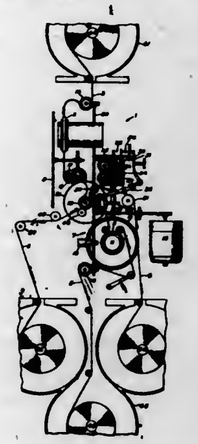
1,900,553. PORTABLE MOTOR DRIVEN SAW. GEORGE E. HAMPTON, Pittsburgh, Pa., assignor to The Syntron Company, a Corporation of Delaware. Filed Feb. 4, 1931. Serial No. 513,268. 14 Claims. (Cl. 143—43.)

1. In a portable motor driven tool assembly including a handle for the assembly and a driving motor, a motor-circuit-controlling switch located adjacent to the handle to be grasped by the operator in holding and guiding the tool by said handle, a second motor-circuit-controlling switch in series circuit with said first switch, and means for closing said second switch upon pressing said tool and material to be operated on thereby into close operating engagement.



14. Portable cutting apparatus comprising a unitary assembly including a driving member, a cutting element driven thereby, a movable guard for said element, means normally maintaining the guard in advanced position to shield a given portion of the cutting element and in advance of the part of said element which must engage the work, so that it may not engage the work until the guard is shifted, and means actuable to move said guard toward retracted position where at least a part of the cutting element will be exposed, and into a position that it may engage the work so that the guard may be forced back by the work as the tool advances, said means providing a clear path for return movement of the guard to its advanced position when the cutting element has been removed from the material.

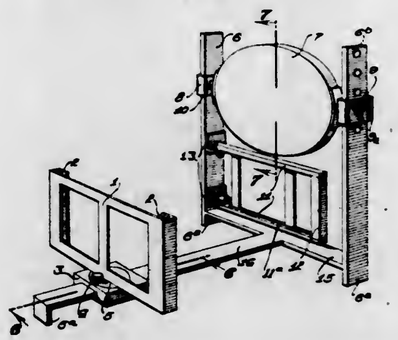
1,900,554. COMBINED RADIATOR AND HUMIDIFIER. THEODORE S. HART, New Britain, and PHILIP M. BUSH, Bloomfield, Conn., assignors to The Hart & Hutchinson Company, New Britain, Conn., a Corporation of Connecticut. Filed Aug. 27, 1931. Serial No. 559,686. 9 Claims. (Cl. 257—138.)

1. In a humidifier for the air in a room, a cabinet adapted to rest upon the floor of said room, said cabinet having top and bottom openings, a pair of inlet and outlet headers supported by the end walls of said cabinet, a plurality of tiers of horizontal tubes connecting said headers, the lower tiers of tubes being provided with fins and comprising a radiator section, the upper tiers being immersed in a plurality of water pans and comprising humidifying units, means for supplying heating fluid to said inlet header, the heated air from said radiator section being caused to absorb the moisture rising from the humidifying units.

1,900,555. COMBINED MOTION PICTURE-SOUND REPRODUCER. CHARLES L. HEISLER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 26, 1928. Serial No. 273,126. 3 Claims. (Cl. 88—16.2.)

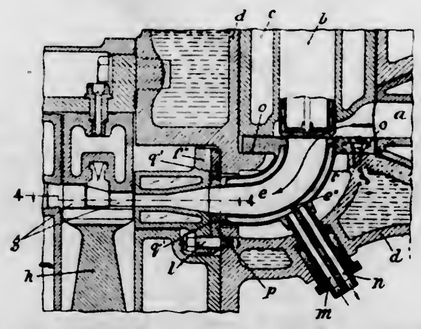
2. In apparatus of the character described, a structure adapted to support a plurality of film reels, said structure forming a pair of spaced reel housings and a third housing arranged opposite the space between the pair of housings, the adjacent walls of which form a film channel leading to said third housing.

3. A combined picture projecting and sound reproducing apparatus comprising means for supporting a first pair of reels, means for supporting a second pair of reels, separate picture projecting and sound reproducing elements having a common driving motor for the synchronous operation thereof, means arranged to guide a single record film between the reels of said first pair operatively through both of said elements serially, means arranged to guide a single record film between a reel of said first pair and a reel of said second pair inoperatively past one of said elements and means arranged to guide a single record film between a reel of said first pair and the other reel of said second pair inoperatively past the other of said elements.



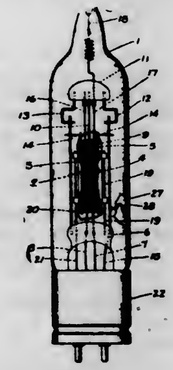
1,900,556. ROLL FOR MOLTEN GLASS AND THE PROCESS OF COOLING THE SAME. HALBERT K. HITCHCOCK, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Jan. 17, 1928. Serial No. 247,368. 8 Claims. (Cl. 257—95.)

1. In glass rolling apparatus, the combination with a cylindrical casing adapted to contact with molten glass, of a spray pipe extending longitudinally of the casing with



spray openings leading laterally therefrom, a pump driven by an electric motor for supplying water under pressure through said pipe, outlet means at the end of the casing for withdrawing therefrom the steam formed in the casing, means for condensing the steam and returning the water of condensation to the pump, and means regulated by the temperature of said steam for governing the speed of the electric motor driving said pump.

1,900,557. EXHIBITING APPARATUS. GEORGE A. HOLCOMBE, San Diego, Calif. Filed Oct. 7, 1929. Serial No. 397,761. 6 Claims. (Cl. 88—1.)



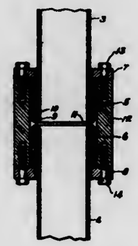
1. In an exhibiting apparatus, a frame including a pair of spaced apart uprights, a concave mirror pivotally supported on a horizontal axis positioned intermediate its upper and lower sides between said uprights, a plane mirror receiving-frame supported on said frame relative to, and facing, said concave mirror, at a distance from said concave mirror less than its focal length, and another frame, or picture holder, pivotally supported on said frame slightly below said concave mirror with its front facing the front of said plane mirror frame.

1,900,558. NOZZLE CHANNEL CONSTRUCTION FOR EXPLOSION TURBINES. HANS HOLZWARTH, Dusseldorf, Germany, assignor to Holzwarth Gas Turbine Co., San Francisco, Calif., a Corporation of Delaware. Filed Feb. 25, 1929, Serial No. 342,639, and in Germany Mar. 13, 1928. Renewed Oct. 1, 1932. 4 Claims. (Cl. 60—41.)

1. In an explosion turbine, in combination, a frame, a combustion chamber supported by said frame and mechanism for periodically charging said combustion chamber with an explosive mixture to be exploded therein, a nozzle valve adapted to be opened at predetermined instants to permit discharge of the combustion gases from the combustion chamber, a rotor, a nozzle supported by and within said frame and arranged to discharge the combustion gases against said rotor, a connecting channel member insert disposed between the outlet end of said combustion chamber and said nozzle to conduct the hot, rapidly flowing gases to the latter, and positioned within said frame and separate therefrom so as to protect the same against the direct heat of the gases, said channel member insert consisting of two walls enclosing a cooling chamber and being fixed at its inlet end to said frame, a conduit for conducting a cooling medium to, and a conduit for withdrawing the same from said cooling chamber, whereby the inner gas-swept wall of said channel member insert may be made relatively thin so that during the operation of the turbine such a small temperature differential exists between the inner and outer surfaces of such wall that no excessive stresses arise therein.

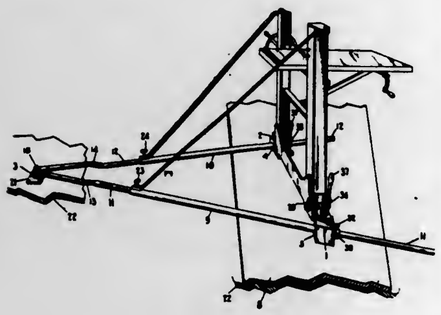
1,900,559. ELECTRON DISCHARGE DEVICE. ALBERT W. HULL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Original application filed Mar. 3, 1924, Serial No. 696,665. Divided and this application filed Aug. 22, 1928. Serial No. 301,336. Renewed Aug. 3, 1931. 7 Claims. (Cl. 250—27.5.)

7. The combination in an electron discharge device of an electron emitting cathode, an anode and a control grid, and shielding means for intercepting the electrostatic lines of force extending between the electrodes comprising a shielding element interposed between the anode and control grid and an additional shielding element surrounding the anode, and connected to the first shielding element.



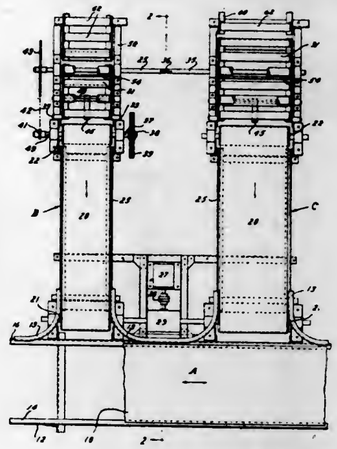
1,900,560. ANCHORING MEANS. ANDRE JANER, Flushing, N. Y., assignor to The A. J. & K. Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 6, 1932. Serial No. 615,591. 2 Claims. (Cl. 24—73.)

2. An anchoring device adapted to anchor a chain to a member having a recess, comprising a member formed of a single piece of wire and having a loop with a pair of crossed arms at one end, one of said arms being disposed at an angle to the general length of the device and having



an edge at its free end adapted to bite into the wall of the recess in which the device is placed, the other of said arms extending beyond the first one and being provided with a hook adapted to be connected to a chain or the like.

1,900,561. CONDUIT CONNECTION. OSCAR JUNGGREN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 5, 1931. Serial No. 535,198. 2 Claims. (Cl. 285—131.)



1. A conduit having two adjacent parts defining a clearance between them for permitting axial expansion and means for connecting said parts, comprising a tubular member around each of said parts and defining an annular space with said part, one end of each of said tubular members being welded to the end of the corresponding conduit part, the other end of each of said tubular members having a flanged portion, another tubular member surrounding said first mentioned tubular members, and means for connecting said flanged portions to said other tubular member.

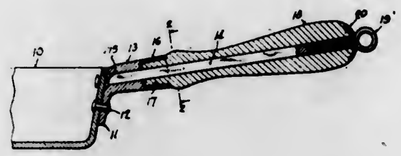
1,900,562. DEPTHOGRAPH CAMERA STAND. CLARENCE W. KANOLT, New York, N. Y. Filed May 23, 1930. Serial No. 454,863. 14 Claims. (Cl. 248—41.)

1. In a stand for a camera for the taking of depthograph pictures, a pair of boxes, wheels mounted therein, anti-friction ball bearings on which said wheels turn, a pair of tubes mounted in said boxes, which tubes converge toward a common center, rods slidably mounted inside of said tubes, bars secured to said rods, the ends of said bars being pivotally secured to a post at said common center, adjustable means to secure the position of said rods in said tubes, a hub on one of said wheels, a bevel gear secured thereto, a bevel pinion in mesh with said gear, a driven shaft to which said pinion is secured, a smooth plane surface on which said wheels run, and manually operable means to space said wheels from said surface.

1,900,563. CONVEYER. HENRY C. KELLER, Syracuse, N. Y., and MAYNARD VAN BILLIARD, Philadelphia, Pa., assignors to The Lamson Company, Syracuse, N. Y., a Corporation of Massachusetts. Filed Apr. 22, 1930. Serial No. 446,231. 12 Claims. (Cl. 198—20.)

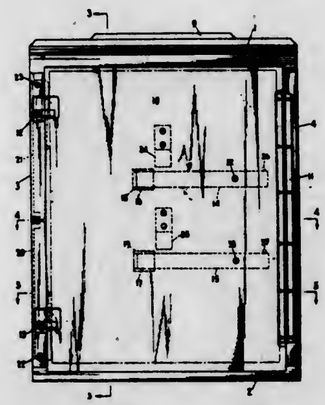
1. The combination with a main conveyer of a pair of branch conveyers by which load units are fed onto the main conveyer, means independent of the main conveyer for operating the branch conveyers and means actuated seriatim by said first named means for regulating the feeding operations of the branch conveyers which means includes a movable section of each branch conveyer, and means for shifting said sections alternately out of position and thereby stopping the feeding operations.

1,900,564. SLIDE FASTENER TAPE. MAX KIESSLING, Waterbury, Conn. Filed May 4, 1932. Serial No. 609,117. 4 Claims. (Cl. 24—205.)



1. In a slide fastener, a longitudinal strip of fabric tape, a plurality of fastener elements secured along one edge thereof, said strip being folded over into two unconnected intermediate plies and having hems folded over one or more times along both edges of said plies, said hems being stitched together to form a head thick flexible edge for receiving said fastener elements.

1,900,565. COOKING UTENSIL HANDLE. RALPH N. KIRCHER, West Bend, Wis., assignor to West Bend Aluminum Company, West Bend, Wis., a Corporation of Wisconsin. Filed Jan. 25, 1930. Serial No. 423,354. 1 Claim. (Cl. 16—116.)



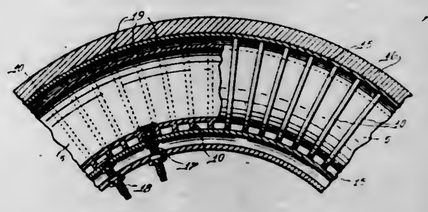
A cooking utensil handle of insulating material provided with a squared bore, combined with means for connecting the handle to the utensil, the said means comprising a

plate adapted to be secured upon the utensil and having a radially extending projection provided with a squared longitudinal bore with a flare at its inner end and a socket at its outer end, a squared shaft anchored in the said bore and extending outwardly of the socket, and having its

inner end expanded to fill the flare and prevent withdrawal of the shaft, the said handle arranged upon the said shaft and having one end entered in the said socket, and means engaged with the shaft for securing the handle upon the shaft.

1,900,566. DEPHTHOGRAPH PLATE HOLDER. CLARENCE W. KANOLT. New York, N. Y. Filed May 23, 1930. Serial No. 454,862. 8 Claims. (Cl. 95—37.)

1. In a plate holder having a top, bottom and sides, one side of said holder being made of unyielding material, an opaque closure for its front, an opaque closure for its rear, a lined screen fixedly mounted in said holder, a photographic plate adjacent to said screen, a pair of swinging levers pivotally secured to said unyielding side of said holder, protuberances on said levers which abut the edge of said plate, and a screw, mounted in said unyielding side of said holder, which engages the inner ends of said levers, whereby the rotating of said screw swings said levers and moves said plate.

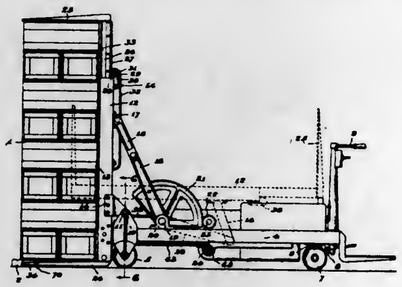


1,900,567. STADIA TRANSIT. EUGENE W. KRAFT, Chicago, Ill., assignor to Keuffel & Esser Co., Hoboken, N. J., a Corporation of New Jersey. Filed Nov. 24, 1931. Serial No. 576,998. 8 Claims. (Cl. 33—69.)

1. An instrument of the class described comprising a support, a telescope carried thereby provided with stadia wires, means mounting the telescope for angular adjustment, cooperating members including a circular ring in which one member is carried by the support and the other member is carried and angularly adjustable with the telescope, a scale of angular displacement throughout an entire circumference upon one edge of the circular ring, two scales upon the other edge of the circular ring one of which is

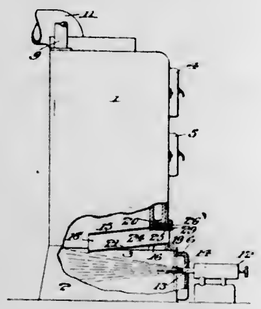
graduated in terms of horizontal constants and the other in terms of vertical constants varying with each angle of inclination of the telescope, and an index for each of the scales on the other member.

1,900,568. PNEUMATIC TUBE. HAROLD F. KRUG, Grosse Pointe Park, Mich. Filed Nov. 27, 1931. Serial No. 577,487. 1 Claim. (Cl. 152—22.)



A pneumatic tire comprising an outer casing forming a tire shoe, an outer pneumatic tube within said shoe in contact with the wall thereof, an inner pneumatic tube within said outer tube and formed with integral external annular ribs extending transversely of said inner tube completely around the same and across said space between said tubes, said ribs being spaced apart and secured at their outer side edges to said outer tube to form annular air chambers between said inner and outer tubes, said ribs being apertured to place said chambers in communication with each other and separate means for inflating each of said tubes.

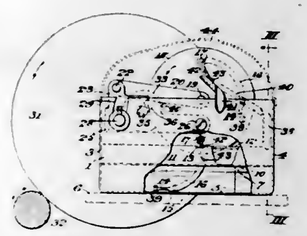
1,900,569. APPARATUS FOR HANDLING MERCHANDISE. HERBERT H. LEDERER, Cleveland, Ohio. Filed Nov. 21, 1930. Serial No. 497,141. 5 Claims. (Cl. 214—66.)



1. Apparatus for transferring stacked merchandise comprising a movable horizontal frame, a body tiltably mounted on said frame for movement from a vertical to a tilted position and vice versa, said body having means at one end thereof for supporting a stack of merchandise when

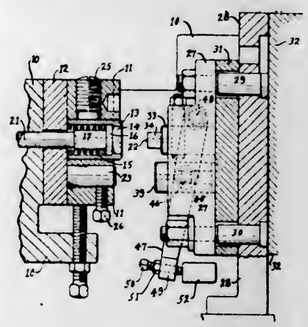
said body is in a vertical position, mechanical means for moving said body relative to said frame, and means for withdrawing said first mentioned means from underneath

the merchandise longitudinally of said frame and transversely of said body, whereby the merchandise may be deposited in its original stacked condition.



1,900,570. FURNACE. GUSTAVE LEIMAN, New York, N. Y., assignor to Leiman Bros. Inc., Newark, N. J., a Corporation of New Jersey. Filed Nov. 2, 1929. Serial No. 404,284. 8 Claims. (Cl. 158—1.5.)

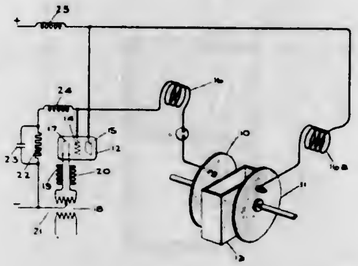
1. An air admission attachment for vertical tubular boilers including a firebox, a base therefor and an oil burning device in the base, said attachment comprising a straight open ended tubular member having the inner end of one of its walls cut away to form a longitudinal opening therein and secured to the boiler in position to project into the firebox for admitting air thereinto, and a gravity operated shutter pivoted adjacent the outer end of said member and adapted to be moved toward and away from said longitudinal opening in the wall of the member by the draught in the boiler to control the amount of air passing through the member to the firebox.



1,900,571. LIQUID FEEDING DEVICE. GEORGE W. LEIMAN, Newark, N. J., assignor to Leiman Bros. Inc., Newark, N. J., a Corporation of New Jersey. Filed Jan. 29, 1930. Serial No. 424,231. 6 Claims. (Cl. 184—63.)

1. The combination with a rotating shaft of a machine, of a liquid feeding device comprising, a main reservoir, an auxiliary reservoir disposed above said main reservoir, means for transmitting motion from said rotating shaft to the device, a disc having its periphery in contact with said means for actuating it, at least one element pivoted on said disc and arranged to be passed into and out of the liquid in the main reservoir for removing therefrom a small quantity of liquid, a duct connected to said auxiliary reservoir and having its upper end horizontally disposed in the vertical plane of travel of said element to receive the element and liquid therefrom, at least one second element pivoted on the disc and arranged to be moved

into and out of the liquid in the auxiliary reservoir, and a conduit having its upper end horizontally disposed in the vertical plane of travel of said second element to receive the element and liquid carried thereby from the auxiliary reservoir.



1,900,572. TUBULAR RIVET MACHINE. CHARLES E. LYMAN, Waterbury, Conn. Filed Sept. 15, 1931. Serial No. 562,890. 14 Claims. (Cl. 10—12.)

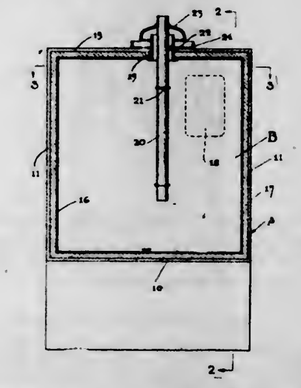
1. In a machine for producing a tubular headed rivet, a reciprocating gate member carrying an extruding punch and a heading punch, a stationary die bed having a recess for holding a blank while the shank is being extruded around said extruding punch, means for stripping said extruding punch from said blank leaving said blank within said recess, means for raising said punches to bring said heading punch into alinement with said blank, said die-bed having a lower heading socket, means on said heading punch for receiving said tubular blank from said recess, and serving to hold said blank while the punches are lowered to bring it down into alinement with said heading socket, and means to eject said finished rivet from said heading punch.

1,900,573. ELECTRIC HEATING APPARATUS. ELMER D. MCARTHUR, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 19, 1930. Serial No. 496,741. 8 Claims. (Cl. 219—47.)

1. Electric heating apparatus comprising a plurality of pairs of electrodes, a separate source of high frequency supply for each of said pairs of electrodes, one of the electrodes of each pair giving a greater heating effect than the other, and means for passing the material to be heated between said pairs of electrodes in succession in such man-

ner that different portions of said material are adjacent the electrode giving the greater heating effect whereby said material is heated uniformly.

1,900,574. FASTENING DEVICE FOR INHERENTLY RESILIENT ARTICLES. RUSSELL G. MEADER, Detroit, Mich., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed July 15, 1931. Serial No. 550,992. 8 Claims. (Cl. 24—214.)



2. A fastener assembly, including an inherently resilient article provided with a preformed opening, a separable fastener element carried by said article and having a part extending through said opening, said fastener element being held in predetermined position relatively to said article by frictional engagement of the wall of said opening with said part due to the inherent resiliency of said article.

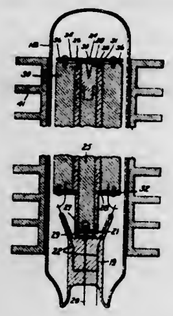
1,900,575. METHOD OF MAKING CUP BRUSHES. ROBERT G. MERTES, Catonsville, Md., assignor to The Pittsburgh Plate Glass Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 18, 1931. Serial No. 529,731. 10 Claims. (Cl. 300—21.)

1. The method of constructing a cup brush which consists in disposing a plate upon a cylindrical sleeve, mounting a plurality of radially extending bristle bodies upon the cylindrical sleeve, one of said bristle bodies being of lesser diameter than the other of said bristle bodies, and then directing the bristles at an angle to produce a working face in a plane at right angles to the center line of the sleeve by bending and securing the plate thereover.

1,900,576. REFRIGERATOR. CHARLES A. MOORE, Edina, Minn. Filed Jan. 26, 1931. Serial No. 511,285. 2 Claims. (Cl. 62—89.)

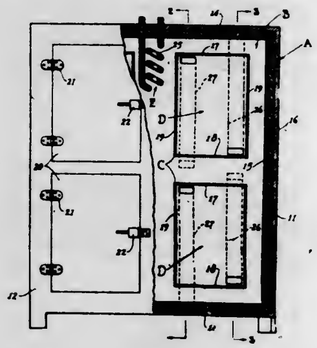
1. In a refrigerator, a cabinet enclosing a provision chamber, a refrigerating medium within said chamber, an upright conduit within the chamber leading downwardly thereinto from the outside, for the gravitating ingress of air therethrough to the chamber, said cabinet having an egress opening in the upper portion thereof through which air from the corresponding portion of the chamber is compressed to the outside.

1,900,577. GASEOUS CONDUCTION LAMP. DANIEL MCFARLAN MOORE, East Orange, N. J., assignor to General Electric Company, a Corporation of New York. Filed July 12, 1928. Serial No. 292,223. 15 Claims. (Cl. 176—122.)



1. A gaseous conduction lamp comprising a sealed vessel containing a gas at cathode glow pressure, a hollow cathode the interior walls of which are inclined to the longitudinal axis thereof and having an opening through which the active surface of the cathode is exposed, an anode encircling said cathode but out of registry with said opening, and a layer of insulation between said cathode and said anode of about 1/100ths of an inch in thickness, said electrodes and insulation being fitted to support one another as a compact structure.

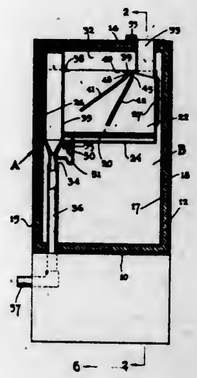
1,900,578. GASEOUS DISCHARGE DEVICE. DANIEL MCFARLAN MOORE, East Orange, N. J., assignor to General Electric Company, a Corporation of New York. Filed Mar. 31, 1930. Serial No. 440,178. 12 Claims. (Cl. 176—122.)



1. A gaseous conduction lamp comprising a sealed vessel containing a gas at cathode glow pressure, a thick walled

cup-shaped anode having a partially closed end, a layer of insulation lining said anode, and a cathode fitted into said cup-shaped anode with one end adjacent the partially

closed end thereof and having in said end a conical cavity with a depth greater than its maximum diameter said cavity being in registry with the opening in the partially closed end of said cup-shaped anode.



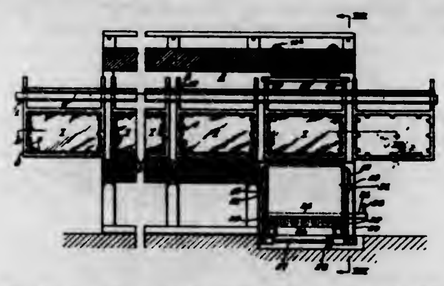
1,900,579. REFRIGERATOR. CHARLES A. MOORE, Edina, Minn. Filed Mar. 19, 1930. Serial No. 437,010. 3 Claims. (Cl. 62—89.)

2. In a refrigerator, a cabinet providing a chamber, a casing within the chamber spaced from inner walls thereof and providing a provision compartment interiorally isolated from the interior of the cabinet, said cabinet including a door forming a side wall of the casing and affording access to the compartment therein, means in said door for the ingress of air to the compartment from the atmosphere outside of the cabinet, means also in said door for the egress of air from said compartment to the outer atmosphere, and an element within the chamber for refrigerating and circulating the air therein, about said casing, and for effecting the ventilation of said chamber, by gravity, through said means.

1,900,580. VENTILATED REFRIGERATOR. CHARLES A. MOORE, Edina, Minn. Filed Feb. 2, 1931. Serial No. 512,842. 16 Claims. (Cl. 62—89.)

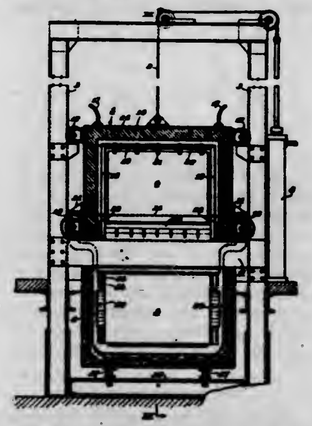
6. In a refrigerator, a cabinet enclosing a chamber for provisions, a partitioning structure within said chamber providing a refrigerant compartment communicating at its upper portion with the upper portion of the provision chamber and at its lower portion with a lower portion of said chamber, said partitioning structure comprising spaced walls forming an air passageway therebetween opening at the lower portion of said structure for the egress of air therefrom into the provision chamber, means for the ingress of outer air into said passageway at the upper portion of said structure, said passageway being

open at the upper portion of said structure for the ingress of air thereto from the upper portion of the chamber, and means for the egress of air from said chamber.



1,900,581. BRAKE TESTING INSTRUMENTALITY. CAMPBELL H. OLIVER, Hibbing, Minn. Filed Oct. 10, 1931. Serial No. 568,011. 1 Claim. (Cl. 265—1.)

A stress indicating lever having a laterally extending web upon one side thereof terminating materially short of the free end of said lever, a geared quadrant upon the free end of the lever, a yieldable spring member fixed to the outermost end of said web forming an extension thereof, a circular dial having an inwardly extending hub portion beneath and to which the upper end of the spring member is fixed forming a support for the dial, a shaft extending through said hub member and carrying a gear in constant mesh with said quadrant, a handle like extension above the quadrant for yieldable operation of the lever, and a pointer carried by said shaft for indicating upon the dial the stress upon the handle before movement of the lever occurs.

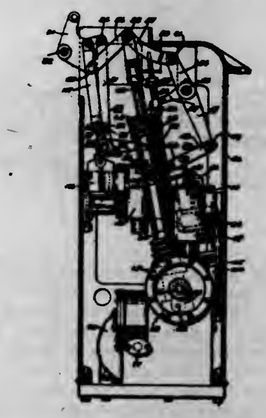


1,900,582. APPARATUS FOR CASE HARDENING GLASS SHEETS. WILLIAM OWEN, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Mar. 18, 1932. Serial No. 599,740. 11 Claims. (Cl. 49—45.)

1. In apparatus for case hardening glass sheets, a heating furnace with a track extending therethrough, a sheet glass carrier mounted for movement along the track arranged to support the glass sheet from beneath and opening downwardly to permit the discharge by gravity

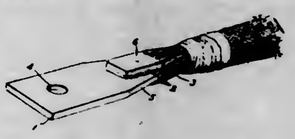
from the carrier of such sheet, and a receiver located beneath the track and adapted to cool the sheet which drops into it when the carrier is opened.

1,900,583. APPARATUS FOR CASE HARDENING GLASS SHEETS. WILLIAM OWEN, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Mar. 18, 1932. Serial No. 599,741. 12 Claims. (Cl. 49—45.)



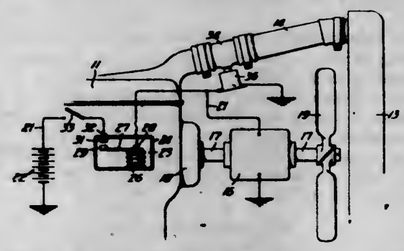
1. In apparatus for case hardening glass sheets, a bridge provided with a frame for supporting a glass sheet in vertical position, a heating furnace open at the bottom mounted to move vertically and arranged in its lower position to fit over said frame, a pair of cooling platens suspended in parallelism below the furnace so as to move up and down therewith and in upper position to lie on opposite sides of said frame, means for raising and lowering the furnace and platens, and means for moving the platens toward and from each other.

9. Means for chilling glass sheets comprising a pair of metal platens mounted for movement toward each other in parallelism, and means for regulating the temperature of the platens comprising a bath of liquid positioned beneath the platens so that the platens may be immersed by a relative vertical movement of the platens and the bath.



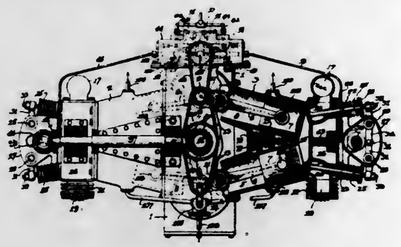
1,900,584. SWITCH OPERATOR. JAMES C. REA, Oakland, Calif. Filed Jan. 8, 1928. Serial No. 244,129. 11 Claims. (Cl. 200—82.)

1. In a switch operator, two mechanisms adapted to be tripped for controlling switch operations, means biasing said switch toward one of two positions, linkage means interconnecting both said mechanisms, spring means adapted to apply opposed forces to two points, one of said points being located on said linkage means and movable for operations of said switch to either of said positions, the other of said points being relatively fixed, and means cooperably associating said mechanisms and said linkage means with said switch for effecting the other one of said



switching operations in response to tripping of one of said mechanisms, said stationary point of spring application being positioned so that said bias may move the switch to said one position without affecting the condition of said spring.

1,900,585. TERMINAL FOR ELECTRICAL CONDUCTORS. WALTER C. REED, Dalton, Mass., assignor to General Electric Company, a Corporation of New York. Filed July 21, 1930. Serial No. 469,458. 4 Claims. (Cl. 173—353.)



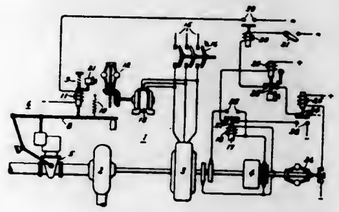
1. A terminal comprising a plurality of end strands of a conductor, and a metallic plate having a portion thereof inserted between said strands and integrally united thereto and a portion thereof protruding from said conductor and constituting the tang of said terminal.

1,900,586. COOLING SYSTEM. JOHN R. RIPPS, Fresno, Calif. Filed Nov. 7, 1930. Serial No. 494,085. 4 Claims. (Cl. 123—171.)

1. A cooling system for use in an internal combustion engine comprising a fan for directing currents of air about said engine, a pump for circulating cooling water through the engine, an electric motor for driving said fan and said pump, and thermoresponsive means on the engine for regulating the operation of said motor.

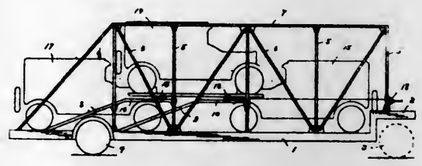
1,900,587. DIESEL ENGINE. EWALD SCHUTZNIEDRIG, Detroit, Mich., assignor to Victor Koch, Detroit, Mich. Filed Dec. 12, 1930. Serial No. 501,776. 2 Claims. (Cl. 123—53.)

1. In a Diesel engine, upper opposed banks of cylinders, lower opposed banks of cylinders, heads applied to the outer ends of said cylinders and forming combustion chambers common to each pair of vertically spaced cylinders and in communication therewith, means for supplying air and fuel to said chambers, counter shafts between the upper banks and between the lower banks of cylinders, pistons in said cylinders and connected to said shaft, and a take-off shaft between said counter shafts and geared thereto.



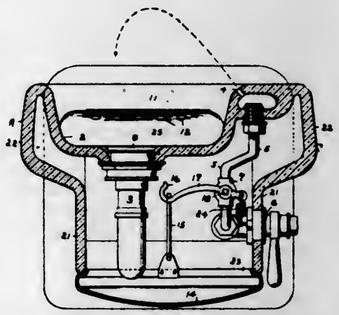
1,900,588. LIQUID COUNTER-BALANCED PUMPING SYSTEM. BERNARD H. SCOTT, Glendale, Calif. Filed June 2, 1930. Serial No. 458,973. 15 Claims. (Cl. 103—179.)

1. A liquid-balanced pumping system comprising a working barrel, a standing valve for the working barrel, a valved plunger having a hollow head in the working barrel, a means forming a reservoir in a well for liquid, a means to apply the hydrostatic head of the liquid in the reservoir to the plunger in the direction of motion of the plunger on its pumping stroke, and a string of sucker rods mechanically connected with the plunger for actuating the latter.



1,900,589. CONTROL SYSTEM. HAROLD T. SEELEY, Yeadon, Pa., assignor to General Electric Company, a Corporation of New York. Filed Sept. 26, 1931. Serial No. 565,310. 5 Claims. (Cl. 175—294.)

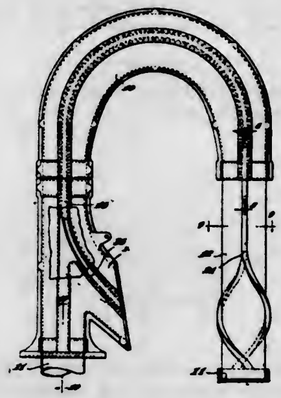
1. In combination, a generator, a prime mover driving said generator, an exciter for said generator, means including a magnet for effecting the operation of said prime mover when said magnet is energized and for shutting down said prime mover when said magnet is deenergized, control means for normally effecting the energization and deenergization of said magnet, and means controlled by the speed of said prime mover and the voltage of said



exciter for effecting the deenergization of said magnet and for removing it from the control of said control means when the speed of said prime mover exceeds a predetermined value while the exciter voltage is below a predetermined value.

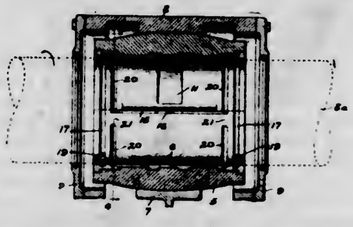
1,900,590. VEHICLE. ROY B. SIMNING, Duluth, Minn., assignor of one-fourth to Rollo G. Lacy, Duluth, Minn. Filed July 20, 1928. Serial No. 294,240. 8 Claims. (Cl. 280—33.1.)

3. A transport for vehicles comprising a structure supported upon wheels, open at one end for the reception of the vehicles, means at the opposite end for manipulation of the vehicles, and means intermediate of the ends of the structure for elevating and supporting one of the vehicles.



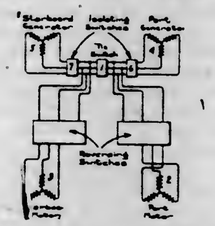
1,900,591. DRINKING FOUNTAIN. HALSEY W. TAYLOR, Warren, Ohio. Filed Jan. 26, 1931. Serial No. 511,181. 3 Claims. (Cl. 4—191.)

2. A basin having a drain opening at its bottom and an overflow passage at one side, and including a stream-projecting device located within said basin in a higher plane than said overflow passage, in combination with a water supply pipe connected to said stream-projecting



device, a rotatable valve for controlling the flow of water through said pipe, a water receiving vessel, and spring actuated means rigidly connected with the rotatable part of said valve for holding the valve open and for yieldingly suspending the said vessel in position to rotate and close said valve when water overflows into the vessel.

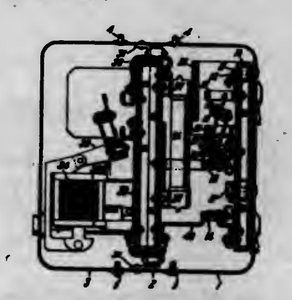
1,900,592. PNEUMATIC DISPATCH SYSTEM. WILLIAM J. TAYLOR and CLARK T. CUTTING, Syracuse, N. Y., assignors to The Lamson Company, Syracuse, N. Y., a Corporation of Massachusetts. Filed Mar. 8, 1932. Serial No. 597,441. 14 Claims. (Cl. 243—16.)



1. In a pneumatic dispatch system, a main carrier transmission tube, a branch transmission tube leading therefrom, a switching section in the main tube at the juncture of the branch and main tubes, means in said section for deflecting certain carriers to the branch tube and an orientating section through which the carriers pass in transit to the switching section and by which the carriers are shifted into such position that those to be deflected are acted upon by such means.

1,900,593. SHAFT BEARING. RAYMOND B. WADE, Swampscott, Mass., assignor to General Electric Company, a Corporation of New York. Filed Sept. 16, 1929. Serial No. 392,929. 6 Claims. (Cl. 308—131.)

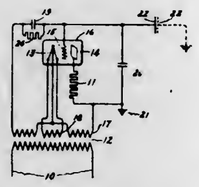
1. A shaft bearing having a centrally arranged, circumferentially extending oil receiving recess opening into the bearing surface in its upper half, a horizontal channel which supplies oil to the recess, a conduit for supplying oil under pressure to the channel, a pair of annular grooves in the working surface of the bearing each of which is provided with a dam at one end, a second horizontal channel in the bearing surface to which the other ends of the grooves are connected and deliver oil under pressure above that of the atmosphere due to the source of supply and to the rotation of the shaft, and a conduit by which oil from the second channel is continuously discharged under pressure.



1,900,594. ELECTRIC SHIP PROPULSION. GEORGE O. WATSON, Rugby, England, assignor to General Electric Company, a Corporation of New York. Filed Sept. 7, 1929, Serial No. 391,090, and in Great Britain Sept. 7, 1928. 5 Claims. (Cl. 172—8.)

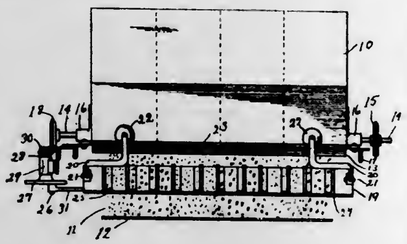
2. In an electric system, a plurality of motors, a plurality of generators, isolating switches for connecting each motor to its generator, tie switches for connecting a plurality of motors to a single generator, field control means for said generators and motors, means for reversing said motors, key-operated locking mechanism for said isolating switches and for said tie switches from which the key cannot be withdrawn unless said switches are locked open or closed, key-operated locking mechanism for said field control means and for said reversing means from which the key cannot be withdrawn unless said field control means is locked in the "off" position and said reversing means is locked in the "ahead", "astern" or "off" position and a common key for operating both of said key-operated locking mechanisms to ensure that the isolating and tie switch mechanisms cannot be unlocked simultaneously with the reversing means and field control means.

4. In an electric ship propulsion system, a motor, a generator, a prime mover for said generator, a field control member for said generator and motor arranged to control also the speed of said prime mover throughout its complete range of speed, a reversing member for said motor, a low speed control member for said prime mover and interlocking mechanism for preventing movement of said reversing lever until said field control member is in its "off" position, movement of said field control member until said reversing member is in the "ahead", "astern" or "off" position, movement of said low speed lever until said field control member is in a position which will give its minimum speed setting and movement of said field control member beyond its minimum speed position until said low speed control member is in a position to give its maximum speed.



1,900,595. CIRCUIT CONTROLLING AND PROTECTIVE DEVICE. LOUIS J. WEBER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 18, 1930. Serial No. 436,869. 5 Claims. (Cl. 247—9.)

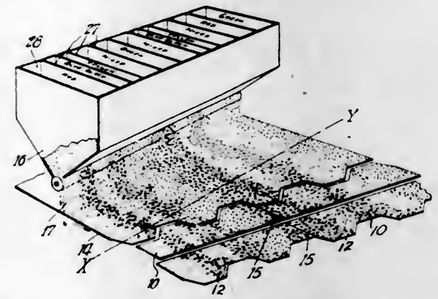
1. An enclosed safety circuit control and protective device including in combination an enclosing casing formed by a back section, a middle section, and a cover, said sec-



tions and said cover being arranged to be removably assembled to each other in the relation specified, a panel mounted in the middle section of said casing so as to have one side adjacent said cover and its other side adjacent said back section, an electro-magnetically operated circuit breaker and a cooperating overload circuit protective means mounted on the side of said panel adjacent said cover, circuit protective fuses mounted on the other side of said panel adjacent said back section, a circuit disconnecting switch including cooperating stationary and movable contacts, supporting means mounting said switch in said back section, a plurality of contacts on said supporting means, a plurality of contacts on said panel arranged to cooperate with said first contacts when said middle section is in said predetermined assembled relation to complete circuits from said disconnecting switch to said fuses, operating means for said disconnecting switch carried by said back section, and interlocking means associated with said operating means for preventing the mounting or dismounting of said middle section with said back section when said disconnecting switch is closed.

1,900,596. ELECTRIC CONTROL SYSTEM. CHANCY F. WHITNEY, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 4, 1930. Serial No. 479,759. 4 Claims. (Cl. 171—97.)

1. In a system for controlling an electric circuit in response to the change of position of a body with respect to some portion of said circuit, the combination of a source of current, a load device, a vapor electric valve provided with a control grid, interconnecting said source and said load, an impedance bridge connected across said source, an intermediate point of said bridge being connected to said grid to render said discharge device normally nonconducting, said impedance bridge including a capacitance the magnitude of which is dependent upon the position of said body, by means of which said valve is rendered substantially fully conductive by relatively small changes in said capacitance.



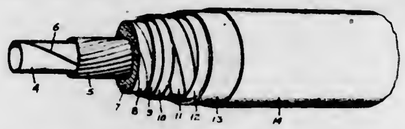
1,900,597. ROOFING. EDWARD C. OTIS, Chicago, Ill., assignor, by mesne assignments, to Certain-teed Products Corporation, a Corporation of Maryland. Filed Apr. 28, 1926, Serial No. 105,132. Renewed Jan. 21, 1932. 29 Claims. (Cl. 91—68.)

6. In a machine for surfacing sheet roofing, means for supplying different kinds of surfacing material to a sheet of roofing, and means intermediate said supply means and the sheet of roofing upon which the different kinds of said material are delivered and movable laterally of said delivery whereby said materials are positively transported laterally of said delivery for causing varying intermingling of the different kinds of material and deposition thereof on the roofing sheet.

12. The method of producing cyclical mixtone effects in roofing surfaced with contrasting granules which comprises laterally intermixing the granules as they are supplied to a run of the roofing, and in cyclically varying proportions.

1,900,598. ROOFING MANUFACTURE. EUGENE T. DOYON, Chicago, Ill., assignor, by mesne assignments, to Certain-teed Products Corporation, a Corporation of Maryland. Filed Nov. 23, 1923, Serial No. 676,541. Renewed Oct. 27, 1930. 20 Claims. (Cl. 91—68.)

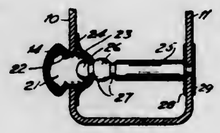
4. The method of making vari-colored roofing units which is characterised by cutting the units on the bias from a sheet of vari-colored roofing material, whereby a roof when laid with overlapping courses of units will present a different vari-colored appearance from that of the sheet of roofing material.



10. In a machine for making vari-colored roofing, the combination comprising a delivery hopper having a discharge opening for delivering an uninterrupted stream of vari-colored surfacing material to a roofing sheet; and partitions within said hopper dividing the same transversely into compartments to receive vari-colored materials, and terminating a distance above the hopper bottom to provide a communicating space between compartments at the hopper bottom for materials about to be discharged from the hopper; said partition constructed and arranged to be separated various distances to provide various sizes of compartments and to be terminated at various distances from the hopper bottom, thereby permitting a control and variation for the vari-colored effects produced upon the roofing sheet.

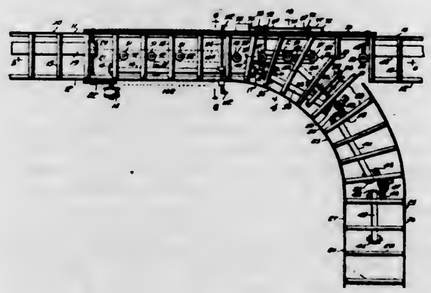
1,900,599. PROCESS FOR THE PRODUCTION OF CELLULOSE FORMATES. EGON ELÖD, Karlsruhe, Germany. Filed Aug. 5, 1927, Serial No. 211,004, and in Germany Aug. 9, 1926. 5 Claims. (Cl. 260—101.)

1. The process of preparing cellulose formates which comprises reacting cellulose with substantially anhydrous formic acid in the presence of hydrochloric acid gas as a formylating catalyst and in the presence of zinc chloride in quantities of at least 50% of the initial cellulose, the reaction being discontinued before any substantial degradation of the cellulose occurs.



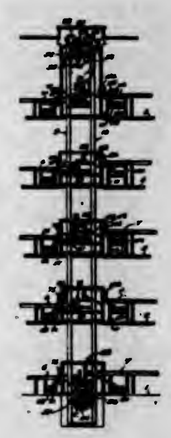
1,900,600. HIGH TENSION ELECTRIC CABLE. LUIGI EMANUELI, Milan, Italy, assignor to Società Italiana Pirelli, a Company of Italy. Filed Sept. 17, 1929. Serial No. 393,232, and in Great Britain May 11, 1929. 6 Claims. (Cl. 173—266.)

1. In a high tension cable, the combination of a centrally disposed member of low electrical resistance which is adapted to carry a substantial portion of the current transmitted by the cable and defines a smooth walled internal channel for fluid insulation, said member comprising a strip of good conducting metal twisted in the direction of its length with a long lay and having a narrow slot



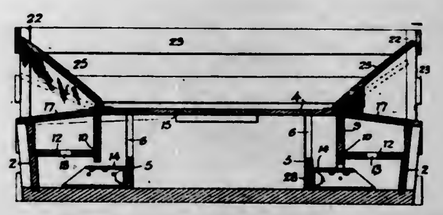
between the adjacent edges to form an outlet for the fluid, a surrounding body of insulation which is permeated with fluid from the channel, and an enclosing metal sheath.

1,900,601. LOOSE LEAF BOOK. ABRAHAM FELDER, New York, N. Y. Filed May 19, 1932. Serial No. 612,317. 4 Claims. (Cl. 129—23.)



2. In a device of the kind described, the combination with a pair of book covers, of snap button sockets carried by one of said covers, and coacting button members having elongated shanks carried by the other cover, said shanks being of sufficient length to extend through and hold a package of loose leaves, each of said shanks being provided at one end with a plurality of heads defined from each other and the shank by grooves and the socket being elongated to accommodate the plurality of heads whereby a selected number of said heads may be engaged in the socket.

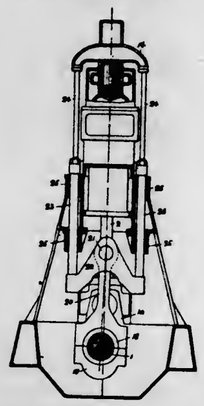
1,900,602. SWITCHING CONVEYER. HENRY R. GOTTHARDT, Louisville, Ky., and WILLIAM E. CAIN, Jeffersonville, Ind., assignors to Logan Co., Inc., Louisville, Ky., a Corporation of Kentucky. Filed May 21, 1931. Serial No. 539,082. 16 Claims. (Cl. 198—38.)



1. A switching conveyer comprising a supply conveyer, a pair of receiving conveyers associated therewith to receive articles therefrom, means constantly operating to tend to move articles from said supply conveyer to one of the receiving conveyers, normally operative laterally immovable means vertically movable to operative position to engage the bottoms of articles for preventing movement of articles to said last named receiving conveyer and guiding them to the other receiving conveyer, and means for rendering said last named means inoperative.

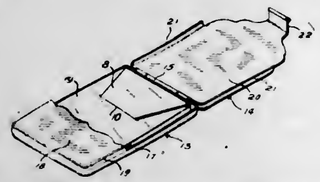
1,900,603. AUTOMATIC CONVEYING APPARATUS. HENRY R. GOTTHARDT, Louisville, Ky., and WILLIAM E. CAIN, Jeffersonville, Ind., assignors to Logan Co. Inc., Louisville, Ky., a Corporation of Kentucky. Filed Mar. 12, 1932. Serial No. 598,486. 8 Claims. (Cl. 214—11.)

1. A conveyor comprising endless conveying means, a plurality of loading stations and a plurality of unloading stations, a carrier connected to said conveying means to be moved thereby past said stations, manually operable means at each loading station adapted to be set in accordance with the desired destination of an article to be conveyed from such station, means for supporting an article adjacent each loading station, a gate operable when in one position for preventing movement of an article from said supporting means into position to be picked up by said carrier, said gate being movable to a second position to permit movement of the articles into a position to be picked up by the carrier, means operable when the gate is in said first named position for preventing the functioning of said manually operable means, means connected to the carrier and operable in accordance with the setting of said manually operable means for determining the destination of the article, and means at the selected discharge station operable by said last named means for removing the article from the carrier when the latter reaches such discharge station.



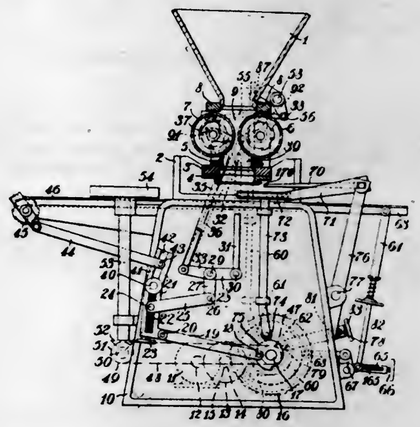
1,900,604. STOCK WATERING APPARATUS. ANDREW FREDERICK GUSTAFSON, Clarinda, Iowa. Filed Sept. 4, 1928. Serial No. 303,916. 5 Claims. (Cl. 119—78.)

1. A stock watering apparatus comprising, in combination, a water supply compartment, a drinking compartment communicating with the water supply compartment, means for maintaining a substantially constant level of water in the compartments, a partition between the said compartments which partition is substantially impervious to sediment and has its top slightly below the normal water level in the apparatus, and another partition between the water supply compartment and the drinking compart-



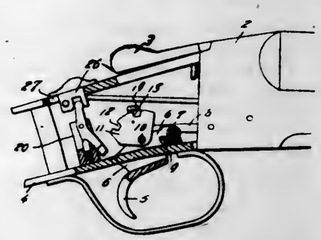
ment, said latter partition having a lower portion substantially impervious to sediment and being positioned with its lower edge below the normal water level in the apparatus but above the bottom of the compartments.

1,900,605. CONTROLLING DEVICE FOR CONTROLLING PISTONS OF INTERNAL COMBUSTION ENGINES. TORKILD VALDEMAR HEMMINGSEN, Copenhagen, Denmark. Filed June 29, 1929, Serial No. 374,709, and in Denmark July 14, 1928. 2 Claims. (Cl. 123—188.)



1. In an internal combustion engine, a cylinder, oppositely moving working and controlling pistons mounted in said cylinder, the head surface of the controlling piston forming part of the combustion chamber in the cylinder, a crank shaft including a crank pin connected with the working piston, bearings for the crank shaft, a single eccentric element on the crank shaft located intermediate the crank pin and one of the crank shaft bearings, and means connecting the eccentric element with the controlling piston for imparting reciprocatory movements thereto, said means including two rods disposed in a plane at right angles to the axis of the crank shaft and parallel with the central vertical plane passing through the main connecting rod, and inclined rods connecting the first mentioned rods with a cross head connected with the controlling piston.

1,900,606. MEDICINE PACKAGE. EWALD KIPPER, Brackwede, Germany. Filed Feb. 17, 1932. Serial No. 593,489. 2 Claims. (Cl. 206—42.)

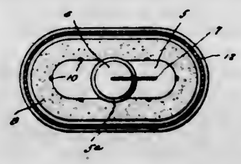


1. A package for medicine tablets, comprising a substantially rectangular flat box, the top of said box being comprised of a relatively long open portion and a relatively short closed portion, said box being provided with a hinged lid substantially covering said top portion and being provided with a snap fastening element for engaging the end of the box opposite the hinge of the lid, and a rectangular sanitary sheath having a flap substantially fitting within the box, located there in such fashion that the flap closure is adjacent to the hinge and exposed for immediate manipulation of the said flap after the main cover is open.

1,900,607. MACHINE FOR FEEDING PLASTIC MATERIAL SUCH AS DOUGH THROUGH DIES OR LIKE APERTURES. ADELBERT KREMMLING, Hamersleben, near Oschersleben, Germany. Filed Nov. 19, 1932, Serial No. 643,486, and in Germany May 11, 1931. 7 Claims. (Cl. 107—29.)

1. Machine for feeding and depositing plastic material such as dough, comprising a supply hopper, an extrusion chamber terminating in a die aperture, a conduit element intermediate the hopper and extrusion chamber and mounted for movement relatively thereto, and feed rolls supported by the conduit element for feeding dough from the hopper to the extrusion chamber.

1,900,608. TRIGGER MECHANISM. ROY A. LESTER, El Paso, Tex. Filed Sept. 16, 1930, Serial No. 482,888. Renewed Jan. 14, 1933. 4 Claims. (Cl. 42—42.)



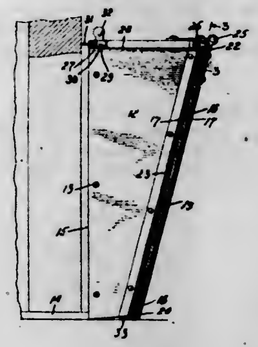
1. A single trigger mechanism for double barrel firearms comprising in combination with hammer sears and a trigger, a rockable pin carried by the trigger and cams on the pin, one of which is normally engaged with the hammer sear to be tripped thereby and the other of which is normally disengaged with that hammer sear to be tripped thereby and adapted to move into engagement with its hammer sear subsequent to the tripping of the first named hammer sear.

1,900,609. TOILET ARTICLE. MARTIN V. MCDONOUGH, Brooklyn, N. Y. Filed Mar. 7, 1932. Serial No. 597,369. 8 Claims. (Cl. 87—23.)

8. A substantially elongated cake or piece of soap, substantially rectangular in cross section provided with an opening extending lengthwise thereof and also substantially rectangular in cross section, a bottle substantially rectangular in cross section fitted within said opening and having means penetrating the material of the soap

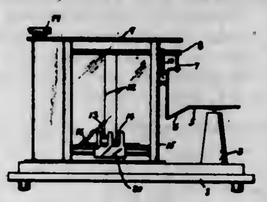
about said opening to form an interlocking connection between said soap and said bottle, said bottle being also provided at one end with a filling neck projecting beyond

the corresponding end of said soap, and a protective casing for the soap consisting of two telescoping sections each of which is substantially rectangular in cross section and is closed at one end.



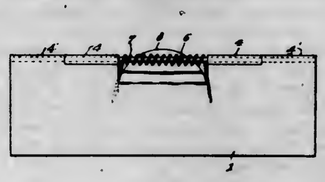
1,900,610. ADJUSTABLE DISPLAY STAND. WILLIAM H. MULLINS, South Boston, Va. Filed Sept. 8, 1930. Serial No. 480,540. 2 Claims. (Cl. 211—148.)

1. A display device comprising a base, a standard secured to the base and having its upper end threaded, primary and secondary tubular sections of different lengths slidably fitted upon the standard and provided with diagonally disposed contact faces, article supporting trays interposed between the primary and secondary sections, the secondary sections and certain of the primary sections being each provided at one end thereof with a flat horizontal contact face, washers disposed beneath the trays and bearing against the flat contacting faces of the secondary sections and against the bottoms of said trays, said sections being interchangeable to support the trays at different angular positions with respect to the standard, and a nut engaging the threaded upper end of the standard and bearing against the adjacent section to force all of said sections in engagement with each other and certain of said sections against the trays to hold said trays in adjusted position.



1,900,611. WINDOW VENTILATOR. EUGENE J. NEY, New York, N. Y. Filed Mar. 8, 1931. Serial No. 519,719. 2 Claims. (Cl. 98—99.)

1. In combination with a window casing and a vertically sliding sash therein, of a pair of brackets secured to the vertical members of said casing immediately above the sill portion thereof so as to project into the room, a pair of channels formed in said brackets in alignment with one another, a deflecting frame slidable in said channels and resting upon said sill, said frame comprising two rails adapted to be disposed in said channels and connected by a rail adapted to rest upon the window sill, a window pane slidably arranged in said deflecting frame, horizontal flanges formed upon said brackets in alignment with the free ends of those deflecting frame rails which are disposed in said channels, a screen frame hingedly secured to those rails of said deflecting frame which are disposed in said bracket channels and adapted to rest upon the



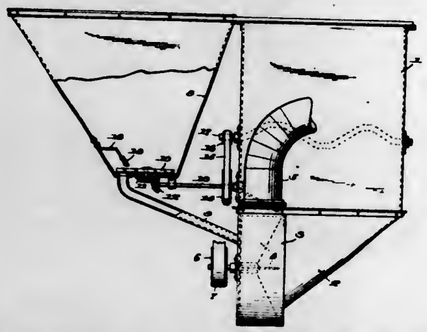
flanges of said brackets, the free longitudinal edge of said screen frame abutting against the lower rail of said sash when the latter is raised to permit access of air into the room through said screen frame.

1,900,612. APPARATUS FOR TESTING WATCHES. TOKUJIRO OWADA, Sukegawa-Cho, Japan, assignor of one-half to Koji Konishi, Tokyo, Japan. Filed Sept. 8, 1932. Serial No. 632,268. 2 Claims. (Cl. 181—0.5.)

1. An apparatus for testing a watch, which comprises means for supporting the watch under test in such a manner that it is freely oscillatable around an axis parallel to the axis of oscillation of the balance wheel of the watch, a plurality of resonators of different natural frequencies, and means to transmit the oscillatory impulses of the watch to the resonators.

1,900,613. CLAMP FOR HOLDING DRESSING IN FOWLS AND THE LIKE. CHESTER JAMES PARKER, Carson City, Nev. Filed Apr. 1, 1932. Serial No. 602,572. 1 Claim. (Cl. 24—253.)

A device for holding dressing in fowls and the like comprising a pair of elongated plates having their lower edges bent inwardly beyond a right angular position, said edges being notched to provide teeth, the teeth of one member crossing the teeth of the other member when the jaw members formed by the plates are in closed position, the upper edge of each plate having projections which are

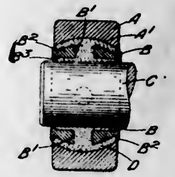


rolled to form barrels, a rod passing through the barrels for hingedly connecting the two plates together, the central portion of the upper edge of each plate being extended and bent outwardly to form handles with the hinged rod passing between the handles and a spring encircling the central part of the rod and having its ends engaging the outer faces of the plates for normally holding the teeth in overlapping relation.

1,900,614. METHOD OF PREPARING ARTIFICIAL MANURES. EUGENE M. POIROT, Poirot Farms, Mo., assignor to Arthur Capper, trustee, of Kansas. Filed Oct. 25, 1929. Serial No. 402,530. 6 Claims. (Cl. 71—6.)

1. In a method of preparing artificial manure from straw at the time of threshing, which comprises conveying the straw from the thresher by means of a pneumatic stacker, feeding into the stream of straw passing in an air current through such stacker a chemical reagent tending to promote bacterial development, and depositing the mixture in a pile.

1,900,615. MACHINE FOR PREPARING ARTIFICIAL MANURES. EUGENE M. POIROT, Poirot Farms, Mo., assignor to Arthur Capper, trustee, of Kansas. Original application filed Oct. 25, 1929, Serial No. 402,530. Divided and this application filed Nov. 4, 1930. Serial No. 493,424. 4 Claims. (Cl. 71—1.)

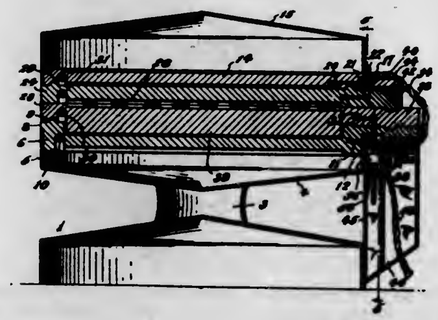


4. The combination with a threshing machine, of a pneumatic straw stacker having a fan housing, reservoir means for receiving and holding a supply of powdered material to be introduced into the straw, said reservoir means having two main openings, one constituting a receiving opening and the other constituting a discharge opening, said receiving opening being accessible only to the exterior of the threshing machine and said stacker, and a pipe leading from said discharge opening to said fan housing and providing ported communication between said reservoir and said fan housing.

1,900,616. ELECTRIC ACCUMULATOR. ADOLFO POUCHAIN, Turin, Italy. Filed May 1, 1928, Serial No. 274,363, and in Germany May 19, 1927. 1 Claim. (Cl. 136—31.)

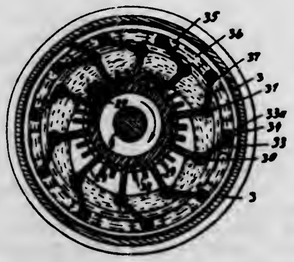
A zinc-lead electric accumulator, comprising lead electrodes, electrodes for deposition of zinc thereon, and an electrolyte formed of an aqueous solution, containing 80–150 grams of free H_2SO_4 and 450–650 grams $ZnSO_4$ for about 1,000 cc. of water at the beginning of an accumulator charge after a complete discharge, the amount of said electrolyte in the accumulator being at least 800 cc. for each 75 ampere-hours of accumulator capacity.

1,900,617. SELF-ALIGNING SPHERICAL JOINT OR BEARING. HARRY RALPH RICARDO, London, England. Filed Feb. 20, 1930, Serial No. 430,098, and in Great Britain Mar. 18, 1929. 5 Claims. (Cl. 308—239.)



1. A spherical joint or bearing including in combination an outer one-piece member and a pin, both of which are formed of metal fusible at a relatively high temperature, and an intermediate member comprising an annular skeleton formed of a metal fusible at a relatively high temperature having cast thereon metal fusible at a relatively low temperature, and flanges on the ends of the skeleton extending radially so as to close in at least partially the ends of the space between the skeleton and the outer member in which the fusible metal lies and thus prevent this metal being forced in the axial direction out of such space when under load, diametrically opposite parts of each flange being cut away to permit the entry of the skeleton into the outer member prior to the casting of the fusible metal around the skeleton.

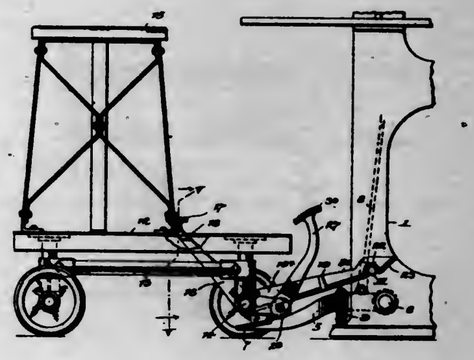
1,900,618. SAMPLE TAKING DEVICE. SOSTHENE ROBICHAUX, Saratoga, Tex. Filed Aug. 27, 1929. Serial No. 388,682. 7 Claims. (Cl. 255—72.)



1. A sample taking device including a drilling apparatus and a sample barrel therein which is removable while said apparatus is in the well bore, said drilling apparatus including a tubular stem and a drilling tool attached thereto and having an inlet passageway for a sample, said apparatus having an outlet passageway for fluid above said inlet passageway, packing means around the barrel and in contact with the surrounding wall of the drilling apparatus, between the passageways for forming a substantially fluid tight seal between the barrel and drilling apparatus.

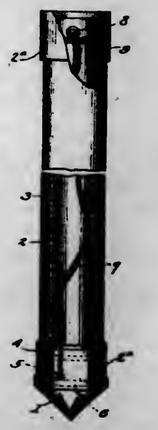
1,900,619. COOKING UTENSIL. HENRY C. SNYDER, Kis-Lyn, Pa. Filed Nov. 18, 1930. Serial No. 496,444. 7 Claims. (Cl. 219—19.)

7. In a device of the character described, upper and lower grids, upper and lower irons engageable between the grids, resistance coils in the several irons and grids, means whereby when the upper grid is imposed on the upper iron the coil in the grid will be cut out and the coil in the iron will be rendered operative, terminal pins connected to the coil in the lower iron and projecting downwardly therefrom to extend through the lower grid, and a feed switch bar supplying current to the several coils and engaged by said depending pins whereby to be moved from the terminals of the coil in the lower grid when the irons are fitted thereon.



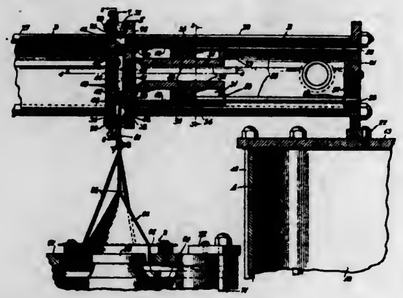
1,900,620. ROTARY MECHANICAL APPARATUS. GEORG STAUBER, Berlin, Germany. Filed Apr. 24, 1931, Serial No. 532,620, and in Germany Jan. 23, 1931. 9 Claims. (Cl. 230—79.)

1. An engine or machine driven by or delivering gases comprising a cylindrical casing, a liquid charge therein, an eccentrically situated rotor with rotating flaps, the flaps being fitted with flat and radial ribs forming part of said rotating flaps, the surface of the liquid being adapted to oscillate between these ribs.



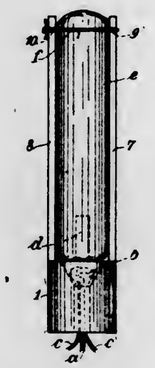
1,900,621. OPERATOR'S BENCH. WILLIAM STROBRIDGE, Syracuse, N. Y., assignor to United States Hoffman Machinery Corporation, New York, N. Y., a Corporation of Delaware. Filed Mar. 7, 1931. Serial No. 521,029. 15 Claims. (Cl. 68—9.)

1. In combination with an operator's bench, means carried thereby for locking the same in working relation with a machine having at least one operator operated device for initiating or effectuating an operation; and means also carried by the bench and adapted to extend into operative



relation to said device and likewise to such position that it may be actuated by the operator for moving the operator operated device.

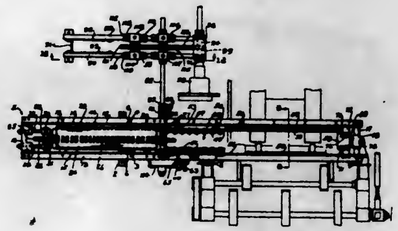
1,900,622. APPARATUS FOR FORMING CONCRETE PILES. RENZO TADA, Tokyo-Fu, Japan. Filed Feb. 2, 1931, Serial No. 513,173, and in Japan Oct. 18, 1930. 1 Claim. (Cl. 61—57.)



Apparatus for forming a concrete pile having superimposed radial enlargements and an enlarged footing, comprising an outer tube adapted to be raised alternatively through fractions of the height of the pile under construction, said outer tube having a detachable shoe at its lower end, an inner tube of less diameter than the outer tube and adapted to be rammed, a valve plate pivotally mounted at the lower end of the inner tube, an operating cord passing into the inner tube and attached to the said valve plate, and a conical tamping shoe detachably connected to the lower end of the inner tube, said tamping shoe being removed after the formation of the enlarged footing so that the pile is formed continuously afterwards without withdrawing the inner tube out of the outer tube.

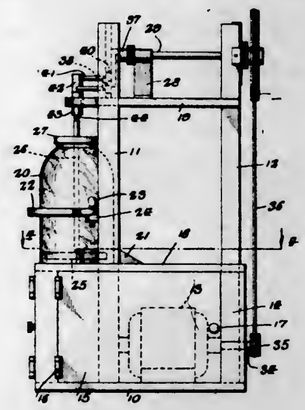
1,900,623. METHOD AND APPARATUS FOR PRODUCING SOUND WAVES. ALLEN M. TOWKSBURY, Skowhegan, Me., assignor of one-third to Blin W. Page, Skowhegan, Me. Filed Dec. 17, 1931. Serial No. 581,555. 36 Claims. (Cl. 181—27.)

1. In a device for producing sound waves, a sound chamber, a source of pressure, a source of vacuum, and means for successively connecting said separate sources with said chamber.



1,900,624. SAFETY DEVICE FOR BLASTING CHARGES EMPLOYED IN MINING AND SIMILAR WORK. WALTER VOORTMANN, Dortmund, Germany. Filed Jan. 16, 1931, Serial No. 509,247, and in Germany Mar. 5, 1930. 6 Claims. (Cl. 102—6.)

1. A safety device for blasting charges employed in mining and similar operations, consisting in the combination of a cylindrical plug of incombustible material provided with a central passage, and a pulling member anchored axially of the passage in the plug, the pulling member being marked at definite distances.

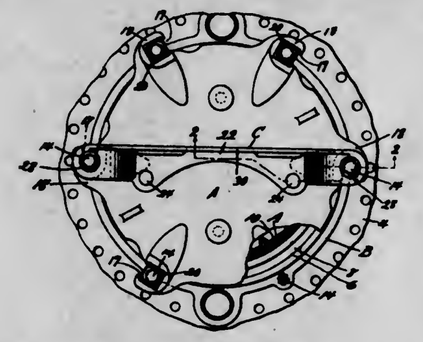


1,900,625. PALLET FEEDING DEVICE. CHARLES E. WALKER, Catskill, N. Y., assignor to Lancaster Iron Works, Lancaster, Pa., a Corporation of Pennsylvania. Filed Nov. 6, 1930. Serial No. 493,843. 12 Claims. (Cl. 25—1.)

1. The combination with an automatic brick machine having brick molds movable intermittently in a fixed direction to a predetermined position of rest in said machine, of a guideway extending across said machine and transversely of the direction of movement of said mold, means in said guideway for moving a pallet from one end thereof to a predetermined position in said guideway,

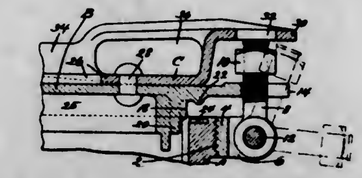
and means for releasing a pallet from said predetermined position in the guideway on to a mold immediately beneath it in the position of rest.

1,900,626. ELECTRIC BUTTER CHURN. GLADYS R. T. WILLIAMS, Cleveland, Ohio. Filed Dec. 9, 1931. Serial No. 579,941. 1 Claim. (Cl. 259—113.)



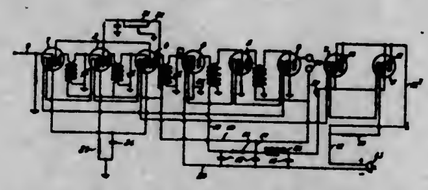
A churn of the character described comprising a stationary bracket, a clamping arm pivotally supported and cooperating with the bracket for clamping a receptacle therebetween, uprights at opposite sides of the bracket and having grooves in their upper portions, a crosshead between the uprights and slidably fitted in the grooves therein and having a slot, a projection on the crosshead and extended outwardly therefrom, a dasher reciprocatingly mounted in the receptacle and having a stem, a coupling on the projection for detachable connection with the stem, and a power shaft mounted midway between the uprights and having a crank engaged in the slot in the crosshead.

1,900,627. TANK DOME CLOSURE. VICTOR WILLOUGHBY, Ridgewood, N. J., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 27, 1931. Serial No. 559,633. 15 Claims. (Cl. 220—55.)



1. The combination with a tank dome cover of the character described, of fastening means for said cover brought into operative position by rotation of said cover,

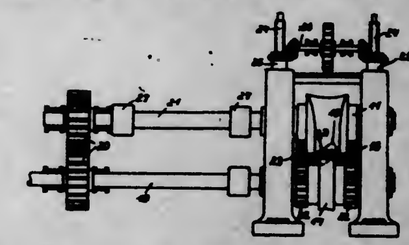
and means secured to the cover and normally cooperating with the fastening means for preventing rotation of the



cover, said means necessitating raising of the cover to a partially open position to allow rotation and complete removal of said cover.

1,900,628. TANK DOME CLOSURE. VICTOR WILLOUGHBY, Ridgewood, N. J., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 27, 1931. Serial No. 559,634. 17 Claims. (Cl. 220—55.)

1. The combination with a tank dome cover of the character described, of fastening means normally holding said cover in closed position, and means fixedly mounted on said cover in cooperative relation to certain of said fastenings as to prevent disengagement of the latter from said cover until said cover is raised to a predetermined partly open position.



1,900,629. RADIO CIRCUIT. ROBERT P. WUNDERLE, Ann Arbor, Mich. Filed Oct. 19, 1932. Serial No. 638,849. 8 Claims. (Cl. 250—27.)

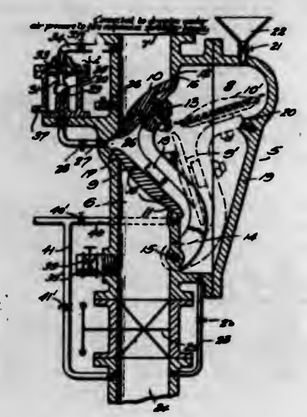
1. In a radio circuit of the type described, the combination comprising a plurality of coupled multi-electrode vacuum tubes including indirectly heated cathodes and anodes, said cathodes being provided with heater means insulatingly spaced therefrom, a rectifier having a heatable filament and an anode, a circuit including all of said heater means and said filament adapted to be energized by direct or alternating current, a filter connected in the output of said rectifier, and connections from the filter and the anodes of said vacuum tubes whereby a substantially constant potential is supplied thereto either from a direct or alternating current source.

6. In a radio circuit of the type described, the combination comprising a plurality of vacuum tubes coupled together to form a combined detector and amplifier, indirectly heated cathodes in all of said vacuum tubes, heaters for said cathodes, anodes in all of said vacuum tubes, a thermionic rectifier having indirectly heated cathodes, heaters for said cathodes and anodes, connections including all of said heaters including a resistance whereby alternating current or direct current may be directly supplied thereto, a filter system in the output of said rectifier, connections between all of the anodes of said multi-electrode vacuum tubes and said filter, and connections for the anodes of said rectifier whereby either direct or alternating current may be supplied directly thereto.

1,900,630. ROLLING MILL. JOHANN ZAGORSKI, Frankfort-on-the-Main, and ERWIN WERNICK, Berlin, Germany. Filed Jan. 25, 1929, Serial No. 335,090, and in Germany Dec. 17, 1927. 8 Claims. (Cl. 80—34.)

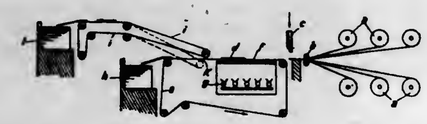
8. A rolling mill for rolling molded propellers, comprising, in combination, a roll table having a longitudinal slot, an upper roll arranged above said table, a lower roll arranged below said table, means for supporting said table so as to be slidable tangentially to said rolls, and propeller forming dies on said rolls and said table, said lower roll being so arranged as to project through said slot and form a part of the lower die.

1,900,631. AIR BRAKE FOR AIRPLANES. GIUSEPPE M. BELLANCA, New Castle, Del. Filed Nov. 8, 1930. Serial No. 494,862. 1 Claim. (Cl. 244—29.)



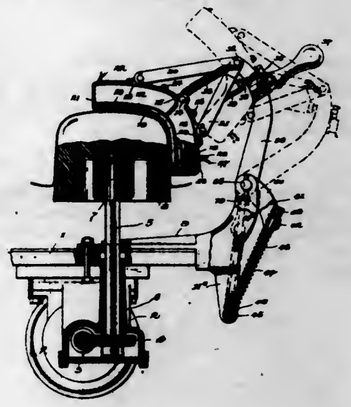
An airplane comprising lift struts, said lift struts being divided into two portions, a rod extending through the lift struts and rotatably mounted within the lower portion and fixedly mounted to and within the upper portion, means to move the rod to produce rotation of the upper portion with respect to the lower portion to retard the speed of the airplane.

1,900,632. FIRE EXTINGUISHING SPRINKLER VALVE. ALFRED H. BOARDMAN, Seattle, Wash. Filed May 1, 1929. Serial No. 359,801. 11 Claims. (Cl. 169—17.)



4. In an automatic valve for a dry-pipe fire extinguishing system, a valve casing providing a chamber adapted to contain water, said casing having an inlet to and an outlet from the chamber with the inlet being adapted for connection with the pressure pipe from a water main for supplying said water to the chamber and the outlet being adapted for connection with the supply

pipe of a dry-pipe system, said supply pipe being of a character containing air under pressure and carrying sprinkler heads adapted to open responsive to fire conditions, valves of a swing-check character normally maintained in seating engagement by the water in said chamber over said inlet and outlet openings, means for maintaining a normal pressure equalization between the water in said chamber and that of the supply pipe to maintain said valves in seated dispositions, and means acting as a result of a drop in the air pressure of said dry-pipe for releasing the water in said chamber to allow said valves to open under the pressure of the water from the main on said inlet valve.



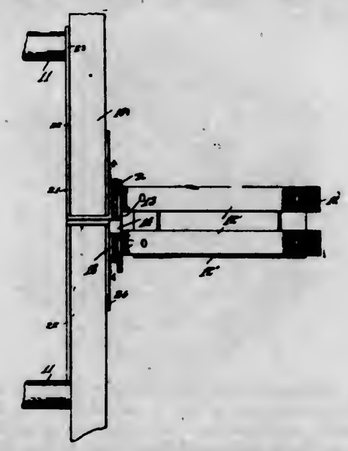
8. The combination of a valve device for use in either a dry-pipe or a wet-pipe sprinkler system characterized by the provision of a chamber adapted to contain water under pressure and having passages leading to and from the same, and an arm supported in said chamber provided with a valve arranged for seating engagement with the inlet to the chamber for either a dry-pipe or a wet-pipe system, said arm further provided with means by which another valve may be so attached to said arm that it will be engaged with the outlet from said chamber when the first mentioned valve is seated and the device is used in a dry-pipe system.

1,900,633. APPARATUS FOR SORTING TRANSPARENT OR TRANSLUCENT PAPERS, FILM FOILS, AND THE LIKE. CARL BÜCHNER, Mannheim-Waldhof, Germany, assignor of one-half to Papyrus A.-G., Mannheim-Waldhof, Germany. Filed Dec. 21, 1928, Serial No. 327,725, and in Germany Dec. 23, 1927. 1 Claim. (Cl. 88—14.)

An apparatus of the class described, comprising the combination with a light transmitting device and sheet conveying means for moving sheets across the light transmitting device, so as to enable the sheets to be illuminated by light transmitted from the light-transmitting device for inspection, of a plurality of rollers having webs capable of transmitting light wound thereon and aligned with respect to one another so as to enable the webs on being unwound from the rollers to be brought into superposed relation, means for simultaneously unwinding the webs from the rollers, grouping them in superposed relation and delivering the superposed webs to the said sheet conveying means, severing means interposed between said web grouping and delivering means and said sheet conveying means for dividing the superposed webs into groups of superposed sheets and means for separating the groups of sheets after passing from the light transmitting device.

1,900,634. HAT LUHRING MACHINE. JOHN L. CARD, Syracuse, N. Y., assignor to United States Hoffman Machinery Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 1, 1930. Serial No. 499,375. 10 Claims. (Cl. 223—30.)

1. In a machine of the character described, the combination of a rotatable hat support; an articulated luhring pad; means acting to swing the elements of said articulated pad toward each other at all times; and means for supporting the pad.



1,900,635. PROCESS FOR PRINTING TRANSFERS. CARLO ALBINI COLOMBO, Milan, Italy, assignor to Soc. Ital. Transfers Albini, S. I. T. A., Milan, Italy. Filed Apr. 27, 1931, Serial No. 533,366, and in Italy Apr. 29, 1930. 1 Claim. (Cl. 41—33.)

Process for preparing transfers adapted to be placed upon porous material, consisting in melting together tallow and colophony in equal parts, in adding to the mass resulting therefrom wax and glucose in order to obtain the desired density, in adding said mass to a lithographic colour in the desired proportions for obtaining the desired colour density and in printing the inscriptions and designs to be transferred on a sheet of paper by means of the ink prepared as above.

1,900,636. ATTACHMENT FOR LADDERS. CHARLES H. DAVIS, Hawkins, Wis. Filed May 7, 1932. Serial No. 609,954. 1 Claim. (Cl. 248—30.)

A rotatably adjustable bracket including a peripherally toothed disk having a central pivot, a second disk having a diametrically arranged slot receiving said central pivot whereby to rotate and slide with respect to the first disk, lugs on the periphery of the second disk embracing the toothed periphery of the first disk, and a tongue intermediate the lugs and arranged to engage between adjacent teeth of the first disk upon gravitational movement of the second disk.

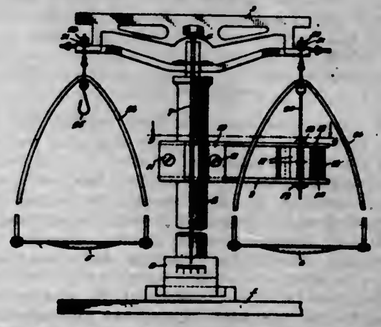
1,900,637. CAPPING MACHINE. ROLLIN L. DRAKE, Port Arthur, Tex., assignor to The Texas Company, New York, N. Y., a Corporation of Delaware. Original application filed Aug. 13, 1924, Serial No. 731,730. Now Patent No. 1,823,889. Divided and this application filed Apr. 30, 1929. Serial No. 359,196. 17 Claims. (Cl. 113—29.)

1. In a can sealing apparatus, a rotary element, a slidable element carried by said rotary element, co-acting capping rollers mounted on the slidable element and comprising opposed rollers, a cam for actuating said slidable element so as to move the capping element to and from operating position, means adapted to move the capping rollers toward each other and a cam for actuating said means.

1,900,638. COMPOSITION CONTAINING A RESINOUS COMPLEX. CARLETON ELLIS, Montclair, N. J. Filed Dec. 17, 1927. Serial No. 240,941. 12 Claims. (Cl. 134—36.)

2. As new compounds, the aliphatic ether-alcohol esters of stearic acid.

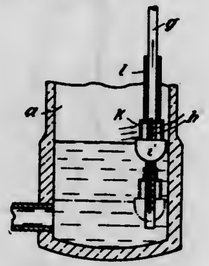
1,900,639. GARMENT SAFETY POCKET. JOHN LLOYD FOSTER, New York, N. Y. Filed Jan. 17, 1931. Serial No. 509,318. 1 Claim. (Cl. 2—254.)



In combination with a garment having a pocket opening and a pocket member connecting with said opening, of a sheet-like flexible guard member secured to the inner wall of the garment below the pocket opening, and a tongue member of greater length than the depth of the pocket and substantially the width of the pocket, the tongue member being secured to the garment immediately below the pocket opening and adapted by its said length to extend under the contents of the pocket, said tongue member being adapted for withdrawal to permit access to the contents of the pocket.

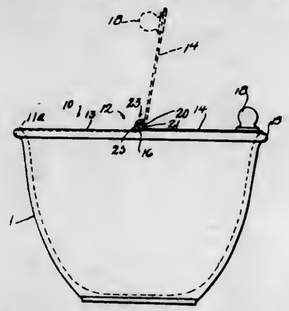
1,900,640. YIELDING JOINT FOR EXTENSION RULES. HERMAN M. GABSTRON, Mount Vernon, N. Y. Filed Apr. 8, 1929. Serial No. 352,180. 6 Claims. (Cl. 33—120.)

2. In a folding rule, the combination with the members and the joint plates therebetween, of a pivot passing thru said members and plates, and elements widthwise superlying the outer faces of the members and anchored against displacement relatively thereto, the extremities of said elements yieldably engaging the said members, the elements being hingedly engaged by said pivot.



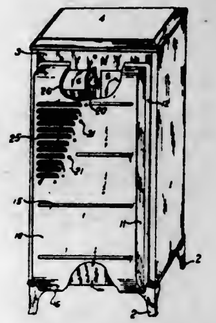
1,900,641. MAGNETIC DAMPER FOR PRECISION BALANCE. JOHN GATTONI, Union City, N. J., assignor to Seederer-Kohlbusch, Inc., Jersey City, N. J., a Corporation of New Jersey. Filed May 21, 1932. Serial No. 612,742. 16 Claims. (Cl. 188—104.)

1. In a balance, a support, a beam pivoted thereon, a yoke frame pivotally mounted on said beam, a double hook



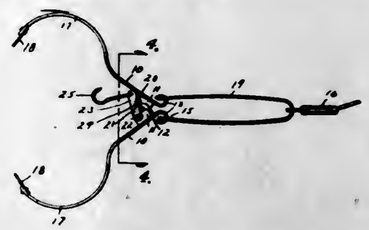
carried by said yoke frame, a scale pan carried by one of said hooks, a magnet, means securing said magnet to said support, and a damping plate carried by the other of said hooks and adapted to move in the field of said magnet.

1,900,642. VENTILATING DEVICE FOR SUBTERRANEAN SPACES. FRITZ GERLACH, Berlin-Tempelhof, Germany, assignor to Siemens-Schuckertwerke Aktiengesellschaft, Berlin-Siemensstadt, Germany, a Corporation of Germany. Filed July 17, 1929, Serial No. 378,924, and in Germany Nov. 9, 1928. 1 Claim. (Cl. 98—1.)



Ventilation device for subterranean spaces, such as sewers, their connecting conduits and inspection shafts, comprising an air-pump, a driving motor for said air-pump, a stationary pipe mounted in said inspection shaft terminating at its lower end at about the lowest level of the sewage and connected at its upper end with said pump, said pipe being perforated from a point adjacent the lower end to a point above the maximum level of the sewage, a pipe section slidably mounted upon the lower end of said stationary pipe, a float, means supporting said pipe section on said float so that the lower end of said pipe section is above said float, said float being adapted to hold said pipe section in position to cover the perforations in said stationary pipe except those a short distance above the surface of the sewage and those below the sewage.

1,900,643. SELF-CLOSING SUGAR BOWL MOUNTING. HARRY C. GESSLER, Brooklyn, N. Y. Filed Oct. 19, 1931. Serial No. 569,624. 3 Claims. (Cl. 65—60.)

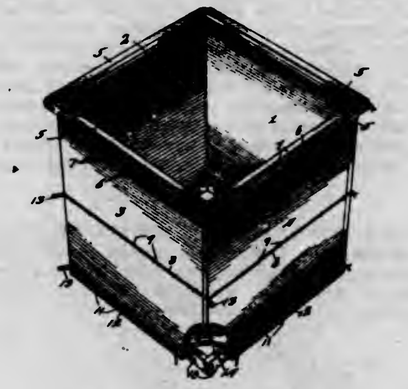


3. A sugar bowl having a bowl portion, top closure means split along a substantially diametral line to provide a plurality of segmental members, one of said members being permanently secured to the bowl portion, hinge means connecting the other member to the first member along said line, the hinge means including a pintle and a plurality of knuckles, and a resilient element between the knuckles, said element extending around the pintle and having a plurality of shoulders outside of the bowl portion, said shoulders lying in the plane of the element between the knuckles and terminating in close proximity thereto, said shoulders bearing on the members for resiliently limiting the opening of the hinged member.

1,900,644. REFRIGERATION APPARATUS. RAYMOND C. HAIMBAUGH, Chicago, Ill., assignor to Grigsby-Grunow Company, Chicago, Ill., a Corporation of Illinois. Filed June 6, 1931. Serial No. 542,560. 4 Claims. (Cl. 62—116.)

1. A refrigerator cabinet having a chamber in the top portion thereof into which is adapted to be disposed a mechanical refrigerating unit requiring a circulation of cooling air, said chamber being closed at the top thereof, a side of said chamber having apertures therethrough whereby air may be sucked in and driven out from said apparatus chamber, a flue disposed over one side of said cabinet and covering said apertures, a partition dividing said flue into separate conduits, said flue being provided with an inlet mouth at the bottom thereof and with an exhaust at the upper portion thereof.

1,900,645. ANIMAL TRAP. JOSEPH HARTSHORN, Fort Des Moines, Iowa. Filed June 30, 1930. Serial No. 464,928. 2 Claims. (Cl. 43—94.)



1. A trap comprising a pair of bars, each having a pair of inwardly projecting lugs, means for pivoting the lugs of one bar to the lugs of the opposite bar, one set of corresponding ends of said bars being provided with loop portions, a substantially U-shaped spring having its free ends connected to said loops, the opposite end of said bars being provided with outwardly curved portions, a jaw bar supported perpendicularly to the free ends of said bars, the inner edges of said jaw bars being provided with inwardly projecting teeth, one of said jaw bars being adapted to overlap the other when in a closed position, a latch bar pivotally connected between one set of said inwardly projecting lugs, a pin carried by the other set of inwardly projecting lugs designed to be engaged by said latch bar, and a bait hook carried by the free end of said latch bar.

1,900,646. METHOD FOR MAKING A DOWNWARDLY TAPERED CONTAINER. LESLIE M. HILL, Benton Harbor, Mich. Filed July 26, 1930. Serial No. 470,920. 5 Claims. (Cl. 140—71.)

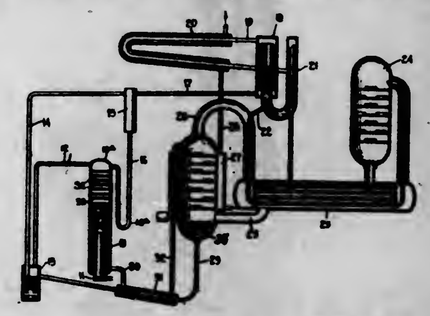
1. The method of making a downwardly tapered, rectangular basket or container, comprising the fabricating of a straight wire-bound flexible blank, having straight parallel continuous binding wires projecting at the opposite ends

of the straight flat blank thus formed, with spaces between the flat sections of the blank, folding the blank into container or basket form, taking up slack in one or more of

the wires at said spaces, while maintaining another wire without slack and under tension at the upper corners of the container, causing the container to taper downwardly with flat sides inclined outwardly.

1,900,647. ELECTRIC SWITCH. ERNEST A. HOOPES, Des Moines, Iowa. Filed Aug. 17, 1931. Serial No. 557,557. 10 Claims. (Cl. 200—83.)

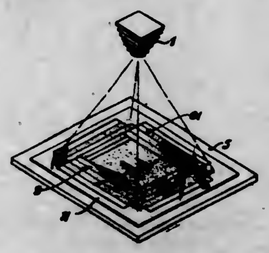
1. In an electric switch, the combination of a spring formed concavo-convex in cross section, means for supporting said spring at one end portion, a contact carrier on the free end portion of said spring, means for applying pressure to the concave side of said spring, and a supplemental spring interposed between the first mentioned spring and the said means for applying pressure.



1,900,648. CATALYTIC SIDE CHAIN OXIDATION OF AROMATIC COMPOUNDS. ALPHONS O. JAEGER, Crafton, Pa., assignor to The Selden Company, Pittsburgh, Pa., a Corporation of Delaware. Original application filed June 3, 1927, Serial No. 196,393. Divided and this application filed Mar. 28, 1928. Serial No. 265,521. 20 Claims. (Cl. 260—108.)

1. A method of oxidising the side chains of side chain aromatic compounds, which comprises causing the compounds to react with an oxidising gas in the presence of an oxidation catalyst having associated therewith at least one active compound of a metal included within the group of alkali metals, alkaline earth metals.

1,900,649. PURIFICATION OF CRUDE DICARBOXYLIC ACIDS. ALPHONS O. JAEGER, Mount Lebanon, Pa., assignor to The Selden Company, Pittsburgh, Pa., a Corporation of Delaware. Filed July 20, 1931. Serial No. 552,077. 15 Claims. (Cl. 260—122.)



1. A method of purifying crude polycarboxylic acids obtained from vapor phase catalytic reactions, which comprises recrystallising the acid from a solvent included in the group esters of the polycarboxylic acid being treated, hydrogenated polynuclear aromatic hydrocarbon mixtures of the esters and hydrogenated polynuclear aromatic hydrocarbons.

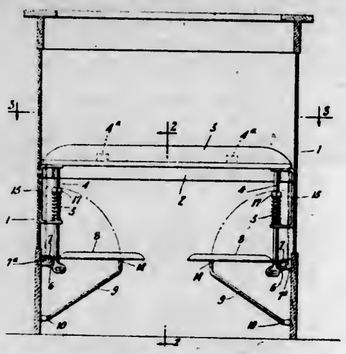
1,900,650. ABSORPTION REFRIGERATING APPARATUS. DONALD BRANCH KNIGHT, Brooklyn, N. Y., assignor to Electrolux Servel Corporation, New York, N. Y., a Corporation of Delaware. Filed Mar. 2, 1931. Serial No. 519,816. 12 Claims. (Cl. 62—119.5.)

6. An absorption refrigerating system of the pressure equalized type including a generator, an analyser above said generator and in open communication with the vapor space in the latter, an absorber located such that the normal liquid level therein is below the normal liquid level in the generator, a separating chamber above said analyser, a vapor liquid lift connected between said absorber and said separating chamber, a conduit for supplying vapor from said analyser to said liquid lift, and a conduit having a liquid trap from said separating chamber to said analyser.

1,900,651. MASK. LLOYD R. KOSMIC, Webster Groves, and FREDERICK B. WOLF, Clayton, Mo. Filed Oct. 19, 1931. Serial No. 569,570. 8 Claims. (Cl. 88—24.)

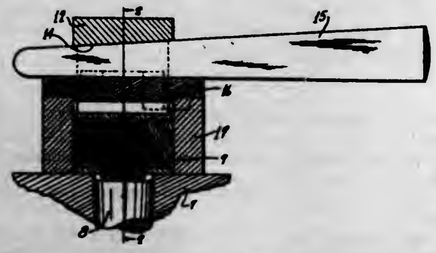
1. A mask comprising at least one envelope adapted to hold a sheet which is to be masked, the edges of the envelope substantially accurately positioning the edges of said sheet, said envelope having an opening, and means associated with said envelope for varying the size of said opening, said last-named means comprising flaps adjacent to said opening and means on said flaps whereby their marginal effects may be adjusted.

1,900,652. LIQUID DISPENSING APPARATUS. JOSEPH A. LOGAN, Springfield, Mass., assignor to Gilbert & Barker Manufacturing Company, West Springfield, Mass., a Corporation of Massachusetts. Filed Mar. 2, 1932. Serial No. 596,270. 10 Claims. (Cl. 221—95.)



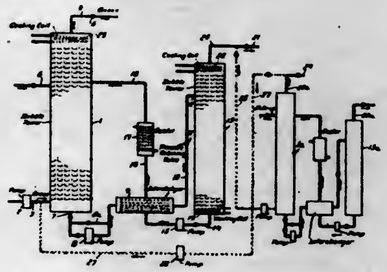
1. In combination, a pipe line, means for forcing liquid therethrough, a member affording an expansion chamber connected with said line and normally containing a body of air trapped therein, a control member

for said liquid forcing means movable from one position to another to start and stop the same, and means movable with the control member for varying the volume of



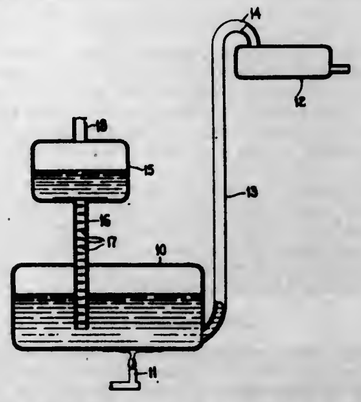
said chamber and decreasing or increasing the same accordingly as said control member is moved to start or stop liquid forcing means.

1,900,653. SHOE BOOTH FOOT REST. VINCENZO MARCHISELLA, New York, N. Y. Filed Oct. 23, 1931. Serial No. 570,652. 5 Claims. (Cl. 155—165.)



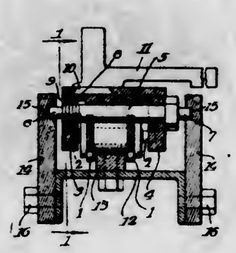
1. In a shoe booth, rear and side walls, foot rests pivotally supported by said side walls, a seat pivotally connected to said rear wall, means operated by said seat to rock said foot rests into the horisontal and vertical positions.

1,900,654. DEVICE FOR EXTRACTING METAL MEMBERS. MILTON MATHEWS, Sedalia, Mo. Filed Oct. 30, 1931. Serial No. 572,032. 4 Claims. (Cl. 29—85.)



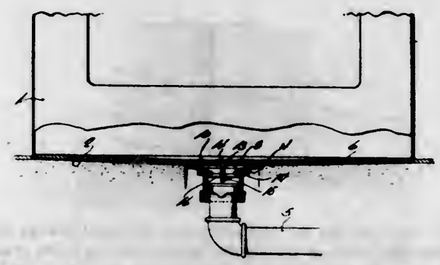
1. In a device for pulling threaded studs and the like, a tension member adapted for engagement with the stud to be extracted, and having a transverse passage therethrough adapted to receive a wedge, a compression member substantially surrounding the tension member having pairs of diametrally opposed wedge-engaging surfaces formed inwardly of one of its ends, the surfaces being arranged in two series of contiguous steps, a wedge extending transversely of the tension and compression members, disposed in bearing engagement with a said pair of said surfaces, the wedge and members being arranged, as the wedge is driven, to cause a movement of the tension member, outwardly of the compression member, said wedge being adapted to be transferred from one pair of said surfaces to any other pair thereof without removing the wedge from the compression member.

1,900,655. SEPARATION OF ACETYLENE. FLOYD J. METZGER, New York, N. Y., assignor to Air Reduction Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 11, 1932. Serial No. 592,304. 7 Claims. (Cl. 260—170.)



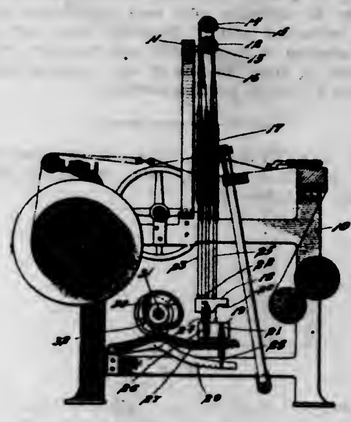
1. The method of effecting the selective separation and recovery of acetylene from gaseous mixtures containing it in admixture with other hydrocarbons which comprises bringing the gases into intimate contact with an alkyl carbonate and thereby effecting selective absorption of the acetylene from the gases, and subsequently heating the resulting liquid to expel absorbed acetylene therefrom.

1,900,656. HEAT PUMP. CARL GEORG MUNTERS, Stockholm, Sweden, assignor, by mesne assignments, to Electrolux Servel Corporation, New York, N. Y., a Corporation of Delaware. Filed May 5, 1931, Serial No. 535,105, and in Germany Sept. 27, 1930. 13 Claims. (Cl. 103—255.)



1. A liquid pump comprising a fluid tight vessel, means for heating said vessel, a container above said vessel, a pipe connected to the bottom of said container and terminating within and adjacent the bottom of said vessel, baffling means within said pipe, and a rising pump pipe connected at one end to the lower part of said vessel and terminating at its other end in a gooseneck.

1,900,657. FEED BELT GUIDE CONSTRUCTION. WALTER F. NEWHOUSE, Benton Harbor, Mich. Filed Apr. 30, 1932. Serial No. 608,439. 7 Claims. (Cl. 198—176.)

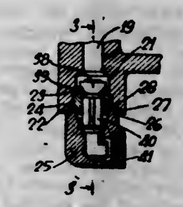


1. In work-feeding or controlling instrumentalities, the combination of a feed chain or link belt, feed dogs held thereon by transverse clamping bolts, and a guide for said chain or link belt, said guide having means for engaging the end portions of said clamping bolts, preventing either lateral or vertical displacement of the feed belt.

1,900,658. SHOWER STALL. EDWARD F. NIEDECKEN, Milwaukee, Wis. Filed Mar. 11, 1931. Serial No. 521,679. 1 Claim. (Cl. 285—37.)

In a metallic shower stall including a bottom and having an outlet opening therein provided with a drain connection secured therearound, said connection forming with the floor a substantially plane surface, an asphalt tile covering for the floor of the stall, at least one of the asphalt tiles of the covering having a beveled outlet opening lying above and registering with the outlet opening of the stall, a rigid perforated plate having a beveled marginal edge and having its upper surface lying in or below the main plane of the asphalt tile covering in the region of the outlet openings, with the beveled periphery of the plate overlapping the beveled marginal portion of the asphalt tile around its outlet opening, and cooperable means between the plate and the drain connection for forcing the plate into clamping engagement with said marginal portion of the asphalt tile to exert downward and lateral pressure on the marginal beveled edge of said tile for preventing passage of water between the tile and perforated plate.

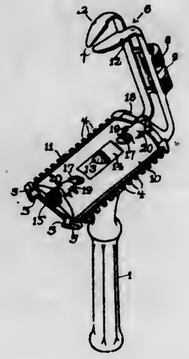
1,900,659. HARNESS MECHANISM FOR A LOOM. DANIEL N. O'BRIEN, Ashton, R. I., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Apr. 15, 1930. Serial No. 444,404. 8 Claims. (Cl. 139—62.)



1. In a loom, two sets of oppositely reciprocating thread-guiding harnesses, sets of rollers of different diameters connected to the different harnesses of the different sets, a jack to which the lower portion of each set of harnesses is connected, means for mounting said jack to rock, and means including said rollers for operating said harnesses and jacks to cause the thread engaging portions of said harnesses of the different sets to pass each other successively during the changing of the shed.

1,900,660. MATRIX BOARD FOR STEREOTYPING. ANTON RUDOLPH PAWLITSCHKO, Little Ferry, N. J., assignor to Western Newspaper Union, a Corporation of Delaware. Filed Oct. 13, 1930. Serial No. 488,543. 8 Claims. (Cl. 91—68.)

1. The process of preparing matrix boards of the type used in stereotyping, which comprises the step of impregnating the surface of matrix paper with a suspension in water of graphite and a resinous material which is hard at normal temperatures.

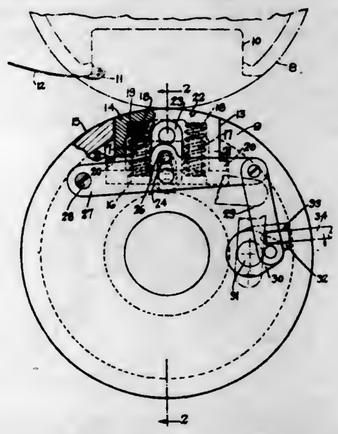


1,900,661. CONDUIT CONNECTION FOR COMPRESSORS. FRANK D. PELTIER, Evansville, Ind., assignor, by mesne assignments, to Servel, Inc., New York, N. Y., a Corporation of Delaware. Filed Feb. 18, 1930. Serial No. 429,280. 1 Claim. (Cl. 137—69.)

In a connecting device of the character described, the combination with a securing wall formed with a return passage therein having a receiving chamber and a pair

of grooves in stepped relation about the outer end of said chamber, of a valve member comprising a flanged sleeve having a collar disposed to fit into the innermost of said grooves and a fluid-actuated valve disposed therein, a packing member disposed in the outermost of said grooves and disposed to close the joint between said collar and its groove, an elbow coupling having a boss adapted to fit slidingly over said sleeve and provided with lugs extending laterally from the elbow, and tension members adapted to engage with said lugs and with said wall member to draw the boss of said coupling into tight engagement with said packing member.

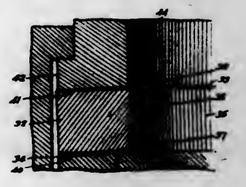
1,900,662. SAFETY RAZOR. OSCAR R. PETERSON, Brooklyn, N. Y. Filed Jan. 16, 1932. Serial No. 587,062. 6 Claims. (Cl. 30—12.)



1. A safety razor including the combination, with a handle, of a frame having guards thereon and a pair of opposite gibs, a blade assembly unit having a plate fitting between said gibs and slidable along the same, a bridge overlying said assembly which is removably attached to said frame and which has means mounted thereon for reciprocating said blade assembly, and a projection upon said handle extending up into said plate in order to limit movement thereof and retain the same and said unit against loss when said bridge is removed, there being a slot in said plate forming a limited clearance for said handle projection.

1,900,663. MANUFACTURE OF CAOUTCHOUC LACQUERS OR VARNISHES. HERMANN PLAUSON, Darmstadt, Germany, assignor, by mesne assignments, to Radiochemisches Forschungs-Institut, G. m. b. H., Darmstadt, Germany, a Limited Company of Germany. Filed June 16, 1930, Serial No. 461,649, and in Germany Jan. 20, 1930. 4 Claims. (Cl. 134—17.)

1. The process of producing rubber lacquers and varnishes, comprising heating rubber in the presence of trinitro phenol together with a volatile hydrocarbon thereby causing the dispersion of the liquefied vulcanized rubber.

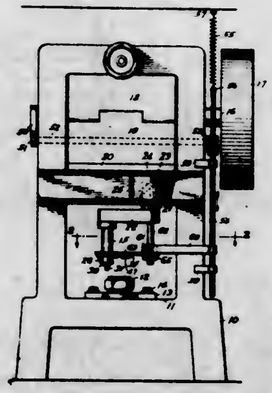


3. The process of producing rubber lacquers and varnishes, comprising heating rubber, a vinyl compound and acetic acid in the presence of tri-nitro-phenol together with a volatile hydrocarbon thereby causing the dispersion of the liquefied vulcanized rubber.

1,900,664. PRINTING PRESS. CARL G. PRITCHARD, Hiram, Ohio, assignor to Harris-Seybold-Potter Company, Cleveland, Ohio, a Corporation of Delaware. Filed Oct. 31, 1930. Serial No. 492,891. 18 Claims. (Cl. 101—415.1.)

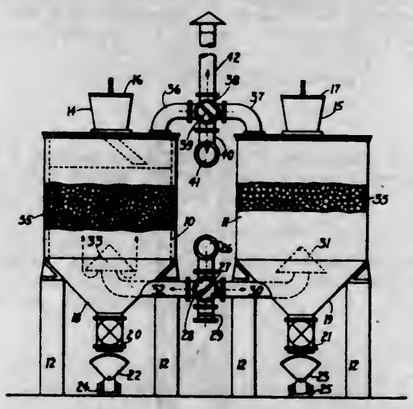
1. In combination, a printing cylinder, a tubular plate fitted over said cylinder and spring-pressed, radially movable means within the cylinder to tension the plate thereon.

1,900,665. DIE FOR EXTRUDING COLLAPSIBLE TUBES. WALTER PRUSSING, Brooklyn, N. Y., assignor to Victor Metal Products Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Feb. 4, 1931. Serial No. 513,293. 20 Claims. (Cl. 207—17.)



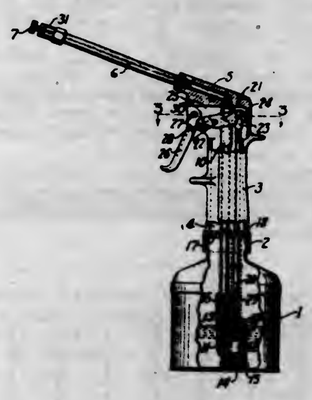
1. In a die set for the extrusion of metal blanks into collapsible tubes, a female die comprising an outer resisting ring of unhardened metal having an inner conical surface surrounding an aperture in the ring, and a hardened metal member having a conical forming recess therein, and provided with an outer conical surface forced into engagement with the inner conical surface of the outer ring, the upper surface of said ring and of said member being inclined downwardly and outwardly, and a male die reciprocating to enter the conical recess to squeese a blank against the conical recess of the member and to force the metal of the blank in the direction of the reciprocation of the male die and thereby to form a tubular wall about the male die.

1,900,666. STRIPPER FOR COLLAPSIBLE TUBE FORMING MACHINES. WALTER PRUSSING, Brooklyn, N. Y., assignor to Victor Metal Products Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Feb. 11, 1931. Serial No. 514,985. 10 Claims. (Cl. 207—9.)



1. In combination with the male die of a collapsible tube extruding machine, means for extruding a tube on to and

around the die, a plate having an opening through which the die is passed, and means for reciprocating the plate relatively to the die to carry said plate into engagement with the open end of the tube carried by the die and to



push the tube past the point of engagement thereof with the die to strip the tube from the die, said reciprocating means comprising a reciprocating spring-pulled rod, a member connecting the rod and the plate and a guide for the member.

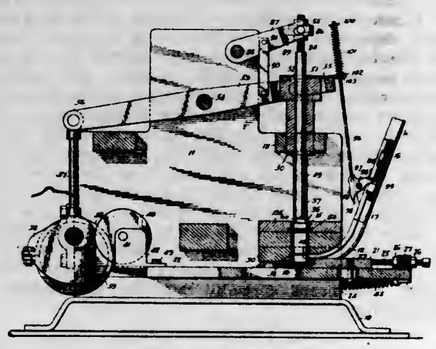
1,900,667. METHOD FOR DESULPHURIZING GASES. EMIL RAVELOMB, Duisburg, Germany, assignor to Charlotte Chemical Laboratories, Inc., Charlotte, N. C., a Corporation of North Carolina. Filed Aug. 19, 1932, Serial No. 629,407, and in Germany May 19, 1931. 6 Claims. (Cl. 23—3.)

5. That process of removing sulphur from gas which comprises forming a purification mass into porous lumps whose ingredients comprise ferric oxide, cement and a suitable filler and having sufficient mechanical strength to withstand a distillation process without disintegrating, providing a plurality of separated batches of the mass and alternately passing gas and atmosphere thru said batches of mass, then placing the mass in a distillation apparatus, when it has absorbed sulphur beyond a given point and subjecting it to the distilling action of a neutral gas at a temperature below 500 degrees Fahrenheit and excluding oxygen from contact with the mass during distillation whereby the mass is freed of sulphur and ready for reuse in its original form for removing sulphureted hydrogen from gas.

1,900,668. LIQUID GUN. HAROLD A. ROSELUND, Toledo, Ohio, assignor to The De Vilbiss Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 19, 1932. Serial No. 599,898. 3 Claims. (Cl. 221—51.)

1. In a device of the class described, a receptacle, a hollow handle member mounted on the top of the receptacle, a tube depending from the interior of the handle down into the receptacle, a pump body carried thereby and having a cylinder in inwardly opening valve-controlled communication with the interior of the receptacle and in outwardly opening valve-controlled communication with said tube, a discharge tube carried by the handle and in communication with said first tube, a plunger operating in said cylinder, a rod extending from the plunger up into the hollow of said handle, an operating lever for the rod mounted in the handle, a control trigger carried by the upper end portion of the handle in operating connection with said lever, whereby an inward movement of the trigger will impart a downward movement of the plunger, and means normally retaining the plunger in raised position.

1,900,669. PENCIL. CRAIG R. SHEAFFER and WILLIAM R. CUTHBERT, Fort Madison, Iowa, assignors to W. A. Sheaffer Pen Co., Fort Madison, Iowa, a Corporation of Delaware. Filed Apr. 1, 1929. Serial No. 351,502. 5 Claims. (Cl. 120—18.)

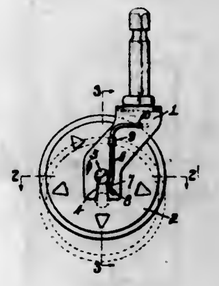


1. A pencil comprising a two-part casing and a lead operating mechanism housed therein, said mechanism comprising relatively movable portions, one of said por-

tions including an anchoring block fixed in one of said parts and the other of said portions including an elongated stem extending a substantial distance beyond said last mentioned part and longitudinally slidable but frictionally held against rotation in the other of said parts over the entire extending area thereof, said parts meeting substantially centrally of the overall length of said pencil.

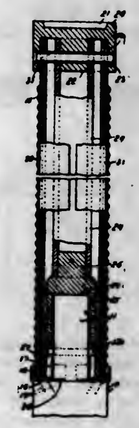
1,900,670. CEMENT OR MATERIALS CONTAINING CEMENT. OTTO STÄLHANE, Stockholm, Sweden. Filed Apr. 23, 1930, Serial No. 446,797, and in Sweden Apr. 27, 1929. 2 Claims. (Cl. 106—27.)

1. A hydraulic binding material consisting of common cement and containing arsenious acid in a proportion of about 50% by weight of arsenious acid calculated on the weight of the cement.



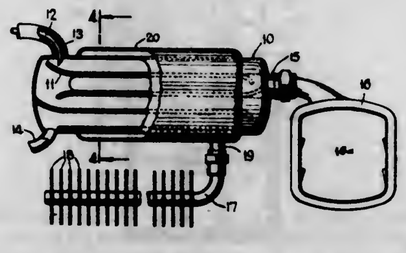
1,900,671. MACHINE FOR INSERTING CORKS INTO CAPS FOR COLLAPSIBLE TUBES. JOHN J. TEMPLE, New York, N. Y., assignor to Victor Metal Products Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Mar. 28, 1931. Serial No. 525,958. 18 Claims. (Cl. 113—80.)

1. In a machine for inserting corks into collapsible tube caps, means for coating the under face of a cork strip with cementitious material, intermittently rotatable means for engaging the leading end of said strip for tensioning said strip and for advancing the strip step by step through the machine, means for shearing a cork from said strip and for advancing the sheared cork into cork-inserting position, a cap chute, a stationary cap stop open at the bottom and having an opening communicating with said chute, a slide for engaging the cap and for advancing said cap from the chute into a position wherein the cap engages the wall of the opening and is aligned coaxially of the cork-inserting means, a projection on said slide for supporting the cap in said position, and means for withdrawing said projection preparatory to the advance of the succeeding cap and thereby removing the bottom support for said cap whereby the corked cap is discharged by gravity from the machine.



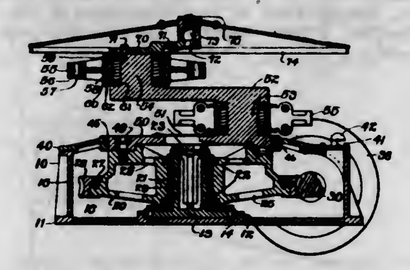
18. In a machine of the character described, a cap chute, means for releasing a single cap at a time from said chute to permit the released cap to drop to the bottom of the chute, means for advancing the released cap into, and for aligning the cap in, cork-inserting position, and means for inserting a disc into the cap comprising a stationary die having an opening therein for the passage of a cork strip, means reciprocating in the die for shearing a disc from the strip and for pressing the sheared disc into the cap, a pair of oscillatory levers for operating the reciprocating means, and means for operatively connecting the levers for simultaneous movement in the same direction but at different speeds.

1,900,672. CASTER. CLEMENT R. UHL, Toledo, Ohio, assignor to The Toledo Metal Furniture Company, Toledo, Ohio, a Corporation of Ohio. Filed July 8, 1931. Serial No. 549,458. 2 Claims. (Cl. 16—18.)



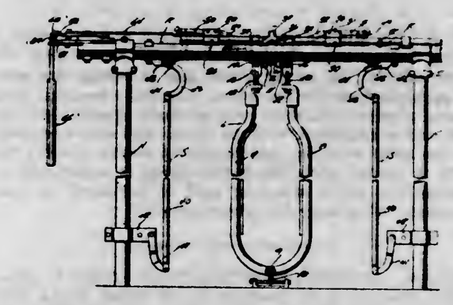
1. In a caster, a fork having upwardly extending bearing notches in the lower ends of its legs, a bearing pin mounted at its ends in said notches and removable therefrom lengthwise of the notches and transversely of the pin axis, said pin projecting at its ends beyond the outer sides of the fork legs, a wheel rotatably mounted on the pin within the fork, and a spring finger fixed at one end to the outer side of each leg and having its free end projecting downwardly at a side of the respective projecting end of the pin and bearing laterally thereagainst, each of said fingers having a hump near its free end engaging under the respective side of the pin to yieldingly resist a removal of the pin from or insertion of the same in bearing position in the fork notches.

1,900,673. COMPOSITE PILE. RICHARD E. TALMADGE, Nutley, N. J., assignor to MacArthur Concrete Pile Corporation, New York, N. Y., a Corporation of New York. Filed May 9, 1931. Serial No. 536,094. 6 Claims. (Cl. 61—53.)



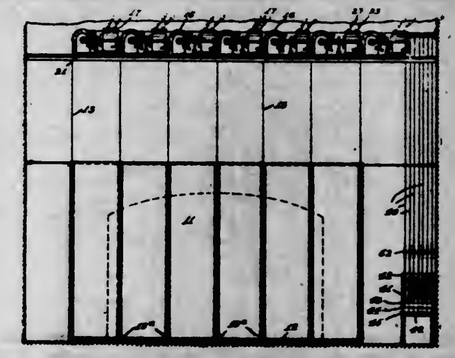
1. A device for bracing and reinforcing a shell disposed on top of a pile section and for driving said section comprising a head adapted to be driven by a pile hammer, members connected thereto and movable laterally to grip the shell, and a rigid member connected to said head and having a socket at its lower end for receiving the tenon of the pile section and for transmitting the driving force directly to said section.

1,900,674. TWO-TEMPERATURE EVAPORATOR. ROBERT S. TAYLOR, Evansville, Ind., assignor to Electrolux Servel Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 7, 1931. Serial No. 514,154. 13 Claims. (Cl. 62—95.)



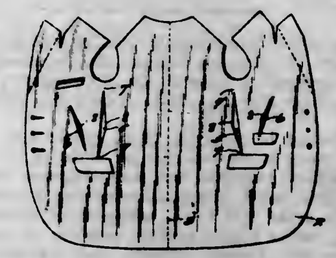
5. A cooling element comprising a casing enclosing an evaporating chamber, connections for the circulation of gas through said chamber, an inlet for cooling liquid, two substantially thermally independent liquid spreading members in said chamber arranged to receive liquid from said inlet and located serially with respect to the gas circulation, and independent means for transmitting heat from without said casing to each of said members.

1,900,675. PUMPING POWER. WALTER C. TROUT, Lufkin, Tex. Filed Oct. 22, 1928. Serial No. 314,117. 9 Claims. (Cl. 74—56.)



2. A pumping power including a crank arm, completely enclosed driving gear for said arm and a protecting canopy carried by said arm.

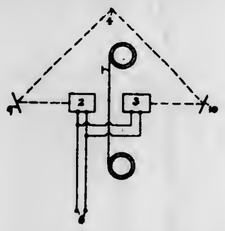
1,900,676. ANIMAL STANCHION. JOSEPH WAKSMONCKI, Mosinee, Wis. Filed Apr. 16, 1931. Serial No. 530,488. 11 Claims. (Cl. 119—148.)



1. In an animal stall, a supporting rail structure, a stanchion including a pair of stanchion members, a separate bracket plate for each stanchion member, each bracket plate having means whereby it is adjustably mounted on the supporting rail structure, a pair of operating rods, latches between the operating rods and the brackets and means for shifting the operating rods in opposite directions.

1,900,677. CURTAIN AND CONTROLLING MEANS THEREFOR. GUSTAV A. WEIDHAAS, Bronxville, PETER CLARK, Great Neck, and HOWARD V. HARDING, New York, N. Y.; said Clark and said Harding assignors to said Weidhaas. Filed Dec. 4, 1929. Serial No. 411,489. 13 Claims. (Cl. 272—22.)

1. In a stage curtain controlling device a curtain, lines connected thereto, means for hoisting and lowering said lines, motion indicating members and a means for reducing the motion from said lines to said members.

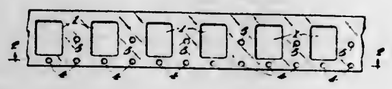


1,900,678. ONE-PIECE COAT. STEFAN WEBER, Easton, Pa. Filed Sept. 11, 1931. Serial No. 562,835. 1 Claim. (Cl. 2—93.)

A one piece coat garment blank having arm openings and integral front and rear panels, a portion of the blank between each of the front and rear panels having darts extending from points immediately adjacent and just below arm openings downwardly on a substantial angle to the center of the back panel and terminating relatively close to lower pockets of the blank, said darts being located substantially where the front panels connect with the back panel, said blank having additional darts in the front panels substantially shorter than and at substantial acute angles to the first darts, the second darts extending from lower pockets of the blank toward and through the front panels and being located between the first darts and the edges of the front panels, both sets of darts being closed at their opposite ends and similarly constructed with certain of their edges substantially straight facing nearest the front panels, and certain other of their edges concaved toward the back panel, the concavities of the concaved edges being not so great as would prevent the concaved edges from matching with the straight edges when said edges are stitched together and the garment

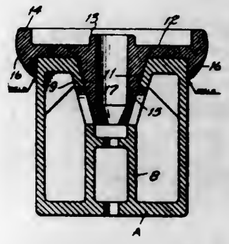
thoroughly pressed, the acute angle arrangement of each pair of darts causing pulling strains on the material from a point adjacent the edge of the front panel on varying angles transversely through the darts toward the back panel, thereby rendering a proper fitting of the coat garment to the curvatures of the body above the hips and under the armholes.

1,900,679. SOUND RECORDING SYSTEM. ALFRED WHITAKER, West Drayton, England, assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y., a Corporation of Delaware. Filed Oct. 25, 1928, Serial No. 315,046, and in Great Britain Oct. 28, 1927. 9 Claims. (Cl. 274—1.)



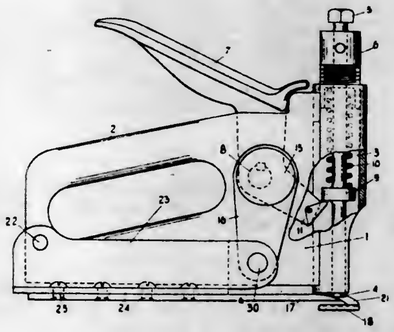
2. In a sound recording system of the type wherein a beam of light the intensity of which is controlled in accordance with sounds to be recorded is caused to produce an image on a photo-sensitive surface, means for directing at least two beams of light on said surface to produce superposed images thereon, and separate means for controlling the intensity of each of said beams in accordance with the sounds to be recorded, one of said controlling means having maximum response at high frequencies and another at low frequencies within the band to be recorded, whereby a substantially uniform characteristic is obtained over the band.

1,900,680. PURIFICATION OF CRUDE MALEIC ACIDS. HEINRICH W. WITZEL, Ingram, Pa., assignor to The Selden Company, Pittsburgh, Pa., a Corporation of Delaware. Filed July 21, 1931. Serial No. 552,194. 3 Claims. (Cl. 260—122.)



1. A method of purifying crude maleic acid obtained as a by-product in the catalytic air-oxidation of naphthalene to phthalic anhydride and containing iron compounds as impurities, which comprises subjecting a water solution of the crude acid to the action of an amount of an inorgantic, water soluble cyanide sufficient to react with all of the iron present, filtering and crystallizing out the purified acid from the filtrate.

1,900,681. METHOD OF REENFORCING CINEMATOGRAPH FILMS. ARTHUR H. ADAMS, Yonkers, N. Y., assignor to F. Leo Crilly, London, England. Filed Nov. 25, 1929. Serial No. 409,737. 14 Claims. (Cl. 88—19.5.)

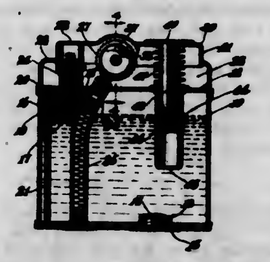


2. A cinematographic film strip comprising, a film strip and a reenforcing strip secured thereto by a plurality of tubular burrs formed of the reenforcing strip bradded upon the film strip, said burrs being located near but not associated with the sprocket holes of the strips.

1,900,682. METHOD OF RECLAIMING CAR BOLSTERS. JAMES R. ALCOTT, Madison, Ill., assignor of one-half to Steadman O. Taylor, Richmond Heights, Mo. Filed Nov. 13, 1929. Serial No. 406,778. 4 Claims. (Cl. 29—164.)

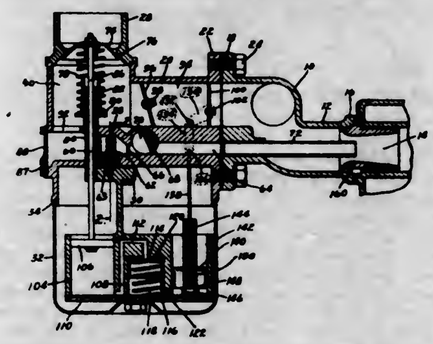
1. The method of reclaiming cast metal car bolsters having mutilated center bearings provided with annular bearing members formed integral with and projecting from the cast bolsters, which comprises destroying the annular projecting portions of the mutilated center bearing to provide a seat for a center plate, and then securing a separate center plate on said seat.

1,900,683. HAND STITCHING TOOL. HOWARD G. ALLEN, Niagara Falls, N. Y., assignor to H. R. Bliss Company, Inc., Niagara Falls, N. Y., a Corporation of New York. Filed Nov. 7, 1930. Serial No. 494,088. 3 Claims. (Cl. 1—50.)



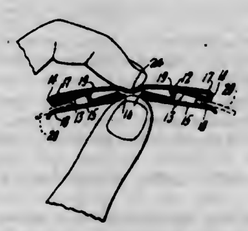
1. A hand stitching tool comprising a body, a driver, a spring acting upon the driver, means for raising the driver against the spring action and to release the same for spring-actuated driver action, a pivotally mounted anvil having a stitch clinching part normally spaced from the body and in alignment with the driver, and means connecting the anvil with the first mentioned means whereby the anvil is rocked when the driver spring is compressed to position the stitch clinching part of the anvil in close proximity to the body for driver action.

1,900,684. LIGHTER CONSTRUCTION. LOUIS V. ARONSON, Newark, N. J., assignor to Art Metal Works, Inc., a Corporation of New Jersey. Filed Nov. 24, 1928. Serial No. 321,551. 12 Claims. (Cl. 67—7.1.)



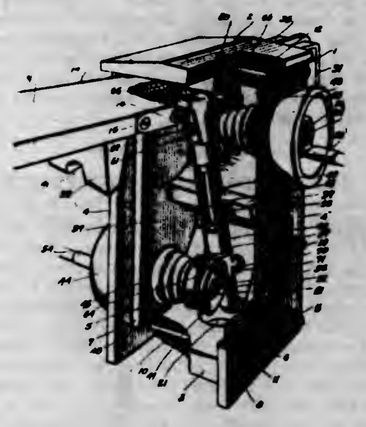
9. In a pyrophoric lighter, spark-producing means, operating means therefor comprising a reciprocatory member,

a plural-chamber casing, a wick in one of the chambers, another of the chambers adapted to contain a body of



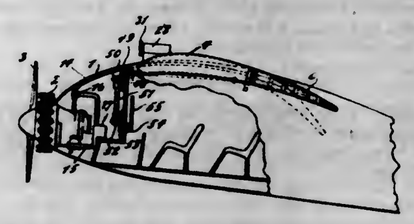
fuel, and reciprocatory means actuated by said reciprocatory member for forcing fuel from said first named chamber into said second named chamber.

1,900,685. CHARGE FORMING DEVICE. FRED E. ABELTINS, Dayton, Ohio, assignor to Delco Products Corporation, Anderson, Ind., a Corporation of Delaware. Filed Sept. 7, 1929. Serial No. 391,059. 7 Claims. (Cl. 261—55.)



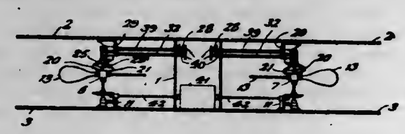
1. A charge forming device for internal combustion engines comprising a mixing chamber, fuel and air inlets therefor, a throttle controlling the flow of mixture therefrom, main and auxiliary air valves controlling the admission of air to the mixing chamber, a plurality of means for retarding the opening movements of these air valves and pressure operated means for regulating the effect of all said retarding devices.

1,900,686. CLASP FOR COLLARS, ETC. WILLIAM H. AVERILL, Boston, Mass., assignor of one-half to Joseph Pollak, Boston, Mass. Filed June 9, 1932. Serial No. 616,420. 3 Claims. (Cl. 24—81.)



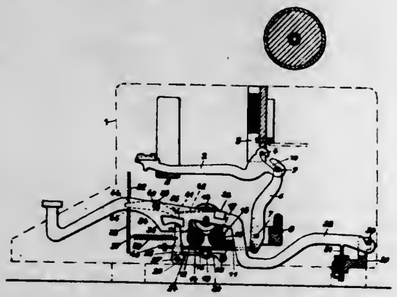
1. A clasp of the character stated comprising an oblong bar, inwardly facing outer jaws at the ends of said bar, resilient connecting portions fixed to said outer jaws and extending in opposite directions behind the bar, and end portions fixed to the inner ends of the connecting portions, the outer extremities of the end portions constituting inner jaws, said connecting portions including resilient struts bearing on the bar and on the mid length of the end portions, so that said end portions constitute levers whose fulcrums, formed by said struts, normally maintain the inner jaws pressed against the outer jaws, and permit displacement of the inner jaws to permit unopposed insertion of collar parts, or the like, between said jaws.

1,900,687. SWITCH. THOMAS B. BASH, Kansas City, Mo. Filed Mar. 16, 1925. Serial No. 15,788. 18 Claims. (Cl. 200—127.)



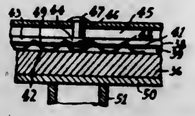
3. In a switch, a box of insulating material, comprising a unitary element constituting back, top and bottom, detachable reversible sides, means connecting the sides to the unitary element, a hinged door suspended from the top of the box, a terminal at the lower portion of one side and a terminal at the upper portion of the other side, a removable fusible conductor connecting the terminals, and means on the inside of the door for holding the conductor in engagement with the terminals when the door is closed.

1,900,688. AIRPLANE WING. FRANK G. BAUM, San Francisco, Calif. Filed Mar. 6, 1930. Serial No. 433,555. 6 Claims. (Cl. 244—29.)



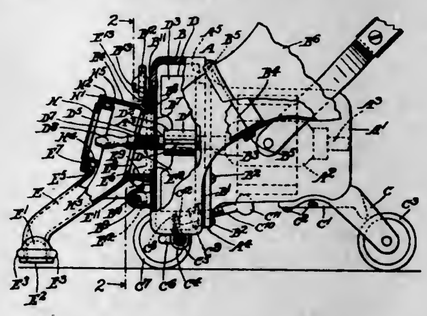
1. In an airplane, in combination with the fuselage and the main wings extending laterally therefrom, auxiliary wings adapted to have their trailing ends raised and lowered consisting of a plurality of independent sections secured to the trailing edges of the main wings for rotation about their longitudinal axis, means to control the disposition of the trailing edges of the auxiliary wings, and means for rotating the sections of the auxiliary wings about their longitudinal axis.

1,900,689. AIRPLANE. FRANK G. BAUM, San Francisco, Calif. Filed Mar. 6, 1930. Serial No. 435,556. 10 Claims. (Cl. 244—15.)



2. In an airplane, in combination, a propeller adapted to exert a lifting and a propelling force comprising a hub, a plurality of propeller blades mounted in the hub to oscillate about their longitudinal axes, means for oscillating the propeller blades to impart a feathering action thereto to render the blades successively ineffective during one half of each rotation of the propeller, means for rotating the propeller, and means controlling the feathering action of the propeller blades for varying the direction of application of the propelling force exerted on the airplane by the propeller blades.

1,900,690. POWER DRIVEN TYPEWRITER. HUGO BENZING, Dresden, Germany. Filed Sept. 8, 1931, Serial No. 561,706, and in Germany Jan. 5, 1929. 5 Claims. (Cl. 197—17.)

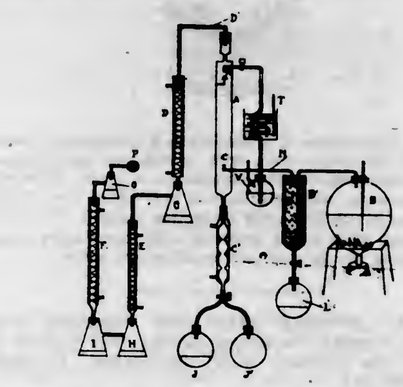


1. In a device of the character described, in combination, a continuously rotating roller, a plurality of keys, a stop connected with one of said keys, a lever adapted to come in contact with said stop, a spring connected with said lever, a cam rigidly connected with said lever, another lever associated with said cam, means for adjusting the position of the second-mentioned lever, a roll connected with the second-mentioned lever and movable therewith, a friction rod adapted to be pressed by said roll against said rotating roller, a type bar, and means connecting said type bar with said friction rod.

1,900,691. ADJUSTABLE MILK BOTTLE HOLDER FOR CRIBS AND THE LIKE. ERNEST J. CARLSON, Reading, Pa. Filed Aug. 31, 1932. Serial No. 631,200. 4 Claims. (Cl. 248—65.)

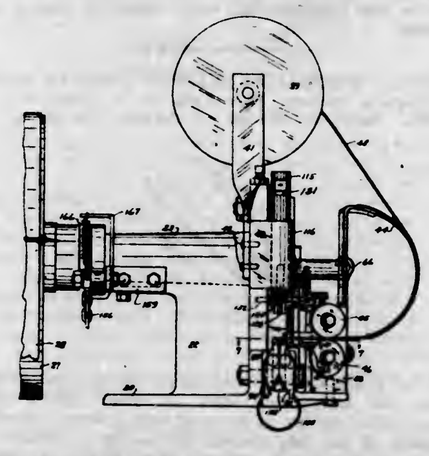
2. A device of the class described comprising an arm adapted to be mounted between opposite walls of a crib or the like, a sleeve slidably mounted on said arm and having a bottle-holding bracket attached thereto, said arm having a longitudinal slot extending throughout the length of said arm adjacent the axis thereof, said arm having a second longitudinal slot extending from the surface of said arm into said first slot and communicating therewith throughout its length, a cam slidably mounted in said first slot and having a stem extending through said second slot, means on said stem for preventing rotation of said stem, and resilient means mounted in said first slot for releasably retaining said cam in any longitudinal position in said first slot.

1,900,692. VACUUM CLEANER. WILLIAM J. CLEMENTS, Chicago, Ill., assignor to Clements Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Apr. 26, 1930. Serial No. 447,579. 4 Claims. (Cl. 15—9.)



1. In a suction cleaner, a pump chamber, having integral front and rear walls, the front wall of said chamber being formed with an air inlet passage therethrough, a nozzle and means for removably securing it in operative relation with said air passage, said nozzle including an inlet portion adapted to be opposed to a surface being cleaned and a connecting portion extending thence for operative connection with the air passage, said connecting portion having aligned openings receiving a connecting inlet tube, one of said openings being in the line of flow of air from the inlet portion to the air passage of the pump chamber, whereby a connection of the tube closes the opening to the inlet portion of the nozzle.

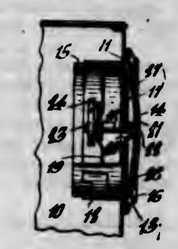
1,900,693. METAL SALTS OF HALF ACID ESTERS OF FATTY HYDROXYLATED OIL AND PROCESS OF MAKING THEM. COLE COOLIDGE, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Oct. 7, 1930. Serial No. 487,022. 13 Claims. (Cl. 260—11.)



1. A process which comprises forming an acid ester from a fatty hydroxylated oil and a polybasic acid, and replacing the hydrogens of the free carboxyl groups of the partially esterified polybasic acid with a metal.

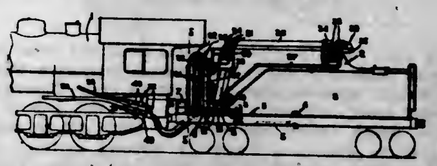
1,900,694. APPARATUS FOR THE REMOVAL OF ALCOHOL FROM WINE, CIDER, BEER, AND OTHER ALCOHOLIC PRODUCTS. MARC COUPEAU, Paris, and MAURICE DELAVILLE, St. Maurice, France, assignors of one-third to André Cornillac, Paris, France. Original application filed July 23, 1930, Serial No. 469,982, and in France June 25, 1930. Divided and this application filed Aug. 7, 1931. Serial No. 555,666. 1 Claim. (Cl. 202—79.)

An apparatus for the treatment of wines or other alcoholic liquids for the removal of alcohol therefrom, comprising a still provided with a chamber having a distilling space which is substantially clear and unobstructed throughout the total height of said chamber, a vacuum pump communicating therewith, a sprayer mounted at the upper part of said chamber together with means for supplying the same with the liquid to be treated, an injector mounted at the lower part of said chamber and means for supplying steam to the same, a conduit at the top of said chamber for the exit of the said steam charged with alcohol vapors, the lower part of the chamber being connected with a vessel adapted to collect the liquid which has been freed from alcohol.



1,900,695. METHOD OF AND MACHINE FOR BINDING CABLES. ARTHUR R. CURTIS, Cleveland, Ohio, assignor to Superior Carbon Products, Incorporated, Cleveland, Ohio, a Corporation of New York. Filed Mar. 11, 1930. Serial No. 434,996. 10 Claims. (Cl. 140—93.)

1. A method of binding the insulation of electric conductors which includes the steps of directing a length of binding wire to a position adjacent a conductor and obliquely to the axis thereof, initially forming a loop of wire around the conductor by forcing the conductor and the wire into a pair of clamping jaws, completing the loop by clamping the jaws together, and clinching the loop by forcing the ends of the wire into engagement with the conductor.



2. In a cable binding machine, the combination of a frame, a shaft mounted on the frame, a driving pulley associated with the shaft, a single rotation clutch adapted to drivingly connect said pulley and shaft, a pair of fingers pivotally mounted on said frame, said fingers having jaws adapted to clamp a cable therein, means for feeding wire over said jaws obliquely to the axis of a cable positioned over said jaws, means for cutting off a length of the wire, means for forcing the cable and said length of wire into said jaws, thereby partially forming a loop of wire around the cable, means for actuating said jaws to clamp the cable, thereby completing the loop, means for bending the ends of the wire into engagement with the cable, means for ejecting the cable from the jaws, and cams mounted on said shaft and adapted to actuate each of the above named means in proper timed relation.

1,900,696. OVEN THERMOMETER. GEORGE J. DAY, Buffalo, N. Y. Filed Jan. 5, 1932. Serial No. 584,823. 3 Claims. (Cl. 73—119.)

3. An oven thermometer, comprising a casing having a substantially conical bearing projecting forwardly from its front side, a face plate applied to the front of the casing in spaced relation to its conical bearing and having oppositely disposed sight openings therein disposed about an axis coextensive with that of said bearing, a thermostatic element applied to the casing and including a revolvable post projecting axially through the conical bearing, and a dial plate fixed on the front end of said post in the space between said face plate and said bearing and in axial contact with the latter, the dial having an arcuate row of temperature indicia at one side of its center and a like row of oven-condition indicia at the opposite side thereof for registering, respectively, with the sight openings in said face plate.

1,900,697. FEED WATER HEATER FOR LOCOMOTIVES. MYRON W. DOLE, Belmont, and MORTIMER SILVERMAN, Brookline, Mass. Filed Nov. 6, 1929. Serial No. 405,225. 17 Claims. (Cl. 122—434.)

1. In a feed water heater for locomotives, the combination with a locomotive tender having a main water compartment, a feed-water heating compartment and a combined passage and preheating compartment interposed between the water compartment and feed-water heating compartment and communicating with both, said compartment being arranged to permit gravitational flow from the water compartment to the feed-water heating compartment through the passage compartment, non-return valves controlling said communications which permit such flow but prevent counter flow said feed-water heating compartment having an upwardly-directed extension provided with a steam dome above the maximum water level in the main compartment, of means to deliver exhaust steam into the feed-water heating compartment to heat the water therein, and a hot water return for delivering any water carried into or steam condensed in the steam dome back to the passage and preheating compartment thereby to preheat the water in said compartment.

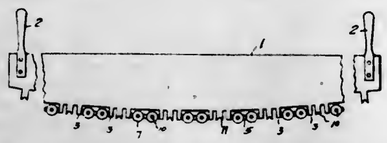
1,900,698. INSULATING BODY. GEORGE H. ELLIS, St. Paul, Minn., assignor to The Insulite Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Aug. 10, 1929. Serial No. 385,082. 8 Claims. (Cl. 92—21.)

1. A process for making thick heat insulating bodies which consists in fiberizing wood to produce a coarse fiber too long and too coarse for the coarsest grade of paper, hydrolizing the pulp, forming the pulp into a thick felted sheet, drying, and then simultaneously pressing and heating the felted product while dry.

1,900,699. WATERPROOF INSULATING BODY. GEORGE H. ELLIS, St. Paul, Minn., assignor to The Insulite Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Nov. 15, 1929. Serial No. 407,580. 8 Claims. (Cl. 92—21.)

1. A process for producing hard wood-like bodies which consists in preparing raw wood pulp and mixing therewith pulverized asphalt, manipulating the batch to form a felted sheet, drying, and then submitting to a pressure within the range of from one hundred fifty to two hundred pounds per square inch at a temperature of approximately three hundred fifty degrees Fahrenheit for from fifteen to thirty minutes.

1,900,700. CELLULOSE NITRATE LACQUER. HANS FINKELSTEIN, Uerdingen (Niederrhein), Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed July 13, 1928, Serial No. 292,596, and in Germany Dec. 22, 1924. 3 Claims. (Cl. 134—79.)



1. A composition of matter comprising cellulose nitrate, an artificial resin prepared from cyclohexanone, formaldehyde and phenol, and a solvent therefor containing a substantial proportion of a butylene glycol monoalkyl ether corresponding to the general formula $HO—C_4H_8—OR$ (in which R indicates an alkyl group with from 1 to 4 carbon atoms).

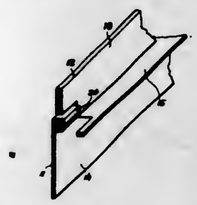
1,900,701. PLOW. GUY B. FISHER, Blandlake, Tex. Filed Feb. 16, 1931. Serial No. 515,992. 1 Claim. (Cl. 97—52.)

A plow comprising a cylindrical drum like roller having an outer shell and a filler therein forming a weight, outwardly extending forwardly curved arms thereon and spaced apart, lengthwise blades on the outer ends of the arms, which extend approximately from end to end of the drum, and have forwardly directed cutting edges and brackets secured to the drum and resting against the rear sides of said arms.

1,900,702. SAW. GUY B. FISHER, Blandlake, Tex. Filed May 4, 1931. Serial No. 534,823. 4 Claims. (Cl. 143—133.)

1. In a saw having a blade and anchors at the operative edge thereof; drag teeth pivoted at their upper ends to the blade and lying alongside the opposite margins of the anchor.

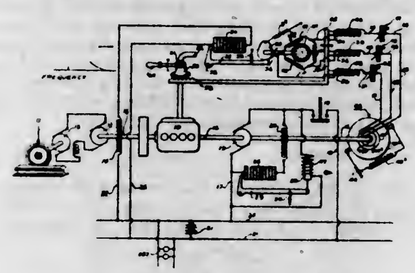
1,900,703. SNOWPLOW. CARL H. FRINK, Clayton, N. Y. Filed May 6, 1932. Serial No. 609,679. 6 Claims. (Cl. 37—44.)



1. In a snow plow, a moldboard and a supporting frame therefore, in combination with a deflector plate hinged to the upper edge of the moldboard to swing forwardly and rearwardly relatively thereto, and means for holding said plate in its forwardly projecting position, the moldboard and plate being provided with cooperative stops for limiting the forward movement of the plate.

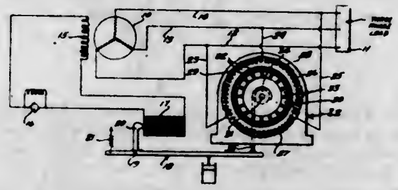
1,900,704. DIVIDING STRIP FOR TERRAZZO AND LIKE FLOORS. PASQUALE GALASSI, New York, N. Y. Filed July 2, 1930. Serial No. 465,825. 4 Claims. (Cl. 94—17.)

1. A floor pattern and guide strip comprising a metallic strip having an upper portion provided with an uninterrupted edge, a lower portion comprising spaced lugs and intervening notches, the bottom edges of said lugs having substantially the same thickness as the body portions thereof, and spaced laterally projecting rib-members in said upper portion spaced from the top of said notches.



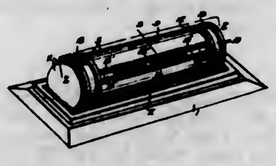
1,900,705. BIMETALLIC FLANGED DIVIDING STRIP. PASQUALE GALASSI, New York, N. Y. Filed Nov. 6, 1931. Serial No. 573,444. 7 Claims. (Cl. 94—17.)

1. In a bimetallic divider strip for terrazzo or like floors, the combination, with an upper section, of a lower section having at its inner edge a flange extending laterally of the body thereof, and having a plurality of longitudinally spaced tongues offset from and transversely of said flange, said tongues projecting upwardly from said flange, and being connected in a substantially permanent manner to the upper section to form a unitary strip with said lower section.



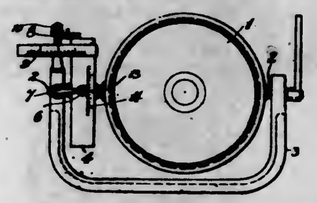
1,900,706. VEHICLE DRIVING APPARATUS AND SYSTEM. FRANK W. GODSEY, Jr., New Haven, Conn., assignor to The Safety Car Heating & Lighting Company, a Corporation of New Jersey. Filed Aug. 19, 1929. Serial No. 387,052. 27 Claims. (Cl. 290—17.)

1. In apparatus of the character described, in combination, a prime mover, a generator, means forming an electrical load for said generator, means for controlling the power supplied to said load, means supplying an alternating potential, the frequency and magnitude of which vary with changes in speed of said prime mover, electromagnetic means for actuating said control means, said electromagnetic means varying in effectiveness with



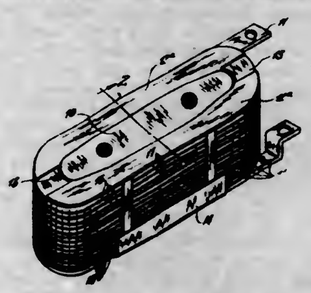
the square of the voltage applied thereto and being connected to be responsive to said alternating potential, and means causing the alternating current supplied to said electromagnetic means to vary with the frequency.

1,900,707. REGULATION OF ALTERNATING CURRENT CIRCUITS. FRANK W. GODSEY, Jr., New Haven, Conn., assignor to The Safety Car Heating & Lighting Company, a Corporation of New Jersey. Filed Jan. 17, 1931. Serial No. 509,460. 17 Claims. (Cl. 171—119.)



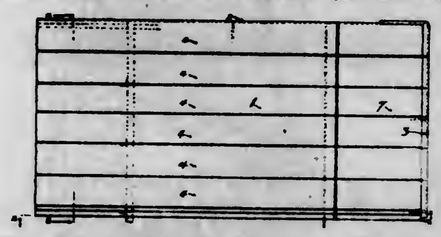
1. In apparatus of the character described, in combination, a source of alternating current, a load supplied therefrom, a carbon pile for affecting a function of the energy supplied to said load, and means for controlling said carbon pile, said means including a spring acting in one direction, a rotary magnetic member opposing the action of said spring and having a winding thereon, and means energized by alternating current and responsive to changes in said function for producing a rotating magnetic field affecting the rotary position of said rotary member, said rotary member being constructed so that change in its rotary position has substantially no appreciable effect upon the current energizing said last-mentioned means.

1,900,708. MORTUARY RECORD CONTAINER. HANS P. HANSEN, Syracuse, N. Y. Filed Mar. 30, 1931. Serial No. 526,307. 2 Claims. (Cl. 40—19.)



2. In a mortuary record holder the combination of a tubular section, cap sections fitted over and upon both ends of the tubular section and having their inner ends extended beyond the areas of contact with the tubular section and in spaced relation thereto to form annular grooves, said tubular section being provided upon its outer surface with a pair of lengthwise guide grooves undercut transversely, and type plates engaging in said grooves and slidable lengthwise thereof.

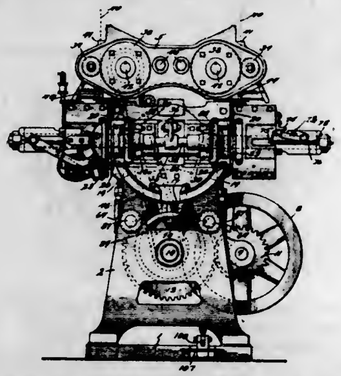
1,900,709. GYROSCOPIC NAVIGATIONAL INSTRUMENT. JAMES BLACKLOCK HENDERSON, Lee, England. Filed May 26, 1917, Serial No. 171,819, and in Great Britain May 11, 1916. 39 Claims. (Cl. 33—204.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L. 1313.)



1. In an instrument of the class described, a gyroscope having a rotary axis, a casing for said gyroscope, horisontal supporting trunnions for said casing, said rotary and trunnion axes being at right angles to each other, and means for indicating the rate of tilt of the gyroscope about the trunnion axis.

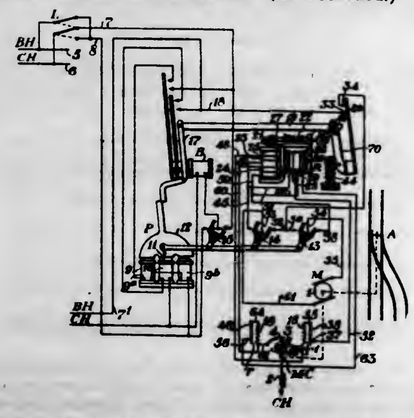
1,900,710. INSULATOR. JOHN H. HERTNER, Lakewood, Ohio, assignor to The Hertner Electric Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 16, 1932. Serial No. 593,296. 10 Claims. (Cl. 175—21.)

1. An electrical insulator comprising a metallic strip having thereon a metallic phosphate coating.



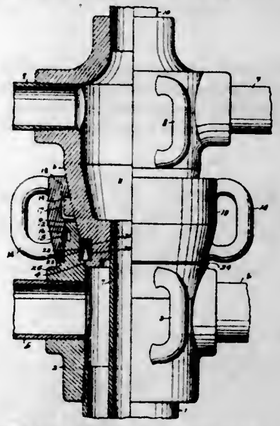
1,900,711. SHEET METAL VESSEL CONSTRUCTION. JAMES E. HOWARD, Jeffersonville, Ind. Filed Sept. 26, 1930. Serial No. 484,488. 5 Claims. (Cl. 114—26.)

2. In a vessel construction having top, bottom and sides of overlapping interengaged sheet metal members, each having along one edge thereof aligned portions bent substantially at right angles to said members, and having flanges formed at the ends of said bent portions, of a



plurality of internal truss and strut members adapted to rigidly support the top, bottom and sides by securement thereof to the aligned bent portions of the overlapping metal members mentioned.

1,900,712. MACHINE FOR MAKING AND INSERTING BASKET HANDLES. LESLIE M. HILE, Benton Harbor, Mich. Filed May 18, 1931. Serial No. 538,155. 35 Claims. (Cl. 140—93.)

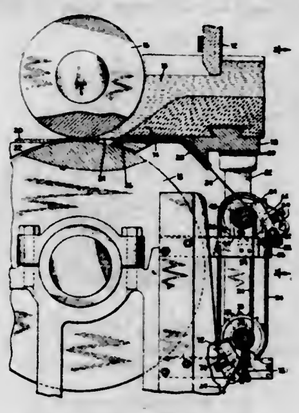


1. In machinery for making and applying upstanding wire handles to baskets, the combination of instrumentalities for performing the successive steps necessary for cutting off a length of wire and forming the same into a bail-shaped wire handle member, and for inserting end portions of said wire member inwardly through the side of the basket, to form an upwardly extending handle, with exposed end portions inside the basket, mechanism having clinching means disposed entirely within the basket for deflecting and bending the inner straight ends of the wire member into position flat wise against the inner side of the basket, formed to position said inner ends at angles to the upright legs of said wire member, whereby said straight end portions will be disposed entirely inside of the basket, and power operated means for actuating said instrumentalities and said mechanism in suitably timed relation to simultaneously clinch the wire ends entirely on the inside of the basket.

1,900,713. RAILWAY TRAFFIC CONTROLLING APPARATUS. CLAUDE M. HINES, Edgewood, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed May 11, 1931. Serial No. 536,497. 2 Claims. (Cl. 175—294.)

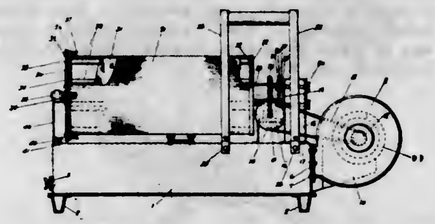
1. In combination, an electric motor, an operating circuit for said motor, a circuit breaker for controlling the supply of current to said motor having a first and a second core, an operating winding on said first core included in said motor circuit, means controlled by said operating winding for tripping said circuit breaker, a thermal relay having a heating winding and a normally closed contact, a holding winding on said second core connected in parallel with said operating winding and including said heating winding and said contact in series whereby said holding winding and said heating winding become energized from the potential across said operating winding over said contact, and means controlled by said holding winding for preventing said circuit breaker from tripping.

1,900,714. TUBING HEAD. GRANVILLE A. HUMASON and WILLIAM A. RAYMOND, Houston, Tex. Filed July 16, 1931. Serial No. 551,122. 2 Claims. Cl. 166—14.)



1. In a tubing head, the combination with a bowl having an inside seat, of a tubing hanger in the bowl on said seat, a turnable ring on the bowl, interlocking means carried by said ring and hanger arranged to be interlocked or released by appropriate turning movements of said ring, and an annular, resilient insert in said hanger forming a packing between the hanger and seat and whose underside has an annular groove aligned with the joint between the hanger and seat.

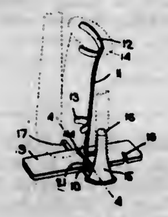
1,900,715. METHOD OF CARRYING OUT EXOTHERMIC CATALYTIC VAPOR PHASE REACTIONS. ALPHONS O. JAEGER, Crafton, Pa., assignor, by mesne assignments, to The Selden Research & Engineering Corporation, Pittsburgh, Pa., a Corporation of Delaware. Filed May 4, 1928. Serial No. 275,044. 9 Claims. (Cl. 260—123.)



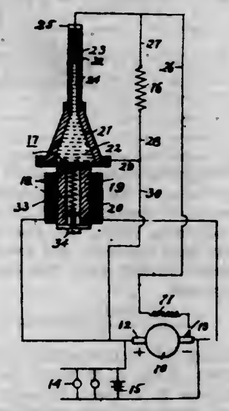
1. A method of carrying out vapor phase catalytic reactions, which comprises passing reaction gases through at least one catalyst zone, absorbing the exothermic heat of reaction by a non-boiling liquid in heat exchanging relation thereto, removing the liquid from the catalytic zone, reducing its pressure to permit a part at least of the exothermic heat absorbed to be given off as latent heat of vaporization, condensing the vapors and returning the condensate and unboiled liquid to the catalytic zone at the pressure there existing.

1,900,716. WIRE GLASS MANUFACTURE. GUSTAV H. JUERGENS, St. Louis, Mo., assignor to Mississippi Glass Company, New York, N. Y., a Corporation of New York. Filed Jan. 10, 1930. Serial No. 419,792. 8 Claims. (Cl. 49—32.)

1. In apparatus of the class described, in combination, a forming pass, means for feeding molten metal to said forming pass, means for feeding reinforcing wire to said pass through said metal, and means for preheating said wire while being fed, whereby said wire enters the molten metal at a comparatively high temperature, said preheating means comprising devices for supplying electric current to said wires while they are under control of said feeding means.

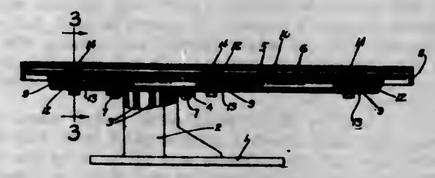


1,900,717. CYANIDE APPLICATOR. KENNETH A. KILBOURNE, Elizabeth, N. J., assignor to American Cyanamid Company, New York, N. Y., a Corporation of Maine. Filed July 7, 1925. Serial No. 41,925. 38 Claims. (Cl. 167—35.)



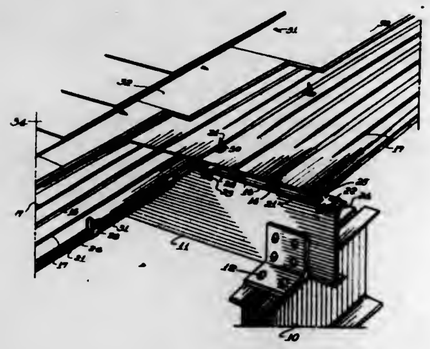
1. An apparatus for fumigating comprising a receiver for fumigant, a receptacle for water and blower means for conducting air through said receptacle and through said receiver successively to cause said fumigant to liberate a poisonous gas.

1,900,718. COMBINED CARRYING CASE AND HOLDER FOR MUSICAL INSTRUMENTS. ALBION S. LANG, Roslindale, Mass. Filed July 22, 1932. Serial No. 623,953. 4 Claims. (Cl. 206—13.)



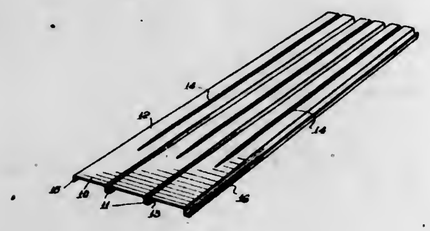
1. A combined carrying case and holder for musical instruments comprising a carrying case element adapted to receive a plurality of musical instruments and a holder element adapted to be received in the carrying case element but removable bodily therefrom, said holder element having a plurality of sections movable relative to each other, each section having means for supporting a musical instrument, the holder element with the instruments supported thereby being removable bodily and as a unit from the carrying case and said holder element forming a support for the instruments when removed from said carrying case the relative movement of the sections of the holder providing for placing the musical instruments in a different position relative to each other when the holder is removed from the case than when said holder is in the case.

1,900,719. GENERATOR REGULATION. BENNETT M. LEECH, Cleveland, and DALE S. COLE, Cleveland Heights, Ohio, assignors to The Leece-Neville Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 27, 1931. Serial No. 540,396. 6 Claims. (Cl. 171—229.)



1. In a system of the character described the combination of a generator, and a regulator therefor comprising a magnet having a coil energized by said generator, a liquid chamber extending within said coil and having a flexible wall adapted to be vibrated by said magnet, an electrode in said chamber, and a body of current-conducting liquid in said chamber adapted to be displaced into contact with said electrode by the vibration of said wall.

1,900,720. BUCK STRUCTURE FOR LAUNDRY PRESSES. FREDERICK W. LINDEMANN, St. Paul, Minn., assignor to The Unipress Company, Incorporated, Minneapolis, Minn., a Corporation of Minnesota. Filed Oct. 27, 1928. Serial No. 315,542. 6 Claims. (Cl. 68—9.)

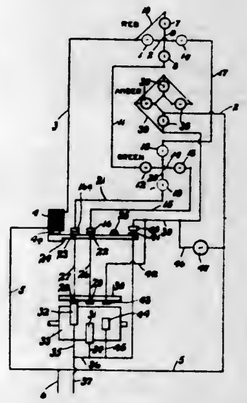


2. A buck providing a steam chamber, a pad cap having a pad-supporting wall normally spaced from the heat-transmitting wall of the buck, said buck having sockets therein, compression springs arranged in the sockets and supporting the cap in spaced relation and linkage means acting counter to the springs to positively limit cap movement in a direction away from the buck and permit universal adjusting motions of the cap laterally in the plane of its working surface.

1,900,721. **ROOF AND FLOOR CONSTRUCTION.** Fred A. MANSKE, EUGENE W. ODENWALDT, and OLIVER E. GIBSON, Chicago, Ill., assignors to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 12, 1931. Serial No. 562,522. 10 Claims. (Cl. 189—34.)

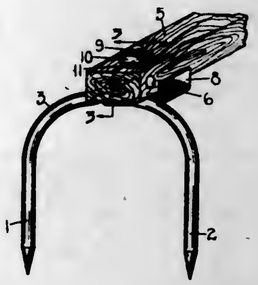
1. A roof deck construction comprising a plurality of plates having overlapping ends, each plate being provided with a plurality of spaced, parallel channels, the channels in the end of one plate engaging with those in the adjacent end of an adjoining plate, and ribs formed in each plate intermediate said channels and extending substantially the full length of said plate but terminating short of the one end thereof.

1,900,722. **METHOD OF AND MACHINE FOR FORMING METAL PLATES.** FRED A. MANSKE, EUGENE W. ODENWALDT, and OLIVER E. GIBSON, Chicago, Ill., assignors to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 19, 1931. Serial No. 576,054. 11 Claims. (Cl. 153—77.)



5. The method of forming a plate with channels which comprises forming a plurality of spaced parallel channels coextensive with the length thereof, and forming ribs in said plate intermediate said channels and extending from one end of the plate but terminating short of the opposite end thereof.

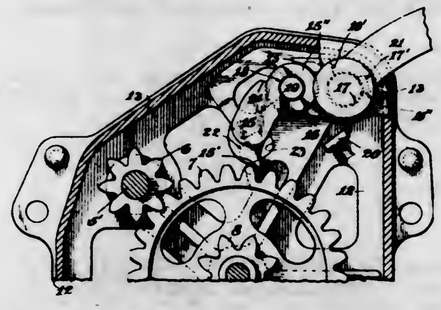
6. In a machine for forming metal plates, means for moving said plates along a predetermined path, rolls for forming non-continuous ribs in said plates, a switch arm positioned in the path of travel of said plates, and means associated with said switch arm for controlling the intermittent engagement of said rolls with said plates.



1,900,723. **TRAFFIC SIGNAL.** DALE O. MILLER, Detroit, Mich. Filed Apr. 21, 1930. Serial No. 445,903. 9 Claims. (Cl. 177—337.)

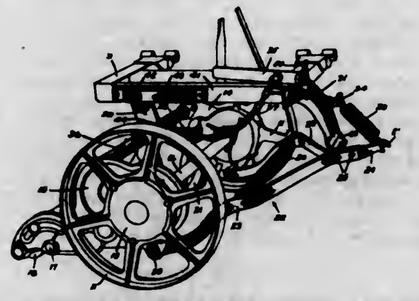
1. In a lighting system, two electric lights of one color, two additional electric lights of a different color, an electric light wiring circuit in which all of said lights are connected in series, a second electric wiring circuit, including two pairs of electric lights all of the lights being connected in series in said second circuit and the two pairs of electric lights in said second circuit being of different colors

and located in right angles to the two pairs of electric lights in the first circuit, means for alternately completing the two wiring circuits and means for automatically breaking both circuits when any one of the four pairs of lights is burned out.



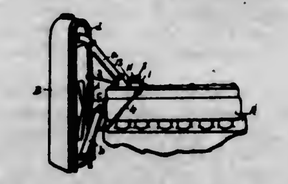
1,900,724. **RAKE TOOTH FOR HAY LOADERS.** PAUL P. MILLER, Ottumwa, Iowa, assignor to Dain Manufacturing Company of Iowa, Ottumwa, Iowa, a Corporation of Iowa. Filed June 10, 1932. Serial No. 616,887. 2 Claims. (Cl. 56—400.)

1. The combination with a raker bar of a hay loader, of an inverted U-shaped tooth having dual prongs, a loop formed in the arc of the tooth and bent substantially at a right angle thereto, a clamp confining said loop and having flanges embracing the bar and in forceful contact with the tooth, and a bolt extending through the clamp, the loop and said bar to hold the clamp and tooth in rigid position on the bar.



1,900,725. **RELEASE MECHANISM.** FRANK E. MOFFETT, Maywood, Ill., assignor to National Malleable and Steel Castings Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 11, 1929. Serial No. 362,178. 4 Claims. (Cl. 188—81.1.)

1. In combination, a housing, a toothed element in said housing, a pawl engageable with said element for preventing movement thereof in a given direction, a member pivotally connected to said pawl and forming therewith a toggle, and means cooperating with said toggle for shifting the same to a position wherein said toothed element cooperates to effect disengagement of the pawl therefrom,

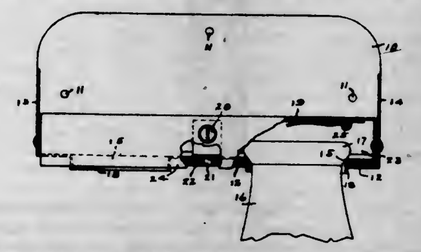


and means on said pawl and housing cooperating upon movement of the pawl to guide the pawl into and out of engagement with said toothed member.

1,900,726. **LAWN MOWER.** AMOS F. MOYER, Minneapolis, Minn., assignor to Toro Manufacturing Company, Minneapolis, Minn., a Corporation of Delaware. Filed Dec. 20, 1930. Serial No. 503,719. 24 Claims. (Cl. 56—7.)

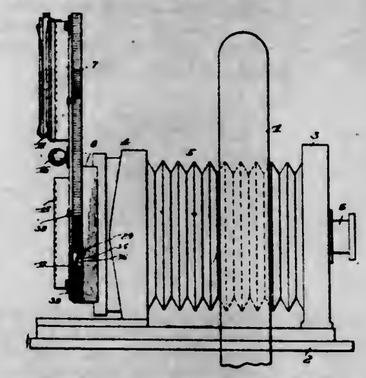
1. The combination with a lawn mowing unit including spaced-apart drive wheels, and a propellant for said unit, of a draft member for connecting the unit with said propellant, said draft member having a pivotal connection with said unit situated at a substantial distance below the axis of said drive wheels, means pivotally connecting the draft member with said propellant, and means connected between said draft member and said propellant adapted to exert a downward pressure on the drive wheels of the mowing unit.

1,900,727. **APPARATUS FOR SAVING RADIATOR ALCOHOL.** ANDREW WILLIAM MURPHY, Norwich, N. Y. Filed May 18, 1931. Serial No. 538,364. 3 Claims. (Cl. 123—174.)



1. The combination with the cooling system of an internal combustion engine including the usual water jacket and radiator and the upflow and return pipes connecting the jacket and radiator, of an overflow pipe leading from the interior of the upper portion of the radiator and provided with two branches, one of said branches being open to the atmosphere, the other branch being connected to one of the first named pipes, and means for diverting the overflow to either of said branches and for cutting off the passage of the overflow to the other branch.

1,900,728. **VULCANIZED RUBBER COMPOSITION AND PROCESS OF VULCANIZING RUBBER.** HERMANN OEHME, Cologne-Kalk, Germany, assignor to Chemische Fabrik Kalk G. m. b. H., Cologne-Kalk, Germany. Filed Feb. 6, 1931, Serial No. 514,053, and in Germany June 26, 1926. 27 Claims. (Cl. 18—53.)



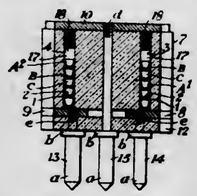
1. An improved vulcanised rubber composition containing a zinc oxide of non-pigmenting properties said zinc oxide being prepared by heating a zinc compound containing volatile residues under such conditions as to exclude the formation of a color pigment.

1,900,729. **MILK BOTTLE RECEIVER.** CORNELIUS B. OSTER and HARRY RAINEY, Rushville, Ind., assignors of one-fourth to Harrie Jones, Rushville, Ind., and one-fourth to Clarence Cole, Indianapolis, Ind. Filed May 4, 1931. Serial No. 534,858. 4 Claims. (Cl. 232—41.)

1. In a receiver for bottles having a laterally projecting ring around their mouths, holding means for suspending a bottle by said ring, and a bottle cover mounted to swing past a vertical plane in opening, said cover having a rear lateral flange which is contacted by the bottle to automatically close the cover over the bottle mouth by contact of the bottle with the cover flange.

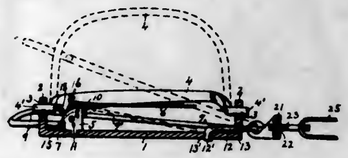
1,900,730. **CAMERA BACK.** WILLIAM H. PETIT and EDSON S. HINELINE, Rochester, N. Y., assignors to The Folmer Graflex Corporation, Rochester, N. Y., a Corporation of Delaware. Filed Dec. 11, 1931. Serial No. 580,302. 5 Claims. (Cl. 95—49.)

1. In a camera back, the combination with a mounting board having an exposure opening in the axis of the camera lens, of a rotary back mounted on the board to turn



through an angle of one hundred and eighty degrees, a focusing screen and a plate holder diametrically oppositely arranged on the back to alternately register with the exposure opening in the board, and an operating spring for the back tensioned by the movement of the focusing screen into such register and adapted to return the back to a position in which the plate holder is in register.

1,900,731. WELL PLUNGER. JOHN W. PIPPIN, Corpus Christi, Tex., assignor of one-half to H. B. Giles, Nueces County, Tex., and one-half to W. F. Hall and George Lowrey, Harris County, Tex. Filed Feb. 17, 1930. Serial No. 429,189. 1 Claim. (Cl. 103—225.)

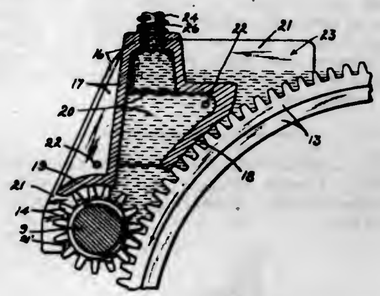


A movable valve body forming part of a pump plunger having an axial passage, the valve body having a chamber therein, a cup-shaped member threaded into the upper end of the valve body and projecting into the chamber, said cup-shaped member having a plurality of lateral passages placing the chamber in communication with the passage in the plunger, a stem projecting from the free end of the cup-shaped member, a sleeve slidably mounted on the stem and having a head provided with a curved face, a valve seat at the lower end of the chamber, a ball valve on the seat and normally engaged by the curved face, a spring on the stem and engaging at one end the free end of the cup-shaped member and at its other end the sleeve for maintaining the valve on its seat.

1,900,732. ELECTRICAL RECTIFIER. WILLARD P. PLACE, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Sept. 25, 1931. Serial No. 565,094. 18 Claims. (Cl. 175—366.)

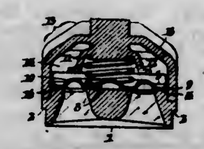
5. A rectifier comprising a block of insulating material provided with a hole, an asymmetric unit in said hole, said asymmetric unit comprising a metal disk havng a coating of a compound of the metal formed on one side thereof, an impressionable conducting member in said hole, said member being in the form of a frustum of a cone the one base of which fits into said hole with a small amount of clearance and the other base of which has a diameter which is smaller than the diameter of the coating of said unit, said smaller base being in engagement with the coating of said unit, and means for subjecting said member and said unit to a comparatively high pressure.

1,900,733. ANIMAL TRAP. JAMES IRWIN PNEUMAN, Camillus, N. Y. Filed May 29, 1931. Serial No. 540,986. 8 Claims. (Cl. 43—88.)



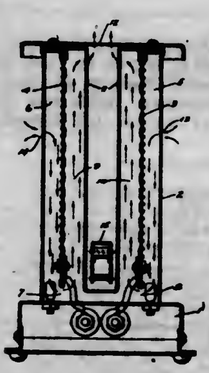
1. In an animal trap having a frame and a pair of jaws pivoted thereto, a post on the frame having a sholder, a jaw-operating spring mounted on the frame and movable into holding engagement with said shoulder against its own tension, and a bait-pan pivoted to said post and provided with an extension adapted to be engaged by the spring when the latter is engaged with the shoulder for releasing said spring from the shoulder when the bait-pan is depressed.

1,900,734. PRODUCTION OF DRIERS FOR VARNISHES, LACQUERS, OIL PAINTS, AND THE LIKE. FRANZ POHL, Ludwigshafen-on-the-Rhine, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Sept. 12, 1928, Serial No. 305,613, and in Germany Oct. 25, 1927. 23 Claims. (Cl. 134—57.)



1. The process of producing driers for varnishes, lacquers, oil paints and the like which comprises acting with a compound of a metal selected from the group consisting of aluminium, zinc, manganese, copper, mercury, cobalt and lead on oxidation products of mineral waxes.

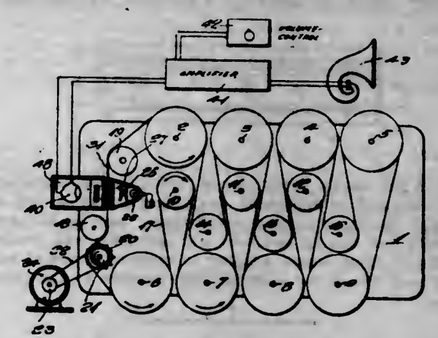
1,900,735. LUBRICATING SYSTEM. WILLIAM D. POMEROY, Seneca Falls, N. Y., assignor to Goulds Pumps, Incorporated, Seneca Falls, N. Y., a Corporation of New York. Filed Feb. 3, 1930. Serial No. 425,554. 28 Claims. (Cl. 184—4.)



1. In a device of the class described, in combination with a pair of gears in meshing engagement and one of said gears adapted to be partially submerged in a lubricant, of an oil housing supported by the periphery of said gears, a chamber in said housing adjacent the teeth of said gears at the junction thereof, adapted to receive the oil discharged by said gears, and a conduit secured to the housing in communication with said chamber for distributing the lubricant.

1,900,736. VALVE. MAURICE F. RICHARDSON, Berwyn, Pa. Filed Feb. 25, 1931. Serial No. 518,136. 1 Claim. (Cl. 251—127.)

In a valve the combination of a ported seat member, a discous valve element embodying a central concavo-convex dome portion and an annular arched ridge, a stationary overhang engageable by said ridge to limit upward movement of said element, and a crows-foot hold-down component the legs whereof engage the seat member outer edge under forced fit, said component affording peripheral guidance for the valve element while securing all said parts in complete assembly.

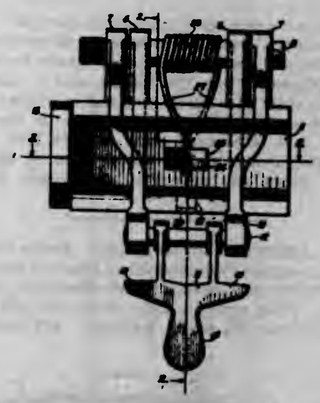


1,900,737. TOASTER. EVEN J. ROHNE, Minneapolis, Minn., assignor to Water-Genter Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Feb. 17, 1930. Serial No. 429,075. 9 Claims. (Cl. 53—5.)

1. A device of the class described comprising a heating chamber having air intake openings in its vertical walls, and heating element supports arranged to compel the air entering said openings to circulate downwardly beneath the heating element supports and then upwardly between them, the top wall of the chamber having an opening permitting introduction between said elements of an article to be cooked, and facilitating upward circulation of air, said openings constituting substantially the sole means whereby air is admitted to or expelled from the heating chamber.

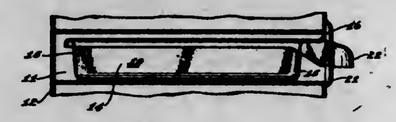
1,900,738. FILM APPARATUS. GORDON BROWN SCHNELL, Newark, N. J. Filed Mar. 12, 1931. Serial No. 522,093. 2 Claims. (Cl. 179—100.3.)

1. A film apparatus comprising an optical system, a plurality of reels in rows in echelon, smaller reels in rows in echelon intermediate said first-mentioned rows, the reels of said last mentioned rows being individually aligned with said first mentioned reels of the adjacent row, said smaller reels being larger in diameter than the space between adjacent reels in said first mentioned rows, and a film supported by said reels for movement with



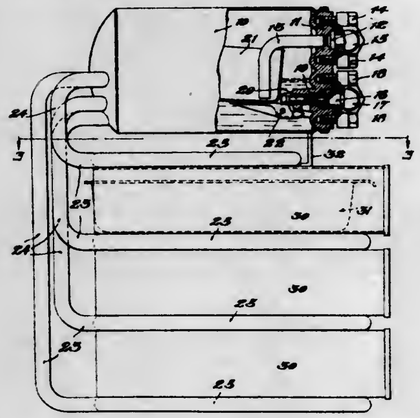
respect to said optical system, said film extending in loops between adjacent reels in said first mentioned rows around said smaller reels of the furthest row.

1,900,739. PRODUCTION OF OLEFINES AND DIOLEFINES. OTTO SCHMIDT, Ludwigshafen-on-the-Rhine, MAX TRUPPENHAUER, Mannheim, and OTTO GROSSKINSKY and HEINRICH FISCHER, Ludwigshafen-on-the-Rhine, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed July 21, 1928, Serial No. 294,566, and in Germany Aug. 29, 1927. 22 Claims. (Cl. 260—170.)



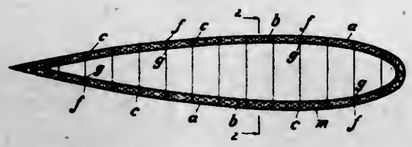
1. A process for the production of olefines and diolefines which comprises bringing a non-aromatic hydrocarbon containing at least 6 carbon atoms in the molecule in a vaporous state and at a temperature between about 500° and 800° C. into contact with lustrous carbon.

1,900,740. RENEWABLE THREADED LINER FOR COAL DRILL BOXING. VICTOR L. SCOTT, Ottumwa, Iowa, and NICHOLAS W. MARSCH, Troy, S. Dak. Filed June 15, 1931. Serial No. 544,362. 11 Claims. (Cl. 255—46.)



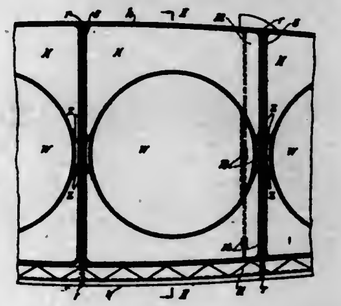
1. A drill boxing structure comprising a pair of boxing sections, and threaded bushing sections enclosed within said boxing sections, said boxing and bushing sections having flat engaging surfaces extending continuously the full length of the structure and of angular contour in cross-section with clearance provided between corresponding faces of said boxing and bushing sections for wear take-up.

1,900,741. ICE PAN. FRANKLIN G. SLAGEL, Buffalo, N. Y., assignor to Fedders Manufacturing Company, Inc., Buffalo, N. Y., a Corporation of New York. Filed July 29, 1929. Serial No. 381,976. 4 Claims. (Cl. 62—108.5.)



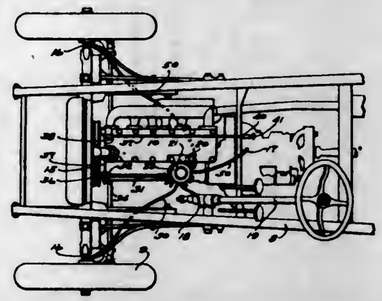
1. A pan for the production of frozen liquids in mechanical refrigerating apparatus comprising a tray, a tray extension having a portion paralleling a wall of the tray, a plate and handle member, said extension and member having locating bosses adapted to register in nested relation, and means for securing said member to the extension.

1,900,742. EVAPORATOR. FRANKLIN G. SLAGEL, Buffalo, N. Y., assignor to Fedders Manufacturing Company, Inc., Buffalo, N. Y., a Corporation of New York. Filed Aug. 13, 1930. Serial No. 475,032. 6 Claims. (Cl. 62—126.)



1. In an evaporator for refrigerating systems, a header, means for automatically controlling liquid refrigerant to maintain a body thereof in the header, means for removing gasified refrigerant from the header, and a plurality of tubes having their ends secured to and extending through the rear end of the header below the level of the body of refrigerant, said tubes each being bent to form horizontally extending loops, the horizontal loops of the respective tubes being in respective superposed horizontal planes.

1,900,743. AIRSHIP. HANS STROBL, Berlin-Tempelhof, Germany, assignor to Luftschiffbau Zeppelin Gesellschaft mit beschrankter Haftung, Friedrichshafen, Bodensee, Germany. Filed Mar. 12, 1930, Serial No. 435,276, and in Germany Mar. 18, 1929. 3 Claims. (Cl. 244—3.)

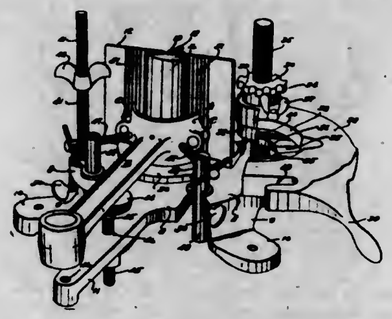


1. A rigid airship comprising an outer hull structure, an inner hull structure, a structure connecting said outer hull to said inner hull, a gas cell within said inner hull, two gas cells within the space between said outer hull and said inner hull, and connecting means between said latter two gas cells.

1,900,744. AIRSHIP. HANS STROBL, Berlin-Tempelhof, Germany, assignor to Luftschiffbau Zeppelin Gesellschaft mit beschränkter Haftung, Friedrichshafen, Bodensee, Germany. Filed June 14, 1932, Serial No. 617,142, and in Germany June 15, 1931. 6 Claims. (Cl. 244—3.)

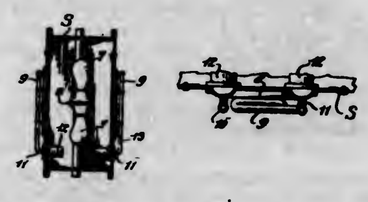
1. In an airship of the lighter than air type a gase cell of substantially circular cross section with its axis substantially parallel to the longitudinal axis of the airship hull, and a smaller gas cell of substantially cylindrical shape so inserted in said first gas cell that the axes of both cells are substantially at right angles to each other.

1,900,745. PROGRESSIVE DISTRIBUTING LUBRICATOR. ERWIN L. SUTTER, St. Paul, Minn., assignor to Sukete Investment Company, St. Paul, Minn., a Corporation of Minnesota. Filed Dec. 26, 1929. Serial No. 416,485. 11 Claims. (Cl. 184—27.)



1. A lubricator comprising a body formed with circumferentially spaced radially disposed gun cylinders having grease intake passages, grease discharge plungers working in said cylinders, a presser ring having rolling engagement with said plungers, and a rotary cam-acting gun-actuating element rotatable within and operative on said presser ring.

1,900,746. BABBITTING DEVICE. THOR THORSEN, Plymouth Township, Hennepin County, Minn., assignor to Storm Manufacturing Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Feb. 2, 1931. Serial No. 512,909. 11 Claims. (Cl. 22—123.)

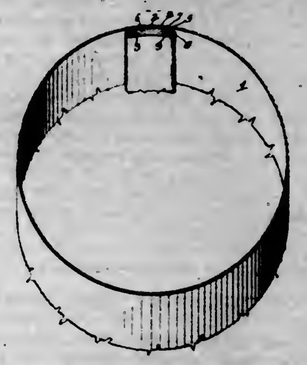


1. A device of the class described comprising a base having a fixed upright face plate, a bed directly mounted on the base, a cope mounted on the base for movement to and from an operative position, a core on the face plate between the bed and cope, a pair of posts on the base,

and a pair of converging set-screws mounted on the posts for axial movement on lines that radiate substantially from the axis of the core for holding a piece of work be-

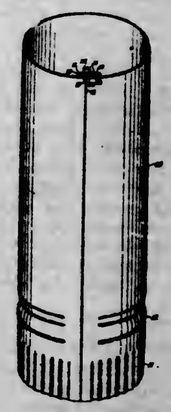
tween the bed and cope in a definite position, in respect to the core, for cooperation with the face plate, core, bed and cope to complete the mold cavity.

1,900,747. ILLUMINATED SIGN. WALLACE K. WILBY and HARRY J. CUDNEY, Buffalo, N. Y., assignors to Flexlume Corporation, Tonawanda, N. Y., a Corporation of New York. Filed Nov. 29, 1929. Serial No. 410,816. 8 Claims. (Cl. 40—133.)



1. An illuminated sign adapted to provide a number of contrasting lighting effects in the illumination of the display characters thereof comprising a sign casing having an opening therein corresponding to the outline of a display character, a translucent element secured to said sign for display through said opening, means within the sign casing for illuminating said element, a second display element formed from an electroluminescent tube and following in outline a portion of the character formed by said translucent element and the opening in said casing, said second element being secured to said sign in close proximity to said translucent element.

1,900,748. PRESSING PAD VENTILATING APPARATUS. FRED CARL WILHELM, Minneapolis, Minn., assignor to The Unipress Company, Incorporated, Minneapolis, Minn., a Corporation of Minnesota. Filed Oct. 11, 1929. Serial No. 398,907. 7 Claims. (Cl. 68—9.)

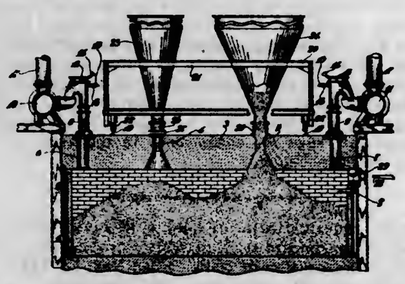


3. In combination with a press having a steam chest having an upper face, a lid-like cap having a working wall overlying and spaced from the face and having a continuous depending flange opposed to the sides of the steam chest and spaced therefrom to permit free vertical and horizontal motions, but adapted to engage the chest to limit horizontal motions of the cap, compressible elements holding the cap in vertically spaced relation above the chest, said cap having perforations establishing atmospheric communication with the space between the cap and chest and said perforations being spread over an area of the cap substantially equal to the area of the upper face of the chest, a pressing pad overlying the perforations, and a presser arm engageable with the pad to depress the cap.

1,900,749. LOCK JOINT FOR METAL PIPES. ALEXANDER C. SLADKY, Milwaukee, Wis., assignor, by mesne assignments, to The Reeves Manufacturing Company, Dover, Ohio, a Corporation of Ohio. Filed Mar. 15, 1930. Serial No. 436,101. 4 Claims. (Cl. 126—309.)

1. A pipe section comprising a metallic sheet, one edge portion of which is folded against the inside of the sheet and then refolded to form a flange spaced from the first named fold and defining a groove, said flange terminating beyond the first folded edge in an outwardly angle locking shoulder, the other edge portion of the sheet having an inwardly offset tongue folded inward upon itself insertable into said groove and terminating in a rearwardly disposed, raw edge for engagement in the angle of said angled locking shoulder.

1,900,750. STOVEPIPE. JOSEPH A. KRANTZ, Dover, Ohio, assignor to The Reeves Manufacturing Company, Dover, Ohio, a Corporation of Ohio. Filed Nov. 24, 1931. Serial No. 577,040. 7 Claims. (Cl. 126—309.)

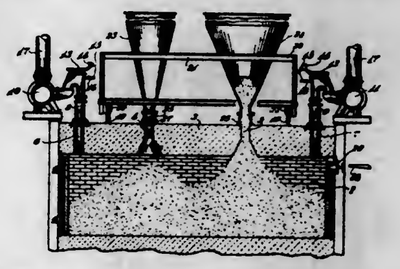


5. A pipe section comprising a metallic sheet, one edge portion of which is folded against the inside of the sheet and then refolded to form a flange spaced from the first named fold and defining a groove, said flange terminating beyond the first folded edge in an outwardly angled lock-

ing shoulder, the other edge portion of the sheet having an inwardly angled locking shoulder and a tongue folded inwardly upon itself insertable into said groove and terminating in a rearwardly disposed raw edge for engagement in the angle of said outwardly angled locking shoulder, the space between said first folded edge and the nearest portion of the outwardly angled locking shoulder being substantially equal to the distance between the forward side of said inwardly angled locking shoulder and said raw edge.

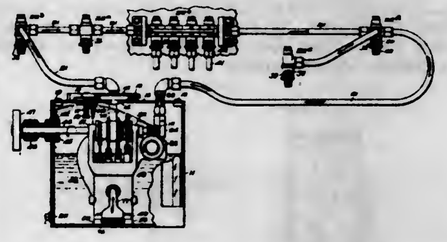
1,900,751. PURIFICATION OF GASES. HANS BAEHR, Ludwigshafen-on-the-Rhine, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed Apr. 14, 1930, Serial No. 444,338, and in Germany Feb. 27, 1928. 16 Claims. (Cl. 23—3.)

3. The process for the purification of gases contaminated with hydrogen sulphide which comprises the step of passing the gas in the presence of sufficient oxygen to oxidise the hydrogen sulphide to sulphur dioxide, at a temperature between about 100° and 700° C. over a catalyst comprising an oxide of a metal having an atomic weight ranging from 54.93 to 65.38, capable of directly combining with sulphur, an oxygen transferring element of groups 4 to 6 of the periodic system, and up to 10 per cent of a asubstance selected from the group consisting of lead, bismuth, their compounds, and the compounds of the alkali metals and alkaline earth metals.



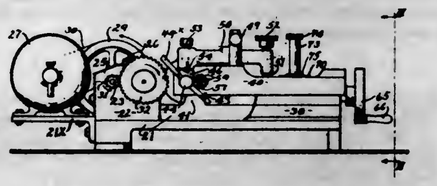
1,900,752. COKING RETORT OVEN. JOSEPH BECKER, Pittsburgh, Pa., assignor, by mesne assignments, to The Koppers Company of Delaware, a Corporation of Delaware. Filed Sept. 29, 1926. Serial No. 138,414. 2 Claims. (Cl. 202—262.)

1. The combination with a horizontal coke oven having a plurality of charging openings in the top thereof and spaced from each other longitudinally of the oven; of a plurality of coal charging containers for cooperating with the charging openings respectively to charge said oven, the aggregate coal capacity of all of said containers approximately equalling the total capacity required for charging the oven with coal up to a substantially level surface throughout the length of the oven adjacent the top thereof so as to leave a gas space above the charge from one end to the other of said oven, and one of said containers being of substantially greater coal capacity than the coal capacity of any container of the remainder of said containers; and gas off-take openings communicating with said oven at the top thereof on opposite sides of the charging opening for the container of greater coal capacity.



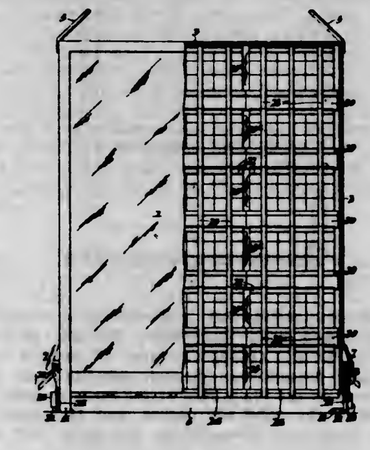
1,900,753. METHOD OF CHARGING COKING RETORT OVENS. JOSEPH BECKER, O'Hara Township, Allegheny County, Pa., assignor to The Koppers Company of Delaware, a Corporation of Delaware. Original application filed Sept. 29, 1926, Serial No. 138,414. Divided and this application filed Feb. 20, 1930. Serial No. 429,953. 11 Claims. (Cl. 202—36.)

1. The method of charging a horizontal coke oven having a plurality of spaced charging openings in the top thereof which comprises filling said oven while hot through said openings with coal to the top at one only of said openings, levelling the contents of said oven and with-



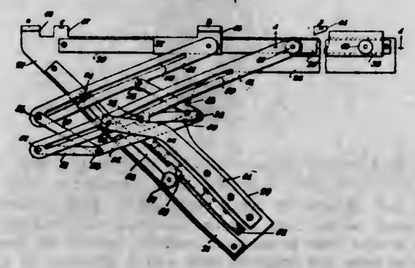
drawing the gaseous products of the oven at two points only and on opposite sides of said one opening during the filling and levelling operations.

1,900,754. LUBRICATING SYSTEM. FREDERICK C. BLANCHARD, Dorchester, Mass. Filed Feb. 8, 1929. Serial No. 338,546. 27 Claims. (Cl. 184—7.)



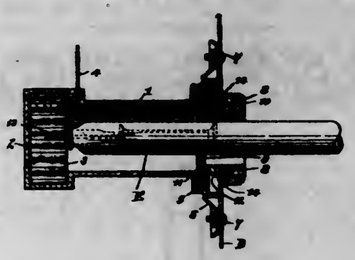
1. Lubricating apparatus comprising, in combination, a circuit conduit system, one or more feeders supplied thereby, means to circulate lubricant in said system under a pressure insufficient to cause said feeder or feeders to feed, and means to cause an intermittent increase of pressure in said system sufficient to cause said feeders to feed.

1,900,755. PISTON RING MILLING MACHINE. THOMAS J. BRUCE, Wichita, Kans. Filed Feb. 2, 1931. Serial No. 512,858. 5 Claims. (Cl. 90—21.)



1. In a piston ring milling machine, a base element, a motor supported from said base element, a drive shaft in bearings on the base element; said drive shaft being driven by said motor, an arbor shaft carrying cutters driven by the drive shaft; a bed slidably arranged for movements from or towards the arbor shaft, said bed having seats as bearings for a detachably associated cross shaft carrying a compacted set of piston rings; said cross shaft having a ratchet element and means on the bed plate for engaging said ratchet for the purpose of spacing cuts as slots in the piston rings when said rings are advanced against the rotating cutters under limited movement of the bed element, and means for controlling the forward and rearward movement of the bed plate.

1,900,756. METHOD OF ASSEMBLING AND TRANSPORTING STACKED ARTICLES. GEORGE W. BUTTS, Wynnewood, Pa., assignor to Pennsylvania Railroad Company, a Corporation of Pennsylvania. Original application filed Apr. 11, 1931, Serial No. 529,532. Divided and this application filed Oct. 17, 1931. Serial No. 569,534. 3 Claims. (Cl. 214—152.)

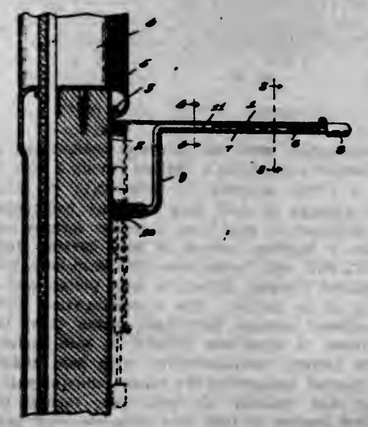


1. A method of loading stacked articles into a bottomless container which consists in arranging the articles in separate individual stacks, each stack being mounted on a separate lading platform and said stacks and platforms being placed side by side whereby the platforms collectively afford a temporary bottom for a container, lowering a container over said stacks, and securing said temporary bottom to the walls of the container.

1,900,757. MEASURING AND COMPUTING INSTRUMENT. EDWIN HOWARD CORLETT, New York, N. Y., assignor to Fairchild Aerial Surveys, Inc., New York, N. Y., a Corporation of New York. Filed June 13, 1929. Serial No. 370,620. 5 Claims. (Cl. 33—150.)

3. In a device of the class described, mechanical means including a pair of connected divergent bars, one of which is calibrated, a pair of sliding elements mounted on the non-calibrated bar for setting off two different distances in substantially the same straight line, a sliding element mounted on said calibrated bar and means pivotally connecting said three slidable elements for moving said third slidable element to indicate on said calibrated bar the factor by which one of said distances must be multiplied to equal the other.

1,900,758. ILLUMINATED SIGN. HARRY J. CURRIER, Buffalo, N. Y., assignor to Flexlume Corporation, Tonawanda, N. Y., a Corporation of New York. Filed July 18, 1928. Serial No. 293,631. 6 Claims. (Cl. 178—328.)

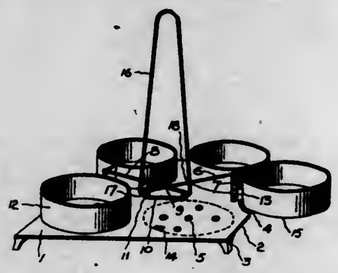


1. In an electric sign, the combination with a wall having an opening, and an electroluminescent tube having an angularly extended electrode carrying terminal portion for insertion through said opening, the latter being of substantially greater diameter than said terminal portion, of a terminal projecting from said terminal portion, and a power line terminal supported behind said opening formed to provide a plurality of tapping points, said terminals being formed for engaging co-operation in any position and angle of said electrode carrying portion with reference to an axis coinciding with the center of said opening.

1,900,759. GREASE INSOLUBLE IN GASOLINE. MAURICE H. ARVESON, Hammond, Ind., assignor to Standard Oil Company, Chicago, Ill., a Corporation of Indiana. Filed Apr. 25, 1930. Serial No. 447,433. 4 Claims. (Cl. 87—9.)

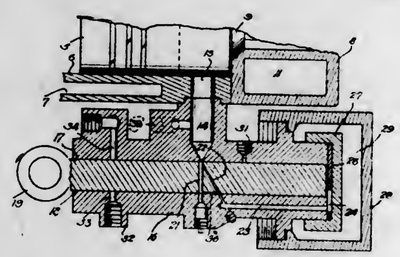
1. A gasoline insoluble composition of matter comprising about:

	Parts
Free fatty acid	2.5
Fatty acid soap	17.5
Glycerine	37
Oil	35



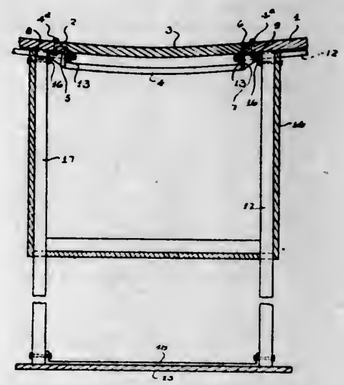
1,900,760. FOLDING SUPPORT. ELDRIDGE M. PENDLETON, Vicksburg, Miss. Filed June 28, 1932. Serial No. 619,792. 2 Claims. (Cl. 46—51.)

1. In combination with a body having a finishing strip, a tray plate having one edge slotted and rolled to provide pintle barrels, a hinged strip having one edge



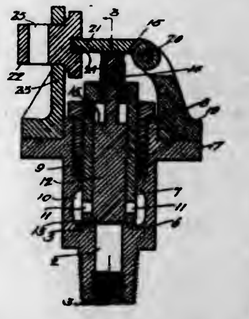
rolled and clamped to the body by the finishing strip and having its opposite edge slotted and rolled to form pintle barrels alining with the first-named pintle barrels, a pintle extending through said barrels and means movably mounted on the plate and adapted to be positioned to engage the body for supporting the plate horizontally.

1,900,761. EGG POACHER. ELIZABETH PROTHAU, Vancouver, British Columbia, Canada. Filed May 27, 1931. Serial No. 540,297. 4 Claims. (Cl. 53—1.)



1. An egg poacher comprising a plate having a vertical pivot pin adjacent one edge, a pair of rings pivotally mounted for individual movement about said pin, each ring being normally in contact with the plate and adapted to be swung beyond its borders, and a handle for lifting the plate and its rings.

1,900,762. INTERNAL COMBUSTION ENGINE. ARTHUR A. REIMANN, Oakland, Calif. Filed May 17, 1930. Serial No. 453,818. 1 Claim. (Cl. 123—33.)

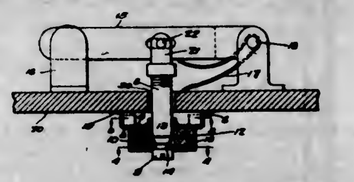


In combination with an internal combustion engine, of an atomizer comprising a casting having a bore formed therein, a piston adapted to reciprocate in said bore, an inlet passage to said bore whereby compressed air may be delivered to said bore, a pocket formed adjacent said bore, a passage formed in said casting and communicating with said pocket and with said bore, an angularly disposed channel formed in said piston and so arranged as to be brought into communication with said last mentioned passage when said piston is at the top of its stroke, a cross-bore formed in said piston, said cross-bore having communication with said channel, a bleeder channel connecting the spaced ends of said cross-bore and said channel, an inlet port formed in said casting and located so that said cross-bore will communicate therewith when said piston is at its lowest point of travel, and an atomising port formed in said casting, said atomising port communicating with said cross-bore, when said piston is at its highest point of travel.

1,900,763. SILO. THOMAS A. ROWE, Red Creek, N. Y. Filed May 14, 1930. Serial No. 452,444. 10 Claims. (Cl. 20—1.4.)

1. The combination with a silo having a vertical door opening, and a band surrounding the silo, of a brace secured to the silo on opposite sides of the door opening and having passageways through opposite ends thereof terminating on the inner face of the brace through which the ends of the band are passed, and fastening means for the band ends arranged on the inner face of the brace.

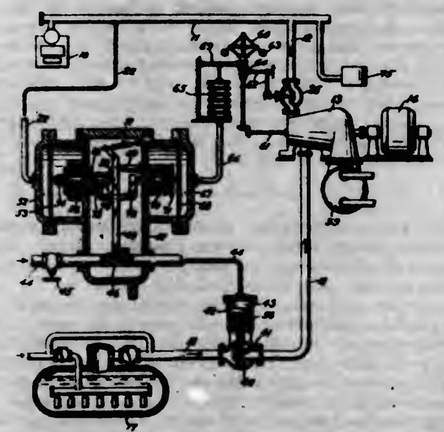
1,900,764. SEALING AND RELEASE DEVICE FOR CARBON DIOXIDE FIRE SYSTEMS. ARTHUR C. ROWLEY, Philadelphia, Pa., assignor to Globe Automatic Sprinkler Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 29, 1929. Serial No. 403,233. 7 Claims. (Cl. 169—11.)



2. In a device of the character described, a body member having a port, a fragile disk normally sealing said port and capable of being ruptured by fluid pressure in the port, a movable element adapted to reinforce the disk at one side to prevent rupture thereof by pressure exerted from the opposite side, and a plurality of means independently operative to retain the said element in normal operative position, one of said means constituting a positive lock for and another being readily releasable to free said element.

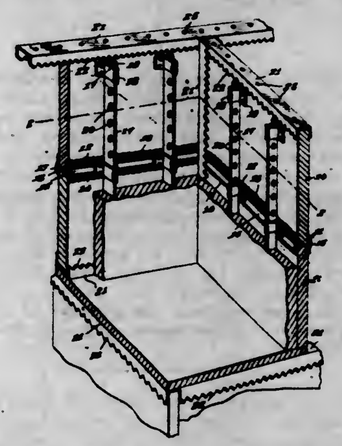
5. In a device of the character described, a body member having a port, a fragile diaphragm adapted to overlie and seal the port, a bushing for retaining the diaphragm in the port-sealing position, said diaphragm being attached to and movable with the bushing, a plunger movable in the bushing and adapted in a predetermined adjusted position to engage one side of the diaphragm to prevent rupture of the diaphragm by pressure exerted

thereon from the opposite side, and interengaging shoulders on the bushing and the plunger limiting the movement of the plunger toward the diaphragm to said predetermined adjusted position.



6. In a device of the character described, a body member having a passage terminating at opposite ends in admission and discharge ports respectively, a fragile disk adapted to close said passage intermediate its ends, a bushing in said body adapted to retain the diaphragm in the passage-closing position, said bushing having ports communicating with the discharge port of said passage, a plunger mounted in said bushing and adapted to reinforce the diaphragm against pressure exerted through said admission port, said plunger normally closing said bushing ports and being movable to a position clear of said diaphragm and uncovering the said bushing ports to permit rupture of the diaphragms by said pressure and escape of fluid through the bushing ports to the discharge port of the body, and releasable means for normally holding the plunger in the diaphragm reinforcing position.

1,900,765. HEAT RESPONSIVE DEVICE. ARTHUR C. ROWLEY, Philadelphia, Pa., assignor to Globe Automatic Sprinkler Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 16, 1930. Serial No. 489,219. 3 Claims. (Cl. 200—142.)



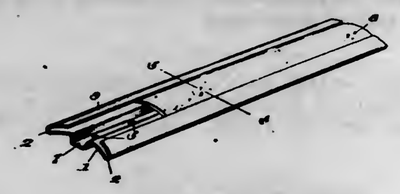
1. In a device of the stated character, the combination with a casing, of a releasable load-engaging member, and means within the casing normally preventing said release, said means including a retaining element adapted for displacement from an operative position to release the said member, and a body of fusible composition held under compression by the load and normally preventing said displacement.

1,900,766. STEAM POWER PLANT. JOHANNES RUTHS, Djursholm, Sweden, assignor to Ruthsaccumulator A. B., Berlin, Germany, a Corporation of Sweden. Filed May 26, 1930, Serial No. 455,838, and in Germany June 5, 1929. 8 Claims. (Cl. 60—54.)

1. A steam plant comprising, in combination, a source of steam of relatively high pressure, a source of steam of relatively low pressure, a prime mover supplied with steam from both of said sources, means to control the supply of steam from the high pressure source in response to variations of speed of the prime mover, means to control the supply of steam from the low pressure source in accordance with variations of steam pressure in the high pressure source, said last-mentioned means being adapted to shut off steam from the low pressure source while permitting flow of steam through the prime mover, and means responsive to excessively low speed of the prime mover to supply steam to the prime mover from said low pressure source independently of the pressure responsive control means.

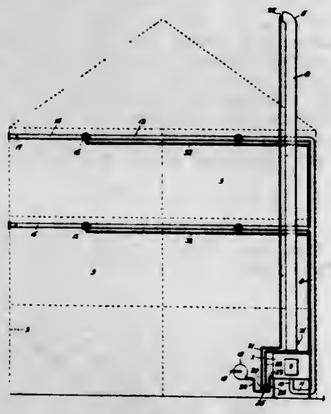
1,900,767. WALL BRACE AND REENFORCEMENT. AUGUSTUS M. RYAN, Madison, N. J. Filed Aug. 2, 1930. Serial No. 472,550. 1 Claim. (Cl. 72—46.)

A wall brace and reenforcement comprising a substantially Z-shaped bar of corrugated formation providing an intermediate web and offset flanges extended reversely to each other, a pair of corrugated flanges arranged at opposite sides of the web and also opposite the first named flanges and joined with the bar following the plane of the web thereof, the flanges opposite each other being extended parallel with one another from opposite sides of the web, wall boards seated between the flanges and abutting the web, U-shaped brackets carried by the wall boards and certain of the flanges and vertically aligned, and perforated strips accommodated in said brackets.



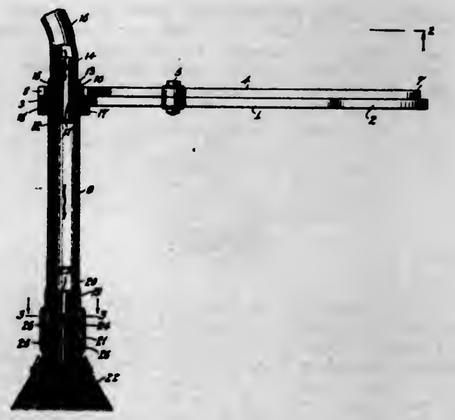
1,900,768. FINISHING WELT. ROBERT C. SCHEMMEL, Union City, Ind. Filed July 8, 1929. Serial No. 376,789. 2 Claims. (Cl. 155—184.)

1. A blind nail finishing welt comprising a pair of spaced apart base fillers, a base fabric encasing said fillers and having a free edge therebetween positioned close to one of the fillers, a flap filler, a separate strip of fabric encasing said flap filler and having its free margins extending from one edge of the flap filler, then folded back beneath the flap



filler, terminating in interfitted relation with the free edge of the base fabric, and a line of stitching passing through the base and flap fabrics adjacent the free edge of the base fabric to unite the base and flap securely together in hinged relation near said last mentioned base filler.

1,900,769. MOLDING. ROBERT C. SCHIMMEL, Union City, Ind. Filed Apr. 30, 1930. Serial No. 448,586. 3 Claims. (Cl. 155—184.)

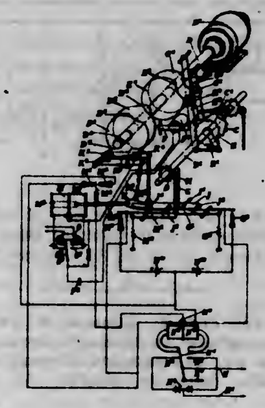


1. A molding strip including a base member having a depressed center portion and longitudinal edges all lying in a single plane, the upper surface of the base member between the depressed center portion and the longitudinal edges being arched above the single plane thereof, marginal portions of the base member being turned inwardly from the longitudinal edges and lying substantially parallel to and spaced slightly above the upper surface of the base portion, a series of tack-receiving perforations provided in the depressed center portion, and a flexible fabric covering strip received under the inwardly turned marginal portions, covering the depressed center portion, and engaging and receiving support from the portions of the arched upper surface of the base member adjacent the depressed center portion.

1,900,770. COMBINED HEATING AND VENTILATING APPARATUS. LOUIS F. SCHLENKER and MARTIN WUERTHNER, Jackson, Mich., assignors to said Schlenker and said Wuerthner, as joint tenants with right of survivorship. Filed Oct. 21, 1929. Serial No. 401,328. 14 Claims. (Cl. 237—46.)

1. A heating and ventilating apparatus comprising in combination an air chamber, means associated therewith which can be employed for heating air passing into and through said chamber, a cold air intake pipe connected with and leading to said air chamber, a main supply pipe connected with and leading from said air chamber, a distributing duct connected with and leading from the main supply pipe, a damper in the outer terminal portion of the distributing duct, branch ducts connected to said distributing duct, each branch duct being provided with a register, a blower, valve-controlled air intake blow piping connecting with and leading from the discharge duct of the blower to the cold air intake pipe for forcing air through the intake pipe thence into the air chamber when the valve-controlled air intake blow piping is open, valve-controlled blower-circulating piping connected with and leading from the discharge duct of the blower to the main supply pipe for forcing air from the chamber into, along and through the main supply pipe when the valve-controlled blower-circulating piping is open, and valve-controlled blower exhausting piping connected with and leading from the discharge duct of the blower to the branch ducts for the purpose of forcing air into the branch ducts and thence into the distributing duct when the valve-controlled blower exhausting piping is open.

1,900,771. DISHWASHER. MYER SIEGEL, New York, N. Y., assignor of one-half to Charles Siegel, New York, N. Y. Filed Aug. 13, 1932. Serial No. 628,739. 1 Claim. (Cl. 15—29.)



A dish washer including a cleaning head, a tubular member carrying said head, said tubular member at the upper end being provided with a turned-in flange, a sleeve having a shoulder, said sleeve being rotatably positioned in said tubular member with the shoulder resting against said flange, said sleeve having a tubular extension for the reception of liquid which is discharged through the sleeve and the tubular member on to said head, a gear wheel rigidly secured to said tubular member, a handle having an apertured portion through which the portion of the tubular member below the gear wheel extends, an abutment rigidly secured to said tubular member immediately below said handle, a rack continually meshing with said gear wheel, a lever pivotally mounted on said handle and rigidly connected with said rack, whereby when said lever is actuated said gear wheel will be rotated for rotating the tubular member and said head.

1,900,772. AUTOMATIC SECRET TELEGRAPH SYSTEM. JAMES HENRY SMART, Shanghai, China. Filed Jan. 15, 1932, Serial No. 586,766, and in Great Britain Feb. 4, 1931. 10 Claims. (Cl. 178—22.)

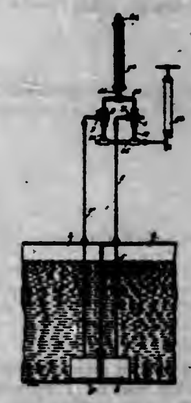
1. In an automatic telegraph transmitter controlled by signal holes in a perforated tape passing through it, the combination of two pecker rods adapted respectively to engage in upper and lower signal holes in the perforated tape, means for reciprocating the rods alternately, means for reversing at predetermined intervals the order in which the two rods are reciprocated, a source of marking and spacing electric current, a transmitting relay associated with said source and so controlled by the pecker rods that it transmits a marking current when one pecker rod

engages in a signal hole and a spacing current when the other pecker rod engages in a signal hole, and means whereby the pecker rods which respectively control the

marking and spacing current transmissions of the relay are reversed when the order in which the said rods are reciprocated is reversed.

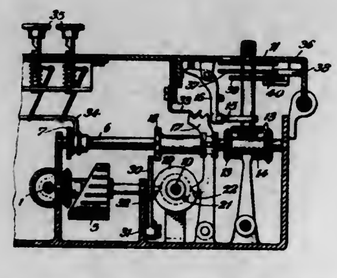
1,900,773. MOTOR VEHICLE. WILLY STANIEWICS, Brunswick, Germany, assignor to Automobilwerke H. Büssing, Aktiengesellschaft, Brunswick, Germany. Filed Mar. 13, 1930, Serial No. 435,513, and in Germany Apr. 16, 1929. 6 Claims. (Cl. 180—64.)

1. A motor vehicle, comprising a body, a subsidiary frame mounted on said body for lateral swinging movement outwardly relatively to said body, pivot means on the body for supporting the frame during such movement, a motor mounted on said frame, and driving gearing connected with said motor, said motor and driving gearing being movable bodily with said frame.



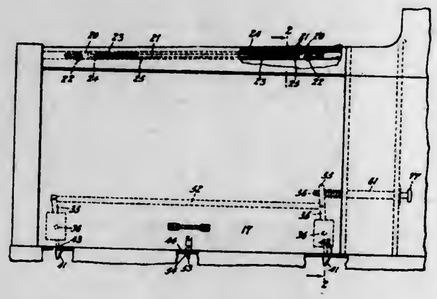
1,900,774. TANK GAUGE. RICHARD STAR, Brooklyn, N. Y. Filed May 23, 1929. Serial No. 365,463. 5 Claims. (Cl. 73—54.)

4. In a tank gauge, means forming a chamber open at the bottom and closed at the top and provided with a depending wall formed with a pair of diametrically opposed triangular notches extending from the bottom towards the top so that the apex of the notches will be between the top and the bottom of the chamber, said chamber being adapted to be placed adjacent the bottom of a tank, a pipe extending through the top of said chamber and a combined gauge and pump connected with said pipe, said combined gauge and pump including a pump structure, a base adapted to receive one end of the pump structure, said base having a mercury chamber provided with a lateral extending bore, said pipe having one end discharging pipe into the top of the mercury chamber whereby when said pump is operated air will be forced into the mercury chamber above the mercury therein and into said pipe and said air chamber until the liquid in said air chamber moves down to the level of apexes of said notches, a supply of mercury filling said bore and part of said mercury chamber and a glass tube connected with said base and in free



communication to said bore whereby the mercury will rise in said glass tube a distance proportionate to the pressure of air in the mercury chamber and in said air chamber.

1,900,775. TANK GAUGE. RICHARD STAR, Brooklyn, N. Y. Filed Sept. 16, 1930. Serial No. 482,218. 1 Claim. (Cl. 73—54.)



A gauge structure for a pair of tanks comprising a pressure responsive gauge member and an air supply pump, a continuous tubular structure formed with a top section, a bottom section and two side sections connecting the top and bottom sections, a valve interposed in each of the two side sections, means for connecting the top section to said gauge member, and means connecting said pump to said bottom section, each of said valves having an air inlet station, a gauge station, a vent station and an inoperative station, and an air system for each valve extending from said gauge station to a point near the bottom of the respective tank whereby either of said valves may be moved to an inoperative or dead station, while the other valve is caused to direct air to said indicating means for actuating the same with either of said tanks for indicating the level of oil therein.

1,900,776. CALCULATING MACHINE COMPRISING AXIALLY DISPLACEABLE SETTING WHEELS. HEINRICH SUTER, Zurich, Switzerland, assignor to Firm H. W. Egli A. G., Zurich, Switzerland. Filed Sept. 24, 1931, Serial No. 564,883, and in Germany Nov. 22, 1930. 4 Claims. (Cl. 235—137.)

1. In a device of the type described, in combination, a setting wheel for each setting shaft slidable carried thereby, spur gear teeth provided on said setting wheels, a continuous rigid shaft for the transfer of tens of adjacent number wheels and common to all the setting wheels, a com disc for each setting wheel provided on said common shaft, a guideway provided on said cam discs, setting levers cooperating with the guideway on related cam discs and adapted to consecutively advance said setting wheels one step by engagement with the spur gear teeth of the wheels.

1,900,777. AUTOMATIC HOOD LOCK FOR VEHICLES. CARL BERNHARD THORESEN, Richmond Hill, and FRED B. ELIASSEN, Brooklyn, N. Y. Filed May 14, 1932. Serial No. 611,410. 10 Claims. (Cl. 70—14.)

1. In combination with a frame having a movable hood, an arm pivoted to the hood on a transverse axis and provided with a locking head at one end, a frame member for engagement by the locking head, resilient means for rotating the arm in one direction to move the locking head into engagement with the frame member, and means movable longitudinally of the frame and disposed for engaging the other end of the arm to move the latter in the opposite direction, the said means being free from the arm to permit the movement of the arm relatively to the said means.

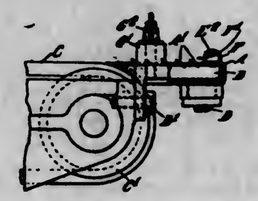
1,900,778. DROP FRAME BODY FOR TRAILERS. WILL S. TATUM, Hattiesburg, Miss. Filed July 27, 1931. Serial No. 553,390. 8 Claims. (Cl. 296—3.)

1. A drop body for trailers comprising a main frame, a sub-frame disposed in dropped relation with respect to and of less length than said main frame and having its rear end flush with the rear end of the main frame, each of said frames provided with a plurality of superposed decks, spaced front and rear opposed transverse sills for the lowermost deck of the main frame and arranged forwardly of the uppermost deck of the sub-frame, truss

frames secured to said sills, extending at right angles to the latter, spaced outwardly from the sides of the main frame and arranged forwardly of the sub-frame.

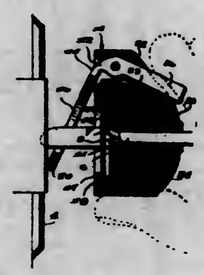
1,900,779. PYROMETER. CHARLES B. THWING, Philadelphia, Pa., assignor to Thwing Instrument Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 8, 1929. Serial No. 405,786. 10 Claims. (Cl. 73—82.)

1. A pyrometer comprising a thermocouple, a conical concentrating reflector on one side thereof, and a tubular mirror in operative relation to said conical reflector for transmitting radiant energy to said thermocouple.



1,900,780. MINING MACHINE. FREDERICK W. VODOZ, Wilmette, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 11, 1930, Serial No. 474,410. Renewed July 27, 1932. 20 Claims. (Cl. 262—28.)

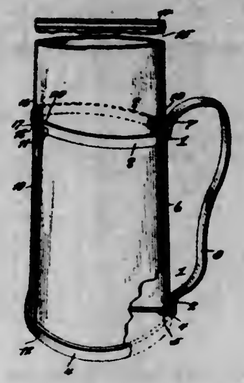
1. In combination with a mining machine having a cutter bar with a cutter chain movable thereabout adapted to cut a kerf adjacent the mine floor, means for clearing the cuttings from the path of said cutter chain comprising a screw conveyor detachably connectible with said mining machine and having a receiving end disposed adjacent the path of said cutter chain.



CARNEGIE LIBRARY OF ATLANTA

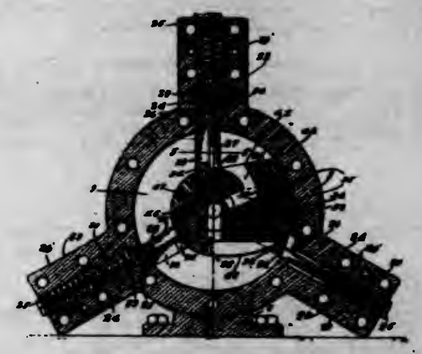
1,900,781. MANUFACTURE OF GLASSWARE. THOMAS WARDLEY, Greenford, England. Filed Feb. 11, 1932, Serial No. 592,228, and in Great Britain Nov. 19, 1930. 7 Claims. (Cl. 202—31.)

1. Apparatus for use in transferring glassware, comprising a plate having a plurality of oblique and unobstructed apertures through which air issues upwardly in an oblique direction to impinge on the ware supported on said plate and both tend to raise the same and urge the same across the plate while preventing said glassware from being knocked over, and transfer means from which air issues in a substantially horisontal direction across said plate in order to transfer the ware from said plate to a conveyor, there being means supplying air under pressure to said transfer means and the oblique apertures in said plate.



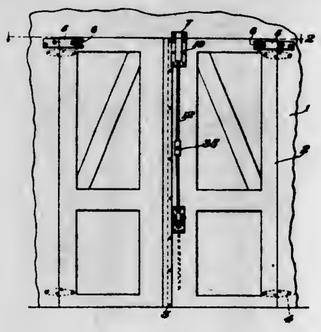
1,900,782. LIGHT PLUG. CHESTER M. WAY, Burlington, Vt. Filed Nov. 20, 1929. Serial No. 408,527. 3 Claims. (Cl. 173—361.)

1. An electrical connector plug having contacts adapted to frictionally engage contact means in a cooperating socket member, and means for forcibly withdrawing said plug from said socket member to disengage said contacts, comprising a bell crank lever fulcrumed adjacent the periphery of said plug and having one arm adapted to engage the walls adjacent said socket member and another arm adapted to be actuated by an operator, said first named arm comprising an annulus placed about said contacts.



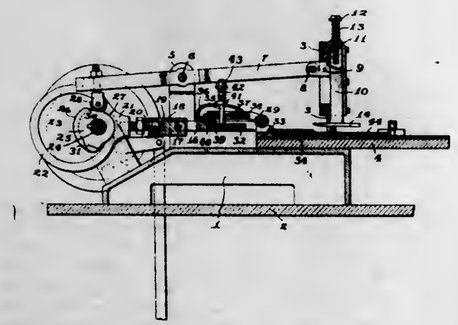
1,900,783. HOLDER FOR PARAFFIN FLUID CONTAINERS. JOHN F. WEISS, Philadelphia, Pa. Filed June 15, 1932. Serial No. 617,480. 1 Claim. (Cl. 65—61.)

As an article of manufacture, a holder for fluid container normally conical in one plane when containing its fluid, said holder comprising a base ring for the support of the bottom of the container, a pair of semi-elliptical clamps for the upper portion of the container, a pair of elements connecting the base ring and one of the clamps rendering the latter relatively rigid to the base ring, one of the elements constituting a handle, the other clamp being hingedly connected to the rigid clamp at a point adjacent where the handle connects to said clamp, whereby said other clamp may swing laterally outwardly to remove the container, the free ends of both clamps having separable interengaging lips, the free end of the hinged



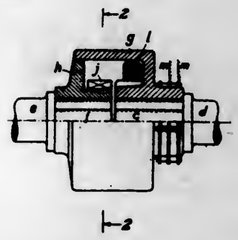
clamp having a bifurcation, the free end of the rigid clamp having a tongue to enter the bifurcation to guide the ends of the clamps into their connected positions.

1,900,784. ROTARY STEAM ENGINE. GEORGE ZENT, Wapakoneta, Ohio. Filed Jan. 10, 1931. Serial No. 507,941. 1 Claim. (Cl. 121—77.)



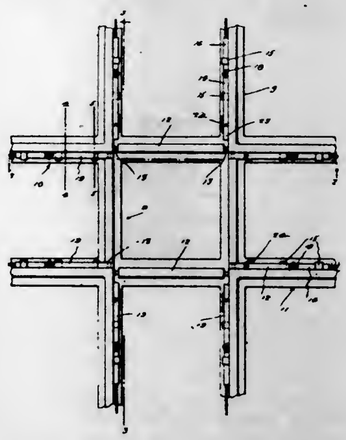
A rotary engine comprising a power shaft having intake and exhaust passages, means connecting the intake passage with a fluid power source, a casing rigidly mounted and receiving the shaft and having a chamber, a rotor secured to the shaft for contact with the walls of the chamber and having intake and exhaust passages, extensions on said casing and having bores communicative with the chamber, said casing having slots in the walls of the chamber thereof, abutments slidably mounted in the slots of the casing and contacting with the rotor at their inner ends and having their outer ends in alignment with the bores, adjustable tension means in the bores and engaging the outer ends of the abutments, said casing having guide grooves with their outer ends terminating outwardly of the walls of said chamber and within the extensions to provide shoulders, stops on the inner ends of said abutments and slidable in the grooves and engageable with the shoulders to limit the outward movement of said abutments, said abutments cooperating with the rotor of the casing to provide a plurality of compartments in the chamber so that the second named intake passage is always in communication with a compartment and the second named exhaust passage is always in communication with another compartment.

1,900,785. AUTOMATIC DOOR OPENER. BYRON B. ASHBROOK, Johnstown, Ohio. Filed Oct. 10, 1930. Serial No. 487,858. 1 Claim. (Cl. 292—93.)



A latch operating device comprising plates secured to opposite faces of a door and having aligned openings, spaced ears on one of said plates, a rib formed on the other plate, an L-shaped lever having a recess receiving the rib with a portion thereof extending through the openings and the door, a pivot pin connecting said ears, teeth on one of said ears, an arcuately curved lever journalled and slidable on the pin and having one end connected to a latch operating medium and provided in its opposite end with a slot to receive the first named lever, teeth on the second lever, and tension means on the pin to urge the second lever into a position to engage the teeth and cause a securing of the second lever against movement in one direction after being moved by the first lever.

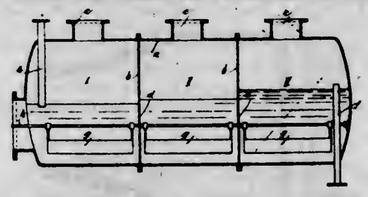
1,900,786. SHOE-SOLE SKIVING MACHINE. RALPH H. BARKER, Derry, N. H. Filed Oct. 15, 1931. Serial No. 569,044. 8 Claims. (Cl. 12—31.5.)



1. A skiving machine of the character described including a shoe sole support having a flat upper surface, a die carried by said surface, said die being formed with a longitudinally extending depression and roughly chamfered sides, said sides being connected at one end by the curved section of the die, a roller for depressing the heel portion of a sole in said die so as to snugly fit the same, with the side portions of the sole projecting above said roughened portion, and a knife positioned to move in a direction substantially parallel to said sole for cutting away the projecting portions of the sole, said die having an inclined end whereby as the roller and cutter passes over said end, the entire sole will be depressed below the cutter and the edge of the cutter will move to a position over the sole as it finishes the cutting stroke thereby producing a breasting line.

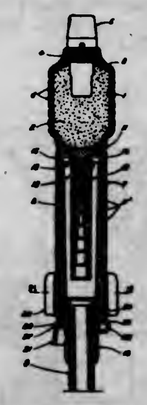
1,900,787. COUPLING OR CLUTCH FOR COAXIAL SHAFTS. JUSTIN BAUGNÉE, Differdange, Luxemburg. Filed June 19, 1931, Serial No. 545,574, and in Germany Apr. 15, 1930. 5 Claims. (Cl. 192—48.)

2. A compound clutch for connecting coaxial driving and driven shafts comprising a one-way clutch operating automatically to form a positive connection for one direction of rotation and an electromagnetic clutch operative to magnetically couple said shafts for operation in the opposite direction.



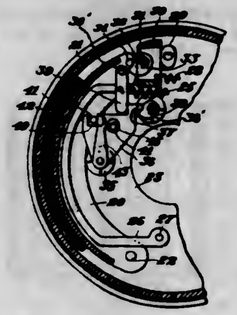
1,900,788. RAILWAY TRACK CROSSING CONSTRUCTION. ELIJAH W. BAYES, Parsons, Kans. Filed Mar. 30, 1932. Serial No. 602,047. 8 Claims. (Cl. 246—381.)

1. In a railway track crossing structure of the class described, a pair of tracks including spaced parallel rails intersecting each other to provide a rail crossing, the heads of the rails being formed with notches defining gaps at the point of juncture of the respective pairs of rails, and a plurality of projectible and retractible gap closing devices, and means for rockably mounting the devices on the flanges of said rails.



1,900,789. APPARATUS FOR SEPARATING SALTS OR OTHER MATERIALS FROM LIQUIDS. HANS CHRISTIAN AUGUST BEHRENS, Hamburg, Germany, assignor of one half to the Firm Rud. Otto Meyer, Hamburg, Germany, and one-half to the Firm Kupferhütte Ertel, Bieber & Co., Hamburg, Germany. Filed Dec. 4, 1929, Serial No. 411,649 and in Germany Dec. 4, 1928. 2 Claims. (Cl. 159—17.)

1. A process for separating out salts and the like from liquids by the use of high vacuum, comprising placing the salt solution in a tank having several independent stages, said stages then being subjected to varying degrees of

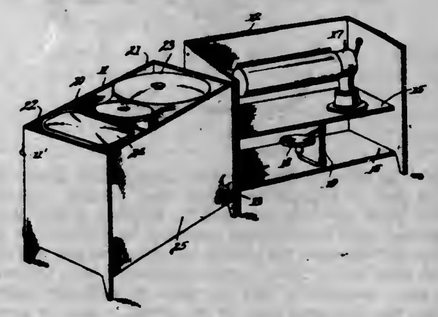


vacuum, separating said solution in said stages, lowering the temperature throughout said separation and finally withdrawing said separated salts from the last stage.

1,900,790. GRENADE. EDGAR WILLIAM BRANDT, Paris, France. Filed July 18, 1931, Serial No. 551,744, and in France July 25, 1930. 18 Claims. (Cl. 102—29.)

6. A grenade of the class described, comprising a grenade body, means for releasably attaching the same to the projective weapon, and an element located in the path of the projectile from said weapon whereby to absorb for the propulsion of the grenade the kinetic energy of the projectile, said element comprising a braking tube secured to the base of the grenade and released therefrom by the impact of the projectile.

1,900,791. AUTOMATIC BRAKE ADJUSTER. HENRY E. BRICE, New York, N. Y. Filed July 25, 1931. Serial No. 553,166. 11 Claims. (Cl. 188—79.5.)



5. Mechanism for the purpose indicated comprising a drum, a pivotally mounted brake shoe for movement into engagement with and retraction from said drum, a service lever pivotally mounted with its free terminal adjacent the free terminal of the shoe, a spring actuated cam carried by the free end of the service lever and engaging an element of the shoe, a rocker formed with a clearance slot for an element of the shoe and engaging opposite sides of the slot in the opposite positions of the shoe, and a spring actuated cam engaging a nose of said rocker.

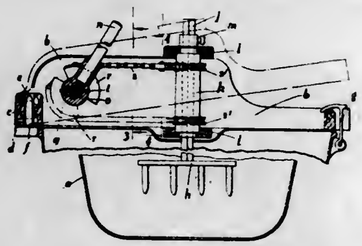
1,900,792. NONINDUCTIVE CABLE. CARL P. BRODHUN, Wilkes-Barre, Pa., assignor to The Okonite Company, Passaic, N. J., a Corporation of New Jersey. Filed May 1, 1928. Serial No. 274,268. 3 Claims. (Cl. 173—267.)

2. An electric cable comprising a conductor and a plurality of armor strips impregnated with a phenol condensate resulting in strips of stiff bendable non-metallic, non-conductive material, said strips being helically wound in criss-cross relation around the conductor.

1,900,793. CABINET. HORATIO DELVES BROUGHTON, Woodcliff, N. J. Filed Nov. 25, 1931. Serial No. 577,357. 2 Claims. (Cl. 312—152.)

1. A cabinet of the class described having in combination, sections provided with open top portions, means hingedly connecting the sections at one side to permit their movement into and out of closed position, locking means on the opposite sides of the sections to that of the hinged means for detachably connecting the sections in their closed position, one of said sections having a shelf extending longitudinally thereof and provided with an open inner side to permit access to the shelf when the sections are moved relative to each other, the other of said sections having a closed inner wall and a vertically disposed partition dividing the same into spaced compartments, and a cover having sections hinged together adapted to close

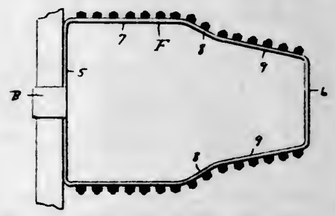
the openings in the tops of the sections, the end sections of the cover forming extensions for the cabinet, and means for maintaining the end sections in their horizontal position.



1,900,794. SAFETY DEVICE FOR LOCKS. ALBERT BRUN, Paris, France. Filed July 29, 1931, Serial No. 553,849, and in France Dec. 6, 1930. 2 Claims. (Cl. 70—46.)

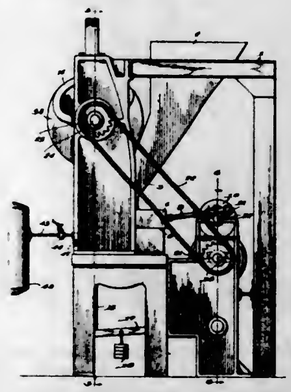
1. A lock comprising a fixed casing having tumbler receiving recesses in opposite side portions thereof, a barrel rotatable within said casing and provided with transverse tumbler accommodating recesses, tumblers within the recesses of said barrel for free sliding movement therein whereby either end of any tumbler may enter a related recess in the casing when the tumblers are alined with said casing recesses, the tumblers being notched to accommodate a laterally undulated key for retracting the tumblers from the casing recesses, the said tumbler notches having flaring mouth portions whereby a laterally undulated key is effective to retract any tumbler irrespective of the position thereof transversely of the barrel

---



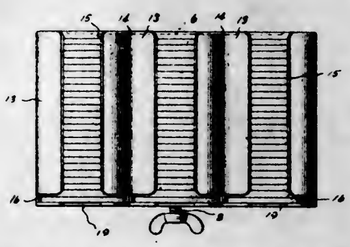
1,900,795. WASHING MACHINE. WILLIAM JOSEPH BUTTERWORTH, Tutbury, England, assignor to Qualcast Limited, Derby, England, a Company of Great Britain. Filed June 24, 1932, Serial No. 619,155, and in Great Britain June 8, 1931. 1 Claim. (Cl. 74—14.)

In a machine of the character described, a bridge having a pair of opposed elongated slots formed therein, a driven shaft vertically mounted for rotation in said bridge, a driving shaft horizontally mounted for rotation in said bridge and disposed for sliding movement within the elongated slots of the latter, means associated with said driving shaft whereby to lock the same in adjusted position within the elongated slots of the bridge, a pair of sectors fixed in inverse opposed relation upon said driving shaft, and a sectional chain secured to each of said sectors and to said driven shaft whereby to transmit the oscillatory movement of the driving shaft to the driven shaft, the links of one section of the chains being in a plane at right angles to the links of the remaining section.



1,900,796. CLOTHES DRIER. PAULINE F. CARTER, Brookline, Mass. Filed Aug. 22, 1932. Serial No. 629,948. 1 Claim. (Cl. 211—89.)

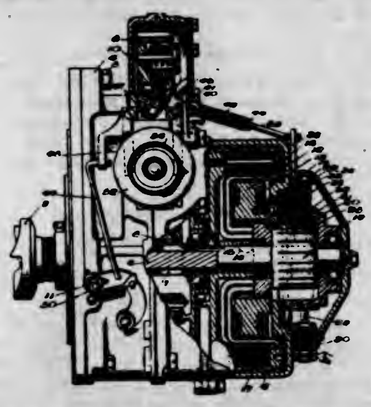
A clothes drying apparatus of the class described comprising a frame, clips mounted on the frame and a hanger bracket mounted on the frame, said hanger bracket being of an inverted U-shaped formation having the end of one leg merging into one end of the frame, said frame being of



an oblong formation to include end portions and side portions, the side portions having the parts remote from the bracket converging outwardly therefrom.

1,900,797. APPARATUS FOR PRODUCING VARIOUS KINDS OF POTTERY. RICHARD L. CAWOOD, East Liverpool, Ohio. Filed Dec. 9, 1930. Serial No. 501,108. 2 Claims. (Cl. 25—92.)

1. In an apparatus for making articles from air penetrable compressible material, a die casing, die plungers movable into and out of said casing from opposite ends thereof, means for feeding material to said casing between said plungers and means for operating said plungers between said feeding operations to compress the material and eject the finished article, and means for locking said feeding means temporarily against movement during the charging operation.

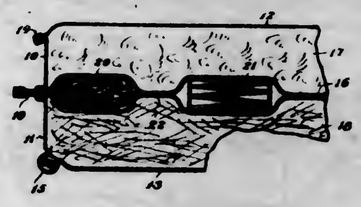


1,900,798. GAME APPLIANCE. REGINALD J. CHAPPELL, Brooklyn, N. Y. Filed June 25, 1930. Serial No. 463,751. 1 Claim. (Cl. 211—49.)

A poker chip holder comprising a cylinder provided with means for supporting the same to make access to the bottom possible, said cylinder being open at the top

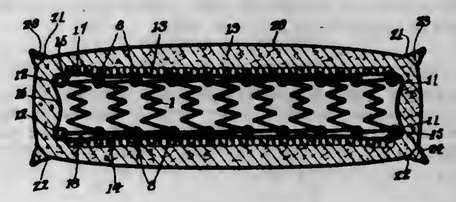
and having a bottom wall slotted radially inward past the center and provided with a slot extending throughout the length of the cylindrical wall, the center lines of the slots in the bottom and cylindrical walls lying in a common plane, said cylinder being slotted next to the bottom wall and in crossing relation to the slot in the cylindrical wall, the slot adjacent the bottom wall extending for at least half the interior diameter of the cylinder and being of a width greater than one but less than two poker chips.

1,900,799. ENGINE STARTING MECHANISM. ROLAND CHILTON, Ridgewood, N. J., assignor to Eclipse Aviation Corporation, East Orange, N. J., a Corporation of New Jersey. Filed Oct. 18, 1929. Serial No. 400,704. 12 Claims. (Cl. 290—38.)



1. In engine starting apparatus, the combination of a driven member adapted to engage and crank an engine to be started, inertia mechanism drivably connected with said driven member and including an electric motor having an armature and commutator, brushes for said commutator, arms carrying said brushes normally out of engagement with said commutator, manually operable means for accelerating said inertia mechanism comprising a hand-cranking shaft and a clutch mechanism interposed between said cranking shaft and inertia mechanism, and common means for controlling said clutch and said brush carrying arms.

1,900,800. NECKTIE CONSTRUCTION. HARRY A. CLARK, Detroit, Mich. Filed May 19, 1932. Serial No. 612,348. 4 Claims. (Cl. 2—150.)

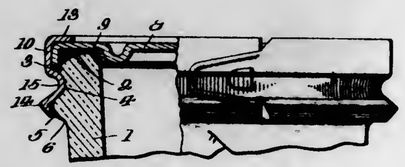


1. A necktie construction comprising a fabricated strip of material folded intermediate the ends to provide a pair of sections substantially in contact with each other, a piece of material embracing the sections adjacent the folded portion, a resilient filler block located between the sections where embraced by the piece of material, a pin having a head, one of the sections having an opening to receive the pin, and means for supporting the pin and likewise the folded portion of the strip at the front of a collar connected to a shirt.

1,900,801. MATTRESS. THOMAS S. COBB, Fort Lauderdale, Fla. Filed Aug. 6, 1930. Serial No. 473,406. 3 Claims. (Cl. 5—359.)

1. A mattress or the like comprising top and bottom walls, side walls connecting the top and bottom walls and formed of companion strips, a two-ply tie sheet extending the entire length and width of the mattress at approximately the center thereof and dividing said mattress into upper and lower sections each containing a fibrous filling, the filling of one section being of a nature different from the filling in the other section, the ends of the tie sheet being extended laterally between the adjacent ends of the companion strips of the side walls and stitched thereto and the plies of said tie sheet between the opposite side walls of the mattress being separated vertically at spaced intervals to form independent compartments and said plies between the compartments being stitched together, and a filling for each compartment of a nature different from the filling in the upper and lower sections of the mattress.

1,900,802. SPRING MATTRESS. SOLOMON COHEN, Leavenworth, Kans. Filed Aug. 4, 1932. Serial No. 627,605. 5 Claims. (Cl. 5—351.)

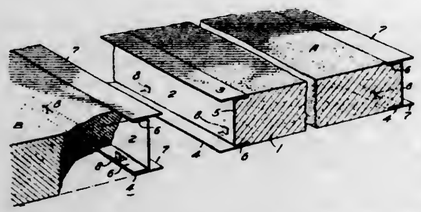


4. A mattress comprising a resilient core, resilient border elements coupled at spaced intervals to the sides and ends of the core at the top and bottom of the latter, superposed webs formed of woven spiral wires, said core being arranged between said webs, a flexible inner casing encompassing said border elements and core and having parts extending between said webs and the said elements and core, said parts being coextensive with said webs, coupling members connecting said webs to the border elements, casing and core, a padding element of fibrous material positioned against said webs and against the other parts of said casing, and an outer casing of textile material enclosing said padding element.

1,900,803. JAR AND CLOSURE THEREFOR. LINDSAY THORNE CRABBS, Chicago, Ill., assignor to Phoenix Metal Cap Co., Inc., Chicago, Ill., a Corporation of New York. Filed Dec. 15, 1930. Serial No. 502,543. 1 Claim. (Cl. 215—95.)

The combination of a jar and a metal closure therefor comprising a cap and a holding band, said cap having a channel near its peripheral edge adapted to receive a sealing gasket, said band having a portion thereof overlying said cap and said sealing gasket, and a flange depending therefrom having a strengthening bead at the lower edge thereof, said jar having formed therein spaced ribs at

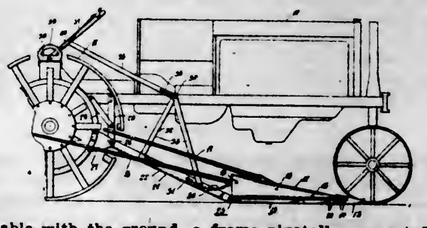
the upper outer face thereof, said flange being so proportioned that the strengthening bead at the lower edge thereof will contact with the lower side of the lowermost rib, whereby when lateral pressure is applied to the flange



to bead a portion thereof into the space between the ribs the contraction of the metal will cause the overlying portion of the band to draw down on the cap and bring the cap, sealing gasket and jar into tight sealing relation.

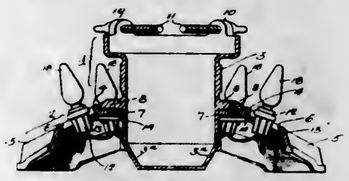
1,900,804. BRAKE DRUM OR MEMBER. JAMES H. CROWE, Lakewood, Ohio, assignor to The Midland Steel Products Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 16, 1931. Serial No. 509,172. 20 Claims. (Cl. 188—218.)

2. A brake drum having a shoe contacting surface composed of substantially eutectoid steel.



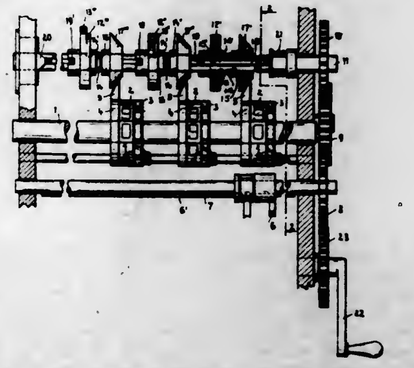
1,900,805. METAL EDGED GYPSUM LUMBER. CLARKE F. DAVIS, Short Hills, N. J. Original application filed Sept. 13, 1932, Serial No. 632,909. Divided and this application filed Dec. 19, 1932. Serial No. 647,971. 38 Claims. (Cl. 72—40.)

1. A precast slab of cementitious material having on opposite edge portions metallic members with either receiving or receivable parts, the adjacent metallic members on two contiguous slabs when inter-engaged being adapted together to form an I beam, each of said metallic members having a web and flanges, one of said members having an uninterrupted web.



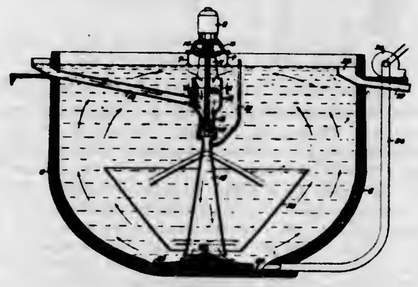
1,900,806. CORN REMOVING ATTACHMENT. ARTHUR M. EVENSON, Spring Grove, Minn. Filed Nov. 17, 1931. Serial No. 575,623. 4 Claims. (Cl. 56—119.)

1. In combination with a farm vehicle having a wheel adapted to travel adjacent a row of corn, a removing head for listed or lodged corn stalks disposed forwardly of the wheel and in its path of travel, comprising a body horizontally arranged and substantially semi-conical with its smaller end foremost, runner means on the body en-



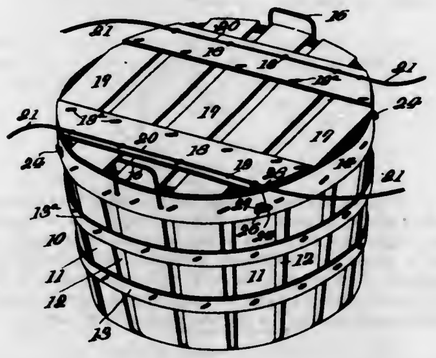
gageable with the ground, a frame pivotally connected to said body and pivoted to the vehicle, and means to move the body into and out of operative position.

1,900,807. CHRISTMAS TREE HOLDER. THOMAS J. FEGLEY and GEORGE O. LEOPOLD, Philadelphia, Pa., assignors to North Bro's M'f'g Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 3, 1932. Serial No. 609,016. 1 Claim. (Cl. 248—38.)



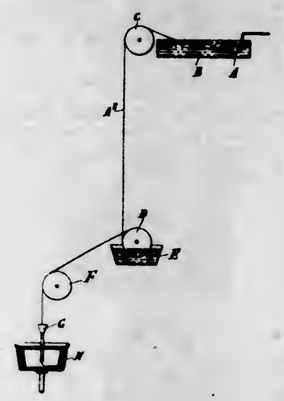
The combination in a Christmas tree holder, of a base consisting of a ring and inclined radiating legs for supporting the holder; a series of openings in the ring, said ring having a depressed internal flange; a receptacle extending through the ring and having an external flange; means securing the flange of the base to the flange of the receptacle, said receptacle having lugs at its upper end, the lugs having threaded openings, and screws extending through the threaded openings and arranged to clamp the trunk of the tree to the receptacle.

1,900,808. CARRYING MECHANISM FOR CALCULATING MACHINES AND THE LIKE. RICHARD HAASE, Brunswick, Germany, assignor to Brunsviga-Maschinenwerke Grimme, Natalis & Co., Aktiengesellschaft, Brunswick, Germany. Filed Nov. 9, 1931, Serial No. 573,995, and in Germany Oct. 1, 1930. 6 Claims. (Cl. 235—137.)



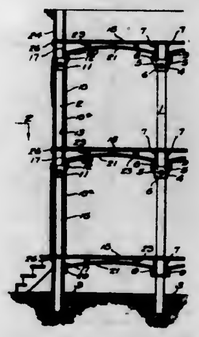
1. In a carrying mechanism for calculating machines and the like, the combination of numeral wheels provided with carrying teeth, carrying wheels for the respective numeral wheels mounted on a shaft parallel to the axis of said numeral wheels and adapted to be engaged by said teeth for shifting the carrying wheels into carrying position, a rod mounted on said shaft and axially shiftable thereon and adapted when shifted to move said carrying wheels out of operative position, and means for moving said rod.

1,900,809. SEWAGE PURIFICATION SYSTEM. FRED V. HAMMERLY, Berkeley, Calif., assignor of one-half to Carroll B. Abbott, Berkeley, Calif., and one-half to Georgia A. Hammerly, Berkeley, Calif. Filed Feb. 26, 1929. Serial No. 342,687. 8 Claims. (Cl. 210—8.)



1. A sewage purification system comprising a tank having a basin-shaped bottom, a hopper disposed adjacent the center of the tank, an inlet duct feeding the hopper, a mechanically driven impeller for breaking up the sewage particles and for forcing the circulation of the sewage thru the hopper and against the tank bottom, and means for injecting air into the sewage after it has passed the impeller.

1,900,810. BASKET COVER FASTENER. WILLIS W. HARGROVES, Portsmouth, Va. Filed Aug. 31, 1932. Serial No. 631,253. 4 Claims. (Cl. 217—124.)



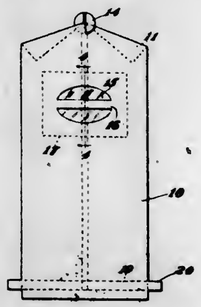
1. The combination of a basket having a reinforcing strip at the top thereof, a cover for said basket, said cover comprising parallel slats and reinforcing members extending substantially across the ends thereof and secured thereto, means for fastening said cover to said basket, said means including wires extending the entire length of each reinforcing member and secured thereto, and fastening elements to which the ends of said wires are secured, said fastening elements being secured to said reinforcing strip.

1,900,811. PRODUCTION OF ARTIFICIAL THREADS AND THE LIKE FROM VISCOSE, AND IN APPARATUS THEREFOR. HORACE JAMES HEGAN and EDWARD HAZELEY, Coventry, England, assignors to Courtaulds Limited, London, England, a British Company. Filed May 18, 1929, Serial No. 364,188, and in Great Britain May 29, 1928. 5 Claims. (Cl. 18—8.)

4. In apparatus for the production of artificial threads and the like from viscose, a spinning nozzle adapted to dip into a precipitating bath, a rotating wheel practically on a horizontal level with the spinning bath, a second rotating wheel situated practically vertically below the first rotating wheel with means for causing fluid to act on the said thread, a third rotating wheel adapted to receive the thread from the second rotating wheel, and a collecting device to which the said thread is finally passed.

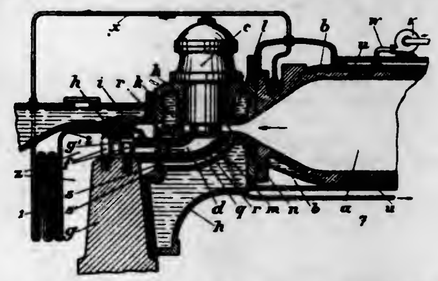
1,900,812. HOUSE OR BUILDING CONSTRUCTION. JOHN ADOLF HENKENSIEFKEN, Philadelphia, Pa., assignor of one-fourth to Clara G. Henkensiefken, one-fourth to Frederick Henkensiefken and one-fourth to Frieda Henkensiefken. Philadelphia, Pa. Filed Oct. 29, 1929. Serial No. 403,336. 1 Claim. (Cl. 20—1.)

In a building construction, an upright center post, a building wall in surrounding relation to and spaced from the center post, said building wall comprising a plurality of upright posts spaced at intervals and constituting supports for said wall, clamps carried by the center post and the posts of said wall, said clamps provided with upwardly extending side extensions spaced from the posts, boards supported on the clamps of said wall posts and engaged behind the extensions of the clamps on said wall posts, transverse joists supported on the clamps of the



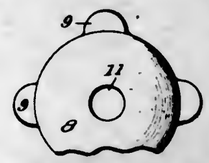
center post and lying against the center post, a pair of transverse boards supported on the clamps of the center post between the upward extensions and the joists, arched boards supported at their inner ends on the joists of the center post, and abutting the transverse boards, said transverse boards and the joists extending from one side of the building wall to an opposite side and in parallelism, the outer ends of the arched boards being supported on the boards carried behind the extensions of the clamps of the wall posts, and a flooring supported on the arched boards and the parallel transverse boards of the center post.

1,900,813. PSYCHROMETER. EARL VERNON HILL, Chicago, Ill., assignor to E. Vernon Hill Company, a Corporation of Illinois. Filed May 7, 1930. Serial No. 450,576. 2 Claims. (Cl. 73—24.)



1. In a psychrometer comprising a body having a dry and a wet bulb thermometer mounted thereon and relatively movable concentric scale members pivotally secured to said body, the combination of a handle for whirling the body pivotally mounted to the pivot of the concentric scale members.

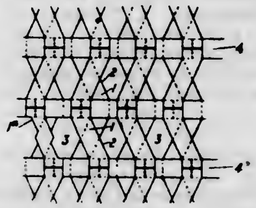
1,900,814. STORAGE BAG. WALTER P. HOLLEY, Montgomery, Ala. Filed Mar. 14, 1931. Serial No. 522,694. 1 Claim. (Cl. 206—7.)



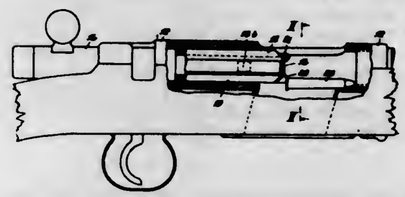
A garment bag provided with upper and lower open ends, means for sealing said ends, a sight opening formed in one of the faces of the bag adjacent the open upper end thereof and covered with a transparent pane mounted upon the inner face of the bag and having a centrally located transverse partition, a reinforcing rectangular frame located within the bag and at the rear of said opening and provided with a transverse partition of a width equaling the width of the first-mentioned partition for preventing the contact of the contents of the bag with the said transparent pane.

1,900,815. EXPLOSION TURBINE. HANS HOLZWARTH, Dusseldorf, Germany, assignor to Holzwarth Gas Turbine Co., San Francisco, Calif., a Corporation of Delaware. Filed Nov. 10, 1928, Serial No. 318,344, and in Germany Nov. 24, 1927. 4 Claims. (Cl. 60—41.)

1. The combination with an explosion chamber suitable for use in an explosion turbine and adapted to receive intermittent charges of fuel and air which are ignited therein, of a double walled passageway leading from the outlet end of the explosion chamber and arranged to direct the gases to a place of use, the double walls of said passageway defining a cooling chamber for receiving a cooling medium whereby said walls are cooled, said walls being sufficiently thick to withstand the pressure of the gases, shock and other stresses imposed thereon, and a relatively thin walled jacketed insert positioned within said passageway and lining at least a portion of the inner wall thereof so as to be directly contacted by the gases discharging from the chamber and thus protect the thick, cooled wall of such passageway against the high heat of the gases, a conduit for conducting a cooling medium to the jacket of said insert, and a conduit for withdrawing therefrom the cooling medium heated by the heat abstracted from said gases, the thin, inner, gas-swept wall of said insert being adapted to have, during the operation of the explosion chamber, such a small temperature differential between the inner and outer surfaces thereof that no excessive stresses arise therein.



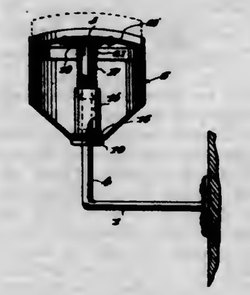
1,900,816. FEEDER FOR INGOT MOLDS. BLOOMFIELD H. HOWARD, Washington, D. C. Filed Dec. 12, 1927. Serial No. 239,494. 4 Claims. (Cl. 22—147.)



1. A feeder for ingot molds comprising a heat retaining body adapted to cooperate with the upper end of the mold and comprising a portion of minimum cross sectional area and a portion of maximum cross sectional area with an upwardly and inwardly curved wall portion intermediate said areas, and provided with an opening communicating at its lower end to the portion of minimum area.

1,900,817. CHECKER BRICKWORK CONSTRUCTION FOR REGENERATORS. JOSEPH FRASER HYSLOP, Falkirk, Scotland. Filed Mar. 30, 1932, Serial No. 602,057, and in Great Britain Mar. 30, 1931. 2 Claims. (Cl. 263—51.)

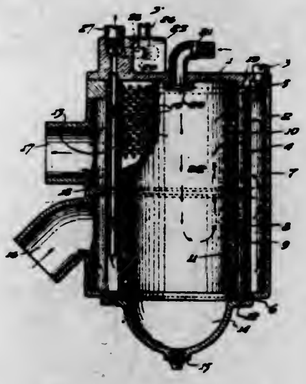
1. Checker brick-work for regenerators comprising closed parallel walls including staggered courses of supporting bricks of inverted T-shape, and superposed vertically spaced courses of checker bricks extending between said walls and formed with rectangular end portions filling the gaps left by said supporting bricks, said checker bricks presenting lateral faces disposed in vertical planes inclined obliquely to said closed walls and forming boundaries of vertical flues, the checker bricks of alternate courses having oblique faces oppositely inclined to those of the other courses, whereby to afford vertical flues of approximately diamond section in plan.



1,900,818. REPEATING FIREARM WITH BOLT ACTION AND CASE MAGAZINE. FRANZ JAGER, Suhl, Germany. Filed May 20, 1932, Serial No. 612,587, and in Germany May 22, 1931. 8 Claims. (Cl. 42—17.)

1. A fire-arm with bolt action, comprising in combination a bolt, a case magazine with lips, a barrel, a rotatable sleeve on the end of the bolt lying adjacent the barrel and longitudinal slots in said sleeve adapted to serve as seats for the said magazine lips and having a greater length than the distance between the outer edges of the magazine lips.

1,900,819. SOAP DISPENSER. WILLIS A. JENNINGS, Chicago, Ill. Filed June 27, 1931. Serial No. 547,417. 3 Claims. (Cl. 45—28.)

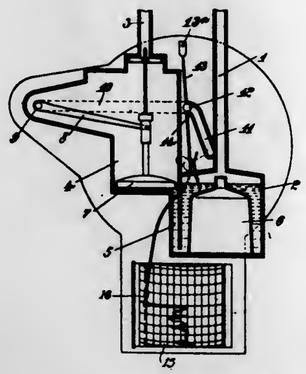


1. A soap holder of the class described comprising a casing having a tapering lower end, a coupling extending through the lower end of said casing and provided with an externally threaded neck, an internally threaded tube having an annular flange formed at its lower end for clamping said casing between the lower ends of said tube and coupling, said coupling provided with an enlarged longitudinally extending aperture, said standard extending through said aperture, a follower in engagement with the upper end of said standard, and means carried by said follower and threaded into said internally threaded tube for causing said follower to move longitudinally within said casing as said casing is rotated upon said standard.

1,900,820. SHIPPING CONTAINER. MELVILLE G. KENYON and MARLOWE H. KLUTER, Richmond, Ind., assignors to The F. & N. Lawn Mower Company, Richmond, Ind., a Corporation of Delaware. Filed July 24, 1931. Serial No. 552,950. 12 Claims. (Cl. 206—46.)

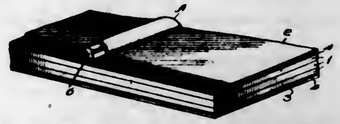
2. In a shipping container for a lawn mower, an arrangement of interior packing to prevent movement of the mower within the container including a bottom member upon which the drive wheels of the mower are adapted to rest, an upwardly projecting inverted V portion formed integrally with said bottom member and adapted to extend between the roller and the cutter bar of the mower, and a supporting member of inverted U shape upon which said roller is adapted to be supported, said supporting member being adjacent to and extending substantially the length of said inverted V portion on the side thereof opposite to said bottom member.

1,900,821. OIL FILTER AND COOLER. JOSEPH E. KLINE, Alpena, Mich. Filed Apr. 10, 1930. Serial No. 443,149. 8 Claims. (Cl. 210—165.)



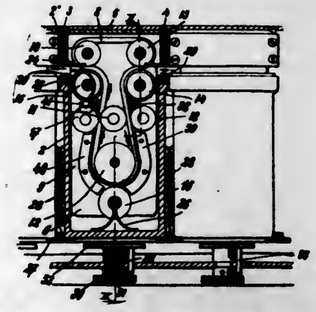
1. An oil filter and cooler comprising an oil cooling chamber and a hot oil chamber inwardly of said oil cooling chamber and having at its upper portion an inlet for hot oil, filtering and insulating means in the hot oil chamber, means affording communication between the upper part of the hot oil chamber and the upper part of the cooling chamber and intercepted by said filtering means, the lower parts of the chambers being out of communication with each other, an outlet conduit for cooling oil leading upward from the lower part of the cooling chamber, and means for dissipating heat from the oil cooling chamber.

1,900,822. SPARE WHEEL AND TIRE COVER ASSEMBLY. CHARLES F. LAMBERT, Grosse Pointe Farms, Mich., assignor to Clayton and Lambert Manufacturing Company, Detroit, Mich., a Corporation of Delaware. Filed Oct. 27, 1932. Serial No. 639,809. 8 Claims. (Cl. 150—54.)



4. A spare tire and wheel assembly comprising a supporting member, a wheel hub having an aperture for detachably receiving a hub cap when in position on one of the axle spindles of the vehicle, fastening means at the hub for securing a portion of the hub directly to said supporting member, a metal tire cover detachably secured to the tire and having a front drum portion for covering the tire and wheel, an aperture formed in said drum portion in alignment with the aperture in said hub, and an auxiliary hub cap simulating said hub cap and removably held in said drum aperture.

1,900,823. DIFFERENTIAL PRESSURE GAUGE FOR MEASURING FLOW OF FLUIDS IN CONDUITS. ARNO LANG, Treuenbritzen, Germany, assignor to The Firm Dr. Martin Böhme, Berlin, Germany. Filed Apr. 12, 1927, Serial No. 183,185, and in Germany May 6, 1926. 3 Claims. (Cl. 73—167.)



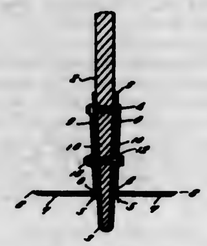
3. A differential pressure gauge for measuring the flow of fluids, comprising a pair of intercommunicating vessels; a liquid partially filling said vessels; a float in one of said vessels and supported by said liquid; a cam; means for transmitting the movement of the float to the cam; a recording lever controlled and actuated by the cam; and a stationary insert body in the other of said vessels to modify the free sectional area of said vessel whereby to produce a modified relationship between the level of the liquid in the other vessel and the differential pressure producing the difference of elevations in the two vessels whereby the changing of level in the float-containing vessel becomes proportional to the square root of the pressure difference applied to the two vessels of the gauge, said cam varying the movement of the recording lever dependent upon the float at certain positions of the liquid with respect to the insert body.

1,900,824. MOLDING CONSTRUCTION FOR COMPOSITE PANELS. GEORGE K. LEWIS, Chicago, Ill., assignor to Carrol C. Kendrick, Chicago, Ill. Filed Feb. 5, 1931. Serial No. 513,654. 2 Claims. (Cl. 20—91.)

2. A composite panel for vehicle body construction comprising body laminations of fibrous material and a sheet metal lamination on the outer surface thereof, said laminations being glued together and compressed in flat formation to form a unitary structure of relatively large area, said sheet metal lamination having embossed therein an integral portion shaped as a molding and raised beyond the surface of the plane of the sheet metal lamination on the opposite side of the fibrous body, and a filler member disposed in a space between said raised molding portion and the body of the panel and forming a strengthening member for said molding portion.

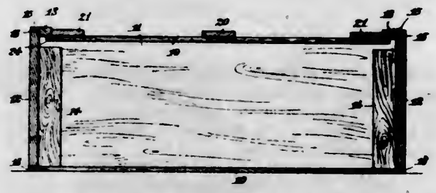
1,900,825. PHOTOGRAPHIC DEVELOPING APPARATUS. ALEXANDER IEZEKIL LIBERMAN, Paris, France. Filed Jan. 10, 1930, Serial No. 419,888, and in Germany Apr. 25, 1929. 7 Claims. (Cl. 95—94.)

1. In a device for developing photographs, the combination of a plurality of developing tanks, each tank being formed in two portions, separate film guiding means for each tank adapted to feed the film to be developed into and out of the associated tank between the two separate portions thereof, means for mounting said film guiding means on one of the portions of each tank, means for normally holding the two portions of each tank a certain distance apart to allow the film to enter and leave the tank, and means for moving one portion of each tank relatively to the other so that the tank may be hermetically closed down when not in operation.



1,900,826. CLOTHES HANGER. JOHN C. LINDSAY, Brooklyn, N. Y. Filed Jan. 16, 1932. Serial No. 587,028. 1 Claim. (Cl. 223—64.)

A clothes hanger comprising two sections of wire, each doubled upon itself to form a pair of laterally projecting supporting members, the open ends of each section being intertwined with the other to form a central upwardly projecting shank, two of the extremities of the wire

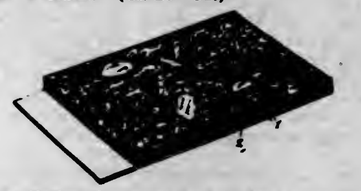


forming said shank being bent upon themselves to form with the shank a three-part clamp, and the lower extremities of said clamp being flared away from the shank providing an entrance for a clothes line into the clamp.

1,900,827. DIBBLE. WILLIAM F. LOVE, Trenton, Fla., assignor to Josie Love, Trenton, Fla. Filed Jan. 14, 1932. Serial No. 586,614. 2 Claims. (Cl. 55—67.)

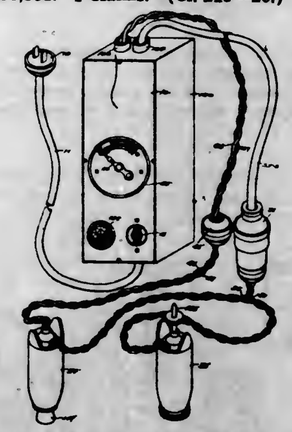
1. A dibble comprising an elongated handle, a comparatively wide, substantially wedge-shaped head on one end of the handle, a substantially wedge-shaped metallic casing mounted on the head and enclosing said head bolts passing through the head and through the upper portion of the sides of the casing for connecting the casing to the head, said bolts being arranged in a transverse plane, angular gages adjustably mounted on opposite sides of the casing, said gages comprising a vertical leg abutting the casing and a horizontal leg extending outward from the casing, bolts extending through the vertical legs of the gages and through the casing and the head, and nuts threaded on the bolts for drawing the gages toward each other against the casing the last-mentioned bolts being arranged in a transverse plane and the upper portion of the vertical limbs of the gages having notches therein in vertical alinement with the first-mentioned bolts.

1,900,828. BOX. HARRY LUBIN, South Orange, N. J. Filed July 17, 1931. Serial No. 551,487. 2 Claims. (Cl. 217—56.)



1. A crater or box having sides and ends and transverse bearing members extending inwardly from the upper portions of the ends of the crate or box, a resilient cover having a transverse member disposed intermediate of its ends and extending beyond the sides of the cover and engaging the sides of the crate or box, and transverse members spaced from the ends of the cover and normally disposed at the bearing members on the crate or box, with the ends of the cover beyond the last mentioned transverse members disposed under the said bearing members, and corner members in the box which are spaced from the undersides of the transverse bearing members to form guideways below the transverse bearing members which are terminated at their outer ends by the ends of the box, the guideways serving to receive the last mentioned transverse members with the cover adjacent thereto when the cover adjacent a transverse member is pressed downwardly and is moved in the direction of the adjacent end of the crate or box.

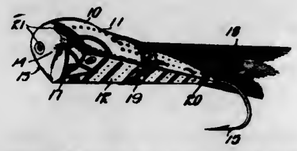
1,900,829. CATALYSTS FOR THE PRODUCTION OF OXYGENATED ORGANIC COMPOUNDS. OSCAR W. LUABY, Baltimore, Md. Filed June 4, 1927. Serial No. 196,637. 21 Claims. (Cl. 260—156.)



1. A heat resistant catalyst for the production of oxygenated organic compounds, consisting of an intimate mixture of zinc oxide and an oxide of chromium, the oxide of chromium being in the greater amount.

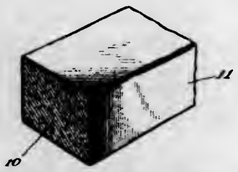
1,900,830. CEDAR BOARD. JOHN FREDERICK MAHLSTEDT, New Rochelle, N. Y., and ABRAM V. A. FELTEN, Pittsfield, Mass. Filed May 28, 1930. Serial No. 455,048. 1 Claim. (Cl. 20—91.)

An aromatic board composed of fragments of aromatic wood pressed together to form a strong sheet, and a backing constituting an odor insulator secured against one side only of the board or sheet.



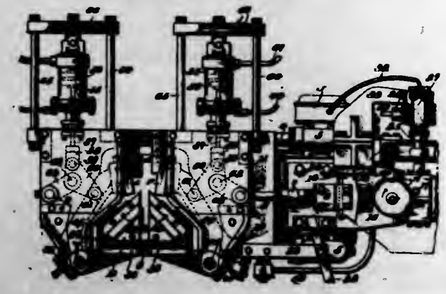
1,900,831. ELECTRICAL CONTROL SYSTEM FOR PERMANENT HAIR-WAVING APPARATUS. EZRA BUDD MARTER, 3d, Burlington, N. J., assignor to A. Edmond Pausser, Philadelphia, Pa. Filed Apr. 22, 1930. Serial No. 446,364. 4 Claims. (Cl. 219—20.)

4. Apparatus of the character described, comprising a main electrical circuit, a switch in said circuit, a pair of branch circuits connected in parallel across said main circuit, a plurality of heating elements connected in one of said branch circuits, a temperature-responsive device disposed adjacent one of said heating elements and connected in the other of said branch circuits, a relay comprising



an energising winding connected in said other branch circuit and a movable contact arm normally closing said one branch circuit, whereby said relay and said temperature-responsive device control energisation of said heating elements in accordance with the temperature thereof, a timing device, a movable arm arranged for actuation by said contact arm when said relay operates to deenergise said heating elements at a predetermined temperature, means operable by said movable arm for starting said timing device, and means operable by said timing device for opening said switch and returning said movable arm to normal position after a predetermined interval of time.

1,900,832. FISH LURE. MARSHALL D. MARTIN, New Orleans, La. Filed May 7, 1932. Serial No. 609,918. 2 Claims. (Cl. 43—46.)



1. An artificial fish lure comprising a tapered body having a flat bottom and a forward end provided with a concaved portion, said concaved portion being formed on the underside of said body, eyes secured to the concaved portion of said end being positioned so as to be seen from the underside of said body, a hook embedded in said body with an eyelet projecting at the forward end and a hook portion at the rear end, the flat bottom of said body providing a wide area on which coloring may be applied, substantially as set forth.

1,900,833. COATED CONCRETE. PETER J. MAUL, Detroit, Mich., and MARTIN HOFFMAN, Chicago, Ill. Filed Oct. 10, 1930. Serial No. 487,879. 5 Claims. (Cl. 72—36.)

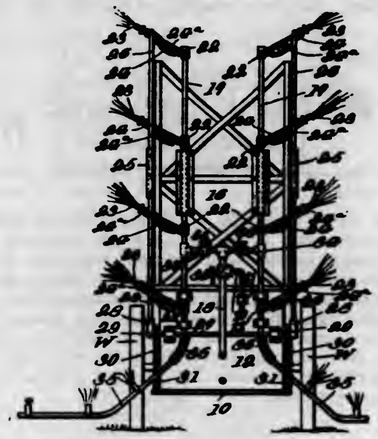
5. An article formed from cementitious material, a cellular aggregate and a glazing material, said article having a glaze formed from the glazing material exposed on a surface thereof, and a coating on said glaze.

1,900,834. ELECTRIC WELDING MACHINE. FRED P. MCBERTY, Warren, Ohio. Filed Apr. 22, 1929. Serial No. 357,068. 32 Claims. (Cl. 219—4.)

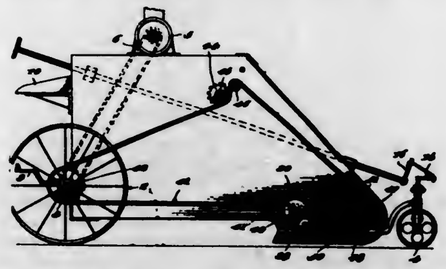
1. In an electric welding machine for welding together two pieces of work by the combined flash and butt weld method, a pair of supports for said pieces of work, and means carried by said supports for cooperating with the parts of said pieces of work supported on said supports to positively properly position the pieces of work upon said supports in a manner to compensate for the metal burned from said pieces of work during the flashing operation of the machine.

1,900,835. TIRE AND RIM CONSTRUCTION. JAQUELIN M. MEREDITH, Norfolk, Va., assignor of one-fourth to B. F. Yost, Norfolk, Va. Filed Apr. 29, 1931. Serial No. 533,812. 1 Claim. (Cl. 152—20.)

A bicycle tire and rim comprising a rim section having continuous grooves formed therein, the outer walls of the grooves being outwardly inclined, the inner walls of the grooves being inwardly inclined and forming a central rib, wide, spaced, continuous ribs formed on the tire, said ribs having substantially straight outer surfaces and inclined inner surfaces conforming to the shape of the central rib of the rim section, and said ribs of the tire extending laterally within the grooves, setting up a binding action between the ribs and walls of the grooves, under pressure directed thereto caused by inflating the tire.



1,900,836. METHOD OF AND APPARATUS FOR PREVENTING THE BURSTING OF LIQUID CONTAINERS SUBJECTED TO FREEZING TEMPERATURE. VERNON MERRITT, Montgomery, Ala. Filed Dec. 5, 1929. Serial No. 411,925. 11 Claims. (Cl. 137—34.3.)

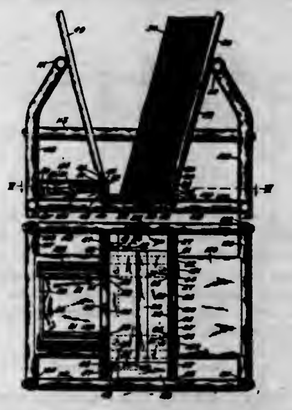


5. A liquid container, comprising sections of variable cross sectional area and pressure releasable valves positioned in the portion of the sections of greatest cross sectional area whereby the release of excess liquid due to freezing thereof, is assured.

1,900,837. SPRAYING APPARATUS. HENRY J. MILLS, Kinderhook, N. Y. Filed Sept. 8, 1931. Serial No. 561,752. 14 Claims. (Cl. 299—37.)

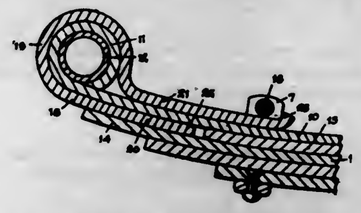
6. A spraying apparatus comprising a movably supported tank, a vertically disposed conduit supported by said tank, and communicating therewith, vertically movable reciprocating means operated by movement of the tank, a spray head connected at one end with the conduit and communicating therewith, and means movably connecting the other end of the spray head with said reciprocating means, so that continuous oscillations are imparted to the spray head in a vertical plane during movement of the tank.

1,900,838. LAWN MOWING MACHINE. FRED B. MINOUS, Oshkosh, Wis. Filed Dec. 31, 1931. Serial No. 584,198. 6 Claims. (Cl. 56—23.)



1. A machine of the class described comprising a casing, a supporting and driving means therefor, a mowing element carried by said casing, an elevating conveyor placed adjacent and in the rear of said mowing element, said casing provided with a storage compartment, and packer means having a rearward and downward pulling action mounted within the storage compartment in the rear of said elevating conveyor, said packer means having a raking and packing action for pulling material away from said elevating conveyor and packing the material in said storage compartment.

1,900,839. PROPELLER. WALLACE M. MINTO, Jersey City, N. J. Filed Dec. 16, 1929. Serial No. 414,509. 6 Claims. (Cl. 170—165.)



1. In a propeller having blades arranged spirally around the hub thereof successively forward of each other; each blade having a straight forward edge located at right angles to the axis of rotation and the major portions of successive blades working in paths in rear of one another.

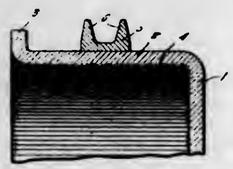
1,900,840. LOOSE LEAF BINDER. CHADWICK HARRY MOORE, London, England. Filed Sept. 8, 1931, Serial No. 561,762, and in Great Britain July 2, 1931. 24 Claims. (Cl. 129—28.)

10. In a loose leaf binder the combination of a back structure, withdrawable binding posts supported on the back structure, a device on the back structure for locking the binding posts against withdrawal, a support for the binder and means operative as the binder is placed in position on the support to release the locking device.

1,900,841. SPRING CONSTRUCTION. ROBERT W. NILSON, Toledo, Ohio, assignor to The Mather Spring Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 11,1932. Serial No. 604,447. 2 Claims. (Cl. 267—47.)

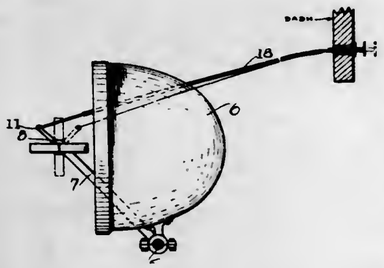
1. In a leaf spring, one of the outer leaves of the spring having an eye, a bar having an end portion located between two leaves of the spring, a cylindrical portion surrounding the eye and an inwardly extending end portion located in contact with the surface of the leaf having the eye.

1,900,842. HEATER FOR RODS AND TUBES. EDWI F. NORTHRUP, near Princeton, N. J., assignor to Aja Electrothermic Corporation, Trenton, N. J., a Corporation of New Jersey. Filed Dec. 21, 1925. Serial No 76,878. 21 Claims. (Cl. 219—11.)



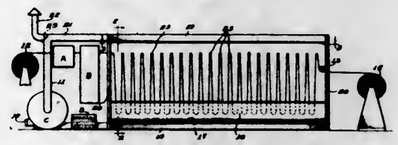
1. In the art of inductive electric heating, a hollow helical coil, a source of high frequency electric current applied to the terminals of the coil and means for moving an article to be heated having much greater length than width or thickness through the coil while it is being subjected to the heating effect of the coil, the coupling between the article and the coil being close.

1,900,843. HEATER FOR RODS AND TUBES. EDWIN FITCH NORTHRUP, Princeton, N. J., assignor to Ajax Electrothermic Corporation, Ajax Park, Trenton, N. J., a Corporation of New Jersey. Filed Mar. 15, 1930. Serial No. 436,193. 7 Claims. (Cl. 219—11.)



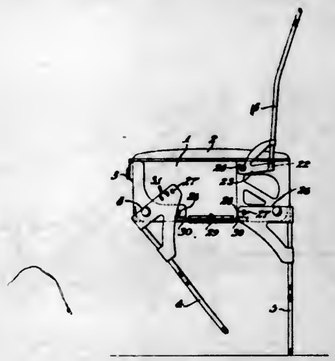
1. In the art of electric heating, a source of alternating current supply, a plurality of helical coils having their axes in line, connections from the source of supply separately to each coil, capacitative means within said connections and a plurality of discharge gaps, one across the coils for supplying high frequency oscillations to the coils from said current supply.

1,900,844. BRAKE DRUM. RAYMOND J. NORTON, Washington, D. C., assignor to Bendix Brake Company, South Bend, Ind., a Corporation of Illinois. Filed Sept. 20, 1930. Serial No. 483,356. 5 Claims. (Cl. 188—218.)



1. A brake drum of low carbon steel having a frictional engaging surface of a higher carbon content, and an exterior rigidifying annulus.

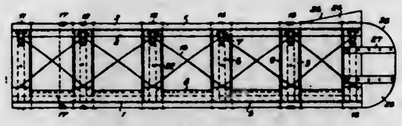
1,900,845. SIGNAL. JOE YONEO OHTA, Terminal Island, Calif. Filed Dec. 28, 1931. Serial No. 583,547. 1 Claim. (Cl. 116—45.)



A direction indicator for motor vehicles adapted to be positioned forwardly of and in proximity to a headlight of the vehicle comprising a bracket, a cylindrical head secured to said bracket and having a slot formed therein, a spindle rotatably mounted in said head and having a threaded extremity, a signalling device detachably secured to said threaded extremity and embodying in its construction a frame, and a signal indicia bearing plate carried by said frame, a lever secured to said spindle and movable in the slot of said head, and manually controlled means connected to said lever.

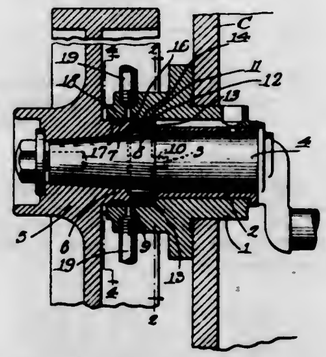
1,900,846. APPARATUS FOR AND METHOD OF DRYING. BUFORD B. RUSSELL, Chicago, and WALTER J. UHLHORN, Oak Park, Ill., assignors to Drying Systems, Inc., Chicago, Ill., a Corporation of Illinois. Filed June 2, 1930. Serial No. 458,972. 2 Claims. (Cl. 34—12.)

1. A drying apparatus comprising conveying means, an air delivery duct extending below the conveying means and having central longitudinally extending discharge means on the upper surface, means for delivering heated air under pressure to said duct, a deflecting plate spaced from and extending over said discharge means for the purpose of evenly directing the air toward both sides, and means providing concave surfaces for receiving the air and carrying it upwardly and directing it inwardly above said deflector plate.



1,900,847. COLLAPSIBLE SEAT, STOOL, OR CHAIR WITH RECEPTACLE FOR HOLDING ARTICLES. WILLIAM ERNEST SIDAY, Richmond, England. Filed Nov. 18, 1930, Serial No. 496,479, and in Great Britain Nov. 19, 1929. 2 Claims. (Cl. 155—148.)

1. In a collapsible chair, a seat, a leg carrying member pivoted to the side of the seat whereby the leg is adapted to be swung between folded and extended positions relative to the seat, said leg carrying member being laterally flexible at a point spaced from its pivot, a fixed formation at the side of the seat, a formation carried by the leg carrying member at said point engageable with and disengageable from the seat carried formation by lateral flexure of the leg carrying member and effective when engaged with said seat carried formation to lock the leg carrying member and leg in one of their aforementioned positions, and cam means carried by the seat for cooperation with said leg carrying member to effect lateral flexure of said member thus to effect disengagement of said locking formations.

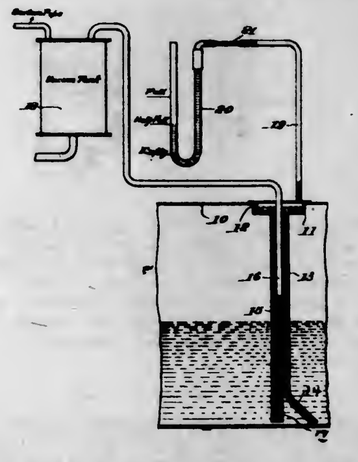


1,900,848. RUDDER FOR SEA-GOING VESSELS. JOHAN GUNDERSEN VADSET, Stavanger, Norway. Filed Jan. 25, 1932, Serial No. 588,716, and in Norway Feb. 23, 1931. 11 Claims. (Cl. 114—168.)

1. A jury rudder for steering vessels, for use when the ordinary rudder or steering gear has broken down comprising a plurality of open semi-cylindrical bodies constituting steering devices, two lines connecting each steering device with the vessel, one of said lines leading to the bow, and the other of which leads to the stern of the vessel, the arrangement of said devices in relation to

the side of the vessel being such that the steering of the vessel in either direction sideways is controlled by paying out or heaving in one of the said lines.

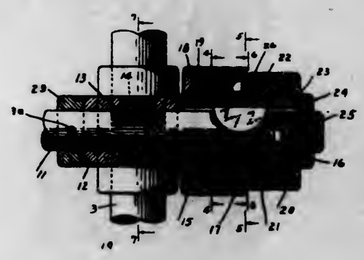
1,900,849. SEAL. MICHAEL H. ACKERMAN, Mansfield, Ohio, assignor of one-half to Louis C. Sickel, Caledonia, Ohio. Filed July 24, 1931. Serial No. 552,968. 3 Claims. (Cl. 286—7.)



1. A seal of the class described including a ring having an annular flange providing a bearing and sealing surface, a deformable ring carried by the main ring and adapted to be expanded radially when subjected to compression, and a relatively thin metal band engaging the deformable ring and having means adapted to engage said ring and hold the band assembled therewith, said band being split transversely and being expansible to form a sealing, working fit against the structure contacted thereby when the deformable ring is subjected to pressure and expanded radially.

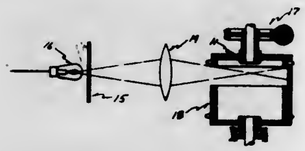
1,900,850. FROTH-FLOTATION PROCESS FOR SLIME-CONTAINING ORE PULPS. MAHLIN S. HANSEN, Indianapolis, Ind., assignor to Peter C. Reilly, Indianapolis, Ind. Filed July 31, 1931. Serial No. 554,385. 9 Claims. (Cl. 209—166.)

1. The process of concentrating slime-containing "oxidised ore" pulps by froth flotation, comprising modifying a slime-containing "oxidised-ore" pulp with a fluosilicate of the class including hydrofluosilicic acid, sodium fluosilicate, potassium fluosilicate, calcium fluosilicate, magnesium fluosilicate, and ammonia fluosilicate; and subjecting the modified "oxidised-ore" pulp to the froth-flotation process.



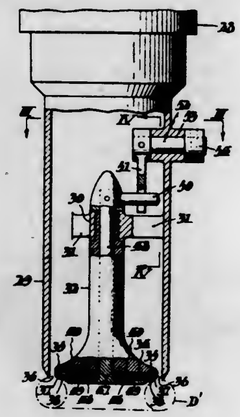
1,900,851. LIQUID LEVEL GAUGE. EDWARD P. HUGHES, Detroit, Mich., assignor of sixty per cent to Walter A. Wood, Detroit, Mich. Filed July 5, 1929. Serial No. 376,107. 4 Claims. (Cl. 73—54.)

1. A liquid level indicator comprising a closed housing, a pair of tubes suspended therefrom and in communication therewith at their upper ends, one of said tubes having its upper end disposed above the bottom of said housing and its lower end substantially closed, the other tube having its upper end disposed at the bottom of said housing and its lower end open, a discharge tube having its lower end in communication with the first named tube



through a restricted passage and adapted for communication with a vessel in which said tubes may be submersed, means for drawing liquid upwardly through said discharge tube, and a pressure-responsive gauge means in communication with the top of said housing.

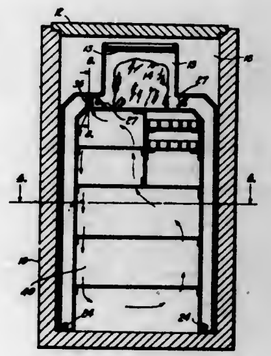
1,900,852. JIG AND FIXTURE LOCK. FRED W. KUPPERSMITH, Bloomington, Ill., assignor to Williams Oil-O-Matic Heating Corporation, Bloomington, Ill., a Corporation of Illinois. Filed Feb. 8, 1932. Serial No. 591,500. 3 Claims. (Cl. 77—62.)



1. A work holder including a base, a plurality of guide posts thereon, a jig plate reciprocable upon said guides, an operating shaft carried by the jig plate adapted to reciprocate the jig plate, an operating handle for the shaft, a multiple disk clutch connecting the handle to the jig plate including a fixed housing about the shaft, a sleeve therein keyed upon the shaft and extending therebeyond, an outstanding flange upon the sleeve exterior of said housing, a housing carried upon the handle surrounding said sleeve on the other side of said flange, a plurality of disks within the first housing alternately keyed to said housing and said sleeve, a plurality of disks within the handle housing alternately keyed to said housing and said sleeve, a plurality of balls interposed between the first housing disks and handle sleeve mounted in apertures provided therefore in said sleeve flange and a plurality of cam depressions in the handle sleeve adapted to co-act with the balls to exert varying pressure upon the housing disks upon rotation of the handle housing to lock or release the operating shaft.

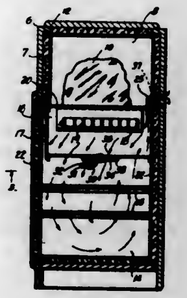
1,900,853. APPARATUS FOR PRINTING FROM A NEGATIVE SOUND RECORD TO A POSITIVE. EARL I. SPONABLE, New York, N. Y., assignor to Fox Case Corporation, New York, N. Y., a Corporation of New York. Filed May 15, 1929. Serial No. 363,224. 6 Claims. (Cl. 95—75.)

1. An apparatus for printing from a negative sound record to a positive comprising spaced coaxial sprocket wheel sections over which the negative and positive move in an overlying relation, means for focusing a line of light on a portion of said film exposed through the space between said sprocket sections with the rays of light substantially normal to the direction of movement of the film at the exposed line.



1,900,854. ALIMENTARY PRODUCT FORMING DEVICE. HANS C. ARGE, New York, N. Y., assignor to Doughnut Machine Corporation, New York, N. Y., a Corporation of New York. Filed June 18, 1932. Serial No. 618,027. 8 Claims. (Cl. 107—14.)

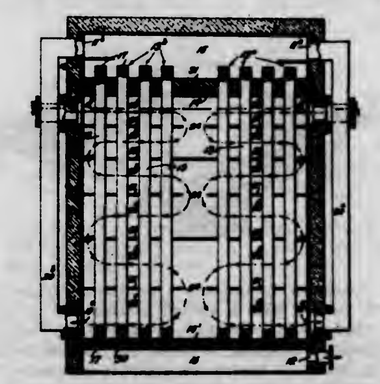
1. In a device for producing annular formations, such as doughnuts and the like, from plastic material, a hopper for the plastic, die mechanism including a tubular outlet member and a normally contracted radially expansible circular cutter member co-axially within the tubular outlet member, and providing jointly therewith, an annular opening for extrusion of the plastic supplied from the hopper; and means for actuating the cutter member to sever annular extrusions of the plastic by contact of its peripheral edge with the inner surface of the tubular outlet member.



1,900,855. VENTILATING MEANS FOR REFRIGERATORS. GEORGE A. AYLSWORTH, Kansas City, Mo., assignor to Cold Control Corporation, Kansas City, Mo., a Corporation of Missouri. Filed Jan. 12, 1931. Serial No. 508,110. 8 Claims. (Cl. 62—89.)

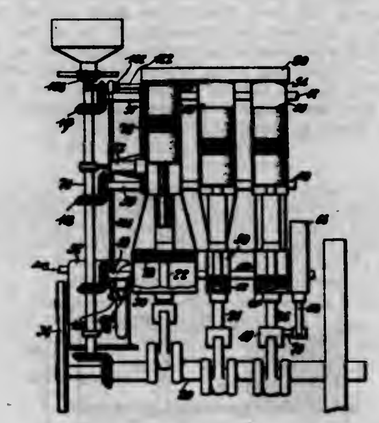
2. Refrigerating apparatus comprising a closed refrigerating chamber, a refrigerating unit in communication with said chamber, and means providing a single passageway constituting a combined air inlet and outlet to said

chamber having various portions of said passageway maintained at different thermal states for inducing a continuous flow of ventilating air into and out of the chamber.



1,900,856. REFRIGERATOR CONSTRUCTION. GEORGE A. AYLSWORTH, Kansas City, Mo., assignor to Cold Control Corporation, Kansas City, Mo., a Corporation of Missouri. Filed Apr. 9, 1931. Serial No. 528,877. 5 Claims. (Cl. 98—51.)

1. A refrigerator construction comprising a cabinet having a refrigerant chamber and a noncommunicating refrigerating compartment, and means providing a single passage for the inflow and outflow of air from the exterior of the cabinet to and from the refrigerating compartment, said passage being exposed to the chilling action of said refrigerant chamber.



1,900,857. APPARATUS FOR USE IN THE CATALYTIC OXIDATION OF GASES. GEORGE A. BERRY, Bound Brook, and CLARENCE P. LINVILLE, Elisabeth, and ALLING P. BRANDSLEY, Plainfield, N. J., assignors to Calco Chemical Company, Bound Brook, N. J., a Corporation of Delaware. Filed July 15, 1929. Serial No. 378,282. 7 Claims. (Cl. 23—288.)

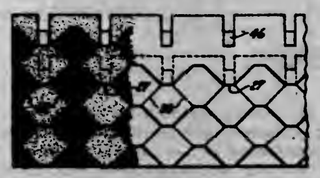
1. Converter apparatus, comprising a plurality of parallel conversion tubes containing catalytic material, through which the gases to be converted flow, and means for causing a stream of cooling gas to flow back and forth

transversely across all the tubes in a zig-zag path extending from the sections of the tubes near their inlet ends to the sections of the tubes at their outlet ends.

1,900,858. THREE-CYLINDER TANDEM ENGINE. ROBERT EARLL BRUCKNER, Easton, Pa., assignor to Doherty Research Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 9, 1929. Serial No. 338,840. 4 Claims. (Cl. 123—59.)

1. A compounded compressor having more than two cross-compounded cylinders, said compressor being constructed and arranged so that a cylinder of a given stage of compression is intermediate two cylinders of lower stages of compression.

1,900,859. METHOD OF MAKING GELS. GERALD C. CONNOLLY and ERNEST B. MILLER, Baltimore, Md., assignors to The Silica Gel Corporation, Baltimore, Md., a Corporation of Maryland. Filed July 25, 1930, Serial No. 470,761, and in Germany Apr. 27, 1928. 9 Claims. (Cl. 23—182.)

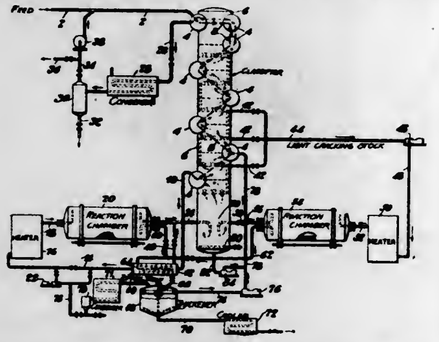


1. In the process of producing gels in which a hydrogel is washed with heated water, that improvement pertaining to controlling the apparent density of the gel which comprises adjusting the temperature of the heated water, the temperature chosen for the water being the higher as the apparent density desired is lower.

1,900,860. DRILL STEEL RETAINER. DUDLEY K. DOVELL, El Paso, Tex., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Nov 4, 1930. Serial No. 493,423. 8 Claims. (Cl. 121—82.)

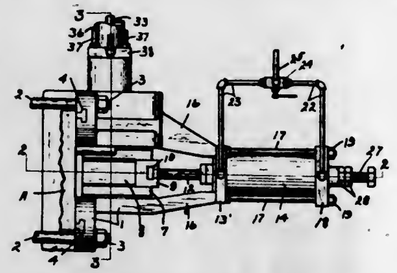
4. In a tool retaining mechanism, a chuck housing having a bore, a chuck in said bore for receiving a collared drill steel, said chuck housing having formed in its opposite side walls longitudinally elongated slots opening into said bore in advance of said chuck, a pivoted retainer yoke arranged externally of said chuck housing and having end portions projecting through said slots into said bore, said yoke presenting an abutment against which the steel collar is adapted to strike, and a coil spring in said bore acting on said projecting end portions for yieldably maintaining said yoke in retaining position.

1,900,861. ROOFING MATERIAL. NORMAN P. HARSHBERGER, Chicago, Ill., assignor to Bakelite Building Products Co. Inc., New York, N. Y., a Corporation of Delaware. Filed May 21, 1928. Serial No. 279,402. 15 Claims. (Cl. 108—7.)



1. A roofing element comprising a body portion having cuts extending inwardly from an edge to form a tongue, said tongue being bent over on the upper surface of the body to extend in a reverse direction from said edge of the body to form means for alining another roofing element of the next course which is laid over said bent over tongue and to form a portion of triple thickness with two roofing elements.

1,900,862. PROCESS FOR REFINING OILS. WILBUR G. LAIRD, New York, N. Y., assignor to Heat Treating Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 6, 1927. Serial No. 211,636. 1 Claim. (Cl. 196—49.)

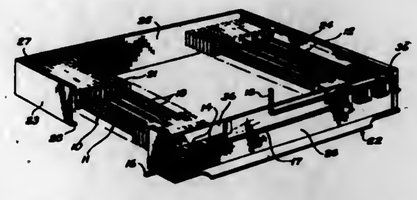


A process of converting relatively heavy hydrocarbons into lower boiling point hydrocarbons, comprising passing oil through a cracking coil and then into a large reaction zone, heating the oil to a cracking temperature in

said coil, discharging the vapors into a vapor fractionating zone where partial condensation occurs, withdrawing the heavy condensate from the base of the tower and passing it with said oil through said coil, withdrawing the relatively lighter but insufficiently cracked

condensate from an intermediate point in said fractionating zone then passing it through a separate cracking coil and into a large cracking zone maintained under relatively high pressure and cracking temperature and subjecting the vapors evolved from said lighter cracked oil to fractional condensation in said fractionating zone.

1,900,863. DIE CASTING MACHINE. NATHAN LESTER, Worcester, Mass., assignor to P. & R. Tool Company, Worcester, Mass., a Corporation of Massachusetts. Filed Sept. 23, 1929. Serial No. 394,717. 14 Claims. (Cl. 22—68.)

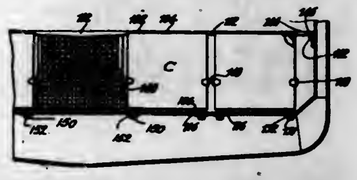


1. In a die casting machine in combination a delivery pot having a chamber therein adapted to contain molten metal normally open at one side for receiving the metal, means for varying the capacity of the chamber, a closure for said chamber having an outlet port for the metal and means for discharging the metal from the chamber through said port.

1,900,864. REFRACTORY POROUS DIAPHRAGM. RUSSELL E. LOWE, New York, NORMAN B. BROWN, St. Albans, and WILLIAM BJORKSTEDT, Jamaica, N. Y., assignors to Doherty Research Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 7, 1927, Serial No. 173,599. Renewed Dec. 31, 1931. 11 Claims. (Cl. 106—9.)

2. A method of making zircon refractories comprising mixing zircon grog with zircon fines, the grog consisting of particles passing through screens not substantially larger than 20-mesh and not substantially smaller than 40-mesh, said fines constituting between 5% to 20% by weight of the grog-fines aggregate, adding P_2O_5 to said aggregate and firing the mass, the P_2O_5 by weight constituting not substantially less than 4% of the weight of said aggregate.

1,900,865. CONDENSER UNIT FOR REFRIGERATING APPARATUS. SAMUEL MOORE, Buffalo, N. Y., assignor to Fedders Manufacturing Company, Inc., Buffalo, N. Y. Filed Apr. 21, 1932. Serial No. 606,640. 5 Claims. (Cl. 257—36.)

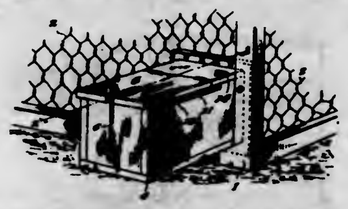


1. A condenser comprising a rectilinear frame having one wall formed with a slotted portion and an opposite wall formed with a marginal notch, a tube unit having one extremity engaging through the slotted portion of said first wall and having its opposite extremity resting in the marginal notch of said opposite wall, and means secured to said opposite wall for closing the open side of the notch to retain the tube unit against removal.

1,900,866. ACOUSTICAL PLASTER. JAMES S. OFFUTT, Chicago, Ill., assignor to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 28, 1930. Serial No. 439,851. 4 Claims. (Cl. 106—34.)

1. A sound-absorbing wall plaster composition comprising calcined gypsum, a graded sized aggregate, a saponin foaming agent, a retarder for the gypsum, and substantially 1% each of extremely finely divided ground asbestos to increase the plasticity of the plaster when gaged with water and of elongated wood-fibers which are capable of expanding when wetted and of shrinking on subsequent drying thereby insuring connected porosity in the final set product, the ratio of aggregate to the gypsum being at least 2:1.

1,900,867. CONTAINER AND METHOD AND MEANS FOR HANDLING CARGO BY SUCH CONTAINERS. MARSHALL OLDS, Mountainside, N. J. Filed Oct. 26, 1927. Serial No. 228,822. 8 Claims. (Cl. 214—152.)



1. The method of loading a ship which includes stowing away a multiplicity of cargo containers in spaced relationship and in substantial or approximate alinement with one another, bridging the spaces between adjacent containers and hauling other containers over the tops of said bridged containers.

1,900,868. ANIMAL FEEDER. FRANK R. RITCHIE, Chippewa Falls, Wis. Filed May 13, 1930. Serial No. 452,030. 2 Claims. (Cl. 119—20.)

2. A feed box having one end open and having its other end portion forming with an opening in its top, a cover normally closing the opening in the top, means for fastening the cover when closed, a gate, a rod pivoting the gate beneath the top of the box back of the opening, whereby

the gate may be swung upward into open position and downward into closed position, said rod extending from one of the side walls of the box and having its outer por-

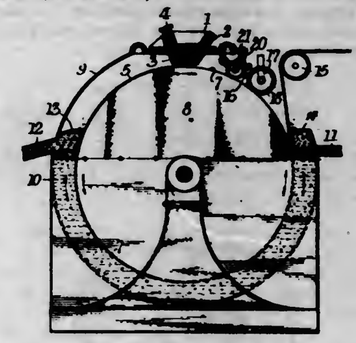
tion bent to form an actuating arm, and fastening means on the box cosecting with the arm to secure the gate in either open or closed position.

1,900,869. COLOR PHOTOGRAPHIC MATERIAL. MERRILL W. SEYMOUR, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 25, 1931. Serial No. 559,847. 11 Claims. (Cl. 95—2.)

11. A film for the production of color photographs which comprises a support, and coated on one face of said support a sensitive layer consisting of a mixture of two separately color sensitised emulsions, one of said emulsions being sensitized with 1'.2-dethyl-3,4-bensothioseula cyanine iodide and the other of said emulsions being sensitized with 4,4'-diphenyl-3,3'-diethyl 7-(4 phenyl thiazole ethiodide) methyl thiazole carbocyanine iodide.

1,900,870. PHOTOGRAPHIC COLOR PROCESS. MERRILL WILMER SEYMOUR, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Apr. 26, 1932. Serial No. 607,570. 7 Claims. (Cl. 95—2.)

1. The method of making a multi-color record that comprises exposure to a light image of an element carrying a plurality of differentially color sensitized layers, developing the affected portions to form uncolored silver images, exposing the element to light of a color capable of affecting only one of said layers, developing a silver and color image in the layer so exposed, exposing the element to white light, developing in the other of said layers a silver and color image, then removing all said silver images in the several layers in a single operation, leaving a color image in each layer.



1,900,871. DOUBLE ALPHA KETONIC ACID CELLULOSE ESTERS AND PROCESS OF MAKING THE SAME. CYRIL J. STAUD and CHARLES S. WEBBER, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Feb. 25, 1929. Serial No. 342,668. 14 Claims. (Cl. 260—101.)

1 A mixed cellulose ester including an acyl radical and a radical of an alpha ketonic acid.

1,900,872. METHOD OF RECOVERING CELLULOSIC DERIVATIVE SCRAP. ERNEST R. TAYLOR and HENRY B. SMITH, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed July 29, 1929. Serial No. 381,997. 6 Claims. (Cl. 252—1.)

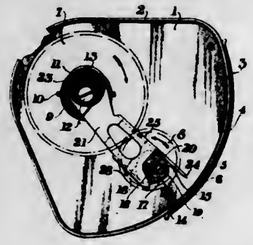
4. The process of preparing cellulose derivative film scrap for digesting, leaching or other solution treatment which comprises passing the film scrap between relatively closely spaced corrugated rolls.

1,900,873. PROCESS OF MAKING CELLULOSE NITRATE FILM AND SIMILAR PRODUCTS. HENRY E. VAN DERHOEF, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Apr. 6, 1929. Serial No. 353,049. 7 Claims. (Cl. 18—57.)

1. The process of manufacturing cellulose nitrate film which comprises simultaneously coagulating and curing a cellulose nitrate "dope" by subjecting it to an atmosphere of high relative humidity.

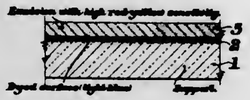
1,900,874. BEARING. AUGUST GUNNAR FERDINAND WALLGREN, Stockholm, Sweden, assignor to Aktiebolaget Nomy, Stockholm, Sweden, a Corporation of Sweden. Filed May 10, 1930, Serial No. 451,233, and in Sweden May 15, 1929. 5 Claims. (Cl. 308—73.)

1. A bearing of the character described comprising an outer annular member, an inner annular member and a plurality of bearing blocks having operative positions between the annular members, one of said members comprising a body portion and supporting layer portions, the other of said members having a body portion and a layer portion forming a bearing surface, said blocks having a body portion, supporting layer portions and layer portions forming bearing surfaces, one group of said supporting portions being recessed and another group of supporting portions projecting and cooperating with the recessed supporting portions to tilt the blocks, said bearing surfaces cooperating to transmit load through the bearing, said body portions consisting of a ferrous metal and said layer portions consisting of a non-ferrous metal of greater hardness than the ferrous metal.



1,900,875. BEARING. AUGUST GUNNAR FERDINAND WALLGREN, Stockholm, Sweden, assignor to Aktiebolaget Nomy, Stockholm, Sweden, a Corporation of Sweden. Filed June 16, 1931, Serial No. 544,767, and in Sweden June 21, 1930. 7 Claims. (Cl. 308—73.)

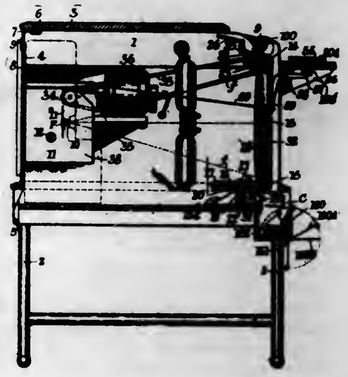
1. A bearing of the character described comprising relatively rotatable spaced bearing members and a plurality



of bearing blocks having operative positions between said members, one of said members having grooves to form bearing shoulders adjacent to the grooves, said grooves being disposed transversely of the direction of movement of the bearing, said blocks having projections cooperating with said bearing shoulders to tilt the blocks, and said grooves having converging sides whereby the angularity between the groove surfaces and the bearing shoulders is less abrupt than a right angle.

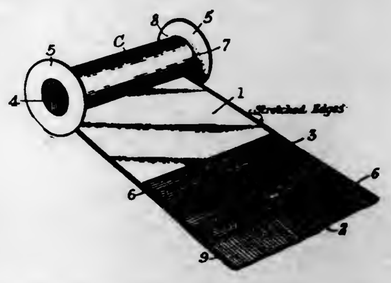
1,900,876. MOTION PICTURE FILM FEEDING DEVICE. OTTO WITTEL, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Oct. 9, 1930. Serial No. 487,412. 16 Claims. (Cl. 88—184.)

16. A device of the class described comprising a guideway for a perforated tape, a claw adapted to feed the tape intermittently along said guideway, mechanism reciprocating said claw transversely of the plane of the guideway for moving the claw into and out of engagement with the tape perforations, and means for moving said claw longitudinally of said guideway in one direction for feeding the tape one step, and for partially reversing the movement of said claw immediately prior to its withdrawal from the tape by said mechanism.



1,900,877. NONHALATION MOTION PICTURE FILM. KENNETH C. D. HICKMAN, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed May 13, 1931. Serial No. 537,048. 2 Claims. (Cl. 95—9.)

1. A motion picture negative film adapted for use in making exposures under illumination particularly rich in light of the longer visual wave lengths and comprising a support and a photographic layer thereon highly sensitive to light of the longer visual wave lengths, said support carrying a dye layer having a density in the blue region of the spectrum not greater than .15 and throughout the other visual portions of the spectrum greater than .3, the dye being unaffected by ordinary photographic processes.

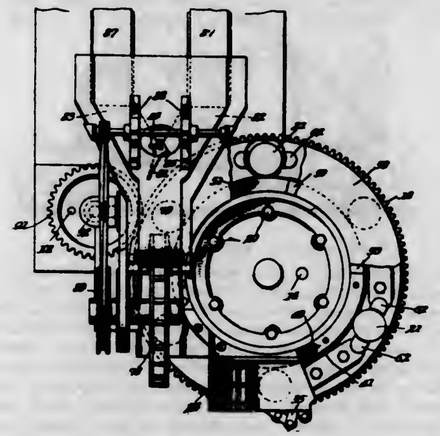


1,900,878. DOCUMENT PHOTOGRAPHING APPARATUS. ROY S. HOPKINS, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Dec. 3, 1927. Serial No. 237,467. 14 Claims. (Cl. 88—24.)

1. In a document photographing apparatus in combination, a camera having mechanism including a film advancing means and a shutter, a document feeder, mechanism for intermittently operating the document feeder and adapted to move the feeder to advance documents intermittently across the field of the camera, a common operating means for the camera and mechanism for advancing the document feeder, said common operating means including parts cooperating to produce a cycle

of operations to advance the film and operate the shutter upon alternate operations of the document feeder mechanism.

1,900,879. LIGHT TIGHT PHOTOGRAPHIC FILM CARTRIDGE. JOHN G. JONES, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed July 27, 1929. Serial No. 381,589. 7 Claims. (Cl. 95—9.)



1. A protective covering for photographic light sensitive film comprising a strip of protective paper having the longitudinal edges thereof smoothly stretched thereby having a slightly wavy edge when unrolled.

1,900,880. PROCESS AND APPARATUS FOR MANUFACTURE OF SCREW CAPS. ERIC B. KRAMER, Baltimore, Md., assignor to Crown Cork & Seal Company, Inc., Baltimore, Md., a Corporation of New York. Filed July 22, 1931, Serial No. 552,493. Renewed Dec. 22, 1932. 64 Claims. (Cl. 153—2.)

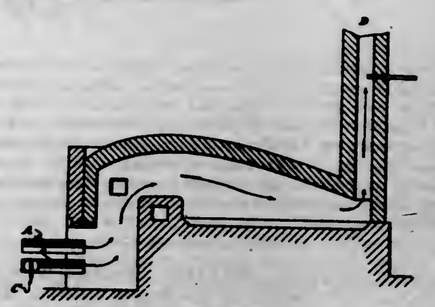
1. The method of making in a single operation curled edge screw caps having a skirt formed with a curled edge and a continuous thread above the curled edge which comprises imparting simultaneously both a bodily movement along a predetermined path and rotational movements to a plurality of hat-shaped blanks, each having a skirt and a flange, and during said movements in immediately successive steps forming the flange into a curled edge and bending the blank skirt to form a continuous thread while leaving the end of the skirt free to permit free shrinkage of the material of the skirt.

17. An apparatus of the class described comprising a feeding mechanism for cupped cap blanks, a rotary mandrel supporting carriage, individually rotating mandrels thereon for receiving a blank, die sections cooperating with said mandrels to form in sequence a curled edge and continuously and progressively beginning at one end and finishing at the other the entire of a continuous-thread in the skirt of the blank above the curled edge, means for rotating the mandrel supporting carriage past

the die sections, means for rotating the mandrels to cause each mandrel to perform at least one complete rotation during the traverse of the carriage past each die section, and automatic means for lifting the cap from a mandrel.

1,900,881. SCREW CAP. ERIC B. KRAMER, Baltimore, Md., assignor to Crown Cork & Seal Company, Inc., Baltimore, Md., a Corporation of New York. Filed July 22, 1931. Serial No. 552,494. 4 Claims. (Cl. 215—43.)

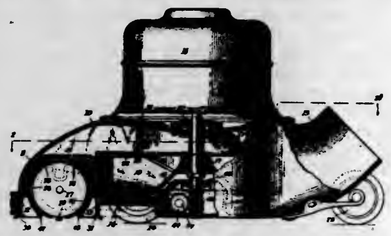
1. In combination with a glass container having a neck formed with a continuous external thread, a screw cap of thin metal having a skirt formed with a continuous thread having a shelf provided near its inner edge with a contact portion which is formed to provide a narrow line contact with the underside of the container thread, the shelf surface and the container thread surface along said line approaching sufficiently close to perpendicularity to the cap axis to produce a downward sealing pressure substantially in excess of the outward wedging pressure, said shelf having a clearance outwardly and upwardly from said line contact about the container thread.



1,900,882. CATALYSTS FOR THE REMOVAL OF ORGANIC SULPHUR COMPOUNDS FROM GASES. OSCAR W. LUBBY, Baltimore, Md., assignor to Wilbert J. Huff, Baltimore, Md. Filed Jan. 28, 1928. Serial No. 250,338. 8 Claims. (Cl. 23—283.)

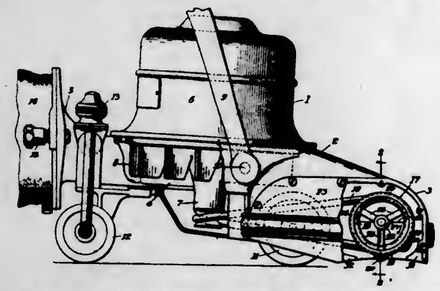
1. The process for preparing a catalyst for the conversion of organic sulphur compounds to hydrogen sulphide consisting of subjecting a mass consisting originally of an intimate mixture of at least one metal included in the sixth and seventh groups of the periodic system of the elements with at least one polyvalent metal of the first to fifth groups of the periodic system, exclusive of rare metals having an atomic number less than 58, to the action of a gas containing hydrogen and organic sulphur at a temperature above 200° C.

1,900,883. PROCESS FOR PURIFYING GAS. OSCAR W. LUBBY, Baltimore, Md., assignor to Wilbert J. Huff, Baltimore, Md. Original application filed Jan. 28, 1928. Serial No. 250,338. Divided and this application filed Apr. 9, 1929, Serial No. 353,895, and in France Jan. 22, 1929. 17 Claims. (Cl. 23—3.)



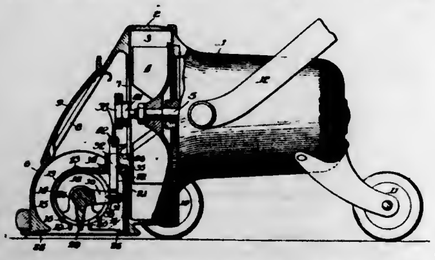
1. The process of converting organic sulfur compounds to hydrogen sulfide in a gas containing elementary hydrogen and which may be free from oxygen and water vapor which comprises reacting a portion of said hydrogen with organic sulfur by subjecting said gas at a temperature above 200° C. to the action of a solid catalyst containing at least one metal included in the sixth and seventh groups of the periodic system of the elements in combination with at least one of the following named elements: copper, cerium, thorium, and antimony.

1,900,884. APPARATUS FOR THE CONTROL OF COMBUSTION. OSCAR W. LUBBY, Baltimore, Md., assignor to Wilbert J. Huff, agent. Filed June 23, 1931. Serial No. 546,245. 7 Claims. (Cl. 236—15.)



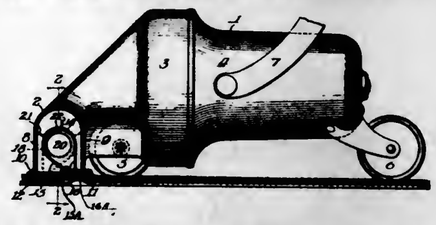
1. In a combustion system, a passage way through which a combustible gas flows, means for admitting air to the gas stream to cause combustion thereof, means for diverting from the gaseous products of combustion a small sample thereof, means for admixing with said sample a definite proportion of hydrogen, a thermal conductivity cell comprising two chambers each inclosing a metal filament, a Wheatstone bridge two of the arms of which respectively include said filaments, a conduit having two branches through which the gaseous mixture flows in substantially equal volumes, said branches respectively communicating with the two chambers of said cell, and one only of said branches including a combustion pipette, a galvanometer connected in said bridge and means controlled by said galvanometer for governing said first mentioned means.

1,900,885. SUCTION CLEANER. DONALD G. SMELLIE, Canton, Ohio, assignor to The Hoover Company, North Canton, Ohio, a Corporation of Ohio. Filed Dec. 1, 1930, Serial No. 499,135. 22 Claims. (Cl. 15—14.)



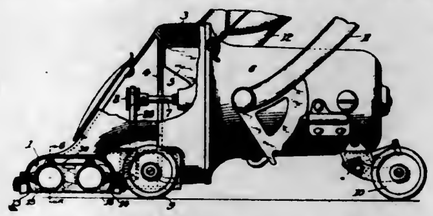
1. In a suction cleaner a suction nozzle, means to draw air through said nozzle, a housing in said nozzle in communication with the exterior atmosphere and open to said nozzle on its under side and a pile penetrating lip adapted to extend between adjacent tufts and into a single tuft of pile formed thereon.

1,900,886. SUCTION CLEANER. DONALD G. SMELLIE, Canton, Ohio, assignor to The Hoover Company, North Canton, Ohio, a Corporation of Ohio. Filed May 28, 1930. Serial No. 456,390. 12 Claims. (Cl. 15—13.)



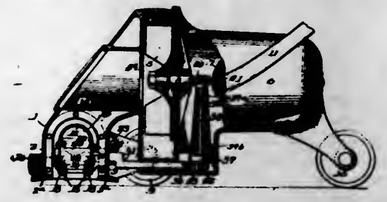
1. In a suction cleaner, a suction nozzle, means to create a reduced pressure in said nozzle, a surface contacting agitator mounted for continuous rotation within said nozzle and interiorly connected to the atmosphere, said agitator comprising a body having an opening therein and a beater bar upon said body extending parallel to said opening, said beater bar and said opening extending helically upon said agitator body, and means to actuate said agitator.

1,900,887. SUCTION CLEANER. WILLIAM H. KITTO, Canton, Ohio, assignor to The Hoover Company, North Canton, Ohio, a Corporation of Ohio. Filed May 28, 1930. Serial No. 456,385. 7 Claims. (Cl. 15—13.)



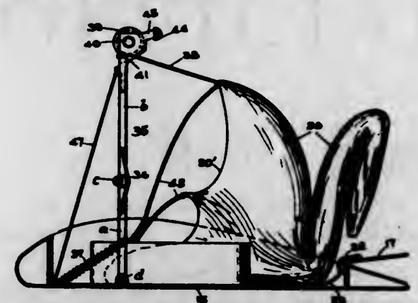
1. In a suction cleaner, a suction nozzle adapted to contact a surface covering undergoing cleaning, means to create a reduced pressure in said nozzle, a member having a downwardly facing opening within said nozzle interiorly connected to air at atmospheric pressure, reciprocating agitating means within said nozzle, and means to positively actuate said agitating means.

1,900,888. SUCTION CLEANER. WILLIAM H. KITTO, Canton, Ohio, assignor to The Hoover Company, North Canton, Ohio, a Corporation of Ohio. Filed May 28, 1930. Serial No. 456,386. 2 Claims. (Cl. 15—14.)



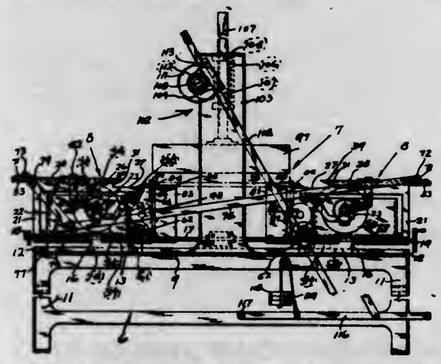
1. In a suction cleaner, a suction nozzle, means to create a reduced pressure in said nozzle, a member rotatably mounted within said suction nozzle interiorly connected to the atmosphere and adapted to be tilted by the movement of the cleaner over the surface covering undergoing cleaning, and means to limit the angle of rotation of the member and to prevent the passage of air between the member and the adjacent wall of the nozzle comprising a sealing stop carried by said member along its entire length and adapted to contact the adjacent wall of said suction nozzle.

1,900,889. SUCTION CLEANER. BERNARD C. BECKER, York, Pa., assignor to The Hoover Company, North Canton, Ohio, a Corporation of Ohio. Filed Feb. 6, 1931. Serial No. 514,012. 11 Claims. (Cl. 15—13.)



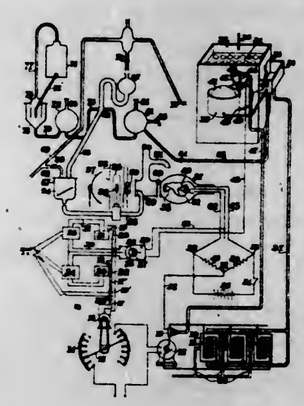
1. In a suction cleaner, a nozzle, a stationary air tunnel interiorly connected to the atmosphere supported in said nozzle and having an exhaust opening therein, surface-contacting agitating means in air sealed relationship with said air tunnel and defining a side of the tunnel mouth, and means to actuate said agitating means.

1,900,890. SUCTION CLEANER. WILLIAM D. SELLERS, Oak Park, Ill., assignor to The Hoover Company, North Canton, Ohio, a Corporation of Ohio. Filed Feb. 12, 1931. Serial No. 515,192. 9 Claims. (Cl. 15—14.)



1. In a suction cleaner, a nozzle, a stationary air tunnel interiorly connected to atmosphere supported in said nozzle and having a downwardly facing exhaust outlet, surface-contacting agitating means carried by said air tunnel at the sides of said outlet, and means to impart an alternate-rotary movement to said agitating means.

1,900,891. PARACHUTE MOUNTING FOR AEROPLANES. THEODORE D. CRANE, Council Bluffs, Iowa. Filed Feb. 10, 1930. Serial No. 427,089. 10 Claims. (Cl. 244—21.)



1. In a parachute mounting for an aeroplane, said aeroplane including a hollow plane having an opening in its upper wall, a parachute normally collapsed and disposed in said plane and having an expansible end-portion provided with flexible stays and spreader-strands, a swivel attached to said flexible stays, anchor stays secured to said plane and attached to the swivel, mechanism connected with the spreader-strands and disposed in said plane, a lid normally closing said opening, and means for actuating said mechanism for moving said lid and expansible end-portion of the parachute to permit the air to enter said parachute to cause inflation thereof.

1,900,892. BOX MAKING MACHINE. JOHN W. LOW, Mill Valley, Calif. Filed Dec. 3, 1930. Serial No. 499,713. 14 Claims. (Cl. 93—51.)

1. In a box making machine a frame, folder elements disposed on the frame to fold the flaps, the sides, and the ends of the blank and to support the blank thereon before folding; spreader members associated with the folders, being adapted to be extended over portions of the blank to apply an adhesive to the surfaces that overlie the flaps when the box is folded; an adhesive container in operative relation to each member; a rotary adhesive carrier in each container being operatively connected to the adhesive receiving face of the said members to be rotated in synchronism with said member, and to transfer adhesive from the container to said member; means to urge said blank into engagement with the folder elements; and means to actuate said blank-urging means.

1,900,893. AUTOMATIC SILVER RECOVERY CONTROL. KENNETH C. D. HICKMAN, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed May 28, 1931. Serial No. 540,620. 18 Claims. (Cl. 204—5.)

2. In an automatic control for an electroplating apparatus adapted to receive an electrolyte, the combination with a plating current control means adapted to vary the plating current supplied to said apparatus, and a control circuit for said plating current control means, of a resistance bridge means including balanced resistance arms, a means for varying the resistance of one of said arms corresponding to the plating ion concentration of said electrolyte to impress an electromotive force on said control circuit, and a shunt means for impressing an opposed electro-motive source on said control circuit corresponding to the plate current whereby the plating current is increased or decreased with increase and decrease in the plating ion concentration of the electrolyte.

CARNEGIE LIBRARY OF ATLANTA

THE

OFFICIAL GAZETTE

OF THE

United States Patent Office

Vol. 428—No. 2 TUESDAY, MARCH 14, 1933 Price—$16 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $16.00 per annum, including annual index, $10.25; single numbers, 35 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

TRADE-MARK RULES—AMENDMENT

Order No. 3,234

U. S. Patent Office, *Washington, Feb. 11, 1933.*

Acting under the provisions of section 487 of the Revised Statutes (U. S. C. Title 35, sec. 11), and with the approval of the Secretary of Commerce, the rules of the Patent Office governing the registration of trade-marks are amended as follows:

Rule 11, add at the end thereof the following paragraphs:

Every attorney prosecuting applications for registration of trade-marks shall submit to the Commissioner of Patents for approval copies of all proposed advertising matter, circulars, letters, cards, etc., intended to solicit trade-mark business, and if it be not disapproved by him and the attorney so notified within 10 days after submission, it may be considered approved.

Any such attorney sending out or using any such matter, a copy of which has not been submitted to the Commissioner of Patents in accordance with this rule, or which has been disapproved by the Commissioner of Patents, shall be subject to suspension or exclusion from practice before the Patent Office, or any division thereof.

THOMAS E. ROBERTSON,
Commissioner.

Adjudicated Patents

(C. C. A. Colo.) Pearce patent, No. 1,277,750, for flotation process and apparatus, claims 1 and 3 *Held* valid and infringed. *Stearns-Roger Mfg. Co.* v. *Ruth*, 62 F.(2d) 442.

(C. C. A. N. J.) Chipman patent, No. 1,694,205, for weed killer and method of killing weeds, claims 3, 4, 6, 8, 9, and 10 *Held* invalid. *Chipman Chemical Engineering Co.* v. *Reade Mfg. Co.*, 62 F.(2d) 490.

(C. C. A. Pa.) Behrman patent, No. 1,733,280, for razor and blade therefor, claims 5, 10, 11, and 12 *Held* invalid. *American Safety Razor Corporation* v. *Frings Bros. Co.*, 62 F.(2d) 416.

(D. C. N. Y.) Flaherty reissue patent, No. 16,808, for low viscosity lacquer and film produced therefrom, claims 2, 3, 6, 8, 9, 12, and 17 *Held* invalid. *E. I. du Pont de Nemours & Co.* v. *Glidden Co.*, 1 F. Supp. 1007.

Adverse Decisions in Interference

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,865,345, G. H. Wheatley, Covering, decided February 13, 1933, claim 19.

Pat. 1,828,471, F. J. Oven, Gasket, decided February 15, 1933, claims 1 and 2.

U. S. Court of Customs and Patent Appeals

Monday, March 6, 1933.

It is ordered that time for the deposit of fee for printing transcript, not due prior to March 1, 1933, be extended for thirty days without application therefor.

It is further ordered that time for filing briefs will be extended on special application therefor, during the present emergency, or until otherwise ordered by the court, in all cases where briefs were not due prior to March 1, 1933.

Attest:

ARTHUR B. SHELTON,
Clerk.

Condition of Applications Under Examination at Close of Business February 25, 1933

(Total number of applications awaiting action, excluding Trade-Mark Division, 54,996; Trade-Mark Division, 1,096. Oldest new case, Sept. 24, 1932; oldest amended, Sept. 26, 1932. The dates given are 1932 except where † indicates 1933.)

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

IN RE REPLOGLE

No. 3,833. Decided December 27, 1932

PATENTABILITY—REFRIGERATING SYSTEM.

Certain claims for a refrigerating system *Held* patentable over the prior art.

APPEAL from the Patent Office. Modified.

Mr. Ralph E. Baker and *Mr. Warren H. F. Schmieding* for Replogle.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

GRAHAM, *P. J.*:

The appellant has made application to the United States Patent Office for a patent on improvements in control of automatic refrigeration apparatus. Several claims were rejected by both tribunals in the Patent Office. On appeal to this court, appellant has dismissed his appeal as to all of said claims except claims 9 and 16, which are as follows:

9. In an artificial refrigerating system for maintaining different maximum temperatures within a plurality of chambers, having a single compressor-condenser unit and power appliance, a plurality of evaporators associated with said chambers and adapted to contain liquid refrigerant, and common refrigerant feed and return conduits for connecting said evaporators with the compressor-condenser unit, the combination therewith of means affected by the pressure within the return conduit to control the operation of the power appliance, and means affected by the pressure in one of the evaporators to positively prevent a premature discharge of refrigerant from said evaporator into the return conduit until a predetermined temperature is reached in the chamber associated with said evaporator.

16. In an artificial refrigerating system for maintaining definite maximum temperatures within a plurality of chambers, having a single compressor-condenser unit and power appliance, a plurality of evaporators associated with said chambers and adapted to contain liquid refrigerant, a common refrigerant feed and return conduit for connecting said evaporators with the compressor-condenser unit, a combination therewith of means affected by the pressure within the return conduit to control the operation of the power appliance, a valve for regulating the flow of the refrigerant from one of the evaporators into the return conduit, means responsive to the pressure internally of said evaporator for actuating said valve and including a snap action valve control for maintaining said valve in either its closed or open position until a predetermined maximum or minimum pressure is reached in the evaporator.

Appellant's disclosure is of a mechanical refrigerating apparatus with three refrigerating chambers, in each of which a different predetermined range of temperatures may be maintained, by maintaining different pressures of the evaporant in evaporators in each of said chambers. A condenser unit supplies the refrigerant to each evaporator, the three evaporators having a common inlet pipe. Branch outlet pipes from these evaporators discharge into a common conduit. The first evaporant is in open communication with the common outlet; the second and third have interposed in their branch outlets two-temperature, snap-acting valves, which may be adjusted to varying pressures, and which control the pressure of the refrigerant in said evaporators.

The tribunals of the Patent Office have rejected appellant's claims on a single reference, Eddy, No. 1,185,597, of May 30, 1916. This reference shows three refrigerating chambers, capable of being maintained at different temperatures by evaporators. The refrigerant is admitted to coils in the chambers through balanced valves, such valves being operated jointly by the pressure of the refrigerant upon a diaphragm, and supplementary pressure due to the expansion of a liquid in a thermic receptacle.

The essential difference between the Eddy device and that of appellant, lies in the character of the valves used in the outlet pipes from the different evaporators. Appellant, as has been said, uses a snap valve. Eddy's valves are, as described by the Board of Appeals:

> The valves used in the Eddy construction in the same position are of the usual spring pressure type in which the tension of the spring is adjusted to hold the refrigerating fluid in the coil up to a point where it receives an amount of heat, and then the increased pressure of the fluid is sufficient to overcome spring pressure, open the valve and discharge the heated fluid into the return pipe. These valves are proportioned to prevent back pressure at high pressure into a coil intended for a lower pressure.

The appellant argues that he has devised a new type of refrigerating apparatus; that his application of snap, positive acting, valves, in these conduits, has produced a new and highly useful improvement in the art; that the snap-acting valves which he employs will open, positively and completely, when a certain predetermined high pressure has been attained, and will likewise close, completely and positively, when a predetermined low pressure has been reached. As to the operation of Eddy's valves, appellant argues:

> • • • It will be noted that the underside of the diaphragm 66 is subjected directly to the pressure prevailing in the passage 67 of the valve and consequently subjected directly to the pressure within the evaporator. An increase of pressure within the evaporator causes an increase of pressure on the underside of the diaphragm 66. Thus, it will be seen that the higher the pressure within the evaporator the more the valve 64 will be open and, vice versa, as the pressure in the evaporator decreases the throttling action of the valve 64 increases. It is apparent, therefore, that the valve 64 increases its throttling action to decrease the flow of gaseous refrigerant from the evaporator as the pressure within the evaporator decreases.

It is contended by appellant that this construction of Eddy's valves will create a constant fluttering and a partial opening of the same at frequent intervals as the pressure rises and falls in the evaporators, all of which is obviated by the type of valves appellant uses. He contends that by this means he has made a highly desirable improvement in the art. This improved result is conceded by the Solicitor for the Patent Office.

As to this point, the Board of Appeals says:

> Appellant contends that such valves being opened at a predetermined pressure will also close at substantially the same pressure producing a fluttering of the valves. We do not see that the system will so operate, especially in view of the use of the balanced valves at 44 which control the fluid in the coil in turn acting upon valve 63 to open it. If the valves do not flutter, then the constant and unnecessary starting and stopping of the condensing unit is avoided and the other difficulties referred to in appellant's brief would not occur. But even if fluttering did occur, the correction of the difficulty is obvious, and we can see no invention in changing the valve in the reference to provide one which requires a greater range of pressure to open and close the valves.

We are unable to discern wherein the inlet valve, thus mentioned by the Board, will materially affect the action of the outlet valve, when the pressure in the evaporator is high. Then the operation of the outlet valves may be expected to be as stated by appellant. It is only when the pressure in the evaporator is materially reduced, that such pressure may be said to be in any degree controlled by the inlet valves.

It is admitted that the various elements used in appellant's device are old. It would seem, however, that the combination of these elements has produced a new and useful result. We are not prepared to hold that such adaption of known devices as appellant has used, to as old an art as automatic mechanical refrigeration, is obvious.

What is, or is not, obvious, depends much upon circumstances. The ordinary rule is, that if the suggested change would, on inspection of a device without experimentation, occur to one skilled in the particular art, then such change may be said to be obvious. However, in this case those skilled in this art and employed in perfecting refrigerating devices, seem to have had no mental conception of the application of these well known snap valves to control the refrigerant circulating therein. That there were defects in the operation of the well known spring pressure valves, is apparent. Whether those skilled in the art had no exact understanding of the defects to be remedied, or whether the idea was not conceived by them that such defects might be remedied as appellant has remedied them, we cannot say. One thing only is certain, that the changes were not suggested until appellant filed his application herein.

In this view of the matter, we are unable to come to the conclusion that the improvements which appellant has made were obvious. We have arrived at much the same state of mind expressed by us in *In re Wessblad*, 19 C. C. P. A. (Patents) 1175, 58 F.(2d) 418, 422 O. G. 309, where we said:

> * * * Nevertheless, considering the references in connection with appellant's combination, its admitted novelty, usefulness, and the distinct advancement it made in the absorption refrigerating art, we are out of accord with the conclusion reached by the Patent Office tribunals. We think the claims are patentable.

Again we said, in *In re Fawick*, 19 C. C. P. A. (Patents) 1124, 56 F.(2d) 873, 421 O. G. 855:

> * * * It would seem, therefore, that, if appellant's combination was obvious to those of ordinary mechanical skill, it would have occurred to someone at an earlier date.

Other cases in point are: *In re Angert*, 17 C. C. P. A. (Patents) 575, 34 F.(2d) 1014, 388 O. G. 782; *In re Baker et al.*, 17 C. C. P. A. (Patents) 681, 36 F.(2d) 138, 391 O. G. 504; *In re Symonds*, 18 C. C. P. A. (Patents) 1128, 47 F.(2d) 972, 410 O. G. 7; *In re Howard*, 19 C. C. P. A. (Patents) 768, 53 F.(2d) 523, 414 O. G. 572; *In re Jones*, 19 C. C. P. A. (Patents) 1173, 58 F.(2d) 461, 422 O. G. 308.

The decision of the Board of Appeals is reversed as to said claims 9 and 16, and is in other respects affirmed.

Modified.

U. S. Court of Customs and Patent Appeals

IN RE NIVEN

No. 3,046. Decided December 27, 1932

PATENTABILITY — VALVE GEAR FOR INTERNAL-COMBUSTION ENGINE.

Claims for a valve gear for internal-combustion engine *Held* unpatentable over the prior art.

APPEAL from the Patent Office. Affirmed.

Mr. W. W. Harris and *Mr. Clarence B. Zewadski* for Niven.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

BLAND, *J.*:

Appellant has appealed from the decision of the Board of Appeals of the United States Patent Office, affirming that of the Examiner, refusing to allow claims 9 to 14, inclusive, of his application for a patent, of which claim 9 is typical and reads:

> 9. The combination with an internal combustion engine having a plurality of aligned cylinders, pistons operable within the respective cylinders, a single sleeve valve between each piston and associated cylinder having a combined oscillating and reciprocating movement with respect to the sleeve and cylinder axes, and a crankshaft driven by the pistons of a sleeve driving link extending longitudinally of the crankshaft axis and positioned to one side of the plane of the sleeve and cylinder axes, driving means between the crankshaft and link for moving the link in a plane parallel with the plane of the cylinder and sleeve axes whereby the link occupies successive parallel positions, and means spaced longitudinally of the link connecting the link and respective sleeves for imparting to the sleeves the aforesaid movement.

Claims 1 to 3, inclusive, were canceled. Claims 4 to 8, inclusive, were allowed.

The references relied upon are: Delahaye (French), 431,722, November 18, 1911; Tone, 1,300,518, April 15, 1919; and Lafitte, 1,537,832, May 12, 1925.

The claimed invention relates to internal-combustion engines. The sleeve valves in multiple of the engines are given a combined axial reciprocation and oscillation by use of a single operator common to all the valves, the oscillator being in the form of a link connected with the crank pins at each cylinder of the engine. Appellant's device maintains the sleeve valves in correct relative timing and it is claimed that it simplifies and reduces the engine cost. A modified form shown in appellant's disclosure has three driving links instead of one and cooperates with eccentrics rather than with crank pins. The eccentrics are displaced at such an angle that dead center conditions are avoided.

The Board of Appeals was of the opinion that there was nothing inventive shown in appellant's disclosure over that which was shown in the prior art cited.

The French patent to Delahaye relates to a system of distribution for combustion motors involving substantially the same elements as are shown in appellant's disclosure except that the disks which revolve in unison contain sprockets over which passes a single chain. Appellant has substituted a link drive for the endless chain drive.

The Board pointed out that Tone and Lafitte each showed the equivalent of appellant's link. Appellant's argument is that the general chain sprocket wear results in loss of timed motion. The Board was of the opinion that the substituting of the elements which were old in Tone and Lafitte for the general chain sprocket member in Delahaye did not require invention.

It is admitted by the Solicitor for the Patent Office that better results have been obtained by appellant than were possible to obtain by use of either of the old single devices. The Solicitor has also pointed out that in the ordinary locomotive engine a connection in the form of a bar connects all the wheels on one side so as to make the wheels turn in unison, and that such connections are old in many structures.

The board cited *Smith* v. *Nichols*, 21 Wall. 112, and quoted therefrom as follows:

> But a mere carrying forward or new or more extended application of the original thought, a change only in form, proportions, or degree, the substitution of equivalents, doing substantially the same thing in the same way by substantially the same means with better results, is not such invention as will sustain a patent.

Appellant does not contend that his disclosure shows any single new element, but contends that the combination of old elements has produced a result never obtained before; that he has made an improvement which was unobvious and now has produced an operative device which eliminates many of the defects which made the devices of the old art impracticable. He claims, therefore, to have brought himself under the line of cases which holds in substance that a combination of old elements which obtains an old result in a more facile, economical and efficient way should be protected by a patent, citing *Kryptok Co.* v. *Stead Lens Co.*, 207 Fed. 85; *Carnes Artificial Limb Co.* v. *Dilworth Arm Co.*, 273 Fed. 838; *Nelson Mfg. Co.* v. *Myers & Bros. Co.*, 25 F.(2d) 659, and numerous other decisions to the same effect.

When the case relied upon by the Board, and other cases to the same import by this and other courts, and the authorities relied upon by the appellant, are carefully considered, it is at once apparent that there is no conflict between them. It is well settled that the first one to assemble old elements which, when joined together, produce the old result but in a much improved and more economical way, may be entitled to a patent. Much depends upon the nature of the device under consideration, the character and degree of improvement made, and more particularly upon the consideration of whether or not it would be obvious to the skilled mechanic to make such a combination in order to produce such an improved result. It is true, as pointed out by appellant, that the courts have frequently sustained patents granted for the assembly of various elements old in the art in the production of an improved machine. In each instance, however, invention was present. *Carnes Artificial Limb Co.* v. *Dilworth Arm Co.*, supra; *Kimloch Tel. Co.* v. *Western Elec. Co.*, 113 Fed. 659.

The particular feature which is the essence of appellant's claimed invention is the link which causes the sleeves to work in unison. No doubt it is rigid, durable and better performs the same function performed by the sprocket and chain, but it does not seem to us that it would require anything more than mechanical skill to substitute the link for the chain, especially when we observe that the link idea is not only old in the art shown in the record, but is old in many mechanical contrivances which are familiar even to those who are unschooled in the art.

It is not clear to us that the Board was in error in the rejection of the claims and its decision is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

IN RE BRENNAN

No. 3,050. Decided December 27, 1932

PATENTABILITY—METHOD OF WRAPPING MEAT CUTS AND MECHANISM THEREFOR.

Claims for a method of wrapping meat cuts and claims for means for carrying out that method *Held* unpatentable over the prior art.

APPEAL from the Patent Office. Affirmed.

Mr. Roy W. Johns and *Mr. Harry F. Riley* for Brennan.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

BLAND, *J.*:

Claims 9 and 11 of appellant's application for a patent were allowed by the United States Patent Office. The Examiner refused to allow, for lack of invention over the prior art, claims 13 to 17, inclusive. The Board of Appeals affirmed the action of the Examiner, and from the decision of the Board appellant has appealed to this court.

Claims 13 and 14 are illustrative and read:

> 13. In the meat packing art a conduit-shaped appliance adapted to facilitate the rapid application of fabricated tubular flexible wrappings successively to a series of oblong pieces of meat respectively as they are fed forward through said appliance in continuous succession, which appliance comprises a conduit part to receive and guide the meat therethrough, and disposed about said conduit part a wrapping supply magazine adapted to receive its charge thereon in endwise-compressed and shortened form, said magazine being positioned to feed the sleevelike wrapping material progressively over the meat as the pieces are ejected serially from the conduit part.
>
> 14. In the meat packing art, the systematic method of applying protective coverings to pieces of meat of oblong shape and substantially similar cross sectional area, which consists in compacting a long fabric tubular casing endwise into a relatively short compass, then feeding the meat pieces endwise one after another into the casing through the main body thereof and simultaneously stretching the successively remote end parts snugly over the surfaces of the corresponding meat pieces and finally separating the covered pieces by severing the connective sleeve portions.

The reference relied upon by the Board is Reisfeld, 1,292,645, January 28, 1919. The following references are also stated to be of record and are regarded as pertinent to certain claims which were added for the purpose of appeal: Read, 1,218,312, March 6, 1917; Bates, 1,353,210, September 21, 1920; Colby 1,611,268, December 21, 1926.

Appellant's disclosure relates to a method and means for wrapping food products and particularly relates to wrapping meat cuts in preparation for freezing same or for delivery of same to retail shops. The apparatus shown consists of a magazine for storing a supply of tubular knitted fabric of which magazine an inner member forms a guideway for guiding cuts of meat such as loins into wrapping position at the outlet of the magazine. At the end of the inner

member which forms the guideway for the cuts of meat is positioned a plurality of resilient fingers extending inwardly, which act to compress the meat as it emerges from the guideway. The end of the apparatus which receives the meat is enlarged so as to provide a kind of hopper. The meat is manually passed through the device and the operator draws the advanced portion of the covering over the meat, stretching it as it is applied. When the cut of meat has been withdrawn from the resilient fingers the portion of the covering immediately behind the cut being removed is severed and the severed ends of the covering on the meat are then pressed inwardly against the ends of the meat.

The Reisfeld patent relates to a machine for the filling and linking of sausages. It is not a hand operated machine. The Board of Appeals was of the opinion that the Examiner was correct in pointing out that the essential elements of appellant's apparatus as defined by the appealed claims were shown in Reisfeld, the difference being in the size of meat which may be used in the two different machines. The Board, relying upon *Cochrane et al.* v. *Deener et al.*, 1877 C. D. 242, 11 O. G. 687, held that the mere difference in size of the pieces of meat pressed and packaged did not indicate invention either in the operation performed or in the means for performing the operation.

Claim 14 includes the act of severing the connected sleeve portion. The Board stated that this was an ordinary operation in the meat packing art as disclosed in the patent to Bates.

Appellant's main contention here is that it is not obvious to modify the Reisfeld machine which was adapted to receiving sausage only and make it operate successfully in a manually operated device for wrapping pork loins and large cuts of meat.

It does not seem to us that the changes which appellant has made in the Reisfeld structure amount to invention. We concur in the views of the Board of Appeals, and its decision is affirmed.

Affirmed.

Disclaimers

1,324,007.—*Worthy C. Bucknam*, Jersey City, N. J. GAS-CUTTING MACHINE. Patent dated December 2. 1919. Disclaimer filed February 18, 1933, by the assignee, *Air Reduction Company, Incorporated.*

Hereby enters this disclaimer to that part of the claim in said specification which is in the following words, to wit:

"1. A gas-cutting machine comprising a support, a frame supported therefrom jointed for universal movement in a plane, a downwardly-directed torch carried by the frame, and a driven tracer connected with the frame and located over the torch.

"2. A gas-cutting machine comprising, in combination, a support, a frame supported therefrom jointed for universal movement in a plane, a downwardly-directed torch carried by the frame, a templet over the torch, and mechanical feed means carried by the frame to cooperate with said templet."

1,502,494.—*Henry E. Warren*, Ashland, Mass. TIME-INDICATING APPARATUS. Patent dated July 22, 1924. Disclaimer filed February 17, 1933, by the assignee, *Warren Telechron Company.*

Hereby enters this disclaimer to the following claims of said Letters Patent, to wit:

"8. In a clock system, the combination with a central station, an alternating current generator thereat supplying light and power through line conductors extending therefrom, and a series of secondary clocks, including a synchronous motor, at the subscribers' stations connected to said conductors, of means for changing the speed of said generator, a master clock and an indicator at the central station having a hand for indicating directly the departure of the alternations sent out by said central station from the time indicated by said master clock, whereby the attendant may be informed of the proper direction to manipulate said speed-changing means to bring said generator into synchronism with said master clock.

"9. In a clock system, the combination with a central station, an alternating current generator thereat capable of supplying current for light and power, line conductors extending therefrom, and a series of secondary clocks, including a synchronous motor, at the subscriber's station connected to said conductors, of means for changing the speed of said generator, a master clock and an indicator at the central station, said indicator having a hand indicating directly the departure of the alternations of said generator from the time indicated by said master clock, whereby the attendant may be informed of the proper direction to manipulate the speed-changing means in order to bring said generator into synchronism with said master clock."

1,855,054. *John Kelly Johnson*, Hartsdale, N. Y. HIGH-FREQUENCY COUPLING SYSTEM. Patent dated April 19, 1932. Disclaimer filed February 23, 1933, by the patentee, assignee, *Hazeltine Corporation, consenting*

Therefore, enters this disclaimer to claims 1 and 3 of said Letters Patent, to wit:

He disclaims from claim 1:

"an electrical conducting shield closely surrounding said inductances whereby the effective coefficient of coupling between said coils is of a sufficiently small magnitude so that said system as a whole tunes to the same frequency to which each of said circuits is individually tuned"

except such an electrical conducting shield closely surrounding said inductances whereby the effective coefficient of magnetic coupling between said coils is of a sufficiently small magnitude so that said system as a whole tunes to the same frequency to which each of said circuits is individually tuned.

He disclaims from claim 3:

"shielding means so situated in relation to said coils that the coupling which would exist between said coils in the absence of said means is reduced to the proper effective value to provide a single resonance characteristic"

except such a shielding means so situated in relation to said coils that the magnetic coupling which would exist between said coils in the absence of said means is reduced to the proper effective value to provide a single resonance characteristic.

Suggestion for the Use of Coupons

The execution of orders for printed copies of U. S. patents, trade-marks, etc., will be considerably expedited if coupons are used. Such coupons may be purchased at the Patent Office in lots of 20 at $2.00 and 100 at $10.00.

Coupon orders do not have to be accompanied by letters of transmittal. They require nothing but the filling in of the patent number, the name of the inventor, the date of issue, and the name and address of the party desiring the service.

TRADE-MARKS

OFFICIAL GAZETTE, MARCH 14, 1933

[VOL. 428. No. 2]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1

Raw or Partly-Prepared Materials

Ser. No. 334,472. SIERRA TALC COMPANY, Los Angeles, Calif. Filed Jan. 30, 1933.

FIBRENE

For Minerals, Specifically Talc.
Claims use since September, 1932.

CLASS 2

Receptacles

Ser. No. 332,891. THE POPSICLE CORPORATION OF THE UNITED STATES, New York, N. Y. Filed Dec. 8, 1932.

FUDGICLE

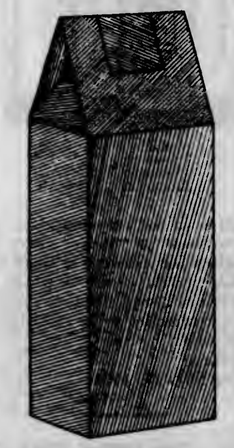
For Wrappers and Bags Made of Glassine, Vegetable Parchment, Plain and/or Waxed Paper.
Claims use since Oct. 3, 1932.

Ser. No. 332,896. THE POPSICLE CORPORATION OF THE UNITED STATES, New York, N. Y. Filed Dec. 8, 1932.

SHERBICLE

For Wrappers and Bags Made of Glassine, Vegetable Parchment, Plain and/or Waxed Paper.
Claims use since October, 1932.

Ser. No. 334,704. AMERICAN VAULT COMPANY, Brooklyn, N. Y. Filed Feb. 7, 1933.



TECHSTONE

For Burial Vaults.
Claims use since Jan. 12, 1933.

CLASS 4

Abrasive, Detergent, and Polishing Materials

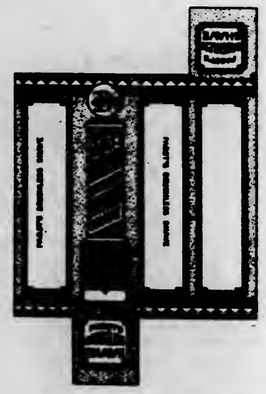
Ser. No. 311,634. WEST DISINFECTING COMPANY, Long Island City, N. Y. Filed Mar. 2, 1931.

The cross-hatchings are used in the accompanying drawing only for the purpose of indicating shading, and are not intended to indicate particular colors. Applicant is the owner of Trade-Mark Reg. 158,142.

For Cleaning Preparations of General Utility in Liquid, Paste, and Powder Form, Dry Cleaner, Floor Cleaner, Enamel Cleaner, Porcelain Cleaner, Metal Polish, Stove Polish, Disinfecting Soap, Sweeping Powder, Abrasive Powdered Material for Cleaning Bowls, Pipes, and the Like, Soap in Solid, Powdered, Liquid, and Paste Form.
Claims use since Nov. 1, 1906.

Ser. No. 330,143. FRED B. ASHTON, St. Louis, Mo. Filed Sept. 6, 1932.

SUDATOSINE



For Soap for Correcting Perspiration Odors.
Claims use since Aug. 20, 1931.

Ser. No. 332,826. JACK CUSHMAN, doing business as Wow! Soap Products Company, Hastings-on-Hudson, N. Y. Filed Dec. 6, 1932.

WOW

For Hand Soap, Which May Also be Used for General Household Purposes.
Claims use since Nov. 1, 1932.

Ser. No. 333,359. PABST PHARMACEUTICAL CO., INC., doing business as Pabst Chemical Co., Chicago, Ill. Filed Dec. 24, 1932.

No claim is made to the representation of a carton or to the words "Brushless" or "Shave" apart from the mark as shown. Although the drawing is lined to indicate red and blue and these are the colors in which the characteristic trade-mark is ordinarily printed, the lines shown in the drawing are not intended to be restrictively indicative of any particular color.
For Shaving Cream.
Claims use since Nov. 25, 1931.

Ser. No. 333,562. THE SHELBY HOME PRODUCTS CO., Shelby, Ohio. Filed Dec. 31, 1932.

LAUNDRI-AIDE

For Washing Compound for Laundry and General Household Use Having Incidental Bluing and Bleaching Properties.
Claims use since June 27, 1927.

Ser. No. 333,788. H. TH. BÖHME AKTIENGESELLSCHAFT, Chemnitz, Germany. Filed Jan. 10, 1933.

All of the wording appearing on the drawing with the exception of the term "Fewa" is hereby disclaimed apart from the mark as shown.
For Soap Preparations.
Claims use since Nov. 15, 1932.

Ser. No. 334,052. FRANCES FLEISCHMANN, doing business as Frances Fleischmann Soap Products, West Haven, Conn. Filed Jan. 18, 1933.

The handwriting appearing on the drawing is applicant's facsimile signature. The representation of the woman's head appearing on the drawing is the portrait of the applicant.
For Facial Soap.
Claims use since Aug. 19, 1932.

Ser. No. 334,071. CHARLES MCALPIN PYLE, doing business as Pyle Manufacturing Co., New York, N. Y. Filed Jan. 18, 1933.

POL-EX

For Cleaning and Polishing Compounds for Metals, Glassware, Enameled Ware, Kitchen Utensils, and Similar Objects.
Claims use since Jan. 6, 1933.

Ser. No. 334,246. BON AMI COMPANY, New York, N. Y. Filed Jan. 23, 1933.

For Scouring Soap in Cake and Powdered Form, and Cleaning and Polishing Powder for Household Use and for Cleaning the Hands.
Claims use since Jan. 14, 1902.

Ser. No. 334,257. MANHATTAN KEROLS PRODUCTS, INC., Brooklyn, N. Y. Filed Jan. 23, 1933.

No claim is made to the representation of the carton and the words "Manufactured by," "Brooklyn, N. Y.," and "Will Not Lay the Nap" apart from the mark shown on the drawing. The vertical lines on the drawing represent red color.
For Polishes, Dressings, and Cleaning Preparations Used on Shoes.
Claims use since Dec. 1, 1932.

Ser. No. 334,588. EDITH C. TOMLIN, Washington, D. C. Filed Feb. 2, 1933.

"SOAPIES"

For Soap Powder Capsules.
Claims use since Dec. 15, 1932.

CLASS 6

Chemicals, Medicines, and Pharmaceutical Preparations

Ser. No. 260,585. TIMOTHY DONALD PERKINS, doing business as Ace Drug Co., San Diego, Calif. Filed Jan. 24, 1928.

ACE DRUG CO.

For Mineral Oil Used for Medicinal Purposes, Quinine, Peroxide of Hydrogen, Boric Acid in Crystal and Also Powdered Form, Citrate of Magnesia, and Antiseptic Solutions.

LOMEL

For Pharmaceutical Preparation—Namely, a Laxative.
Claims use since Dec. 1, 1932.

Ser. No. 333,954. STANDARD OIL COMPANY OF CALIFORNIA, Wilmington, Del., and San Francisco, Calif. Filed Jan. 14, 1933.

NAPHTONE

For Naphthenic Acids and Their Derivatives.
Claims use since Jan. 4, 1933.

Ser. No. 334,016. SOPHIE MAUTWITZ, doing business as The Ab-So-Cur Company, Berwyn, Ill. Filed Jan. 17, 1933.

-AB-SO-CUR-

For Salve Used in the Treatment of Piles.
Claims use since Dec. 10, 1930.

Ser. No. 334,290. PUBLICKER COMMERCIAL ALCOHOL COMPANY, Philadelphia, Pa. Filed Jan. 24, 1933.

FREEZ-PRUF

No claim being made to the words "Freez Pruf" apart from the mark as shown.
For Anti-Freeze Compounds.
Claims use since Jan. 12, 1933.

Ser. No. 334,629. WILBUR C. ANDERSON, doing business as Lexa Laboratories Co., Dayton, Ohio. Filed Feb. 4, 1933.

LEXA

For Headache Tablet.
Claims use since Jan. 13, 1933.

CLASS 11

Inks and Inking Materials

Ser. No. 333,813. TECHNICAL SUPPLY COMPANY, Scranton, Pa. Filed Jan. 10, 1933.

TESCO

For Writing Fluids—Namely, Drawing Inks.
Claims use since Jan. 1, 1913.

Ser. No. 334,221. CHARLES A. BOHLL, doing business as Inter-State Ribbon & Carbon Company, Cleveland, Ohio. Filed Jan. 21, 1933.

TRU-RITE

For Typewriter Ribbons and Carbon Papers.
Claims use since Oct. 1, 1928.

CLASS 12

Construction Materials

Ser. No. 332,477. ALEXANDER AITKEN, doing business as The Stonetone Company, New York, N. Y. Filed Nov. 26, 1932.

Tindertone

For Plastic Coating Compositions.
Claims use since June 1, 1932.

Ser. No. 333,850. COPLAY CEMENT MANUFACTURING COMPANY, Coplay, Pa. Filed Jan. 12, 1933.

HYPER-CEMENT

No claim is made to the word "Cement" apart from the mark shown in the drawing.
For Cement Used for Building Purposes.
Claims use since Dec. 6, 1932.

CLASS 13

Hardware and Plumbing and Steam-Fitting Supplies

Ser. No. 333,140. THE BALTIMORE STEEL CO., Baltimore City, Md. Filed Dec. 17, 1932.

HYDRO-LATOR

For Green Grocers' Spraying Racks.
Claims use since Sept. 10, 1932.

Ser. No. 333,182. BLUE RIBBON PRODUCTS CO., INC., San Francisco, Calif. Filed Dec. 19, 1932.

IRCO

For Coffee Cooker and Heater.
Claims use since June 30, 1932.

Ser. No. 333,701. EDWARD C. BOWERS and CHARLES L. FELDMAN, receivers for Wickwire Spencer Steel Company, New York, N. Y. Filed Jan. 6, 1933.

CLEVR-CLOSR

No claim is made to the word "Closr" apart from the mark as shown.
For Door Springs.
Claims use since Dec. 1, 1932.

Ser. No. 334,579. SEARS, ROEBUCK AND CO., Chicago, Ill. Filed Feb. 2, 1933.

MODERN DAIRYMAN

For Milk Can Strainers.
Claims use since 1929.

Ser. No. 334,653. SANITOL SANITARY CORPORATION, New York and Glendale, N. Y. Filed Feb. 4, 1933.

SANITOL

For Toilet Seats.
Claims use since Jan. 30, 1932.

CLASS 16

Paints and Painters' Materials

Ser. No. 325,378. WILLIAM WEINER, New York, N. Y., assignor to Van Tine Laboratories, Inc., a Corporation of New York. Filed Mar. 22, 1932.

E. Z. WAX

No claim is made to the word "Wax" apart from the mark shown in the drawing.
For Prepared Liquid Wax.
Claims use since December, 1929.

Ser. No. 333,672. COOK & DUNN PAINT CORPORATION, Newark, N. J. Filed Jan. 5, 1933.

RICHMUND

For Dry, Paste, and Ready-Mixed Paints, Varnishes, Lacquers, Paint Enamel, Liquid Polish for Automobiles and Furniture.
Claims use since November, 1930.

L

PENFOLD

L

For Golf Balls.
Claims use since Nov. 14, 1931.

Ser. No. 334,286. MATT F. LATHERS, Orlando, Fla. Filed Jan. 24, 1933.

BATTY BASE BALL

No claim is made to the words "Base Ball" apart from the mark shown on the drawing.
For Hand Paddle and Ball Game of the Bandalore Type.
Claims use since Nov. 17, 1932.

Ser. No. 334,642. S. H. KRESS & CO., New York, N. Y. Filed Feb. 4, 1933.

BILLY BOY

For Dolls.
Claims use since Sept. 5, 1932.

Ser. No. 334,705. ▼ CONSOLIDATED LITHOGRAPHING CORPORATION, Brooklyn, N. Y. Filed Feb. 7, 1933.

Master Piece

For Jigsaw Puzzles.
Claims use since Feb. 2, 1933.

CLASS 23

Cutlery, Machinery, and Tools, and Parts Thereof

Ser. No. 326,419. FILECRAFT, INC., Cleveland, Ohio. Filed Apr. 23, 1932.

TRUARC

For Files, Including Curve Tooth Files.
Claims use since Apr. 1, 1928.

Ser. No. 326,426. KARMELKORN CORPORATION, Rockford, Ill. Filed Apr. 28, 1932.

KARMELKORN

For Machines for Popping and Treating Popcorn.
Claims use since Jan. 6, 1931.

Ser. No. 332,357. TUCKEND BLADE CO., Cincinnati, Ohio. Filed Nov. 21, 1932.

TEMPO

For Razor Blades.
Claims use since Nov. 11, 1932.

Ser. No. 332,639. UNITED STATES EQUIPMENT CORPORATION, New Brighton, Pa. Filed Nov. 30, 1932.

JUISTRACTOR

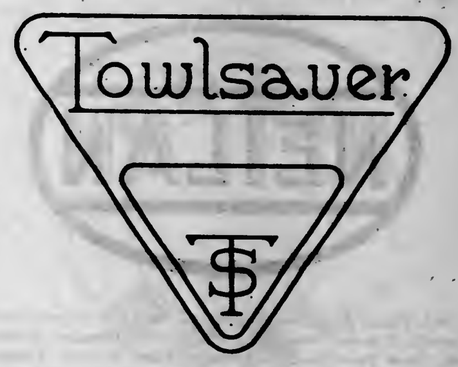
For Fruit Juice Extractor.
Claims use since Sept. 26, 1932.

Ser. No. 333,032. GILLETTE SAFETY RAZOR COMPANY, Boston, Mass. Filed Dec. 13, 1932.

PALM

For Safety Razors and Safety Razor Blades.
Claims use since Mar. 24, 1891, on razors; since December, 1929, razor blades.

Ser. No. 333,180. BAR APPARATUS, INC., New York, N. Y. Filed Dec. 19, 1932.



The words "It Saves" are disclaimed apart from the mark shown in the drawing.
For Fountains for Dispensing Soft Drinks.
Claims use since Dec. 14, 1932.

Ser. No. 333,315. THOMAS A. EDISON, INCORPORATED, West Orange, N. J. Filed Dec. 28, 1932. Under section 5b of the act of 1905 as amended in 1920.

Edison

For Machines for Shaving Sound Record Tablets and Parts Thereof.
Claims use since 1905.

Ser. No. 333,618. TOWLSAVER, INC., Los Angeles, Calif. Filed Jan. 3, 1933.

The word "Towlsaver" is disclaimed apart from the other features of the mark shown in the drawing.
For Paper Towel Dispensing Machines.
Claims use since June 18, 1932.

Ser. No. 334,297. AMERICAN SAFETY RAZOR CORPORATION, Brooklyn, N. Y. Filed Jan. 25, 1933.

JURY

For Safety Razors and Safety Razor Blades.
Claims use since Jan. 18, 1933.

CLASS 25

Locks and Safes

Ser. No. 334,691. SEARS, ROEBUCK AND CO., Chicago, Ill. Filed Feb. 6, 1933.

For Padlocks and Wall Safes.
Claims use since Nov. 28, 1932.

CLASS 26

Measuring and Scientific Appliances

Ser. No. 323,350. NEILAN CO., LTD., Los Angeles, Calif. Filed Jan. 23, 1932.

NEILAN

For Steam Pressure Control Devices and Regulators—Namely, Pressure Recording Controllers, Pressure Recorders, Flow Recording Controllers, Flow Meters, Temperature Recording Controllers, Temperature Recorders, Temperature Controllers, Differential Limit Controllers, Pressure Controllers.
Claims use since May 5, 1926.

Ser. No. 327,608. SOCIÉTÉ ANONYME DES USINES CHAUSSON, Asnieres, France. Filed May 31, 1932.

HERCULE

For Thermostats.
Claims use since Feb. 16, 1926.

Ser. No. 331,411. ROCKWOOD SPRINKLER COMPANY OF MASSACHUSETTS, Worcester, Mass. Filed Oct. 20, 1932.

SPRINK-LA-STAT

For Sprinkler Actuated Thermostat for Fire Detection Apparatus.
Claims use since Sept. 23, 1932.

Ser. No. 333,721. WAK INCORPORATED, Charlotte, N. C. Filed Jan. 6, 1933.

WAK

For Pick Counters for Textile Machines and Revolution Recording Devices.
Claims use since Oct. 11, 1932.

CLASS 28

Jewelry and Precious-Metal Ware

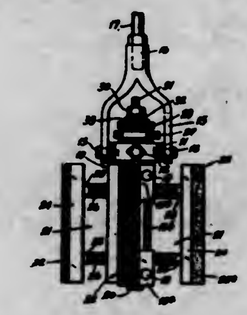
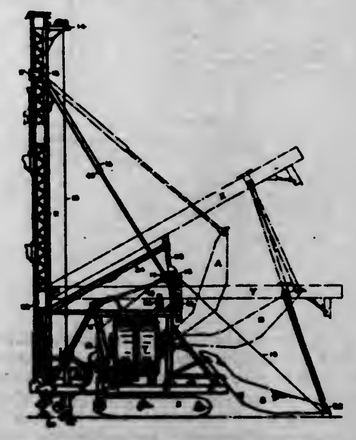
REISSUES



MARCH 14, 1933

18,762. HUMIDIFYING APPARATUS. GEORGE D. DOHERTY, Evanston, Ill., assignor to Doherty-Brehm Company, Minneapolis, Minn., a Corporation of Delaware. Original No. 1,760,976, dated June 3, 1930, Serial No. 199,904, filed June 20, 1927. Application for reissue filed June 3, 1932. Serial No. 615,257. 24 Claims. (Cl. 257—180.)

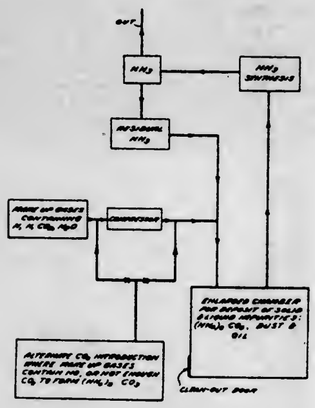


20. A combined air humidifier and heat radiator comprising a plurality of adjacent hollow heating sections connected together for circulating a heating medium therethrough, a casing open to the atmosphere for housing said sections, means for imparting humidity to the heated air rising from said heating sections, and an additional heating section for increasing the temperature of the heated and humidified air beyond that which the mixture possesses after being humidified so as to avoid an excess of free moisture in the mixture where it discharges from said casing.

18,763. HONING DEVICE FOR CYLINDERS. JOSEPH SUNNEN, Kirkwood, Mo. Original No. 1,846,371, dated Feb. 23, 1932, Serial No. 357,748, filed Apr. 24, 1929. Application for reissue filed July 15, 1932. Serial No. 622,778. 19 Claims. (Cl. 51—184.1.)

1. An apparatus of the class described comprising a revoluble carrier, mounts carried thereby and movable transversely thereof, cylinder engaging elements of abrasive material carried by certain of said mounts, cylinder engaging elements of non-abrasive elastic material carried by certain other of said mounts, all of said elements being disposed longitudinally of the axis of rotation and spaced equidistant thereabout, and means for actuating all of said mounts and adjusting all of said elements radially of said axes.

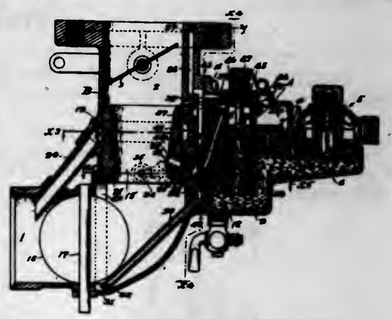
18,764. CONCRETE MIXING AND DISTRIBUTING APPARATUS. JAMES E. BUSHNELL, North Plainfield, and JOSEPH C. LUKACHOVIC, Plainfield, N. J., assignors to Ransome Concrete Machinery Company, Plainfield, N. J., a Corporation of New Jersey. Original No. 1,796,232, dated Mar. 17, 1931, Serial No. 286,082, filed June 16, 1928. Application for reissue filed Oct. 31, 1931. Serial No. 572,416. 17 Claims. (Cl. 214—95.)



1. In a mixing and distributing unit comprising a base member, a charging skip and distributing mast movably mounted on said base for movement relative therewith, and means cooperating between said skip and mast for erecting and lowering said mast.

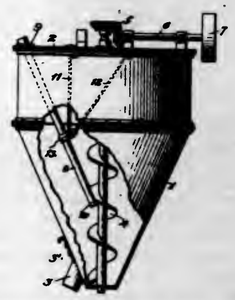
18,765. CONSTRUCTIONAL MATERIAL. ALBERT C. FISCHER, Chicago, Ill., assignor to The Philip Carey Manufacturing Company, a Corporation of Ohio. Original No. 1,770,361, dated July 8, 1930, Serial No. 262,761, filed Mar. 19, 1928. Application for reissue filed Nov. 17, 1930. Serial No. 496,317. 13 Claims. (Cl. 94—18.)

1. Constructional material comprising a preformed compressible strip having the sides thereof surfaced with rubber, and over said surfacing another surface of bituminous material as described.



18,766. PROCESS FOR PURIFYING THE NITROGEN-HYDROGEN MIXTURE IN THE SYNTHESIS OF AMMONIA. LOUIS C. JONES, Greenwich, Conn., assignor to Chemical Engineering Corporation, New York, N. Y., a Corporation of Delaware. Original No. 1,794,908, dated Mar. 3, 1931, Serial No. 180,617, filed Apr. 2, 1927. Application for reissue filed May 17, 1932. Serial No. 611,929. 4 Claims. (Cl. 23—198.)

1. In a process of synthetically producing ammonia, in which a mixture of hydrogen and nitrogen is passed over a catalyst and a portion of the ammonia is removed by condensation or the like, the improvement which comprises admixing the circulating gas containing residual ammonia with the "make-up" gas containing carbon dioxide in a region of reduced velocity and depositing solid ammonium carbonate formed by the resulting reaction in said region.



18,767. CARBURETOR. ORVILLE H. ENSIGN, Pasadena, Calif., assignor to Ensign Carburetor Co. Ltd., Huntington Park, Calif., a Corporation of California. Original No. 1,792,080, dated Feb. 10, 1931, Serial No. 40,532, filed June 30, 1925. Application for reissue filed Nov. 21, 1932. Serial No. 643,784. 10 Claims. (Cl. 261—41.)

1. A carburetor comprising an air intake; a throttle controlled suction passage; a constant level fuel chamber; a fuel passage comprising a suction chamber, a fuel riser opening from said fuel chamber into said suction chamber above the normal fuel level; and a U-tube portion connecting said suction chamber to said suction passage; an

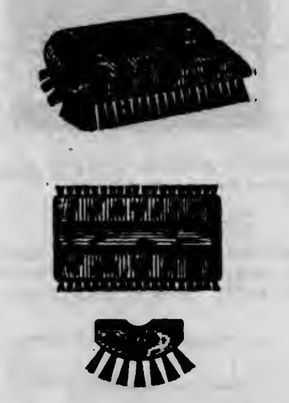
idling by-pass leading from near the delivery end of the fuel passage to the suction passage above the throttle; and calibrated means supplying air to said suction chamber.

18,768. FEED MIXER. INGVAL EDLAND, Monitor, Oreg. Original No. 1,762,654, dated June 10, 1930, Serial No. 411,836, filed Dec. 5, 1929. Application for reissue filed Feb. 10, 1932. Serial No. 593,401. 3 Claims. (Cl. 259—97.)

1. An improvement in a dry feed mixer of the type embodying a conical mixing chamber and a central vertical screw conveyor in said chamber for agitating, elevating and dropping the feed; said improvement comprising an inclined liquid-introduction pipe within said chamber, the upper end of said pipe passing through the top of said chamber at a point near the peripheral edge thereof, the lower end of said pipe being disposed within the small lower end portion of the chamber intermediate the ends of and near the periphery of said screw conveyor, and means fixedly mounting said pipe in said chamber.

PLANT PATENTS

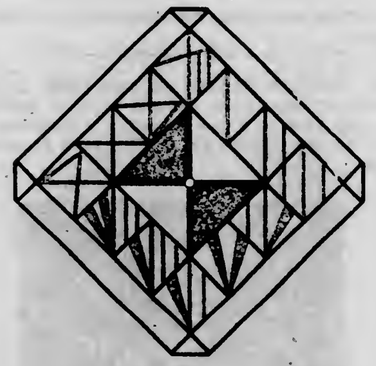
GRANTED MARCH 14, 1933



56. CARNATION. ADOLPHE F. J. BAUR, Indianapolis, Ind., assignor to Baur-Steinkamp & Company, Inc., Indianapolis, Ind. Filed Nov. 17, 1932. Serial No. 643,087. 1 Claim. (Cl. 47—1.)

The variety of carnation herewith described and shown, characterized particularly by its flowers of light pink color, medium size and large yield, also by its freedom from disease and by other superior growing and blooming habits.

DESIGNS

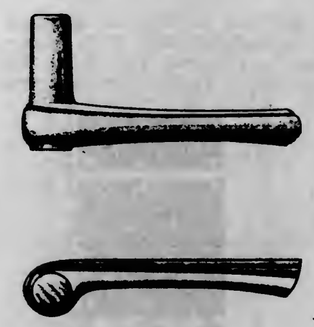


MARCH 14, 1933

89,433. BRUSH. GATES B. AUPPERLE, Albany, N. Y., assignor to Mohawk Brush Company, Albany, N. Y. Filed June 17, 1932. Serial No. 44,111. Term of patent 14 years.

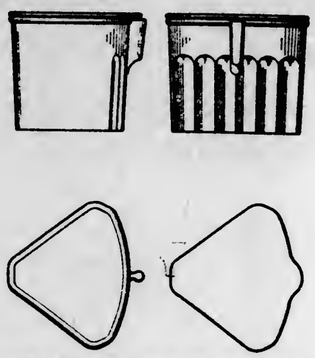
The ornamental design for a brush, as shown.

89,434. DIAL FOR TIMEPIECES. MARGUERITE BRUNSWIG, Los Angeles, Calif. Filed May 28, 1932. Serial No. 43,870. Term of patent 3½ years.



The ornamental design for a dial for timepieces, as shown and described.

89,435. AUTOMOBILE DOOR. BURNELL MALCOLM CALVERT, Terre Haute, Ind. Filed Jan. 22, 1932. Serial No. 42,595. Term of patent 3½ years.

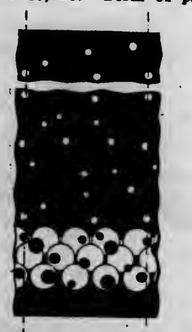


The ornamental design for an automobile door as shown.

89,436. OUTSIDE DOOR HANDLE OR SIMILAR ARTICLE FOR AN AUTOMOTIVE VEHICLE. ERIC S. CARLSON, Detroit, Mich., assignor to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 11, 1933. Serial No. 46,788. Term of patent 7 years.

The ornamental design for an outside door handle or similar article for an automotive vehicle substantially as shown.

89,437. JAR. JEDDIAH B. CLARK, Dunkirk, Ind., assignor to Indiana Glass Company, Dunkirk, Ind., a Corporation of Indiana. Filed Jan. 14, 1933. Serial No. 46,835. Term of patent 7 years.

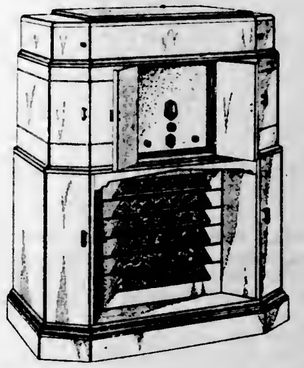


The ornamental design for a jar, as shown.

89,438. GAME BOARD. WILLIAM ROBERT CLUFF, New York, N. Y. Filed Dec. 4, 1931. Serial No. 41,965. Term of patent 14 years.

The ornamental design for a game board as shown and described.

89,439. TEXTILE FABRIC OR SIMILAR ARTICLE. MACLYN GUHL, Forest Hills, N. Y., assignor to William Willheim Co., Inc., New York, N. Y. Filed Jan. 28, 1933. Serial No. 47,025. Term of patent 3½ years.



The ornamental design for a textile fabric or similar article as shown and described.

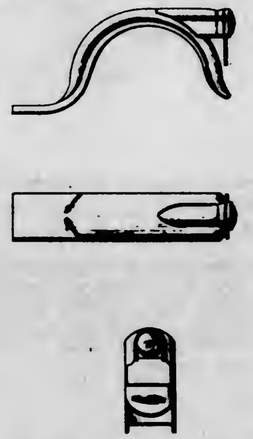
89,440. TEXTILE FABRIC OR SIMILAR ARTICLE. MACLYN GUHL, Forest Hills, N. Y., assignor to William Willheim Co., Inc., New York, N. Y. Filed Jan. 28, 1933. Serial No. 47,026. Term of patent 3½ years.

The ornamental design for a textile fabric or similar article as shown and described.

89,441. RADIOCABINET. ARTHUR C. HAGGSTROM, Rockford, Ill., assignor to E. H. Scott. Filed Dec. 24, 1932. Serial No. 46,581. Term of patent 7 years.

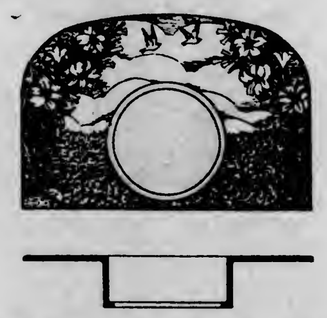
The ornamental design for a radiocabinet substantially as shown.

89,442. TEXTILE FABRIC OR THE LIKE. ALFRED J. HEINKE, Towaco, N. J., assignor to H. R. Mallinson & Co., New York, N. Y., a Corporation of Delaware. Filed Nov. 10, 1932. Serial No. 45,858. Term of patent 3½ years.



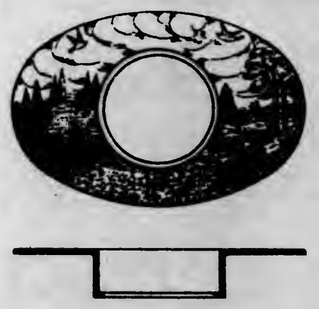
The ornamental design for a textile fabric or the like, as shown and described.

89,443. VALVE CASING. ERIC J. HERVONEN, Worcester, Mass. Filed Sept. 1, 1931. Serial No. 40,973. Term of patent 7 years.



The ornamental design for a valve casing, as shown and described.

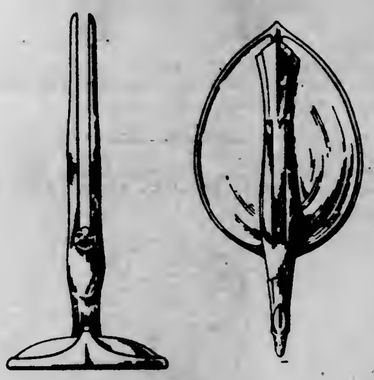
89,444. COMBINED FENDER AND TAIL-LIGHT SOCKET FOR TOY AUTOMOBILES. HARRY T. KINGSBURY, Keene, N. H. Filed Jan. 4, 1933. Serial No. 46,730. Term of patent 14 years.



The ornamental design for a combined fender and tail light socket for toy automobiles, as shown.

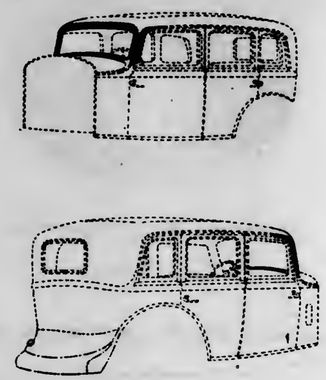
89,445. GRAVE MARKER. FRANK L. MICHAELS, Fort Thomas, Ky. Filed Dec. 1, 1932. Serial No. 46,270. Term of patent 7 years.

The ornamental design for a grave marker substantially as shown.



89,446. GRAVE MARKER. FRANK L. MICHAELS, Fort Thomas, Ky. Filed Dec. 1, 1932. Serial No. 46,271. Term of patent 3½ years.

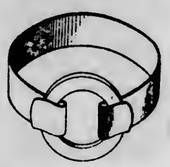
The ornamental design for a grave marker substantially as shown.



89,447. AUTOMOBILE RADIATOR ORNAMENT OR SIMILAR ARTICLE. JOHN R. MORGAN, Birmingham, and WILLIAM SCHNELL, Detroit, Mich., assignors to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 11, 1933. Serial No. 46,796. Term of patent 7 years.

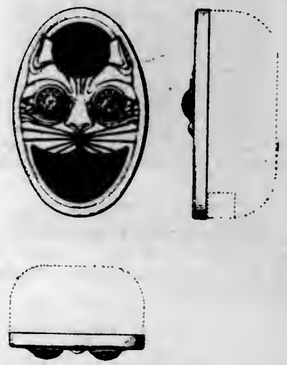
The ornamental design for an automobile radiator ornament or similar article substantially as shown.

89,448. AUTOMOBILE BODY. AMOS E. NORTHUP, Pleasant Ridge, Mich., assignor to The Murray Corporation of America, Detroit, Mich., a Corporation of Delaware. Filed Feb. 17, 1932. Serial No. 42,895. Term of patent 3½ years.



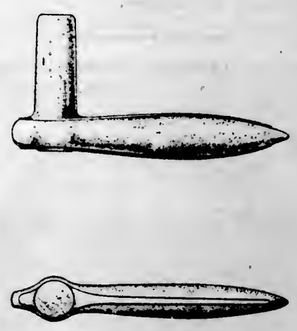
The ornamental design for an automobile body, substantially as shown and described.

89,449. FOUNTAIN PEN. RUSSELL C. PARKER, Janesville, Wis., assignor to Parker Pen Company, Janesville, Wis., a Corporation of Wisconsin. Filed Sept. 7, 1932. Serial No. 44,764. Term of patent 14 years.



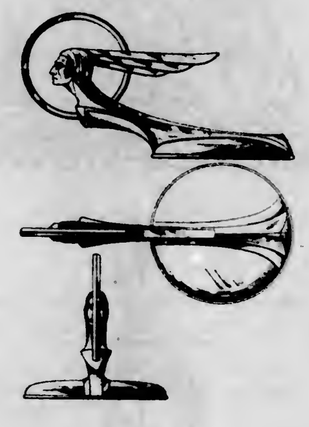
The ornamental design for a fountain pen substantially as shown and described.

89,450. BRACELET. WILLIAM REISS, Bronx, N. Y. Filed Feb. 1, 1933. Serial No. 47,075. Term of patent 7 years.



The ornamental design for a bracelet, as shown and described.

89,451. AUTOMOBILE SIGNAL LAMP. HENRY J. SAUER, Fairfield, Conn., assignor to The Kilborn-Sauer Company, Fairfield, Conn., a Corporation of Connecticut. Filed Sept. 26, 1932. Serial No. 45,066. Term of patent 7 years.

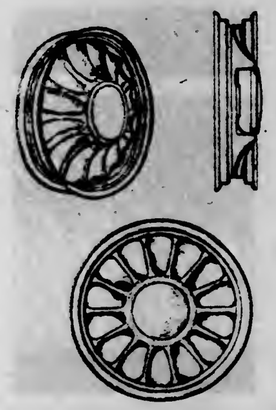


The ornamental design for an automobile signal lamp, as shown and described.

89,452. OUTSIDE DOOR HANDLE OR SIMILAR ARTICLE FOR AN AUTOMOTIVE VEHICLE. WILLIAM SCHNELL, Detroit, Mich., assignor to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 11, 1933. Serial No. 46,796. Term of patent 7 years.

The ornamental design for an outside door handle or similar article for an automotive vehicle substantially as shown.

89,453. AUTOMOBILE RADIATOR ORNAMENT OR SIMILAR ARTICLE. WILLIAM SCHNELL, Detroit, Mich., assignor to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 11, 1933. Serial No. 46,797. Term of patent 7 years.

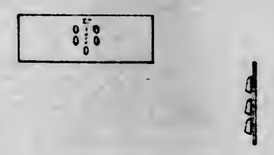


The ornamental design for an automobile radiator ornament or similar article substantially as shown.

89,454. TEXTILE FABRIC OR THE LIKE. JACK SCHWEIZER, Rye, N. Y. Filed Jan. 21, 1933. Serial No. 46,914. Term of patent 3½ years.

The ornamental design for a textile fabric or the like as shown.

89,455. WHEEL. CHARLES W. SINCLAIR, Detroit, Mich., assignor to Kelsey-Hayes Wheel Corporation, Detroit, Mich., a Corporation of New York. Filed Dec. 27, 1932. Serial No. 46,623. Term of patent 14 years.

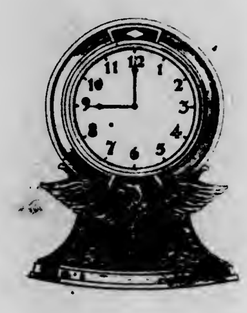


The ornamental design for a wheel, substantially as shown.

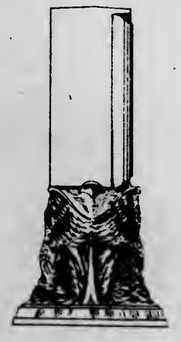
89,456. TEXTILE FABRIC OR THE LIKE. GILBERT V. TILLIARD, Jackson Heights, N. Y. Filed Feb. 8, 1933, Serial No. 47,093. Term of patent 3½ years.

The ornamental design for a textile fabric or the like as shown.

89,457. STOVE PANEL ASSEMBLY. ALBERT H. TINNERMAN, Cleveland, Ohio. Filed Oct. 30, 1931. Serial No. 41,583. Term of patent 7 years.



The ornamental design for a stove panel assembly, as shown and described.



89,458. TEXTILE FABRIC OR SIMILAR ARTICLE. WILLIAM WILLHEIM, New York, N. Y. Filed Jan. 28, 1933. Serial No. 47,023. Term of patent 3½ years.

The ornamental design for a textile fabric or similar article as shown and described.

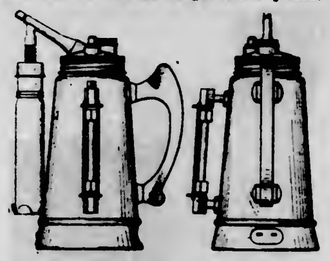
89,459. CLOCK CASE. FRANK J. ABEL, Massapequa, N. Y., assignor to Henry Hyman, Brooklyn. N. Y. Filed Dec. 1, 1932. Serial No. 46,274. Term of patent 7 years.

The ornamental design for a clock case, as shown.

89,460. CLOCK CASE. FRANK J. ABEL, Massapequa, N. Y., assignor to Henry Hyman, Brooklyn, N. Y. Filed Dec. 3, 1932. Serial No. 46,301. Term of patent 7 years.

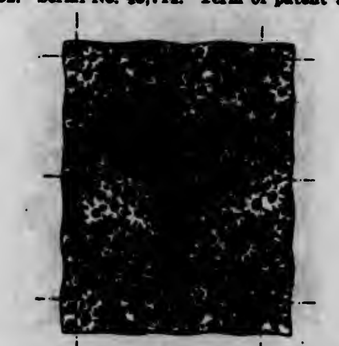
The ornamental design for a clock case, as shown.

89,461. BRUSH. GATES B. AUFSESSER, Albany, N. Y., assignor to Mohawk Brush Company, Albany, N. Y. Filed June 17, 1932. Serial No. 44,112. Term of patent 14 years.



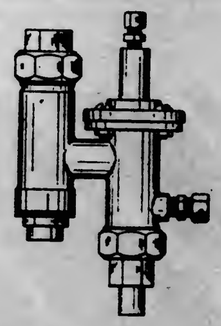
The ornamental design for a brush as shown.

89,462. VAPORIZER OR SIMILAR ARTICLE. HYMAN W. BERGMAN, Kansas City, Mo. Filed Dec. 10, 1932. Serial No. 46,425. Term of patent 7 years.



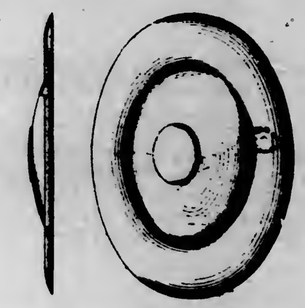
The ornamental design for a vaporiser or similar article, as shown.

89,463. DISPLAY STAND. SAMUEL GORDON, Boston, Mass. Filed Nov. 28, 1932. Serial No. 46,181. Term of patent 7 years.



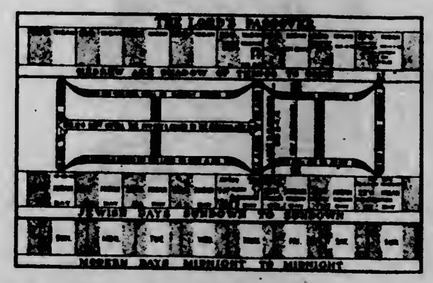
The ornamental design for a display stand, as shown.

89,464. TEXTILE FABRIC OR SIMILAR ARTICLE. CARL R. HELLMAN, New York, N. Y., assignor to William Willheim Co., Inc., New York, N. Y. Filed Nov. 4, 1932. Serial No. 45,744. Term of patent 3½ years.



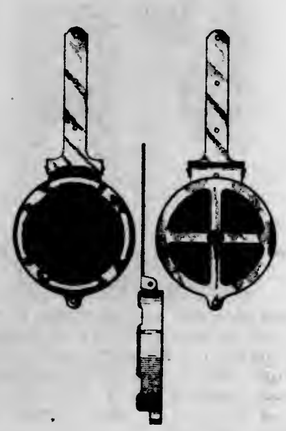
The ornamental design for a textile fabric or similar article as shown and described.

89,465. VALVE CASING. HERBERT S. HUMPHREY, Kalamazoo, Mich., assignor to H. L. G. Company, Kalamazoo, Mich. Filed Dec. 27, 1932. Serial No. 46,626. Term of patent 7 years.



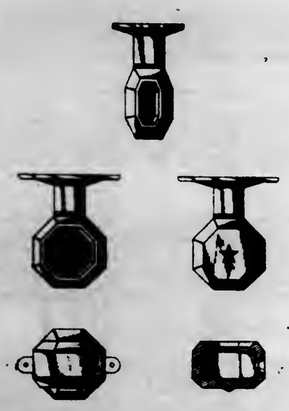
The ornamental design for a valve casing, as shown.

89,466. COMBINATION SPARE TIRE COVER SIDE MEMBER AND SPARE WHEEL HUB CLOSURE FOR A TIRE COVER OR SIMILAR ARTICLE. GEORGE ALBERT LYON, Asbury Park, N. J., assignor to Lyon Incorporated, Asbury Park, N. J., a Corporation of Delaware. Filed Oct. 10, 1932. Serial No. 45,275. Term of patent 14 years.



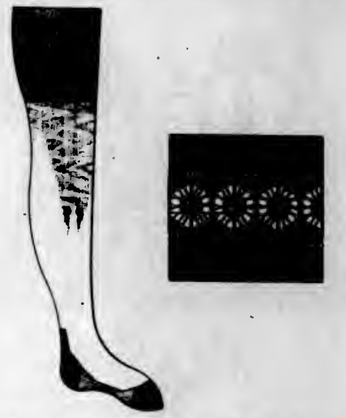
The ornamental design for a combination spare tire cover side member and spare wheel hub closure for a tire cover or similar article as shown and described.

89,467. EDUCATIONAL CHART. ELMER G. MARTIN, East Lampeter Township, Lancaster County, Pa. Filed Dec. 20, 1932. Serial No. 46,587. Term of patent 7 years.



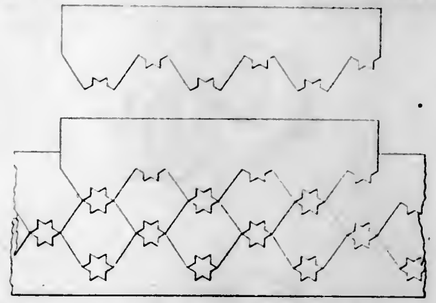
The ornamental design for an educational chart as shown.

89,468. COMBINED CASING OR FRAME AND BRACKET FOR LIGHT REFLECTOR SIGNAL. HERMAN C. REICHHARDT, Evanston, Ill., assignor, by direct and mesne assignments, to Star-Brite Corporation, Chicago, Ill., a Corporation of Illinois. Filed Dec. 31, 1926. Serial No. 42,328. Term of patent 14 years.



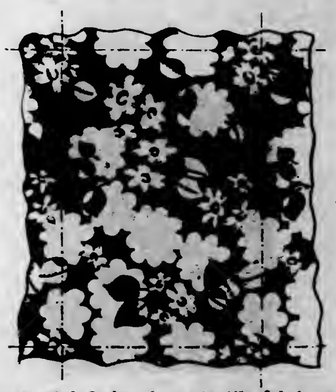
The ornamental design for a combined casing or frame and bracket for light reflector signal, as shown.

89,469. VEHICLE REAR LIGHT CASING. HERMAN C. REICHHARDT, Evanston, Ill., assignor, by direct and mesne assignments, to Star-Brite Corporation, Chicago, Ill., a Corporation of Illinois. Filed Dec. 31, 1931. Serial No. 42,329. Term of patent 7 years.



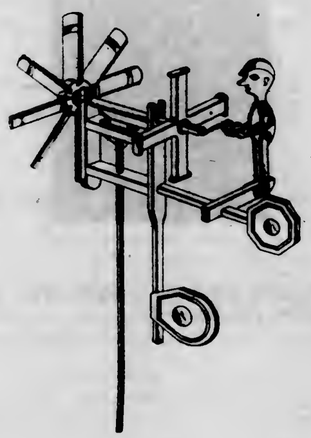
The ornamental design for vehicle rear-light casing as shown.

89,470. STOCKING. ROBERT B. SCHINDLER, Spring City, Pa. Filed Feb. 2, 1932. Serial No. 42,715. Term of patent 3½ years.



The ornamental design for a stocking as shown.

89,471. ROOFING. RICHARD S. STREETER, Oakland, and OTTO E. HENDRICK, Alameda, Calif. Filed Nov. 28, 1932. Serial No. 46,182. Term of patent 7 years.



The ornamental design for a roofing substantially as shown.

89,472. TEXTILE FABRIC OR SIMILAR ARTICLE. PHILIP A. VOGELMAN, New York, N. Y., assignor to William Willheim Co., Inc., New York, N. Y. Filed Sept. 24, 1932. Serial No. 45,025. Term of patent 3½ years.

The ornamental design for a textile fabric or similar article as shown and described.

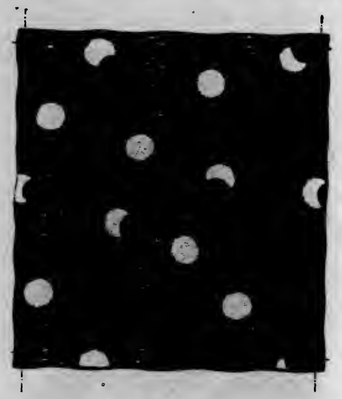
89,473. TOY WINDWHEEL. JAMES WILLIAM WHELAN, Washington, D. C. Filed Jan. 5, 1933. Serial No. 46,743. Term of patent 14 years.

The ornamental design for a toy windwheel, as shown.

89,474. TEXTILE FABRIC OR SIMILAR ARTICLE. WILLIAM WILLHEIM, New York, N. Y. Filed Sept. 24, 1932. Serial No. 45,050. Term of patent 3½ years.

The ornamental design for a textile fabric or similar article as shown and described.

89,475. TEXTILE FABRIC OR SIMILAR ARTICLE. WILLIAM WILLHEIM, New York, N. Y. Filed Sept. 26, 1932. Serial No. 45,099. Term of patent 3½ years.



The ornamental design for a textile fabric or similar article as shown and described.

89,476. TEXTILE FABRIC OR SIMILAR ARTICLE. WILLIAM WILLHEIM, New York, N. Y. Filed Oct. 14, 1932. Serial No. 45,344. Term of patent 3½ years.

The ornamental design for a textile fabric or similar article as shown and described.

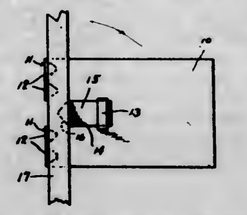
89,477. TEXTILE FABRIC OR SIMILAR ARTICLE. WILLIAM WILLHEIM, New York, N. Y. Filed Dec. 1, 1932. Serial No. 46,286. Term of patent 3½ years.

The ornamental design for a textile fabric or similar article as shown and described.

89,478. TEXTILE FABRIC OR SIMILAR ARTICLE. WILLIAM WILLHEIM, New York, N. Y. Filed Jan. 4, 1933. Serial No. 46,714. Term of patent 3½ years.

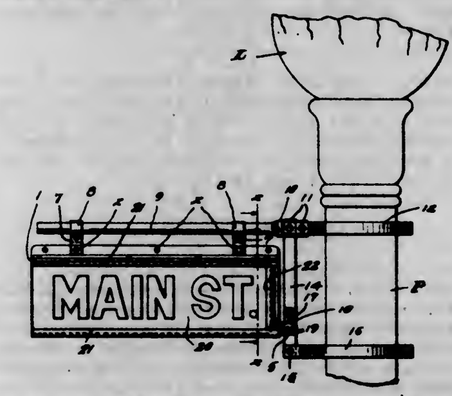
The ornamental design for a textile fabric or similar article as shown and described.

PATENTS



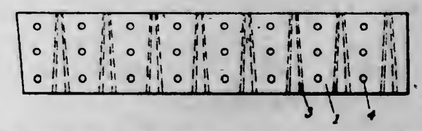
GRANTED MARCH 14, 1933

1,900,894. GROUND CONNECTER. GEORGE L. BARNES and HOWARD D. CHAPMAN, Los Angeles, Calif.; said Chapman assignor to said Barnes. Filed July 26, 1930. Serial No. 470,972. 8 Claims. (Cl. 247—1.)



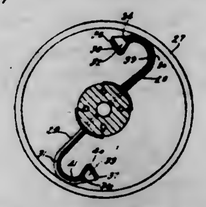
3. A ground connecter comprising: a pair of two-part clamps; the parts of each clamp having co-acting jaws for receiving a pipe therebetween; extensions on the parts of each clamp having openings; a bolt passing through the openings to pivotally connect the parts of one clamp to the parts of the other clamp; and a nut on the bolt adapted to co-act therewith in clamping the jaws of each clamp about a pipe.

1,900,895. EXPANSION JOINT ANCHOR. JOHN C. BARTHOLET, Tacoma, Wash. Filed July 27, 1931. Serial No. 553,447. 8 Claims. (Cl. 94—51.)



1. An anchor for the purpose specified comprising a plate provided at one end with a pair of posts extending upwardly therefrom and bendable relative thereto, and a third post rising from the plate intermediate the ends of the plate and in staggered relation with respect to the first mentioned posts.

1,900,896. SIGN. PETER H. BETHEA, Washington, D. C. Filed July 28, 1932. Serial No. 624,271. 4 Claims. (Cl. 40—128.)

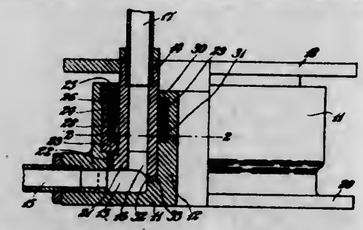


1. A sign comprising two members having their upper marginal portions connected, said members having relative movement to vary the inclination of said members one toward the other, a supporting rod, means for securing an end portion of the rod to a support, means coacting with the rod and the connected marginal portions of the members for suspending the sign from the rod, a bar positioned adjacent to the inner end of the rod and substantially at right angles thereto, one end portion of the bar being secured to said end portion of the rod, means for securing the opposite end portion of the bar to a support, inwardly directed flanges carried by the inner ends of the members of the sign, said flanges being in overlying relation, and a member secured to the bar and to the overlying flanges of the members of the sign to hold the sign against sway.

1,900,897. LINER. CHARLES BUTTERFIELD, Norwood, Ohio, assignor to Harold W. Nichols, Cincinnati, Ohio. Filed Mar. 16, 1931. Serial No. 522,832. 3 Claims. (Cl. 217—3.)

1. A package liner comprising an elongated substantially rectangular blank with straight edges, having tapered pleats formed therein from one longitudinal edge to the other, and the ends secured together to form a tapering tubular basket liner.

1,900,898. ROTARY ENGINE. NEIL CHRISTIE, Larder Lake, Ontario, Canada. Filed May 28, 1932, Serial No. 614,114, and in Canada June 5, 1931. 2 Claims. (Cl. 253—81.)

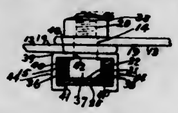


1. In an engine, a hollow shaft forming a fluid inlet and having longitudinal passages forming exhausts, a fly wheel rim concentric with said shaft, feed pipes tapping the hollow of said shaft and rigidly secured to said rim and curled outwardly therefrom, cups forming impulse members and secured to the curved ends of said pipes and having exhaust openings connected to said exhaust passages, and valves introduced in said exhaust passages and adapted to direct the impulse fluid into reverse contact with the cups.

1,900,899. ROTARY COUPLING FOR STEAM AND OTHER PRESSURE FLUID SUPPLY CIRCUITS. GILBERT HAROLD DAVIES, Ebbw Vale, Wales. Filed Aug. 3, 1931, Serial No. 554,982, and in Great Britain Aug. 6, 1930. 5 Claims. (Cl. 285—9.)

1. A rotary coupling comprising a member having an annular chamber therein, a pressure fluid conduit communicating with said chamber, an annular hollow member rotatably seated in the annular chamber in the first-mentioned member, the interior of said hollow member

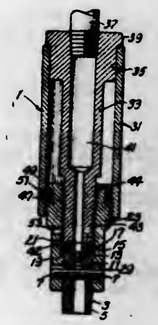
being open at the inner side to the annular chamber and said member being closed at its outer side, a fluid pressure conduit extending through the closed side of said member to communicate with the interior thereof and said mem-



ber being movable axially under pressure admitted to the annular chamber in the first-mentioned member, and means for limiting the axial movement of the hollow member, said limiting means forming a fluid-tight seat.

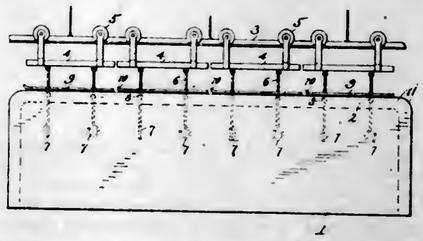
1,900,900. ORNAMENTAL RIBBON AND METHOD OF MAKING SAME. HAROLD A. EVANS, Lynn, Mass., assignor to Parco Specialty Co., Lynn, Mass., a Corporation of Massachusetts. Filed Dec. 16, 1929. Serial No. 414,365. 8 Claims. (Cl. 154—2.)

1. The method of manufacturing ornamental ribbons for application to sheet articles, comprising the coating of the central portion of a strip having selvaged edges with a stripe of permanently plastic agglutinant, applying a protective strip to the stripe and cutting the strip, the stripe, and the protective strip into two separate, elongate members, each of which comprises a ribbon having an adhesively coated marginal portion protected with a protective covering member, and its opposite edge provided with a selvaged edge.



1,900,901. GARAGE DOOR CONTROL DEVICE. EDWARD S. BAGLEY, Hartford, Conn. Filed May 27, 1929. Serial No. 366,272. 7 Claims. (Cl. 268—62.)

1. In a garage door control device, a pair of doors adapted to swing towards each other, a track disposed at right angles to the plane of said doors when the latter are closed, a member movable in said track, a tension member for connecting the rear end of said track to an overhead part of the garage structure, a pair of links pivotally connected at their rear ends to said member at a point above said track, said links having their forward ends respectively connected to said doors, diagonal braces connected at their forward ends to the lintel of the doorway and having their rear ends connected to the under side of said track, and a member partially encircling said track and associated with said first mentioned member for preventing the latter from jumping the track.



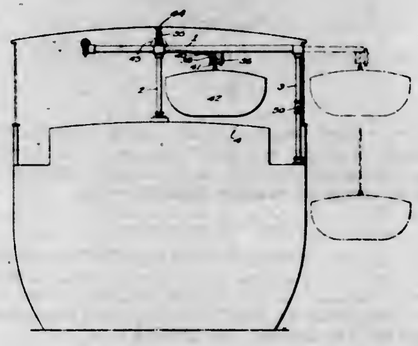
1,900,902. COUPLING. FRANK S. BARKS, St. Louis, Mo. Filed Apr. 10, 1931. Serial No. 529,001. 5 Claims. (Cl. 286—176.)

1. In combination a hollow fitting, and a coupler for a pressure lubricating system, said coupler comprising a nozzle and a hollow connecting member having a threaded bore and being adapted to thread with said nozzle, said connecting member also being adapted to lock with said fitting to join said fitting and nozzle, and means between said nozzle and connecting member adapted to

provide a substantially constant frictional drive therebetween, said means comprising resilient means reacting between said nozzle and connecting member, said means constituting the only driving means between said nozzle and said connecting member.

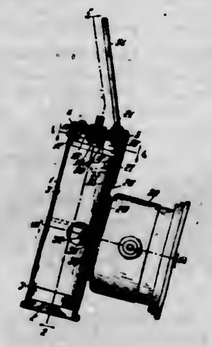
1,900,903. CARRIER FOR OVENS, FURNACES, OR THE LIKE. EARL T. BENNINGTON, Cleveland Heights, Ohio, assignor to The Cleveland Crane & Engineering Company, Wickliffe, Ohio, a Corporation of Ohio. Filed Jan. 15, 1927. Serial No. 161,382. 3 Claims. (Cl. 25—142.)

1. A carrier for furnaces, ovens or the like, having supporting wheels adapted to travel on an overhead track, a frame, load supporting members depending from the frame, a cover plate of substantially the same length as the frame slidably mounted on said members, one end of said plate being upwardly inclined, and means on said members intermediate the ends thereof for supporting said plate.



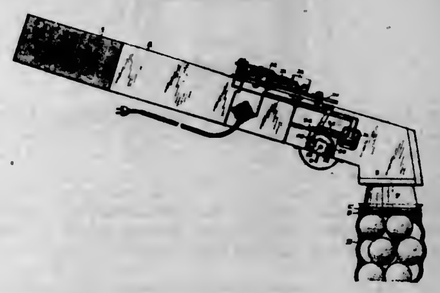
1,900,904. FLEXIBLE WEAR-RESISTING SEALING FABRIC AND METHOD OF MAKING THE SAME. EDWARD H. BERGER, Manville, N. J., assignor to Johns-Manville Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 18, 1929. Serial No. 356,243. 12 Claims. (Cl. 91—68.)

1. An article of manufacture comprising a base member having coatings thereon, said base member consisting of a woven fabric made from strands of fire-resisting fibrous material, one of said coatings consisting of a water-insoluble gum and the other consisting of an oil and vapor-resisting material.



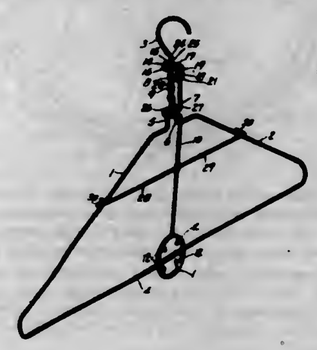
9. A method of manufacturing a water, oil and vapor-proof flexible sealing fabric, which consists in applying a thin layer of a rubber compound to one side of an asbestos fabric and then calendering and curing, after which the other side is impregnated with a protein compound by a series of brushing and drying applications, and then subjected to a series of dipping and drying applications in a hardening solution to give a coating of substantial thickness.

1,900,905. BOAT HOIST. WILLIAM IRVING BOWDEN, Philadelphia, Pa., assignor to American Engineering Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 22, 1930. Serial No. 483,666. 13 Claims. (Cl. 9—22.)



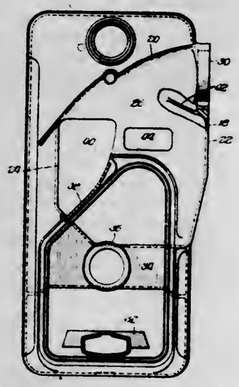
1. In a boat hoist, the combination with an elongated hollow casing, of a threaded shaft journaled at one end of said casing and extending longitudinally therethrough, an inner hollow casing slidably supported in the first-named casing and surrounding said shaft, said inner casing comprising a nut having threaded engagement with said shaft, boat hoisting and supporting apparatus carried by said inner casing, and means for rotating said shaft.

1,900,906. PORTABLE ELECTRIC ILLUMINATING APPARATUS. LE ROY O. BROWN, Chicago, Ill., assignor to Justrite Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed May 18, 1931. Serial No. 538,027. 8 Claims. (Cl. 240—10.6.)



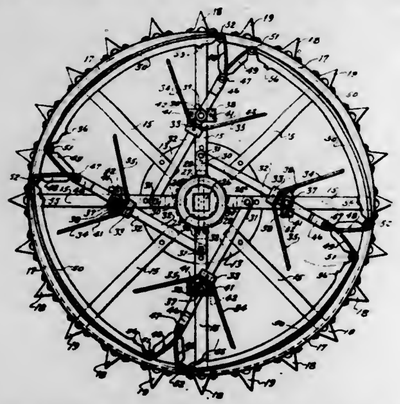
1. In a portable electric illuminating apparatus, a metal battery casing adapted to receive a plurality of sets of battery cells and open at one end for direct insertion of cells to fill the same, springs on the bottom wall thereof, a plurality of series of superposed dry cells having the lower end terminals of the lower cells of each set engaged by said respective springs for electrically connecting said cells in parallel with said casing, a cover for said casing, a metal bar carried thereby engaging the upper terminals of the upper of said several series of batteries for electrically associating said batteries in parallel when said cover is closed, a pair of electrical terminal members mounted upon a wall of the casing with one thereof insulated from the same, a metal member insulated from the casing and in contact with the other of said terminals, a flexible metallic element carried by the cover and contacting with said metal member when the cover is closed, and means for electrically connecting said last-named member with said bar thereby to connect the cells with said terminals while the cover is closed.

1,900,907. BAG FILLING APPARATUS. HERMAN A. BUXTON, Cleveland Heights, Ohio, assignor to The Chase Bag Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 5, 1929. Serial No. 411,720. 7 Claims. (Cl. 226—58.)



1. In a bag filling apparatus, a gravity delivery chute having a flaring receiving end, a downwardly extending discharge end including means for suspending a bag therefrom, a rotatable wheel having spokes extending into said chute and adapted to rotate said wheel by the objects passing through said chute, and adjustable indexing means for controlling the rotatable movements of said wheel, and the number of objects passing through said chute into said bag.

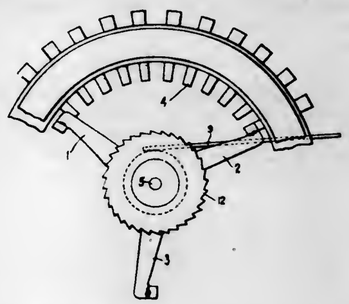
1,900,908. GARMENT HANGER. JOHN G. CAMPBELL and LAWRENCE A. CAMPBELL, Kansas City, Mo. Filed Oct. 11, 1930. Serial No. 487,985. 6 Claims. (Cl. 223—62.)



1. A garment hanger comprising a stem provided with a hook and having a bent portion, a bow including rails diverging from said hook to form a seat, and a horizontal rail connecting said diverging rails, a retainer comprising a wire having one end pivotally mounted in said bent portion of the stem and an opposite enlarged end engageable with said horizontal rail, and means for resiliently latching the retainer to the bow.

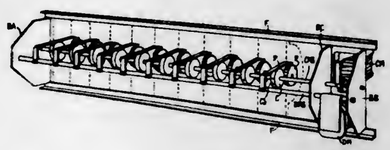
1,900,909. RADIATOR. GLEN C. CARNAHAN, Chicago, Ill., assignor to James B. Clow & Sons, Chicago, Ill., a Corporation of Illinois. Filed Jan. 2, 1931. Serial No. 506,127. 3 Claims. (Cl. 126—91.)

1. A radiator of the class described having, in combination, a vent section and a plurality of adjacent communicating sections, said vent section comprising a chamber, a flue connection extending from the chamber, a side wall of the chamber having a large atmospheric opening at a point remote from the flue connection, and said wall having a smaller supplemental opening disposed between the larger opening and the flue connection.



1,900,910. AUXILIARY TREAD FOR TRACTORS. DAVID CARPENTER, Cherryville, N. C. Filed Dec. 9, 1931. Serial No. 579,844. 3 Claims. (Cl. 301—38.)

3. An expansible tread for a tractor wheel having spokes comprising a plurality of tread members pivotally connected to each other at their ends, means slidably mounted on the spokes of the tractor wheel for supporting the tread members, and means mounted on the hub of the tractor wheel for moving said supporting means and the tread members to form an auxiliary tread having a circumference greater than the circumference of the tractor wheel.



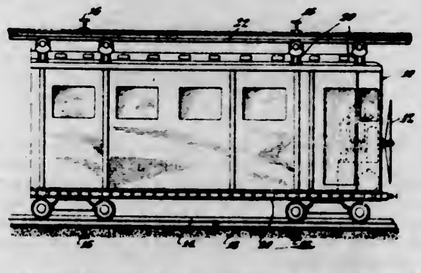
1,900,911. TELEPHONE SYSTEM. DAVID ADAM CHRISTIAN, London, England, assignor to Siemens Brothers & Company Limited, London, England. Filed Nov. 17, 1930, Serial No. 496,145, and in Great Britain Nov. 23, 1929. 16 Claims. (Cl. 179—18.)

1. In a rotary switch mechanism in which a set of fixed contacts are successively engaged by a plurality of movable contacts and wherein the movable contacts are electrically connected, the provision of a like plurality of brushes and a cooperating commutating device com-

prising an insulating ring with a metal segment which functions to sequentially electrically connect said brushes with said movable contacts as the movable contacts successively engage the contacts of said fixed set.

1,900,912. ELECTROMAGNETIC SWITCH. DAVID ADAM CHRISTIAN, London, England, assignor to Siemens Brothers & Company Limited, London, England. Filed Sept. 19, 1931, Serial No. 563,875, and in Great Britain Sept. 23, 1930. 15 Claims. (Cl. 179—18.)

1. In a switching mechanism comprising a plurality of switches, an individual pawl and a cooperating individual ratchet for each of said switches, means for selecting any one of said pawls to operatively associate said selected pawl with its cooperating ratchet, and means common to said switches for operating said pawls to effect the movement of the ratchet cooperating with the selected pawl.

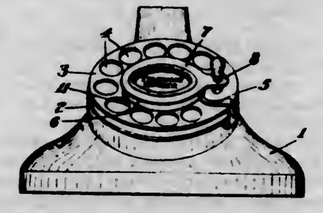


1,900,913. ELECTRICAL COUPLING DEVICE. JOHN P. COLEMAN, Edgewood, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Feb. 2, 1931. Serial No. 512,977. 3 Claims. (Cl. 173—332.)

1. Apparatus for supporting a coupling member comprising a pipe secured to said coupling member, two fixed spaced guides provided with means which receive said pipe in such manner that a limited amount of axial movement of said coupling member is permitted, the guide which is nearest said coupling member also being provided with a plurality of plungers movable radially toward and away from said pipe and biased into engagement with said pipe by means of springs, a compression spring interposed between said coupling member and the nearest guide, and means for preventing rotation of said coupling member about the axis of said pipe.

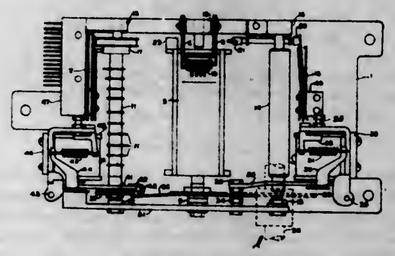
CARNEGIE LIBRARY OF ATLANTA

1,900,914. SYSTEM FOR PREVENTING THE DERAILMENT OF SCREW-DRIVEN VEHICLES. MANUEL GOMIS CORNET, Madrid, Spain. Filed Dec. 11, 1930, Serial No. 501,729, and in Spain Dec. 11, 1929. 8 Claims. (Cl. 104—242.)



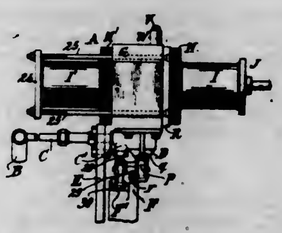
1. In combination with a vehicle, a frame structure enclosing the vehicle, tracks supported within the frame on the bottom thereof for supporting said vehicle for travel within said frame, guide rails positioned within the frame at the top, sides and bottom thereof extending in parallel relation to said tracks, and derailment-preventing means secured to the top, sides and bottom of the vehicle and engaging said guide rails.

1,900,915. WRENCH SET. WILLIAM F. COSTELLO, New Britain, Conn., assignor to The New Britain Machine Company, New Britain, Conn., a Corporation of Connecticut. Filed Feb. 11, 1932. Serial No. 592,309. 4 Claims. (Cl. 206—16.)



1. A holder for a graduated set of superposed, double-headed wrenches, comprising a substantially rigid base member adapted to underlie the bottom wrench of the series and having an upwardly and inwardly bent end portion engageable between the jaws of the several corresponding wrench ends, and strap means pivotally connected to the opposite end of the base member and detachably connectable to the said bent end portion, said means being adapted to extend upwardly between the opposite jaws of the wrenches and over the top of the uppermost wrench.

1,900,916. DIAL OPERATOR. JOHN FRANCIS CURRIVAN, Forest Hills, N. Y., assignor to Good-Ad, Inc., a Corporation of Pennsylvania. Filed Dec. 31, 1929. Serial No. 417,606. 8 Claims. (Cl. 179—90.)



1. For use with a dial telephone having a rotatable dialing disc provided with an annular series of holes, and having centrally thereof an area adapted to disclose printed matter, a dial operator comprising a rotatable and reciprocal plunger and means for maintaining said plunger in alignment with said hole series for selected projection into desired hole, said aligning means lying wholly outwardly of said area so as not to obscure the same.

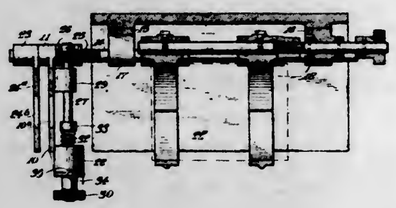
1,900,917. SELECTOR SWITCH SUITABLE FOR USE IN TELEPHONE SYSTEMS. GERALD DRAKIN, New York, N. Y., and LOUIS JEAN JOSEPH SCHREURS, Antwerp, Belgium, assignors to International Standard Electric Corporation, New York, N. Y. Filed May 31, 1930, Serial No. 458,044, and in Great Britain June 26, 1929. 13 Claims. (Cl. 179—27.51.)

1. In a selector switch comprising a plurality of sets of brushes and mounted on a movable carriage, a device for selecting a particular set of said brushes, and means to operate said device by a movement of said carriage preliminary to the movement thereof which advances the brushes over the bank of the selector.

1,900,918. CAN TESTING MACHINE. WILLIAM DIETER, Newark, N. J., assignor to E. W. Bliss Company, a Corporation of Delaware. Filed Oct. 24, 1931. Serial No. 570,831. 5 Claims. (Cl. 73—51.)

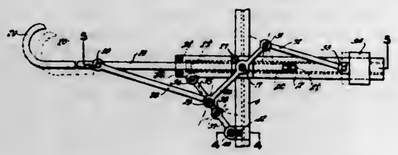
1. A can testing machine of the described type, its units comprising each two chambers, front and rear, with a diaphragm exposed on its opposite sides to the pressures from the respective chamber, means for applying the can to be tested in hermetic communication with the front chamber, and the rear chamber having a total capacity approximately equal to the combined capacity of the front chamber and can, and valve means for simultaneously admitting and discharging air to and from both chambers, whereby pressure differences due to temperature changes of the confined air are substantially equalized.

1,900,919. COMBINED VENTILATING AND FIRE SHUTTER FOR MOTION PICTURE PROJECTION MACHINES. AUGUSTO DINA, Jersey City, N. J., assignor to International Projector Corporation, New York, N. Y., a Corporation of Delaware. Filed June 29, 1929. Serial No. 374,739. 6 Claims. (Cl. 88—17.)



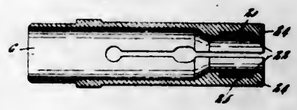
4. A combined ventilating and fire shutter for motion picture machines which comprises a rotatable multi-bladed

shutter, a second multi-bladed shutter moveable with respect to the first shutter, said second shutter having a plurality of operative positions with respect to the first



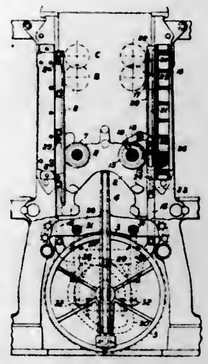
shutter, substantially the entire area of the blades of said shutters being disposed at the same angle to the plane normal to the axis of rotation.

1,900,920. GATE FOR MOTION PICTURE MACHINES. AUGUSTO DINA, Jersey City, N. J., assignor to International Projector Corporation, New York, N. Y., a Corporation of Delaware. Filed Nov. 4, 1929. Serial No. 404,543. 16 Claims. (Cl. 88—17.)



2. A door driving and locking device for motion picture machines which comprises a driven gate door, a driving member, means permitting the member to drive the door away from the gate by a continuous movement thereof, in one direction or another, and means for automatically locking said drive member at predetermined points in the movement of the door.

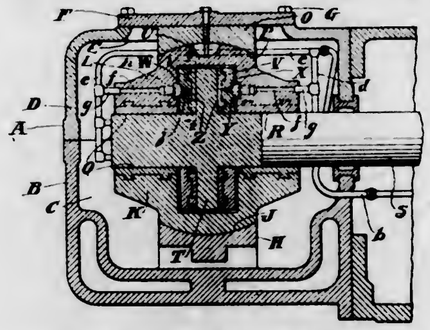
1,900,921. APPARATUS FOR GUIDING AND STEADYING DRILL STEM AND DRILL PIPE. WILLIAM H. ENDSLEY, Henderson, Tex. Filed Apr. 1, 1931. Serial No. 526,949. 10 Claims. (Cl. 255—35.)



1. A pipe stabilizer for well drilling, embodying a pivotally mounted substantially horisontal member, a single hook ended pipe engaging member slidably supported by said horisontal member, link and crank means for moving both members in an arc, link and crank means for selectively moving said pipe engaging member longitudinally with relation to said horizontal member, and means for maintaining both of said members in a substantial balance upon a supporting member.

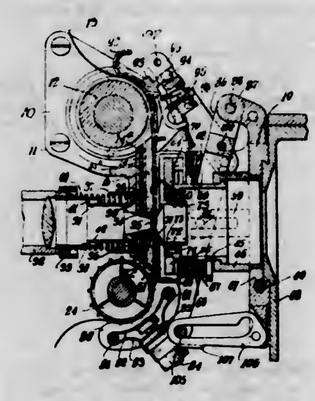
1,900,922. GRIPPING FACE FOR CHUCKS AND METHOD OF MAKING THE SAME. LEIGH R. EVANS, Elmira, N. Y., assignor to Morrison Machine Products, Inc., Elmira, N. Y. Filed Sept. 23, 1930. Serial No. 483,837. 3 Claims. (Cl. 279—123.)

1. A chuck having a stock engaging face provided with wear-resisting portions, in which a shallow recess is formed in said face, and an insert of a hard, brittle metallic material having relatively low tensile strength welded in said recess to the metal of said chuck, with the metal of the chuck forming a reinforcement on all sides except the face of the insert.



1,900,923. PRINTING PRESS. FRITZ FALLERT, Bern, Switzerland. Filed Mar. 24, 1931, Serial No. 524,834, and in Germany June 29, 1928. 5 Claims. (Cl. 101—269.)

1. In a printing press, having vertically disposed printing beds and having impression cylinders provided with channels and mounted in a rising and falling slide, a drive and control arrangement, comprising vertical racks mounted on the frame of the press, pinions connected with the impression cylinders and engaging said vertical racks during the movement of the slide, a toothless gap on the periphery of each of said pinions corresponding to said channels on the impression cylinders, an auxiliary driving mechanism for bridging over said gaps in the driving pinion and for initiating the rotation of the printing cylinders and means for bringing said auxiliary driving mechanism into operation in such a manner, that the impression cylinders gradually are brought from a standstill to the full peripheral velocity.

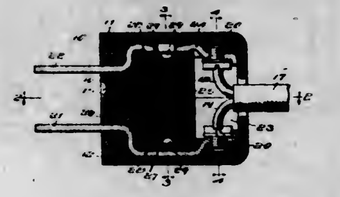


1,900,924. OILING DEVICE FOR BEARINGS. ROWLAND V. D. FIRTH, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Apr. 22, 1930. Serial No. 446,285. 2 Claims. (Cl. 308—160.)

1. In combination with a rotatable member, a thrust bearing having a supply passage for oil, thrust shoes in the bearing having bearing surfaces thereon, oil passages in the thrust shoes extending substantially parallel to the bearing surfaces in a direction counter to the direction of rotation of said member and opening at one end of said shoes, radially extending grooves in said end of the thrust shoes to receive oil from the oil passages, said grooves being wedge-shaped in cross section with the end nearest the center of the shoe blending into the bearing surface, and thrust buttons interposed between the bearing and

the thrust shoes to permit oscillating movement of the thrust shoes relatively to the bearing and having passages to convey oil from the supply passage to the oil passages.

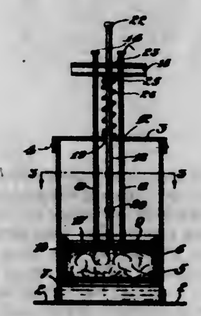
1,900,925. COMPOUND FILM GATE. LOUIS SIMON FRAPPIER and EWALD BOECKING, Brooklyn, N. Y., assignors to International Projector Corporation, New York, N. Y., a Corporation of Delaware. Filed Oct. 27, 1928. Serial No. 315,379. 9 Claims. (Cl. 88—17.)



1. In combination with an aperture plate, an idler and a continuously rotating sprocket for feeding film thereover, a film gate comprising pivoted members carrying pressure shoes adapted to contact with said idler and said sprocket, a slidable member mounted independently thereof and carrying pressure shoes adapted to contact with said aperture plate, and a single means for controlling the position of all of said members.

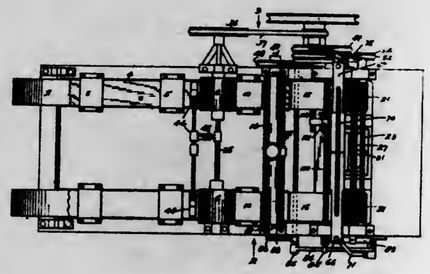
6. In an aperture plate, a plurality of metallic members, mica separators therebetween, and facing strips over which a film may be passed, and members of metallic material inserted in said facing strips under the perforated portions of said film.

7. In a projection machine, an aperture plate having film engaging surfaces of comparatively soft material and hard metallic members inserted in said film engaging surfaces and substantially flush therewith in a position to contact with the perforated portions of the film.



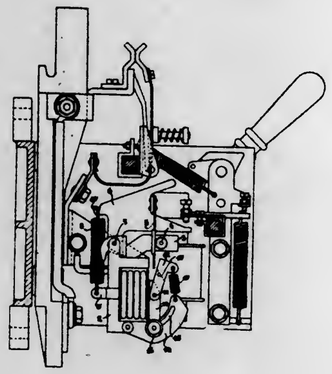
8. In a film gate, pressure shoes, a support therefor, and means for mounting said shoes on said support comprising a swivel joint permitting pivotal movement of said shoes in all directions whereby said shoes may be self aligning when pressed into film engaging position.

1,900,926. COMBINATION PLUG AND FUSE. ADOLPH J. FRIESEL, Chicago, Ill. Filed Apr. 13, 1931. Serial No. 529,660. 2 Claims. (Cl. 200—115.5.)



1. In an electrical device, a plug, a housing member comprising a plurality of sections of insulating material detachably fastened together to form a hollow body, a pair of terminals embedded in said housing member, one of said terminals comprising two sections having their adjacent ends arranged in exposed spaced apart relation on the inner periphery of the housing, a cylindrical fuse block positioned on the interior of said housing, said block having a plurality of fuse members on its outer periphery, a mounting for said block providing means permitting the block to be shifted to bring any one of said fuse members into cooperative relation with the adjacent ends of said terminals, said fuse members extending longitudinally of said cylindrical fuse block, and said block having grooves underlying each of said fuse members providing receptacles of substantial depth for the melted material of the burnt out fuses.

1,900,927. CLOTHES CLEANING MACHINE. EDWIN G. GETTINS, Los Angeles, Calif. Filed Aug. 24, 1931. Serial No. 559,010. 7 Claims. (Cl. 68—37.)



4. In a clothes cleaning machine, a tank, a clothes receiving basket in said tank, a plunger plate in said basket, means for vertically reciprocating said basket and plate, and means for limiting upward movement of said plate relative to upward movement of said basket; said basket and plate reciprocating means including means for advancing said plate downwardly relative to said basket, and means for advancing said basket upwardly relative to said plate beyond the limit of upward movement of the latter.

1,900,928. FIRECRACKER TUBE ROLLING MACHINE. WILLIAM F. GONGAWARE, Santa Monica, Calif. Filed Aug. 24, 1931. Serial No. 558,879. 13 Claims. (Cl. 93—181.)

1. A machine for making a tight-wound, convolute-layer tube including a turnable core, means to feed a flat strip blank thereto, a spinning, friction platen, means to press the coiling tube to the platen, and means to eject the tube from the core.

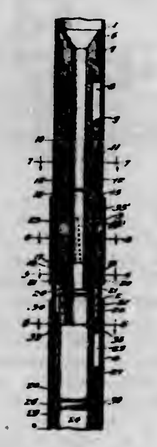
1,900,929. ELECTRIC SWITCH. LEONHARD HAAG, Frankfort-on-the-Main, Germany. Filed May 1, 1930. Serial No. 449,022. 8 Claims. (Cl. 200—88.)

1. In an indirect electric release device, the combination of a magnetic core, an exciting winding upon said core, a release member movably mounted on said core, spring means for actuating said release member anchored to said core, an armature pivoted to said core and under the influence of the magnetic field thereof, a secondary winding upon said core, a release mechanism actuated by small but protracted excess currents fed by said secondary winding and mounted on said core, a catch on said release member in the path of said armature and normally held by said release mechanism, an adjusting armature pivoted to said core for adjusting the ratio of transformation between said exciting winding and said secondary winding, a projection on said adjusting armature lying in the magnetic circuit of said first mentioned armature adapted to alter the reluctance thereof, a scale plate secured to said core, means for clamping said adjusting armature to said scale plate, and a spring connected between said scale plate and said first mentioned armature tending to draw said first mentioned armature away from said core.

1,900,930. PORTABLE MAGNIFIER. OSCAR HAUSER, Ozone Park, N. Y., assignor to Kollmorgen Optical Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Aug. 20, 1931. Serial No. 558,201. 1 Claim. (Cl. 88—39.)

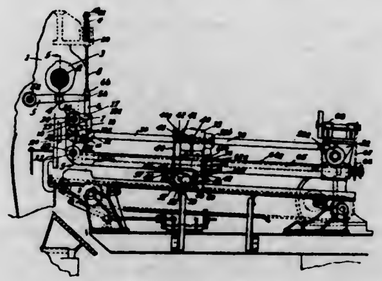
In combination a casing or container, a sleeve within the container secured to the bottom thereof, a shaft or rod movable axially of the container, a plate carried by said rod and maintaining the same in line with said sleeve, a groove in the shaft cooperable with spring fingers provided by said sleeve when the shaft is in its innermost position, a spring placed under compression by the inward movement of said shaft and held compressed by the engagement of said fingers with the groove in said shaft, stop mechanism limiting outward movement of the shaft under the action of said spring, a lens mount carried at the outer end of said shaft, a lens carried by said mount, and a cover for the container carried by said lens mount, the permitted inward movement of said shaft being sufficient to move the lens into the container and said cover to closed position.

1,900,931. FLASH-LAMP. HARRY T. HIPWELL and HARRY H. HIPWELL, Pittsburgh, Pa. Filed Mar. 19, 1930. Serial No. 437,074. 7 Claims. (Cl. 240—10.66.)



1. The combination with a flash lamp casing and a cap therefor, of a suspending member of generally U shape, a recess in said cap having holes through one wall, the legs of said member extending through said holes, and having the inner ends thereof bent outwardly to engage the adjacent walls of the recess, and a disc-like member positioned over said recess to support the inner ends of said suspending member against movements in a lateral direction.

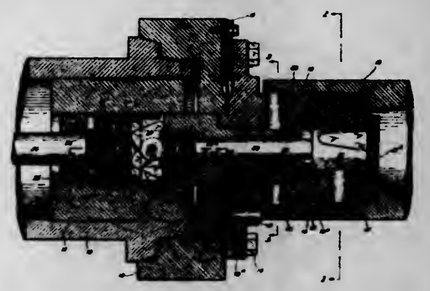
1,900,932. ROTARY WELL DRILLING BIT CONTROL. JAN H. HOLLESTELLE, St. Louis, Mo., assignor to The Kennedye Corporation, St. Louis, Mo., a Corporation of Delaware. Filed May 2, 1928. Serial No. 274,454. 1 Claim. (Cl. 255—27.)



A rotary drill bit control comprising in combination, an outer casing including a plurality of sections, a coupling joining two of said sections, a hollow shaft disposed within said casing, means carried by said coupling for driving said shaft in timed relation with said casing comprising a lug upon said coupling which is slidably positioned within a substantially longitudinal groove in said hollow shaft, and means associated with said hollow shaft

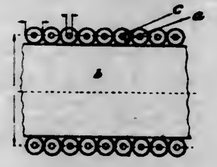
for limiting longitudinal motion of said shaft with respect to said casing, a liquid-tight plunger carried at the top of said shaft within said casing on one side of said coupling, a liquid-tight gland carried at the lower end of said

casing upon the opposite side of said coupling, the space within said casing between said plunger and said gland adapted to carry a liquid to retard movement of said shaft with respect to said casing.



1,900,933. AUTOMATIC GAUGE FOR SHEET METAL SHEARS. EDWIN B. HUDSON, Butler, Pa., assignor to The American Rolling Mill Company, Middletown, Ohio, a Corporation of Ohio. Filed Jan. 10, 1929. Serial No. 331,432. 9 Claims. (Cl. 164—59.)

1. In combination with a shear and a table, a gauge comprising a housing slidably supported upon rails above said table, a movable stop member pivoted upon said housing, a square shaft parallel to said rails, means upon said shear to rotate said shaft at a predetermined point in said shear stroke, a bevel gear slidably but non-rotatably mounted upon said shaft in said housing, a second bevel gear meshing with said first and mounted upon a shaft at right angles to said square shaft, and operating arms connecting said second shaft to said movable stop means.

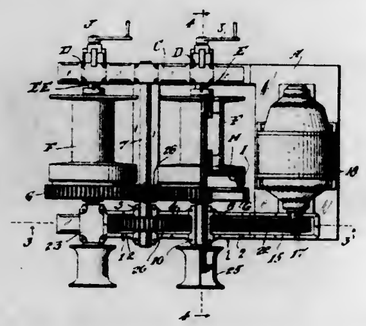


1,900,934. CHUCK. THOMAS J. HUDSON, Cleveland, Ohio, assignor to The Warner & Swasey Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 27, 1930. Serial No. 439,480. 7 Claims. (Cl. 279—2.)

1. In a chuck, a chuck body having two sets of jaws, a pair of cam members for actuating them, one of said cam members being keyed to said body, an actuator, the adjacent portions of the actuator and cam members be-

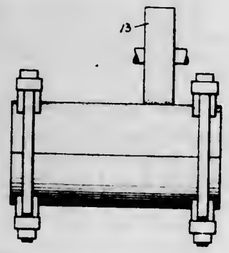
ing slotted, and equalizing transmitting means in the slotted portions whereby said cam members and actuator will rotate as a unit when said chuck body is rotated.

1,900,935. LOADING STRUCTURE FOR A SIGNALING CONDUCTOR. RICHARD LESLIE HUGHES and ERIC BAGULEY, Aldwych, London, England, assignors to International Standard Electric Corporation, New York, N. Y. Filed June 17, 1931, Serial No. 545,002, and in Great Britain July 10, 1930. 9 Claims. (Cl. 178—45.)



1. A loading material comprising a centre core and an outer layer in which the centre core is of higher resistivity than the outer layer and the outer layer is of higher permeability than the core.

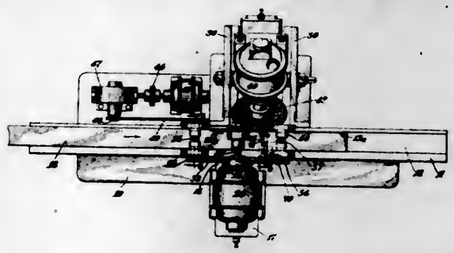
1,900,936. WINDOW FASTENER. EDWARD P. HUTTON, Philadelphia, Pa., assignor of one-half to Alexander J. Gibson, Philadelphia, Pa. Filed Nov. 1, 1929. Serial No. 403,960. 3 Claims. (Cl. 292—58.)



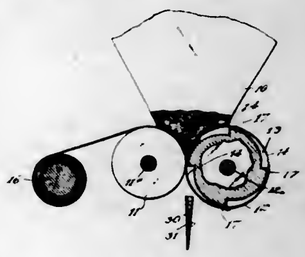
1. In a window fastener of the class described, a cylindrical cap adapted to be supported upon a meeting rail and to support an axial shaft, a sleeve mounted on said shaft, a locking dog carried by said sleeve at one end and an actuating lever mounted on the other end and adapted to engage a slot in said cap to thereby effect axial translation of the locking dog when the sleeve is rotated upon the shaft.

1,900,937. HOISTING ENGINE. CHARLES W. KAHLERTH, Newark, N. J. Filed Apr. 30, 1931. Serial No. 533,975. 7 Claims. (Cl. 254—185.)

1. In a hoisting engine, the combination of a hoisting drum shaft having a drum thereon, a drum driving shaft, a driving connection between said shafts, a pair of spaced bearing frames having bearings for said shafts, one of said frames being hollow to form a gearing chamber and having elongated bearings for said shafts in the walls of and extending across said chamber, a power shaft, a sprocket on said power shaft within said gearing chamber, a second sprocket on said drum driving shaft within said gearing chamber, and a chain co-operating with said sprockets respectively, located within said gearing chamber and passing upon opposite sides of the bearing for said hoisting drum shaft.



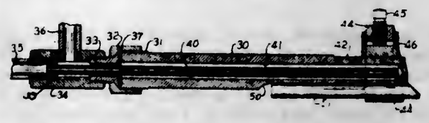
1,900,938. METHOD OF MAKING LINED BEARINGS. EDWARD P. KERAUISH, Cleveland, Ohio, assignor to The Cleveland Graphite Bronze Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 22, 1928. Serial No. 314,106. 1 Claim. (Cl. 29—149.5.)



In a method of making lined bearings, the steps which consist in forming a roughly true cylindrical shell provided with a lining of bearing material, splitting the same along a diametral plane, clamping together the two split half cylinders, removing the stock from the outside of such clamped half cylinders to bring the same into a truly cylindrical condition, and then holding such half cylinders still clamped together while removing stock from the interior thereof to bring the interior surface of said half cylinders into a truly cylindrical condition concentric with the outside surface thereof.

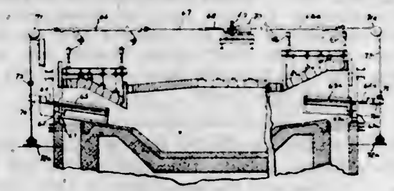
1,900,939. APPARATUS FOR SHAPING MOLDING. HARMON C. KINNEY, Ambler, Pa., assignor, by mesne assignments, to Ambler Asbestos Shingle & Sheathing Company, a Corporation of Pennsylvania. Filed Aug. 21, 1930. Serial No. 476,806. 8 Claims. (Cl. 51—78.)

1. A grinding machine for slabs comprising a bed grooved to receive the slab, means for advancing the slab, a grinder head having vertical and horizontal adjustments to operate on the upper side of one edge of the slab, a second grinder head similarly adjustable to operate in the opposite direction on the other side of said slab, and means for adjustably positioning the second head at variant angles below said bed.

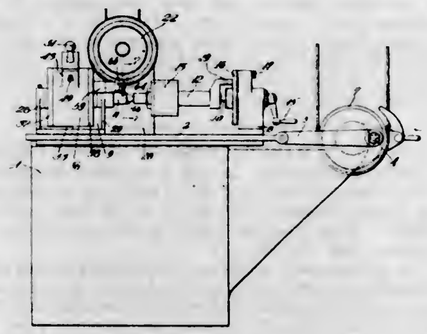


1,900,940. ROOFING AND METHOD OF MAKING SAME. LESTER KIRSCHBRAUN, Leonia, N. J., assignor, by mesne assignments, to The Patent and Licensing Corporation, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 6, 1929. Serial No. 383,887. 8 Claims. (Cl. 154—2.)

1. The method of forming tapered roofing elements having the main body portion thereof composed of hardened plastic material which consists in feeding lengths of fibrous sheets over a smooth surface, simultaneously discharging homogeneous plastic material composed of bitumen and hardening fillers onto one face of said fibrous sheet and forcing said plastic material into a cavity of variable depth acting in opposition to said smooth surface.



1,900,941. WELDING ELECTRODES. EDWARD H. KUHLMAN, Dayton, Ohio. Filed Sept. 28, 1931. Serial No. 565,663. 9 Claims. (Cl. 219—4.)

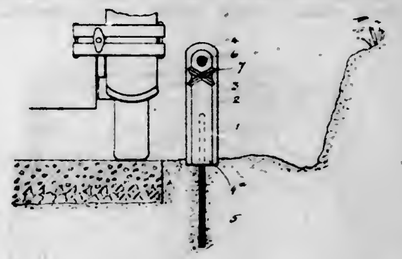


1. A welding electrode having an adjustable welding tip, and adjustable means for maintaining the tip in any desired position on the exterior surface of the electrode.

1,900,942. OPEN HEARTH FURNACE CONSTRUCTION. KENNETH C. MCCUTCHEON, Ashland, Ky., assignor to The American Rolling Mill Company, Middletown, Ohio, a Corporation of Ohio. Filed Jan. 9, 1931. Serial No. 507,662. 7 Claims. (Cl. 263—15.)

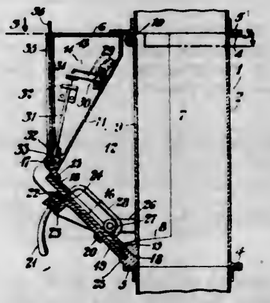
1. In a furnace, movable roof sections at either end thereof, a plurality of lever arms for each section mounted on said framework, means for suspending said roof sections at interspaced points from the said lever arms, and means for moving said lever arms, said lever arms being of different lengths whereby different parts of said sections are moved different distances.

1,900,943. TRUING MEANS FOR FORMED GEAR GRINDING WHEELS. EDWARD W. MILLER, Springfield, Vt., assignor to The Fellows Gear Shaper Company, Springfield, Vt., a Corporation of Vermont. Filed Sept. 17, 1929. Serial No. 393,294. 5 Claims. (Cl. 125—11.)



1. In a gear grinding machine, the combination with a work supporting center, of a cylinder coaxial with said center having an external surface substantially the same in diameter as the base circle of the prescribed involute curve of the gear tooth faces to be ground, a rockable holder having a plane surface engaging said cylindrical surface and adapted to rock thereon, a truing tool carried by said holder and located in the same plane with said plane surface, and overlapping projections, one of which is fixed with respect to said cylinder and the other is secured to the rocking holder, said projections having engaging surfaces formed correspondingly to the mating tooth surfaces of a rack and gear couple of which the pitch line coincides with said plane surface.

1,900,944. RECOVERY OF FIBROUS MATERIAL AND RUBBER FROM WASTE RUBBER STOCK. JOHN KEARSLEY MITCHELL, Philadelphia, Pa., assignor to Dispersions Process, Inc., Dover, Del., a Corporation of Delaware. Filed Aug. 1, 1928. Serial No. 296,870. 5 Claims. (Cl. 18—52.)

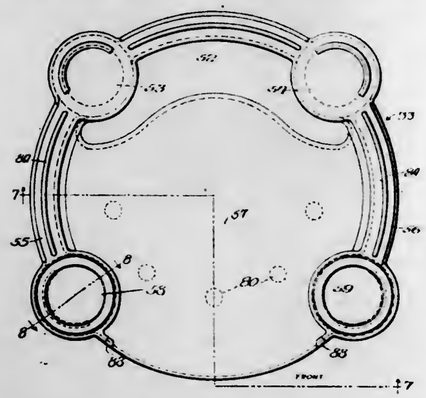


4. A process of recovering fibrous material and rubber from waste rubber stock associated with fibrous material, which comprises manipulating the stock with the rubber as a plastic, coherent and integral mass in the presence of little, if any, water, but in the presence of water-soluble, liquid agents which serve to soften the rubber and to render the rubber non-adherent to the fibrous material so that the latter works its way to the surface of the mass, and removing the fibrous material from the rubber mass.

1,900,945. ROAD MARKER. EDMUND T. D. MYERS, Jr., Richmond, Va. Filed Mar. 2, 1931. Serial No. 519,519. 1 Claim. (Cl. 40—145.)

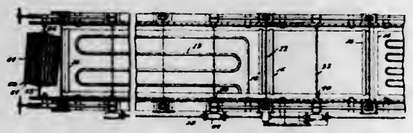
A road marker consisting of a short post-like body having a light reflecting surface, mounted on a ductile stem which is completely hidden in the ground, and which has sufficient stiffness to hold the marker up under ordinary conditions, but which will allow the marker to be struck down without damage to the marker or to the striking agent.

1,900,946. PNEUMATIC DISPATCH TUBE APPARATUS. JOHN T. NEEDHAM, North Plainfield, N. J., assignor, by mesne assignments, to Pneumatic Tube Supply Co. of Delaware. Filed Apr. 2, 1930. Serial No. 441,082. Renewed July 29, 1932. 19 Claims. (Cl. 243—25.)



1. A terminal device for the insertion of carriers into a pneumatic dispatch tube line, comprising a tubular casing adapted to be interposed between and joined at its ends to the adjacent ends of two sections of a pneumatic dispatch tube line to form a passage for conducting carriers from one of said tube sections to the other, said casing having a uniform internal cross section at all points in its length and having a segmental wall portion shiftably mounted for movement to a position to permit the insertion of carriers into the carrier passage through the opening in the casing afforded by displacement of said wall portion; and means to releasably hold said segmental wall portion in position to close said opening.

1,900,947. SECTIONAL BOILER. CHARLES A. OLSON, Geneva, Ill., assignor to Crane Co., Chicago, Ill., a Corporation of Illinois. Continuation of application Serial No. 301,527, filed Aug. 23, 1928. This application filed Apr. 19, 1932. Serial No. 606,268. 1 Claim. (Cl. 122—218.)

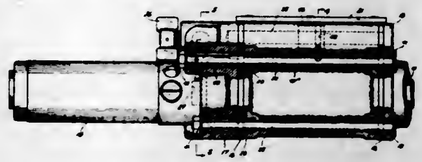


A boiler comprising a plurality of superposed interconnected water chambers spaced apart to provide intervening horizontal flue passages, each chamber having only a single vertical flue passage extending therethrough connecting said horizontal passages to form a continuous flue, said vertical passages being of elongated arcuate shape with their middle portions vertically widely sepa-

rated while having extremities of reduced cross-sectional area extending toward a position of vertical alinement with the extremities of the underlying and overlying vertical passages to provide a shorter path to exit for the flue gases flowing directly through said extremities than

is provided for the gases flowing directly between and through said middle portions, successively superposed middle portions of the vertical passages being about three times more widely spaced apart than are successive extremities.

1,900,948. METHOD AND APPARATUS FOR TILTING TRAY CONVEYER SYSTEMS. KURT T. POTTHOFF, Brooklyn, N. Y. Filed Oct. 19, 1928. Serial No. 313,514. 25 Claims. (Cl. 266—7.)

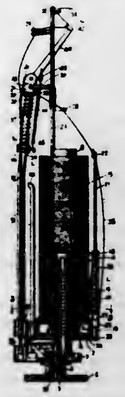


1. An apparatus comprising a series of tanks; a frame over the tanks; sprockets above the tanks at both ends of the tanks and at lower level intermediately of said ends and also a distance above the outer corners of the end tanks; cross-shafts fast to and supporting said sprockets of the lower levels; conveyor chains at opposite sides of the apparatus and passing under said sprockets of said lower level and over the other sprockets; trays having their ends suspended from opposite chains; main drive shafts rotatably mounted longitudinally of said frame; worms fast on said main shafts; worm wheels fast on the cross shafts and engaged by said worms; and means for driving one of the main shafts.

1,900,949. SLIDER FOR FASTENERS. GEORGE E. PRENTICE, Berlin, Conn. Filed July 12, 1932. Serial No. 622,085. 39 Claims. (Cl. 24—205.)

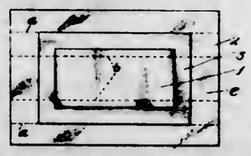
1. An actuating slider for use with separable fasteners of the class described, said slider having converging guide channels and consisting of sheet material, the slider comprising front and rear wings and a neck integrally connecting the wings, said neck being arched in planes at right angles to each other whereby to provide a stiff rigid strut between the wings, the fastener engaging surface of the neck being of curved contour and continuously smooth and uninterrupted from one margin of the neck to the other margin thereof, said surface merging smoothly into the inner surfaces of the front and rear wings respectively.

1,900,950. FLUID PRESSURE MOTOR. JOSEPH EDWARD REHOR, Shaker Heights, Ohio, assignor to The Rotor Air Tool Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 12, 1929. Serial No. 392,029. 2 Claims. (Cl. 121—34.)



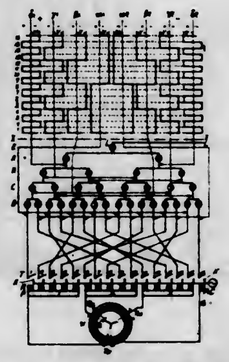
1. A motor comprising a cylinder body with a member attached to an end thereof, a clamping bolt, and an opening extending through said body and member for the clamping bolt, a rotor in the cylinder bore, a slidable abutment blade in the cylinder body and at its inner end adapted to engage the surface of the rotor, and means including said bolt opening for supplying fluid pressure to the outer end of the blade.

1,900,951. MANUFACTURE OF RUBBER-IMPREGNATED PRODUCTS. GEORGE A. RICHTER, WALLACE B. VAN ARSDEL, and ROGER B. HILL, Berlin, N. H., assignors to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Apr. 22, 1929. Serial No. 357,332. 3 Claims. (Cl. 91—68.)



1. A process which comprises impregnating fibrous sheet material with rubber latex, drying, treating with a caustic soda solution to remove resins and proteins associated with the latex, mechanically working the sheeting while wet with the chemical solution, washing free of chemical solution, and drying.

1,900,952. COMPENSATING LET-OFF MECHANISM. HARRY G. ROBINSON, Waterbury, Conn., assignor to Industries of America, Inc., a Corporation of Delaware. Filed Mar. 1, 1930. Serial No. 432,338. 7 Claims. (Cl. 96—15.)

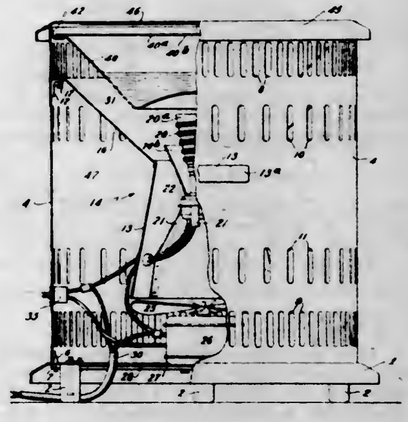


1. In a thread carrier for sinuous path braiding machines, a carrier base, a thread support mounted rotatably thereon, means to regulate rotation of said support relatively to said base, for delivery of thread, and means to facilitate oscillating rotative movement of said base relatively to said thread support during its progress through a sinuous path without corresponding rotative movements of said thread support.

1,900,953. PACKAGE FORMING METHOD. SHY ROSEN, Bloomington, Ill., assignor, by mesne assignments, to Shellmar Products Company, Chicago, Ill., a Corporation of Delaware. Filed July 3, 1930. Serial No. 465,493. 5 Claims. (Cl. 93—35.)

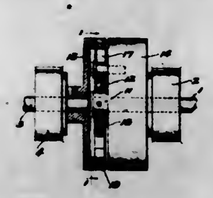
1. The method of forming a package which consists in laying a template on a blank of wrapping material, laying a backing board on said template, then folding said wrapping blank around the side edges and one end edge of said template to partially overlap said board, then securing the folded over sections to said board, and then removing the template.

1,900,954. DISTRIBUTOR FOR USE IN TELEGRAPHY OR THE LIKE. EDWARD KENNETH SANDEMAN, Aldwych, London, England, assignor to International Standard Electric Corporation, New York, N. Y. Filed Feb. 10, 1931, Serial No. 514,761, and in Great Britain Feb. 12, 1930. 7 Claims. (Cl. 178—51.)



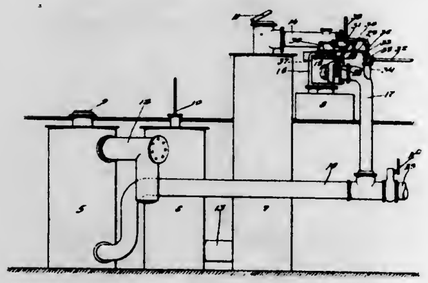
1. An arrangement for use in a telegraph system employing a distributor comprising several valves adapted to operate as a multiple switching arrangement, a means for providing a substantially square wave, said means comprising an amplifier valve, and a voltage operated device comprising a neon lamp shunted by a condenser associated with the output circuits of said amplifier valve.

1,900,955. GOGGLE VENTILATOR. HARRY F. SHINDEL, Reading, Pa., assignor to Willson Products, Inc., Reading, Pa., a Corporation of Pennsylvania. Filed Mar. 18, 1932. Serial No. 599,698. 4 Claims. (Cl. 2—14.)



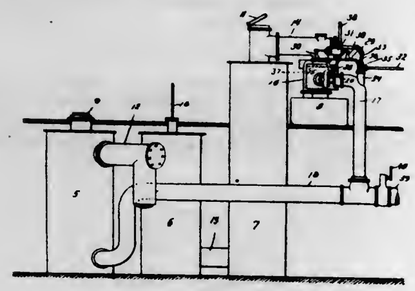
1. A goggle eye-cup having a ventilator opening in the wall thereof, and a pair of eccentrically dished essentially identical port discs secured in said opening in reverse positions to provide cooperating baffled ports.

1,900,956. PORTABLE HEATER. WILLIAM W. SOMERSALL, Natick, Mass., assignor to New England Pressed Steel Company, Natick, Mass., a Corporation of Massachusetts. Filed Apr. 2, 1932. Serial No. 602,707. 12 Claims. (Cl. 219—39.)



1. A device of the character described comprising a casing having an inlet at its bottom, said casing being open at its upper end and having openings adjacent to said end providing a peripheral outlet, a longitudinally extending flue within said casing, said flue having a flaring mouthpiece arranged in cooperative relation with the open end of said casing to provide an axial discharge, a heating element disposed in the flue with its lower end adjacent to the small end of the mouthpiece, a fan disposed adjacent to the lower end of said flue, and a removable dished member fitting within the top of said casing, said member providing a closure for the open end of said casing and cooperating with said mouthpiece to define a divergent annular delivery passage communicating with said outlet to provide a peripheral discharge.

1,900,957. FREE-WHEEL COUPLING. HAROLD HERBERT VERNON STANLEY, Hayes, and GEORGE FREDERICK CLARK, West Drayton, England. Filed Apr. 2, 1931, Serial No. 527,316, and in Great Britain Apr. 15, 1930. 3 Claims. (Cl. 192—46.)

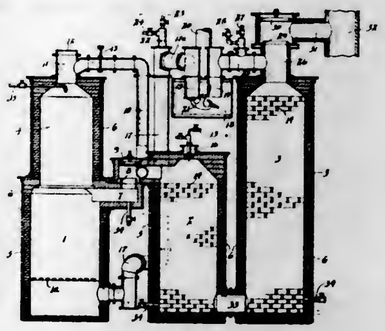


1. In combination, a driving member, pawl actuating means carried by and rotatable with said driving member, a flywheel loosely mounted on said driving member, a pawl pivoted to said flywheel, resilient means connecting said pawl actuating means and said pawl, a driven member including a hub having ratchet teeth internally thereof, said pawl actuating means acting to urge said pawl into cooperative engagement with said ratchet teeth upon the rotation of said driving member, said flywheel acting to retard movement of said pawl relative to said pawl actuating means prior to the engagement of said pawl with said ratchet teeth, and means carried by said flywheel adapted to cooperate with said pawl actuating means upon the cessation of rotation of said driving member whereby said resilient means is maintained under tension.

1,900,958. GAS MANUFACTURE. JOHN B. EBERLEIN and GEORGE R. STEERE, Detroit, Mich., assignors, by mesne assignments, to Semet-Solvay Engineering Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 15, 1924. Serial No. 737,656. 6 Claims. (Cl. 48—80.)

1. A water gas plant including a single generator and a single superheater, a gas line leading from said generator and by-passing the superheater, a gas line leading from said superheater, a housing into which both of said lines extend, a washbox communicating with said housing, and valve mechanism in said housing adapted to alternately open one of said lines and close the other.

1,900,959. GAS MANUFACTURE. GEORGE R. STEERE, Larchmont, N. Y., assignor to Semet-Solvay Engineering Corporation, New York, N. Y., a Corporation of New York. Original application filed Sept. 15, 1924, Serial No. 737,656, and in Great Britain May 19, 1925. Divided and this application filed Feb. 10, 1931. Serial No. 514,857. 2 Claims. (Cl. 48—80.)



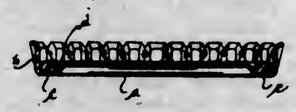
1. A water gas set comprising a single generator, a single carburetor, and a single superheater, the individual units being located in separate and detached shells, a washbox, a gas line leading directly from said generator into said washbox and by-passing the carburetor and superheater, a gas line leading directly from said superheater into said washbox, and valve mechanism for alternately opening one of said lines and substantially simultaneously closing the other.

1,900,960. METHOD OF DECORATING METAL SURFACES. KENJIRO TAKEDA, Osaka, Japan. Filed Jan. 19, 1931. Serial No. 509,671. 4 Claims. (Cl. 41—35.)

1. The method of decorating metal surfaces which consists of forming a perforated pattern of relatively hard metal, positioning the pattern on the surface of an article to be decorated, formed of relatively softer metal, placing the pattern and article on a mold, and thereafter rotating the mold, article and pattern in opposite directions while exerting a pressure thereon to force the softer material of the article into the perforations and around the harder material of the pattern.

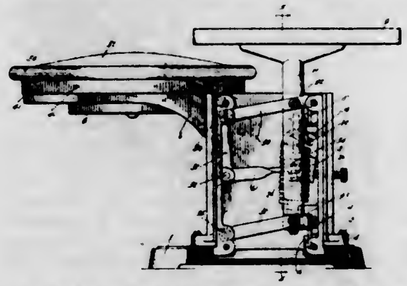
1,900,961. GAS MAKING APPARATUS. CHARLES I. TENNEY, Newton, Iowa, assignor, by mesne assignments, to Semet-Solvay Engineering Corporation, New York, N. Y., a Corporation of New York. Filed May 18, 1925. Serial No. 31,028. 16 Claims. (Cl. 48—80.)

1. A water gas plant including a single generator, a single superheater, and a washbox, a gas line leading directly from said generator to said washbox, and by-passing the superheater, a gas line leading directly from said superheater to said washbox, and a single valve for alternately opening one of said lines and substantially simultaneously closing the other.



3. A carburetted water gas making apparatus in combination, a generator, a substantially unobstructed fuel-receiving chamber disposed over and communicating with said generator so as to feed fuel thereto, a gas passage leading from the top of said generator, a carburetor with which said passage communicates, means for closing said passage, a superheater in series with said carburetor, a conduit leading from said carburetor to the top of said chamber, means for closing said conduit, means for directing air into said superheater and successively back through the said carburetor, conduit, chamber and generator for generating gas, a gas line leading from the base of said generator and by-passing the carburetor and superheater, a second gas line leading from the superheater, and valve mechanism for alternately opening one of said lines and substantially simultaneously closing the other.

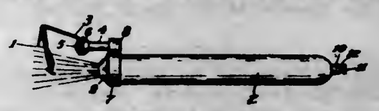
1,900,962. CONTINUOUSLY LOADED TELEGRAPH CABLE. JOHN RICKETTS VERNY, London, England, assignor to International Standard Electric Corporation, New York, N. Y., a Corporation of Delaware. Filed Aug. 22, 1930, Serial No. 477,149, and in Great Britain Sept. 18, 1929. 8 Claims. (Cl. 178—45.)



1. A submarine cable comprising alternate loaded sections and unloaded sections, the length of which are varied in such manner that the loading decreases from the center of the cable toward the end.

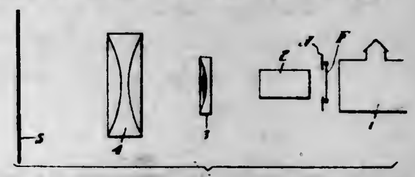
1,900,963. BOTTLE CLOSURE. ALBIN H. WARTH, Baltimore, Md., assignor to Crown Cork & Seal Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 27, 1930. Serial No. 439,295. 6 Claims. (Cl. 215—39.)

1. A bottle cap embodying therein a metal shell and a skirt therefor, the top of said shell being provided with a channel adjacent said skirt, and a gasket within said channel, consisting of a rubber compound having a low content of a vulcanizing agent, whereby upon the subjection of a container, with a cap applied thereto, to heat, said gasket will be semi-vulcanized.



1,900,964. SCALE. MATHIAS J. WEBER, Chicago, Ill., assignor to The Health-O-Meter Company, Chicago, Ill., a Corporation of Illinois. Filed July 22, 1926. Serial No. 124,253. 11 Claims. (Cl. 265—68.)

1. In a weighing scale, the combination of a base, a platform mounted thereon and vertically shiftable thereto, an indicating mechanism on said base, a rack bar for shifting said indicating mechanism and means interconnecting said rack bar and said shiftable platform for indicating the weight when said platform is shifted under the influence of a weight, said means including adjustable devices for compensating the gain and loss movements of the indicating mechanism as it passes through its complete movement corresponding with the full extent of movement of the platform.

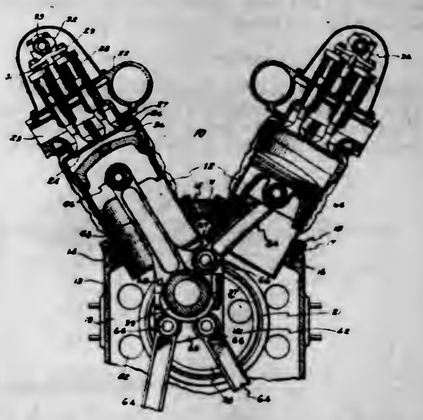


1,900,965. ILLUMINATED RAZOR. FRANK WEISS, Revere, Mass. Filed July 28, 1932. Serial No. 625,415. 1 Claim. (Cl. 240—6.46.)

In combination with an implement having an opening for the reception of a handle attaching lug and also having a working edge laterally spaced from said opening, a straight hollow handle, a band around the inner end of the handle rigid therewith, an attaching lug rigid with the band, and means contained within the handle to project a beam of light axially from the inner end thereof, the lug having a shoulder to engage the implement around the opening therein, said lug further projecting beyond the inner end of the handle and being

disposed parallel to and laterally spaced from the axis of the handle an amount equal to the lateral spacing of the working edge of the implement from the lug receiving opening.

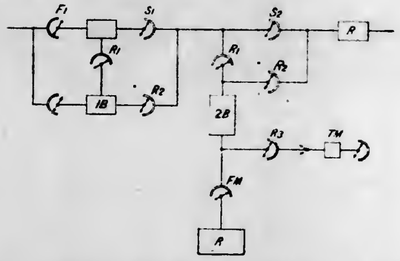
1,900,966. PROJECTION APPARATUS. WALTER G. WOLFE, Greenwood, Mass., assignor to Wilmot R. Evans, trustee, Boston, Mass. Filed Dec. 27, 1927. Serial No. 242,647. 3 Claims. (Cl. 88—24.)



1. In a projection apparatus, a wide angle projector, a translucent display screen in intercepting relation to the beam thereof, and a colored screen member intercepting the beam axially, and having a variant absorptivity decreasingly from the center outwardly.

1,900,967. SAFETY PAPER. FRANK S. WOOD, Quincy, Mass. Filed Apr. 22, 1931. Serial No. 532,115. 8 Claims. (Cl. 91—67.95.)

1. The method of producing a safety paper consisting in creating an alkaline state in such paper and in so treating said paper with a ferrocyanide as to produce an ink set condition without affecting the normal color of the paper.

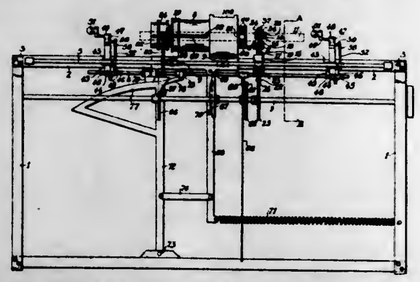


1,900,968. INTERNAL COMBUSTION ENGINE. LIONEL M. WOOLSON, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Original application filed Oct. 1, 1928, Serial No. 309,631. Divided and this application filed Jan. 16, 1930. Serial No. 421,661. 9 Claims. (Cl. 123—6.)

1. The combination in an internal combustion engine having pistons, of a crank shaft having cylindrical crank cheeks forming journals and having crank pins between

the journals, bearings for said journals, connecting rods connecting the pistons to said crank pins, and a lubricating system including means to deliver oil under high pressure to the crank pin bearings and to deliver oil under low pressure to the journal bearings.

1,900,969. AUTOMATIC OR SEMIAUTOMATIC TELEPHONE EXCHANGE SYSTEM. ESMOND PHILIP GOODWIN WRIGHT, Aldwych, London, England, assignor to International Standard Electric Corporation, New York, N. Y. Filed Apr. 23, 1931, Serial No. 532,223, and in Great Britain May 13, 1930. 19 Claims. (Cl. 179—18.)



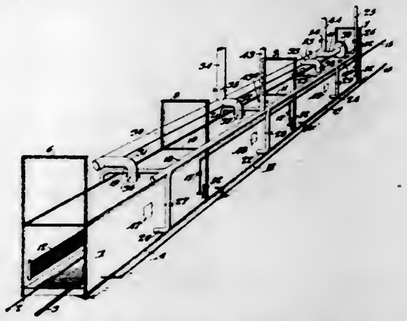
1. In a telephone system the combination of a register sender comprising an impulse receiving device and an impulse sending device, a switching device common to a plurality of said register senders adapted to be set in accordance with code digits transmitted thereto and means whereby said sending device is adapted to transmit trains of impulses under direct control of said switching device and said impulse receiving device.

1,900,970. SLIDING HAIR AND WAVE CLIP. SAMUEL ALIMENA and WILLIAM NAUMANN, Scranton, Pa. Filed Nov. 11, 1932. Serial No. 642,298. 2 Claims. (Cl. 132—48.)

1. A device of the class described comprising a substantially U-shaped member formed of spring material and a sheath in which one limb of the member is slidably arranged said sheath having one end closed and its other end open with said one limb passing through the open end and said sheath being of a length substantially equal to the length of said one limb.

1,900,971. APPARATUS FOR CUTTING GLASS TUBING. ERNEST ASHFORD, Charlton, London, England. Filed June 12, 1930, Serial No. 460,671, and in Great Britain June 20, 1929. 5 Claims. (Cl. 49—50.)

1. Apparatus for cutting glass tubing into lengths comprising means for rotating a length of glass tubing to be cut, a pivotally mounted flame producing jet nozzle and means connected with the nozzle adapted to contact with the surface of the glass tubing to move the nozzle about its pivot in correspondence with variations in the shape of the tubing, and cooling rollers adapted to contact with the heated surface of the tube in the region of the line of application of the flame.

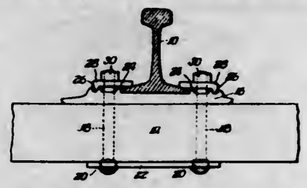


1,900,972. PURIFYING BENZANTHRONE. WALTER BECKER, Feudenheim, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Jan. 25, 1929. Serial No. 335,144. 2 Claims. (Cl. 202—46.)

1. A process of purifying crude benzanthrone, which comprises distilling from a directly heated retort crude benzanthrone to which comminuted iron has been added with the aid of superheated steam.

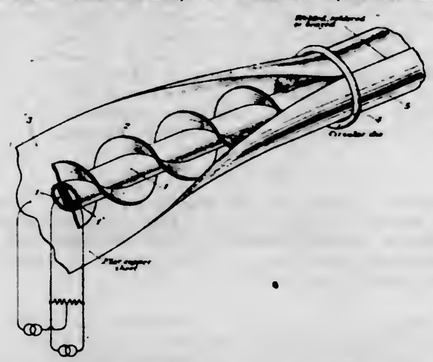
1,900,973. PHOSPHORIC ACID ESTERS. HEINRICH BERTSCH, Chemnitz, Germany, assignor to H. Th. Böhme A. G., Chemnitz, Germany, a Corporation of Germany. Filed Nov. 11, 1927, Serial No. 232,719, and in Germany Nov. 25, 1926. 7 Claims. (Cl. 260—98.)

1. A process for the production of water-soluble phosphoric esters of oils and fats, comprising the steps of treating a fatty substance containing an ester forming group with not substantially less than 50% by weight of phosphoric acid anhydride and washing the reaction product.



1,900,974. PROCESS OF DEHYDRATING VEGETABLES AND THE LIKE. WILLIAM H. BOZARTH, Vineland, N. J., assignor to Osborn Products Inc., a Corporation of New Jersey, Edward E. Grosscup, receiver. Filed May 11, 1928. Serial No. 277,090. 5 Claims. (Cl. 99—5.)

3. The process of dehydrating fruit and vegetable materials comprising, placing the material into a closed compartment, creating a partial vacuum therewithin to withdraw surface moisture from said material, then continuously introducing into and continuously discharging outside air from said compartment for a period of time, closing the source of outside air and the discharge thereof and recirculating the moisture-laden air within the compartment, and alternately effecting the circulation of outside air and the recirculation of moisture-laden air through the compartment until the material has been dehydrated to the desired degree, the entire process being effected without the introduction into the compartment of an extraneous source of moisture.



1,900,975. RAIL JOINT. JOHN BRUNNER, Chicago, Ill. Filed June 12, 1930. Serial No. 460,669. 2 Claims. (Cl. 238—210.)

1. An assemblage of the character described comprising, in combination, a tie, a rail section, a tie plate, and means for holding the rail section in rigid engagement with the tie plate, said means including a plurality of spaced transverse ribs provided on said tie plate to each side of the rail respectively, and clamping shoes, certain of said ribs forming positioning shoulders for the base

flange of the rail section, the others providing a groove on each side of the rail for receiving a portion of the clamping shoe to position the same, said shoe engaging the base flange of the rail, and a fastener extending completely through the clamping shoe, tie plate and tie for securing the clamping shoe.

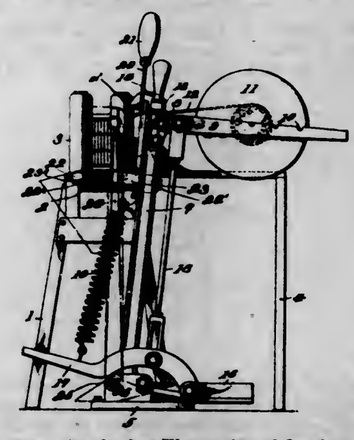
1,900,976. CONCENTRIC CONDUCTOR SYSTEM. ALLEN CARPE, New York, N. Y., and FRANK A. LEIBE, Dunellen, N. J., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed May 22, 1930. Serial No. 454,734. 6 Claims. (Cl. 173—265.)

1. A concentric conductor system including an inner conductor comprising two pieces of conducting material of substantially semi-circular section, with their flat sides abutting, and a sheet of thin, flat dielectric material located between and extending beyond the flat sides of the two sections of tubing, said elements being twisted together to form a spiral core, and a tubular outer conductor mounted upon the edges of the spiral insulating element.

1,900,977. CONTACT DEVICE. CESARE CIPPITELLI, Frankfort-on-the-Main, Germany, assignor to Firm Voigt & Haeffner A. G., Frankfort-on-the-Main, Germany. Filed Jan. 6, 1931, Serial No. 507,032, and in Germany Jan. 21, 1930. 9 Claims. (Cl. 200—48.)

1. An electrical contact device comprising a contact pin, a plurality of contact fingers bent at an angle and disposed one after another around the contact pin to form a contact sleeve, each contact finger having a web-like extension at its middle part with a large and a small curved out part, the smaller curved out part of each contact finger being inserted in the larger curved out part of the next contact finger, the contact fingers being attached to form a contact sleeve.

1,900,978. METHOD OF CONSTRUCTING AND MAINTAINING CRUDE OIL CONDUCTORS. THOMAS DE LA MARE, Salt Lake City, Utah. Substitute for application Serial No. 165,449, filed Feb. 2, 1927. This application filed May 29, 1930. Serial No. 457,079. 4 Claims. (Cl. 25—154.)

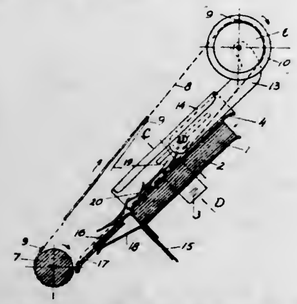


2. The method of constructing composite pipe having a wood lining and a concrete jacket surrounding said lining, consisting in closing the ends of said wood lining, substantially filling the space inside the lining with brine, subjecting said brine to a predetermined pressure before concrete is applied, allowing said lining to remain under said pressure until all parts thereof have swelled to the desired degree, and applying said concrete jacket while the said lining is under internal pressure.

1,900,979. LINGERIE STRAP HOLDER. OLIVE M. DE MENT, Decatur, Ill. Filed July 26, 1932. Serial No. 624,864. 5 Claims. (Cl. 24—73.)

4. A lingerie strap holder comprising clasps formed as a safety pin and having a penetrating point adjacent one end and a shield for the same, the other end portion of the clasp being bent to extend upwardly for engagement through the shoulder portion of a dress with the clasp extending parallel to the shoulder portion of the dress, a chain attached at one end to the shield carrying end of one clasp, and a hook at the shield carrying end of the other clasp and engageable through a selected link of the chain.

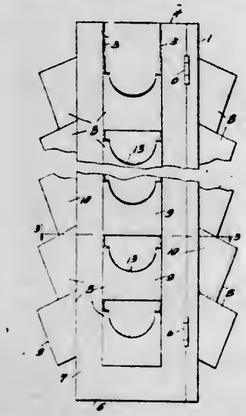
1,900,980. METHOD OF AND APPARATUS FOR BUNDLING FLOORING. ELMER C. DITTMAR, Williamsport, Pa., assignor to The Cromar Company, Williamsport, Pa., a Corporation of Pennsylvania. Filed Jan. 17, 1921. Serial No. 437,820. 24 Claims. (Cl. 100—31.)



1. An apparatus for bundling strips of flooring comprising means for holding flooring strip supporting members, means for holding strips of flooring on said flooring strip supporting members, means for placing said strips of flooring under compression and a band tensioning device for drawing the ends of a band together around said strips.

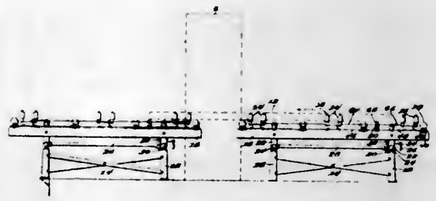
6. The method of forming a bundle of flooring consisting in placing upon a support a strip supporting member, nesting a series of flooring strips upon said strip supporting member, placing upon said nested strips a top strip support, inserting spacing strips between said strips of flooring and binding said strip support and strip supporting members together by a band encircling said strip supporting members.

1,900,981. PROCESS FOR RENDERING CARBON DISULPHIDE SOLUBLE IN WATER. KARL DÖBMAIER, Leverkusen-on-the-Rhine, Germany, assignor to Winthrop Chemical Company, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 6, 1927, Serial No. 217,872, and in Germany Sept. 22, 1926. 2 Claims. (Cl. 252—6.)



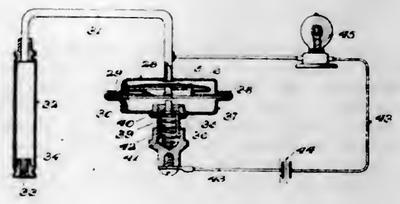
1. As a new composition of matter, a mixture comprising carbon disulphide, a butyl alcohol and a soap, being soluble in water.

1,900,982. TYPEWRITER AND LIKE MACHINE. PAUL DREYER, Stavanger, Norway. Filed May 21, 1931, Serial No. 538,984, and in Norway Apr. 12, 1930. 9 Claims. (Cl. 197—130.)



6. In a typewriter the sub-combination of a platen; means for supporting a pile of envelopes; two endless bands passing around said platen; cross bars arranged between said endless bands and adapted to engage under the crossing flap of the topmost envelope of the said pile; and a resilient plate pressing on said pile, said resilient plate being adapted to leave the closing flap free, substantially as described.

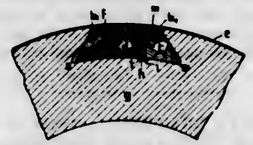
1,900,983. DISPLAY STAND AND SHIPPING CASE. GEORGE E. EVERITT, Decatur, Ga. Filed Oct. 15, 1931. Serial No. 569,076. 14 Claims. (Cl. 217—12.)



13. A display device for packages of merchandise and the like, comprising a surface carrying parallel channels, a plurality of pocket elements adapted to contain merchandise arranged in tier formation, the upper edge of each pocket constituting a supporting abutment for a superimposed pocket, means for supporting the lowermost pocket, and means carried by the pockets adapted to slidably seat in said channels.

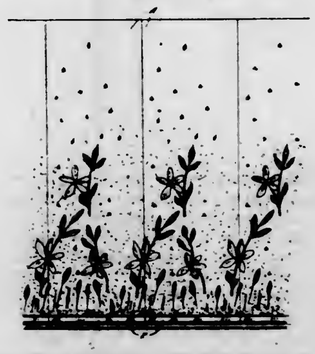
1,900,984. CENTERLESS GRINDING OR POLISHING MACHINE. RUFUS W. FULLER, Deerfield, Mass., assignor to Production Machine Company, Greenfield, Mass., a Corporation of Massachusetts. Filed Sept. 19, 1929. Serial No. 393,825. 8 Claims. (Cl. 51—144.)

1. A centerless grinding or polishing machine for cylindrical work having, in combination, feeding and abrasive means, and means for supporting the work at the side of the abrasive means comprising supporting rolls, guide members comprising pairs of freely rotatable rolls having axes perpendicular to the axis of the work, and means for simultaneously adjusting the different pairs of rolls to accommodate work of different diameters.



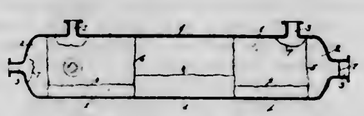
1,900,985. PRESSURE RESPONSIVE VESSEL. JEAN V. GIESLER, Knoxville, Tenn., assignor to The Fulton Syphon Company, Knoxville, Tenn., a Corporation of Delaware. Filed June 8, 1928. Serial No. 283,970. 10 Claims. (Cl. 297—3.)

4. A device of the class described comprising a dished member, a supporting base therefor, and a flexible wall tapering in thickness and connecting said member and base.



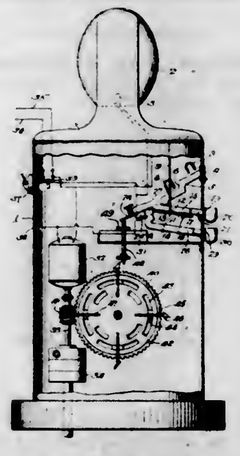
1,900,986. DEVICE FOR THE CLAMPING OF FLEXIBLE PRINTING BLOCKS OR STEREOS ON THE FORM-CYLINDER OF COPPERPLATE OR INTAGLIO PRINTING MACHINES. PETER GIETZ, Johannisberg-on-the-Rhine, Germany, assignor to Maschinenfabrik Johannisberg G. m. b. H., Geisenheim-on-the-Rhine, Germany. Filed Aug. 6, 1931, Serial No. 555,600. and in Germany Dec. 29, 1930. 1 Claim. (Cl. 101—415.1.)

A device for clamping flexible printing blocks or stereos on the form-cylinder of copper-plate or intaglio printing machines, comprising in combination with the form-cylinder having a groove of dove-tail shaped cross section in the periphery extending in the axial direction of said cylinder and with printing block or stereo bent at the ends, a clamping wedge, a clamping ledge on one of said bent ends of said printing block or stereo cooperating with said wedge, and a projection of said clamping ledge interposed between the under surface of said wedge and the bottom



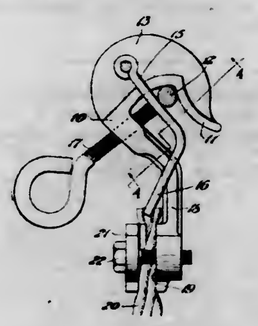
of the dove-tail groove so that said ledge is not only moved in the direction of the circumference, but also pressed in the direction towards the axis of the form-cylinder.

1,900,987. WALL PAPER. JENNIE H. GOFF, Lisbon Falls Me. Filed Feb. 9, 1932. Serial No. 591,912. 1 Claim. (Cl. 41—34.)



An article of manufacture comprising an elongated strip of wall paper having transversely extending weakened lines thereon dividing the strip into sections, one section being matched with the other sections and each section being of a length substantially the height of the wall to be covered by the paper and said strip having a transverse border forming part above each weakened line which parallels the line and is of narrow width and forms a bottom edge for the section.

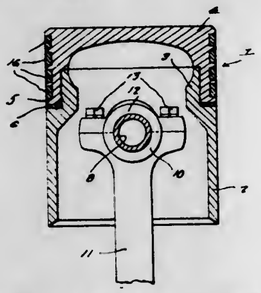
1,900,988. STEEL VESSEL AND METHOD OF PRODUCING SAME. FRITZ GORSCHLÜTER and ERNST POHL, Borsigwerk, Germany, assignors to Borsigwerk Aktiengesellschaft, Borsigwerk, Germany, a Corporation of Germany. Filed June 3, 1929, Serial No. 368,182, and in Germany Mar. 28, 1927. 7 Claims. (Cl. 29—148.2.)



5. The method of making a steel vessel adapted for use under high pressure and temperature conditions which consists in forming plates from steel having a high yield point and little inclination to aging containing a low percentage of carbon, .2% to .5% molybdenum and at least .05% but less than .1% aluminum, and welding said plates together to form a vessel.

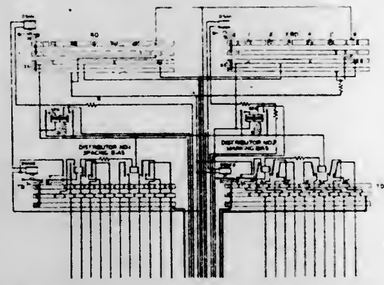
1,900,989. COIN CONTROLLED DISPENSING APPARATUS. HOBART J. HALSTED and NORMAN R. BRIGGS, Buffalo, N. Y. Filed July 24, 1930. Serial No. 470,517. 3 Claims. (Cl. 194—6.)

1. In a bending machine an electric motor, a rotatable member driven thereby, a guide channel for receiving checks, and having a bottom of conductive material, a movable member constituting an extension of the top of the channel, an inverted channeled contact carried by said member and insulated from the bottom of the guide channel, means on the contact for stopping a check supplied thereto and maintaining an electrical connection between the contact and the bottom of the guide channel, a circuit including the motor and controlled by said check, and means actuated by the rotatable member for shifting the channelled contact to release the check and break the circuit to the motor, said means including a series of lifting cams carried by and adjustable relative to each other on the rotatable member, and a push member for transmitting thrust from each cam to the channelled contact.



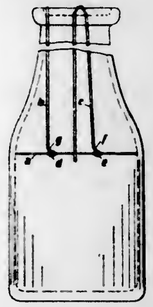
1,900,990. CONNECTER. TOMLINSON F. JOHNSON, Atlanta, Ga. Filed Oct. 30, 1930. Serial No. 492,300. 3 Claims. (Cl. 173—273.)

1. A connecter of the character described comprising, in combination, a hook member having a strengthening rib and a curved bill adapted to be slipped over a conductor; a sheet metal clamping member having arms straddling and pivotally connected to said strengthening flange and having a connecting portion to engage the conductor and clamp it in said hook member; an eye-bolt passing through said hook member having its end abutting the clamping member to exert clamping pressure on said



clamping member; an arm projecting downwardly from said hook member; and means on the lower end of said arm for clamping a tapping cable or conductor thereto so that the cable may extend either upwardly or downwardly while the hook member is clamped in upright position.

1,900,991. PISTON. AXEL C. MATHESON, Minneapolis, Minn. Filed Apr. 28, 1931. Serial No. 532,323. 1 Claim. (Cl. 74—108.)



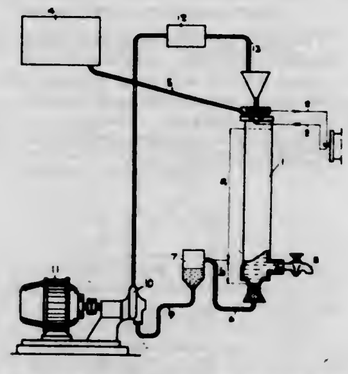
A piston of the class described comprising a lower part, a stationary wrist pin carried thereby, a bushing rotatably arranged on the pin and having flanges at its ends, a piston rod having a semi-circular recess at its upper end in which a part of the bushing fits, a cap having a semi-circular recess therein in which another part of the bushing fits, screw bolts for connecting the cap to the upper end of the rod, said bolts passing downwardly through threaded holes in the cap and upper end of the rod with their heads uppermost, a ring carrying head part threaded to the upper end of the lower part and having threaded sockets in its upper face for receiving a tool for threading the head to the lower part and removing the head from the lower part, screws fitting in the sockets for entirely closing the same, and having their heads flush with the upper face of the head part, said head part having a slightly reduced lower part of the same thickness throughout, grooves at its outer circumference for receiving some of the rings and its inner circumference threaded and the upper portion of the lower part of the piston being of less exterior diameter than the rest of said lower part and exteriorly threaded to engage the internal threads of the head part, the internal walls of said upper part of the lower part of the piston curving upwardly and outwardly to form a large space for facilitating manipulation of the cap of the connecting rod and the bolts which connect the cap with the rod.

1,900,992. IMPULSE TRANSMISSION SYSTEM. THOMAS A. MCCANN, East Orange, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Jan. 9, 1932. Serial No. 585,757. 13 Claims. (Cl. 178—2.)

1. In an impulse transmission system, two rotary impulse distributors adapted to be alternately and automatically connected to a load circuit, circuits whereby one of said distributors at a time is connected to said load circuit, a plurality of relays, one of said relays being actuated to close its contact once during every rotation of either of said distributors, and the other of said relays being actuated at the transmission of a special code impulse group over said distributor whereby the other of said distributors is caused to be connected to the load circuit.

1,900,993. CREAM SKIMMER. AUSTIN O. MIDDLEMISS, Portland, Oreg. Filed Apr. 18, 1929, Serial No. 356,019. Renewed Sept. 2, 1931. 2 Claims. (Cl. 210—51.5.)

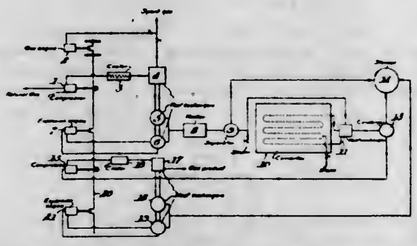
1. In a cream skimmer the combination of an elongated skimming plate having one curved edge adapted to fit the inside of a bottle, two handle members of substantially the same length having hooks at one end to engage the bottle, the other ends of said handle members pivoted at spaced points to the elongated member with pivots being substantially parallel and extending transversely of the member.



1,900,994. PURIFYING OF NATURAL HEAVY SPAR. JOHANNES MÜLLER, Homberg-on-the-Lower-Rhine, Germany, assignor to "Sachtleben" Aktiengesellschaft für Bergbau und Chemische Industrie, Homberg-on-the-Lower-Rhine, Germany, a Germany Company. Original application filed May 6, 1929. Serial No. 360,987, and in Germany July 30, 1928. Divided and this application filed July 2, 1930. Serial No. 465,456. 4 Claims. (Cl. 23—122.)

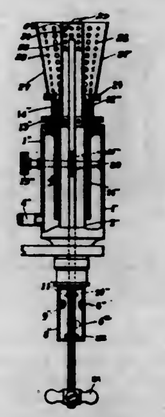
1. A method of purifying natural heavy spar consisting in calcining under oxidizing conditions at 1300–1350° C. lump heavy spar, quenching it in dilute solutions containing sulphide and removing the metal sulphides.

1,900,995. METHOD OF TREATING LIQUIDS. MARION F. NICHOLS, Knoxville, Tenn., assignor of one-half to Campbell Wallace, Knoxville, Tenn. Filed June 9, 1931. Serial No. 543,246. 4 Claims. (Cl. 210—2.)



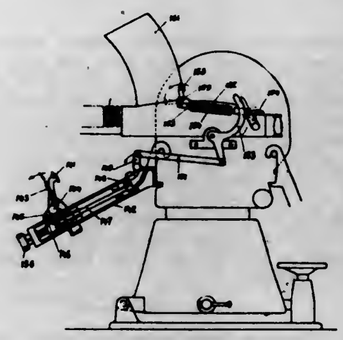
1. The method of treating the waste products from tanneries to clarify and purify the same, comprising combining the green waste water from the soaking of the green hides in vats, the green wash water from washing the green hides after the soaking operation, and waste liquor from the alkali vat and the waste liquor from the acid vat to produce a liquid mass adding to this liquid mass sufficient sulphuric acid to break up the sulphides present, thereby liberating hydrogen sulphide gas; removing the hydrogen sulphide gas by agitation of the liquid mass: combining the waste liquor from the handler or rocker vats, and the waste lime sediment from the lime treating vats to produce a second liquid mass: combining the waste liquor from the white hide wash, the waste liquor from the bate pool, and the old lime liquor from the vats in which the hides are limed to produce a third liquid mass: combining the three liquid masses and allowing the same to stand so that the solid material settles out: withdrawing the liquor having fine particles in suspension from the presence of the sediment: adding to the liquor a small amount of a solution of green hide fleshings to aid in de-coloring the same: adding to the liquor thus obtained calcium acid phosphate in the presence of an alkali for producing a floc which combines with the fine particles in suspension in the liquor and settles with them: and separating the liquid thus obtained from the sediment produced.

1,900,996. METHOD OF REMOVING ONE OR MORE OF THE METALS OF THE IRON GROUP FROM SOLUTIONS CONTAINING SALTS OF ONE OR MORE OF THE SAID METALS. KNUT WILHELM PALMAER, Stockholm, Sweden. Filed Aug. 12, 1929, Serial No. 385,466, and in Sweden Aug. 28, 1928. 2 Claims. (Cl. 204—1.)



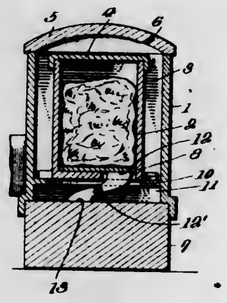
1. In a process for removing one or more metals of the iron group from solutions containing salts of such metals by electrolysis with a cathode consisting of continuously flowing mercury, the improvement which comprises causing the mercury to flow at such a rate with regard to the current density that the deposited metal is completely removed by the mercury in amalgamated form without appearing as a film or coating on the cathode surface at the current density used.

1,900,997. PROCESS FOR THE CONVERSION OF GASEOUS PARAFFIN OR OLEFINE HYDROCARBON INTO LIQUID AROMATIC HYDROCARBONS. ALEXANDER S. RAMAGE, Detroit, Mich., assignor, by mesne assignments, to Merlin Wiley and Ora L. Smith, trustees, Detroit, Mich. Filed May 21, 1930. Serial No. 454,493. 6 Claims. (Cl. 196—10.)



3. Process which comprises passing the highly volatile and normally gaseous constituents of natural gas gasoline admixed with steam successively over and in contact with a mass of ferric oxide and a mass of iron presenting a large surface, at a temperature of at least about 1000° F., and regulating the quantity of admixed steam to maintain the iron in its metallic state.

1,900,998. BURNER. ARTHUR WHITTAKER RICHARDSON, Shell Haven, Thames Haven, England, assignor to Shell-Mex, Limited, London, England, a Company of Great Britain. Filed Aug. 1, 1928, Serial No. 296,762, and in Great Britain Aug. 2, 1927. 5 Claims. (Cl. 158—94.)



1. In a device of the class described, a container for combustible liquid having a combined draft and wick tube with means for admitting air to the lower portion of said tube for passage upwardly therethrough, a wick surrounding and contacting the said tube, and an outer tube formed of a material that is an extremely poor conductor of heat, surrounding and contacting the said wick whereby the wick can be located below the top of the tube when the lamp is alight.

1,900,999. FIRING-DEVICE FOR DEMOUNTABLE MACHINE-GUNS. AUGUSTE LOUIS RICORDEL, Paris, France, assignor to Precision Moderne, Paris, France, a Corporation of France. Filed Nov. 30, 1931, Serial No. 578,096, and in France Dec. 3, 1930. 4 Claims. (Cl. 89—27.)

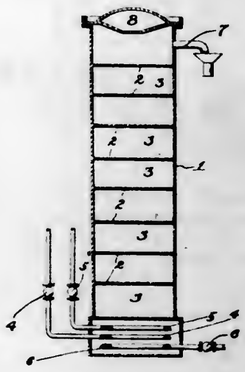
3. In a machine-gun, a firing device comprising a support hinged on the head of the mounting and resting on the support of said head, a foot rest and a firing pedal mounted on a slide, means for fixing the position of the slide along the support, a fire-cam acting on the fire-lever, means to transmit the motion from the firing pedal to the fire-cam, safety means to hinder the loading of the machine-gun when the firing pedal is depressed.

1,901,000. HEAT TRANSFERRER FOR CONTROLLING SOLID CO_2 FOR REFRIGERATION PURPOSES. WALTEN B. ROBE, Towson, Md., assignor to Thermal Control Corporation, a Corporation of Delaware. Filed Apr. 8, 1930. Serial No. 442,637. 12 Claims. (Cl. 62—91.5.)

9. An apparatus of the character described comprising an outer container, an inner container adapted to hold solid CO_2 and having a space between the containers, means for conveying the CO_2 vapor from the inner container to the space between the inner and outer containers and means for making a thermal connection between the inner container and outer container and thermostatic means for controlling the thermal connection between the inner and outer container.

1,901,001. LATHERING DEVICE. FREDERICK ROHLEDER, Vaux Hall, N. J. Filed Nov. 23, 1931. Serial No. 576,879. 1 Claim. (Cl. 128—57.)

A lathering device comprising resilient supports, each support having a shaft portion from the ends of which arms project, a handle connected to the ends of said arms, all of said arms converging toward said handle, rows of balls rotatably mounted on said shaft portions, parallel connecting members joining said shaft portions and positioned at obtuse angles relatively to said shaft portions for maintaining said balls in rows arranged on the bias relatively to said shaft portions, and connecting elements arranged above the balls and connecting the arms at each end of the device for maintaining said parallel connecting members in positions at obtuse angles relatively to said shaft portions.

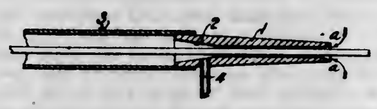


1,901,002. DEVICE FOR FEEDING AND CONTROLLING THE FLOW OF MATERIALS. WILLIAM ROSS, Surbiton, England. Filed Jan. 8, 1929, Serial No. 331,106, and in South Africa Jan. 11, 1928. 3 Claims. (Cl. 83—44.)

1. Mechanism for controlling the flow of granular or pulverulent or like material comprising in combination an inclined chute having apertures therein of varying sizes and formed with a taper at its lower end, a rotary member disposed above the chute adjacent its upper end and a flexible mat carried on said rotary member, said flexible mat being composed of a plurality of endless chains united together so as to form a unit which is flexible both longitudinally and transversely and being arranged to bear

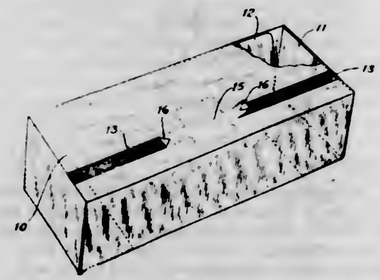
upon the material on the chute for a substantial portion of its under surface so as to drag upon the material and so control and feed same.

1,901,003. PROCESS OF WASHING NITROGLYCERINE AND SIMILAR ESTERS. ARNOLD SCHMID, Vienna, Austria; Hans Schmid and Irma Schmid, administrators of said Arnold Schmid, deceased, assignors to Karl Schmid, Mannheim, Germany. Filed Jan. 25, 1928, Serial No. 249,475, and in Germany Feb. 5, 1927. 1 Claim. (Cl. 260—144.)



Process of continuously washing liquid esters of nitric acid, which comprises emulsifying the same with a washing agent maintaining the emulsion in an extended slowly flowing body for some time, locally agitating to maintain the emulsification but avoiding an intermingling of the freshly introduced acidulous ester with the already deacidified portions.

1,901,004. ELECTRIC GLOW DISCHARGE TUBE. GEORG SEIBT, Berlin-Schoneberg, Germany. Filed Mar. 12, 1931, Serial No. 522,121, and in Germany Mar. 18, 1930. 7 Claims. (Cl. 250—27.5.)

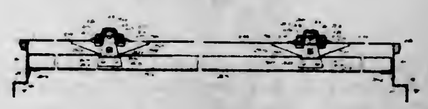


1. A glow discharge tube having a cathode and a first anode, the discharge between which serves as a source of electrons, a second anode to which an amplification current passes from the said source of electrons, and a controlling electrode which controls the said amplification current, parts of said cathode being arranged opposite one another, parts of said first anode being also arranged opposite one another and being enclosed by said parts of said cathode, said discharge electrodes enclosing a central space in which the glow discharge particles passing from said cathode through said first anode fly against one another from several directions and impinge on one another, parts of said second anode being arranged at right angles to said discharge electrodes and enclosing said central space and being adapted to attract the electrons from said central space at right angles to their original direction and parts of said controlling grid being arranged between said central space and said second anode.

1,901,005. MANUFACTURE OF LOADED ELECTRIC SIGNALING CONDUCTORS. WILLOUGHBY STATHAM SMITH, Benchams, NEWTON POPPLEFORD and HENRY JOSEPH GARNETT, Lymne, Solefields, Sevenoaks, and JOHN NORMAN DEAN, Orpington, England. Filed May 25, 1931, Serial No. 539,964, and in Great Britain Feb. 14, 1931. 2 Claims. (Cl. 178—45.)

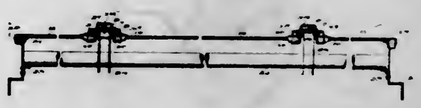
1. In the manufacture of a loaded signaling conductor having a spacing material applied between the central conductor and the loading material, wherein said spacing material is removed during the process of heat treating the conductor in order to provide a space between the conductor and the loading material retaining a carbonaceous material, the method of subjecting said carbonaceous material to an inert atmosphere containing water vapour, which water vapour reacts at the temperature of the heat treatment with the retained carbonaceous material for preventing attack of said carbonaceous material upon said conductor.

1,901,006. PAPER DISPENSING RECEPTACLE. CHARLES W. SPAIN, Hartford, Conn. Filed May 23, 1931. Serial No. 539,443. 4 Claims. (Cl. 206—57.)



1. A receptacle comprising a box-like enclosure having lateral narrow openings within one of its surfaces, and a partially cut portion of said surface centrally disposed and intercepting said lateral openings whereby said central portion may be readily detached to provide an opening extending longitudinally across the face of the receptacle formed of a single piece of foldable material through which goods within the receptacle may be individually withdrawn.

1,901,007. PROCESS OF TREATING ARTIFICIAL FIBERS. HANS CÆSAR STUHLMANN, Premnitz, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed Oct. 25, 1929, Serial No. 402,547, and in Germany Nov. 16, 1928. 3 Claims. (Cl. 18—54.)

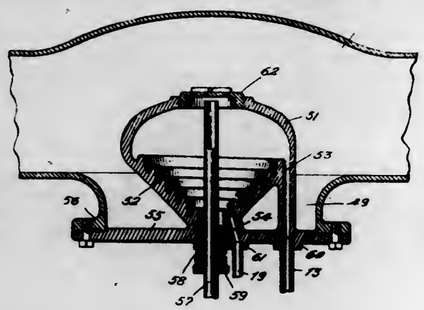


1. The process which comprises treating in a continuous manner buncnes of artificial fibers obtainable by precipitating a viscose solution in an acid precipitating bath in an acid-moist state with hot water, and simultaneously stretching the fibers.

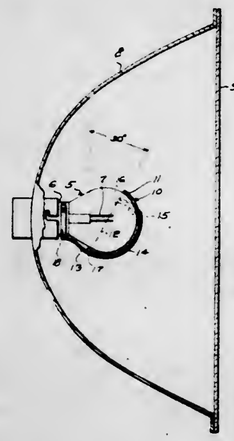
1,901,008. RAILWAY CAR. EARL R. SWANSON, Chicago, Ill., assignor to Chicago-Cleveland Car Roofing Company, Chicago, Ill., a Corporation of Delaware. Filed May 27, 1929. Serial No. 366,398. 6 Claims. (Cl. 105—5.4.)

1. In a roof for railway cars, the combination with a plurality of carlines, of roof sheets respectively associated with and spanning the spaces between the carlines, a beam member extending longitudinally of the car in spaced relation to the roof sheets, brackets for securing the beam member to the carlines, and members respectively connected to said brackets and projecting on opposite sides of the associated carline into supporting engagement with the undersides of adjacent portions of neighboring roof sheets.

1,901,009. RAILWAY CAR. EARL R. SWANSON, Chicago, Ill., assignor to Chicago-Cleveland Car Roofing Company, Chicago, Ill., a Corporation of Delaware. Filed May 27, 1929. Serial No. 366,402. 5 Claims. (Cl. 105—5.4.)



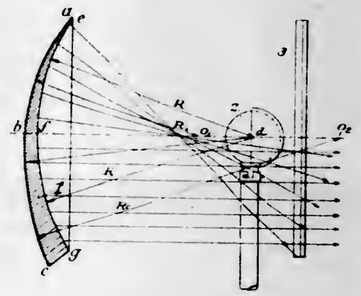
1. In a flexible roof for railway cars, the combination with a plurality of carlines, of roof sheets respectively associated with and spanning the spaces between the carlines, a beam member extending longitudinally of the car in spaced relation to the roof sheets, means rigidly secured to the carlines for supporting said beam member, and plate like members spaced above said beam member and respectively extending continuously between adjacent carlines for supporting said roof sheets, said beam supporting means being disposed intermediate the ends of adjacent plate-like members and the latter being secured in overlapping relation to the carlines independently of said beam supporting means.



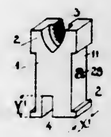
1,901,010. APPARATUS FOR RECONDITIONING USED OIL. ERNEST J. SWEETLAND, Piedmont, Calif. Filed Apr. 28, 1922. Serial No. 557,088. 9 Claims. (Cl. 184—6.)

1. In combination with the lubricating system of an automotive internal combustion engine, a pressure filter including means for separating the solids and water from the lubricating oil forced therethrough, a distilling device in communication with said filter and having return

communication with said lubricating system, of automatic control means interposed in the communicating line between the filter and the distilling device and having communication with the lubricating system whereby the lubricating oil at a predetermined viscosity will be returned directly from the filter to the lubricating system.



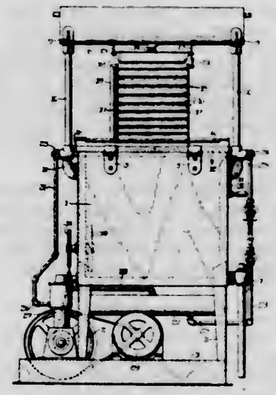
1,901,011. ANTIGLARE DEVICE FOR AUTOMOBILES. JULIAN PAUL TEDFORD, Oklahoma City, Okla., assignor to Leon N. Farr, O. R. Randle, W. H. Courtner, and Geo. W. Riddle. Filed Dec. 12, 1931. Serial No. 580,685. 1 Claim. (Cl. 240—48.6.)



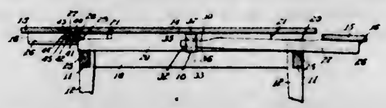
A spherically curved reflecting shield to be mounted upon the forward end portion of an electric bulb and a separate holding device therefor, said holding device comprising a longitudinal body portion including an arm portion provided at its forward free end with a pair of diverging arms, the arm portion and the arms being longitudinally curved to correspond to the curvature of the shield and having their rear end portions substantially circumferentially equi-distantly spaced, said arms being provided at their free ends with inwardly facing extensions to engage over the edge of the shield and the arm portion being provided adjacent to its rear end with an inwardly projecting extension to engage over the edge of the shield, said arm portion being longer than said arms so that the shield is held at a selected angle, said body portion extending rearwardly beyond the arm portion for a substantial distance, and a U-shaped socket carried by the rear end of the body portion for engaging with the shank of the bulb.

1,901,012. HEADLIGHT FOR VEHICLES. JEAN TOURRIOL, Paris, France. Filed Mar. 31, 1930, Serial No. 440,459, and in France Apr. 9, 1929. 1 Claim. (Cl. 240—41.38.)

Headlight for vehicles, comprising a source of light, two semi-menisci juxtaposed along their rectilinear edge, the upper semi-meniscus having its rear and front surfaces converging from the lower edge to the upper and front edge, the lower semi-meniscus having its rear and front surfaces diverging from its upper edge to the lower and front edge, a reflecting layer on the rear surfaces of these semi-menisci, the front and rear surfaces of these semi-menisci each being a portion of a sphere, the front surfaces of the semi-menisci having a common radius, the radii of the rear surfaces of the said upper and lower semi-menisci being respectively smaller and larger than the common radius of the front surfaces of these semi-menisci, all the centers of these spheres being placed on the same horizontal axis passing through the source of light which is disposed in the vicinity of the common center of the front surfaces of the upper and lower semi-menisci.



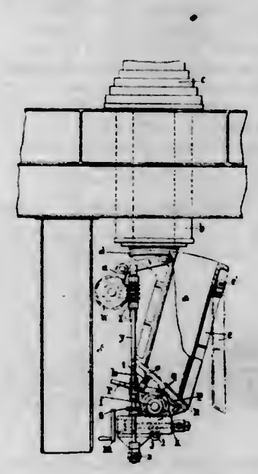
1,901,013. PROCESS AND APPARATUS FOR PHOTOGRAPHIC TYPE-COMPOSING. EDMOND UHER, Jr., Budapest, Hungary, assignor to Uhertype Aktiengesellschaft, Glarus, Switzerland. Filed June 25, 1930, Serial No. 463,761, and in Germany May 5, 1930. 12 Claims. (Cl. 95—4.5.)



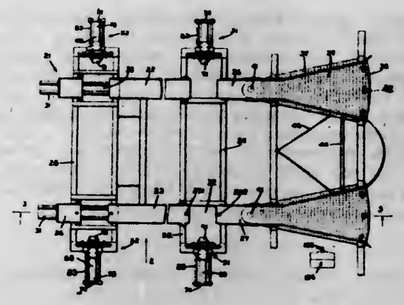
1. A photographic type-composing process, comprising setting up by a succession of manual operations separate movable control bodies each representing a printing character, and deflecting a beam of light into a direction determined by certain dimensions of each of the said control bodies in succession, thereby causing the corresponding printing characters to be photographed on a moving sensitized strip.

1,901,014. MILK COOLING AND STORING APPARATUS. GEORGE E. WALLIS, Evanston, Ill., assignor to The Creamery Package Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed June 12, 1931. Serial No. 543,832. 4 Claims. (Cl. 257—200.)

1. Milk cooling and storing apparatus, comprising, a tank, a cooler mounted thereon, means for positioning said cooler alternatively outwardly of said tank and within said tank, means for directing a flow of milk over said cooler in outward position for entry into said tank, and means for supplying refrigerant to said cooler, said cooler being partially immersed in said milk when within said tank.



1,901,015. REFECTORY TABLE. FREDERICK B. WALTER, Wabash, Ind. Filed Mar. 19, 1930. Serial No. 436,948. 9 Claims. (Cl. 45—118.)

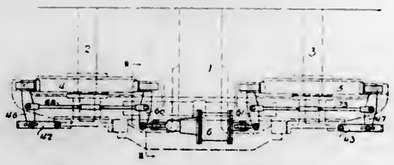


1. In a refectory table, the combination with the main frame and main top associated with said main frame to provide a space for an extension-leaf beneath one edge of the main top, of an extension leaf slide structure slidably mounted in the main frame beneath the main top, slidably-coacting elements carried respectively by the main frame and leaf-structure producing positive upward movement of the inner end of the slide-structure by outward sliding of the slide-structure, and vertically-separable elements carried respectively by the main frame and the inner end of the slide-structure of the limiting outward movement of the slide-structure only when the inner end of said slide-structure is elevated.

1,901,016. COKE DISCHARGER FOR RETORTS FOR THE CARBONIZATION OF COAL AND THE LIKE. FREDERICK JOSEPH WEST and ERNEST WEST, Manchester, England, assignor to West's Gas Improvement Company Limited, Manchester, England, a British Company. Filed Mar. 14, 1932, Serial No. 598,852, and in Great Britain May 7, 1931. 10 Claims. (Cl. 214—18.)

1. In coke extractors for vertical retorts, the combination of a pivotally mounted coke chamber having a hinged coke discharge door and locking means therefor at one side thereof and an arcuate projection for closing the connection between said coke chamber and the retort at the opposite side thereof, and manually operable means for raising and lowering said coke chamber to make a gas-tight joint between said arcuate projection and the retort and for removing any pressure between said arcuate projection and the retort to facilitate their relative movements.

1,901,017. AUTOMATIC TIRE INFLATER FOR VEHICLES. ELLIS EDMOND WHITE, Los Angeles, Calif., assignor to Pneumatic Tire Inflating Devices Corporation, Los Angeles, Calif., a Corporation of California. Filed Sept. 25, 1930. Serial No. 484,419. 6 Claims. (Cl. 152—11.)

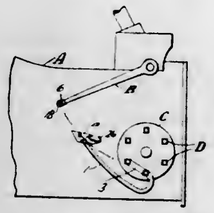


1. A machine for inflating a pneumatic tire mounted upon a wheel of a vehicle and having inlet means extending laterally from said wheel and communicating with the interior of the tire, a runway adapted to receive said vehicle, an inflating head disposed beside said runway and comprising a backing plate mounted in a vertical plane, a block movable with respect to said plate and having a socket in its outer face adapted to receive said inlet means, means resiliently retaining said block substantially centrally of said plate, and means for advancing said plate and block toward said runway to seat said inlet means within said socket, and means for supplying air under pressure to said socket.

1,901,018. TREATMENT OF MAGNETIC ALLOYS AND PRODUCTS RESULTING THEREFROM. CLARENCE GEORGE BIEBER, Huntington, W. Va., assignor to The International Nickel Company, Inc., New York, N. Y., a Corporation of Delaware. Filed Feb. 19, 1932. Serial No. 594,155. 13 Claims. (Cl. 175—21.)

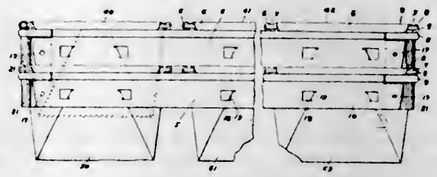
1. The process of heat treating magnetic alloys of the nickel-iron type, which comprises subjecting such alloys to an initial super-annealing treatment, slowly cooling the super-annealed alloys in a hydrogen atmosphere, reheating the cooled alloys to about 1160° F. in air, and rapidly cooling said reheated alloy on a copper plate.

1,901,019. BRAKE MECHANISM. JAMES G. BLUNT, Schenectady, N. Y. Filed Jan. 3, 1931. Serial No. 506,340. 6 Claims. (Cl. 188—56.)



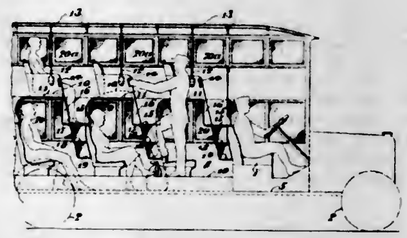
1. In a brake rigging for the wheels on one side of a railroad vehicle having a plurality of axles with wheels attached to the ends of said axles, hanger levers; brake shoes attached to said hanger levers adjacent faces of the wheels on said side; a cylinder and a fluid pressure actuated piston therefor; a pair of main power levers; a rigid rod member pivotally connected at its opposite ends to said power levers intermediate the ends thereof, one of said power levers being pivotally connected at its upper end to a fixed member and the other power lever being pivotally connected at its upper end to said piston; substantially horizontal lever members pivotally connected at their inner ends with the lower ends of said hanger levers, and operably connected at their outer ends to the lower ends of the adjacent power levers, whereby the operation of said piston will actuate the rigging and the brake shoes will be engaged with their adjacent wheels.

1,901,020. PREPARATION OF PURE PHOSPHATES. CHARLES F. BOOTH, Anniston, Ala., assignor to Swann Research, Incorporated, a Corporation of Alabama. Filed Feb. 1, 1932. Serial No. 590,318. 10 Claims. (Cl. 23—107.)



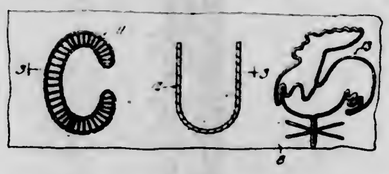
1. Process of producing pure crystalline di-basic alkali metal ortho-phosphate from solutions containing iron and aluminum compounds in solution, comprising adding to said solution a small percentage of a tetra-basic pyrophosphate and then causing said di-basic alkali metal ortho-phosphate to crystallize from said solution.

1,901,021. LOCKING CATCH. BENHARD G. BUSS, Golden, Ill. Filed Nov. 16, 1931. Serial No. 575,231. 2 Claims. (Cl. 74—39.)



1. In a device of the kind described, in combination with a fixed member and an adjacently mounted movable member adapted for travel in a curved path, a resilient arm secured at one end to the fixed member with the free end thereof directed towards the movable member and disposed laterally of the line of travel of the movable member, a lock pin upon the movable member and projecting laterally therefrom towards the extended axis of the fixed member, a lock plate rigidly mounted upon the free end of the resilient fixed member, the said plate being so angularly shaped and recessed at its margins as to force the travel of the said pin in one direction over one edge of the said plate and its return over the opposite edge of the said plate, and an interrupter hook upon the said lock plate and so arranged as to temporarily impede the travel of the said lock pin over said plate.

1,901,022. MULTIPLE BAKE PAN. ELMER H. CHANDONIA, Cincinnati, Ohio, assignor to The Lockwood Manufacturing Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Nov. 17, 1930. Serial No. 496,092. 5 Claims. (Cl. 53—6.)

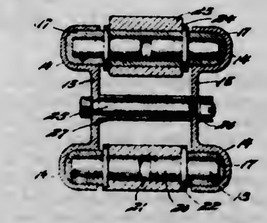


1. In combination with a unit comprising a plurality of substantially parallel bake pans, an angular encircling supporting band for supporting the bake pans, said band having projections at its corners formed by the metal of the band bent outwardly upon itself to provide a corner protector spaced from the pan corner edges and extending sufficiently forwardly and outwardly beyond the normal limits of the band, to rest upon the tops of corresponding corner portions of a subjacent similar set of nested pans.

1,901,023. SINGLE DECK BUS WITH SUPERIMPOSED SEATS. ELBERT A. CORBIN, Jr., Gradyville, Pa., assignor of one-half to William A. Brown, Philadelphia, Pa. Filed Oct. 15, 1927, Serial No. 226,298. Renewed July 29, 1932. 8 Claims. (Cl. 296—64.)

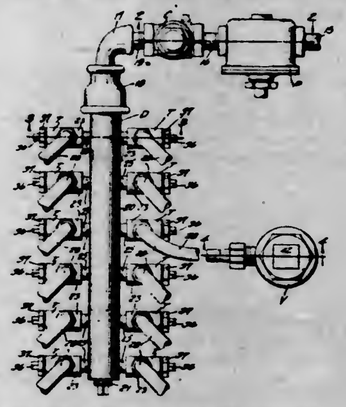
1. An enclosed passenger seating compartment for vehicles having a roof and a single deck between its support and the roof, and a longitudinally extending aisle, superimposed seats transversely disposed along said aisle, the lower seats being positioned below the upper seats but out of vertical alignment therewith, the upper of said seats having leg pockets extending to the tops of the backs of the lower seats.

1,901,024. ART OF MARKING PLASTIC MATERIAL. JACOB EDGE, Downingtown, Pa., assignor, by mesne assignments, to United States Gypsum Company, Wilmington, Del., a Corporation of Delaware. Filed July 12, 1929. Serial No. 377,729. 9 Claims. (Cl. 92—39.)



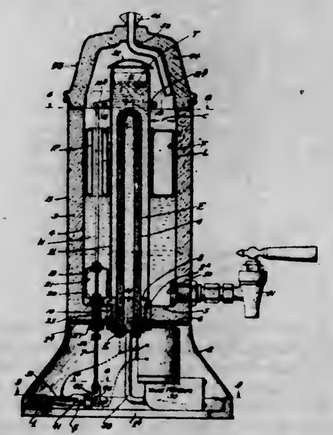
1. A carrying felt for use in board forming machinery, said felt having secured to at least one face thereof a cord arranged to form an intaglio mark in the adjacent face of the newly formed, comparatively soft board.

1,901,025. AERIAL. CHARLES SAMUEL FRANKLIN, Buckhurst Hill, England, assignor to Radio Corporation of America, a Corporation of Delaware. Filed Aug. 17, 1927, Serial No. 213,450, and in Great Britain Sept. 6, 1926. 6 Claims. (Cl. 250—33.)



5. An aerial system for wireless communication comprising an antenna connected to ground at one end only, said antenna comprising a single wire feeder connected to an absorbing arrangement, said arrangement including a radiating element and a resistance element, both said elements having a combined effective resistance equivalent to the surge impedance of said single wire feeder.

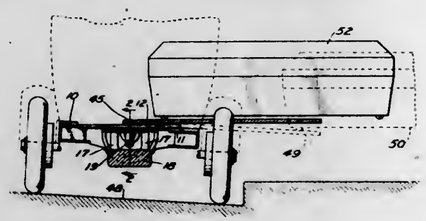
1,901,026. JOINT CONNECTION. MICHAEL G. GIORDANO, Cranston, R. I. Filed Jan. 21, 1932. Serial No. 587,866. 7 Claims. (Cl. 287—54.)



1. In a joint connection for two members to be connected, said members having bores, side links having bushing housing recesses at the ends thereof, bushings mounted in said recesses, collared bearing trunnions having their inner ends in the bores of the members to be connected and their outer ends movably seated in said bushings, said outer ends being cylindrical, and means for locking said side links to each other to urge the collars of the trunnions upon the bushings.

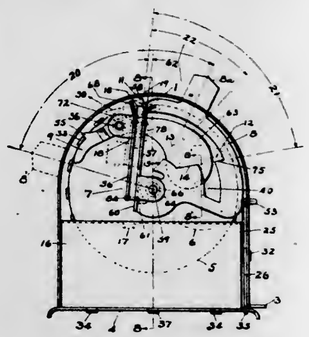
1,901,027. FORCE FEED LUBRICATING APPARATUS. DAVID GRATTAN, Los Angeles, Calif. Filed May 22, 1928. Serial No. 279,750. 2 Claims. (Cl. 184—7.)

1. A force feed lubricating system including a plurality of distributing units and means for forcing lubricant under pressure to the units; each unit including an oil conduit leading from the unit to a part to be lubricated, a regulating valve for each unit by which the amount of oil flowing therethrough can be varied; a terminal valve for each conduit disposed in proximity to the part to be lubricated and having means responsive to a predetermined pressure of oil in the respective conduit, to deliver oil to the respective part; and means for each terminal valve by which the terminal valves can be adjusted independently of each other to insure that they will respond to one and the same pressure.



1,901,028. WATER HEATER FOR COFFEE MAKING. LEE B. GREEN, Lakewood, Ohio, assignor to The Globe Machine & Stamping Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 24, 1932. Serial No. 600,877. 25 Claims. (Cl. 219—38.)

1. A liquid heater comprising a container body and a cover for the same, the container body having an outlet in its lower portion, a smaller diametered receptacle sup-

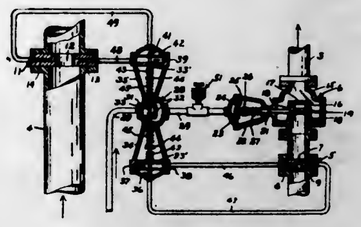


ported within the container and having its riser wall spaced from the riser wall of the container body and disposed to leave a chamber within which heated liquid is normally stored, the said receptacle having a discharge outlet spaced downwardly from the said cover, a liquid supply duct leading to the lower portion of the receptacle, an electric heating member disposed within the receptacle, and control means responsive to variations in the level of the heated liquid in the said chamber for simultaneously controlling the heating member and the flow of liquid through the duct.

1,901,029. SELF-LEVELING PLATFORM OF A TILTED BODY. WILLIAM H. HEISS, Los Angeles, Calif., assignor to Big Rock Ranch Company, Los Angeles, Calif., a Corporation of California. Filed July 15, 1929. Serial No. 378,299. 4 Claims. (Cl. 296—16.)

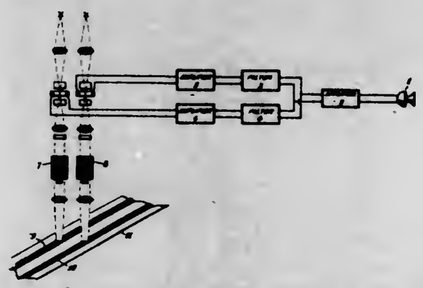
1. In a hearse, the combination of: a body having a longitudinal axis; a platform normally disposed within said body and movable about said axis; means for laterally swinging said platform to a transverse position relative to said hearse, said axial and said lateral movements of said platform being independent; and locking means for arresting said axial movement of said platform in any one of a plurality of positions relative to said axis.

1,901,030. REGISTERING BANK. OTTO C. HOFFMAN, Buffalo, N. Y., assignor of one-half to John J. Dunn, Buffalo, N. Y. Filed May 26, 1928. Serial No. 280,867. 4 Claims. (Cl. 235—100.)



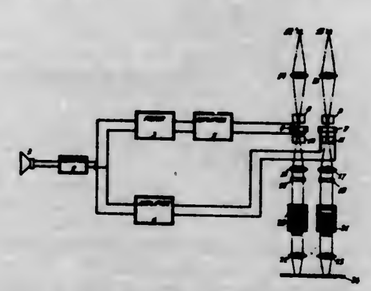
1. In a self-registering bank adapted to register coins of several denominations and having a casing with a single deposit opening therein for all the different coins, a coin carrier, a registering dial, a coin box having a coin slot beneath said carrier, and an oscillating lever adapted to engage and retain a coin in its initial position in said carrier to oscillate said carrier in one direction to register said coin on said dial and to release said coin and oscillate said carrier in the opposite direction whereby said coin may be dropped through the slot of said coin box.

1,901,031. PUMPING APPARATUS. GRANVILLE A. HUMASON, Houston, Tex. Filed July 25, 1932. Serial No. 624,425. 11 Claims. (Cl. 103—5.)



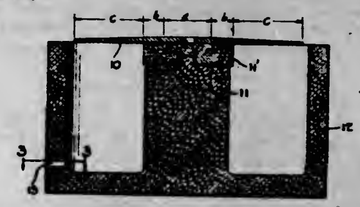
8. In a pump, a well casing, a casing head thereon, a tubing supported in said casing head, a fluid inlet at the lower end thereof, means to seal about said tubing in said casing head, means to seal about said tubing adjacent the lower end thereof, a slidable plunger closing the passage through said tubing, a plurality of valves opening outward from said tubing between said sealing means, and means including a line to conduct pressure fluid into the upper end of said tubing above said plunger to force said plunger downwardly in said tubing to discharge liquid upwardly in said casing, there being an outlet for said liquid at the upper end of said casing, said valves being arranged on said tubing to allow an outlet for said pressure fluid to the casing when said plunger has made its downward stroke.

1,901,032. FLUID FLOW CONTROL DEVICE. FLOYD L. KALLAM, South Gate, Calif. Filed Aug. 10, 1929. Serial No. 384,980. 8 Claims. (Cl. 137—164.)



1. In combination, pipes carrying streams of fluid, a motor valve operative in a said pipe and including a valve stem, spring means coactive with said valve stem to constantly and yieldingly urge a disposal thereof to close the valve, means providing a chamber having a flexible diaphragm wall bearing axially of and against said valve stem, a pipe conveying fluid to said chamber for expanding the chamber against resistance of said spring means, a valve in said last pipe to control the fluid flow therein, means simultaneously operative in accordance with the fluid flow rates in the said first pipes to urge opposite actuations of said control valve, and a constantly open relief valve in said last pipe between said chamber and control valve.

1,901,033. METHOD OF RECORDING AND REPRODUCING PHONOFILMS. AUGUST KAROLUS, Leipzig, Germany, assignor to Radio Corporation of America, a Corporation of Delaware. Filed Apr. 24, 1929, Serial No. 357,859, and in Germany May 19, 1928. 4 Claims. (Cl. 179—100.3.)

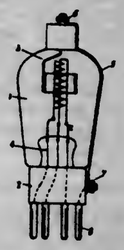


1. The method of photographic recording and reproduction which comprises, producing a sound to be recorded, modulating an electric current in accordance with said sound, separating the high and low frequency components of said modulated current, controlling the intensity of a light beam in accordance with each of said frequency components, independently recording the intensity of the light beams on a moving film record, restricting the light permitted to fall upon the moving film record from the light beam controlled by the high frequency to a small area with respect to the line of motion of said film, restricting the light permitted to fall upon the moving film record from the light beam controlled by the low frequency to a relatively large area with respect to the line of motion of said film, thus producing two records upon said film, passing light through the two records, restricting the light passing through each record in the same manner as in the recording, and photoelectrically controlling a single electric current in accordance with the total amount of light passing through the film record, and reproducing the originally recorded sound thereby.

1,901,034. METHOD OF RECORDING AND REPRODUCING PHONOFILMS. AUGUST KAROLUS, Leipzig, Germany, assignor to Radio Corporation of America, a Corporation of Delaware. Filed Apr. 24, 1929, Serial No. 357,860, and in Germany June 18, 1928. 10 Claims. (Cl. 179—100.3.)

1. In apparatus for recording and reproducing photophonographic sound records, means for dividing the frequency band of the sound to be recorded into a number of frequency bands, and means for separately recording said different frequency bands, said last mentioned means including slitted members having a width in the direction of the motion of the photophonographic record chosen in accordance with the frequency range being recorded through said slit.

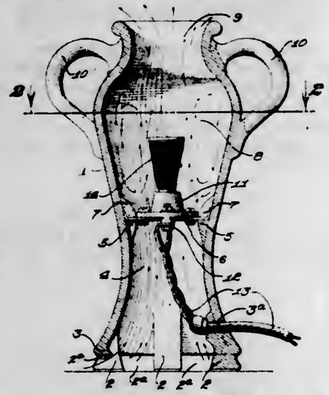
1,901,035. METHOD OF MAKING COLD ROLLED DISKS. GROSVENOR L. KELLEY and EDWARD G. BUDD, Philadelphia, Pa., assignors to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 2, 1928. Serial No. 282,441. 4 Claims. (Cl. 29—148.)



2. The method of forming a tapered disk which comprises cold rolling a disk blank to an intermediate state, thereafter annealing the outer peripheral portions of the blank while retaining the inner peripheral portions below the temperature at which exaggerated grain growth appears and thereafter cold rolling the outer peripheral portions of the blank.

1,901,036. CARTON. WILLIAM S. KINKEAD, Chicago, Ill. Filed July 20, 1929. Serial No. 379,736. 1 Claim. (Cl. 206—47.)

A container for seam binding and edging material comprising an internal and external carton, registering slots in the side walls of said cartons adjacent one of the corners thereof and between the edges of two adjacent side walls, there being additional registering slots in an intermediate portion of the contiguous side walls of each carton for securing therein the free end of the material, there being registering circular openings in the center of the tops of each of said cartons, and a circular carton of tacks mounted in said openings and protruding above the tops of said cartons for supporting and preventing the displacement of said box of tacks.

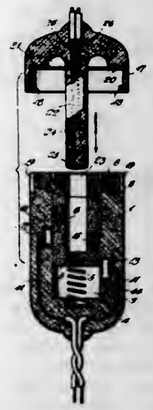


1,901,037. ELECTRIC DISCHARGE DEVICE. DIRK LELY, Eindhoven, Netherlands, assignor to Radio Corporation of America, a Corporation of Delaware. Filed Aug. 31, 1927, Serial No. 216,613, and in the Netherlands Nov. 5, 1926. 2 Claims. (Cl. 250—27.5.)

1. An electron discharge device comprising an evacuated envelope, a plurality of electrodes contained therein, a base sealed to said envelope and provided with a plurality

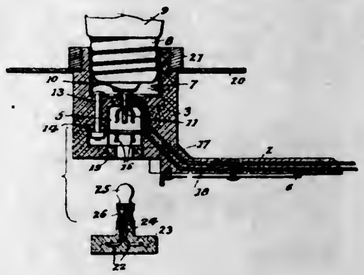
of contact pins, a terminal projecting from the top of the envelope opposite to the base, a conductor connected between said terminal and one of said electrodes, a second terminal on the base and a conductor connected between said second terminal and one of said contact pins, lead-in conductors within the envelope passing through the base and connected between the remaining electrodes and the remaining contact pins, and a conductor external to the envelope connected between said first and second terminals.

1,901,038. ELECTRIC HEATER. DAVID S. MARSHALL, San Diego, Calif. Filed Oct. 23, 1929. Serial No. 401,676. 2 Claims. (Cl. 219—34.)



1. In an electric heater, an open-ended shell comprising a lower constricted portion adjacent its lower extremity, an upper constricted portion adjacent the upper extremity of said shell, and a belled or enlarged portion intermediate said constricted portions, the walls thereof diverging gradually from said lower constricted portion and converging abruptly into said upper constricted portion, a conical heating element disposed within said enlarged portion with its sides diverging upwardly in substantially parallel relation with the diverging walls of said enlarged portion, whereby air passing upwardly from said lower constricted portion is deflected towards the abruptly converging walls of said enlarged portion and thereby caused to set up convection currents so that the air particles are warmed repeatedly before passing out of said upper constricted portion.

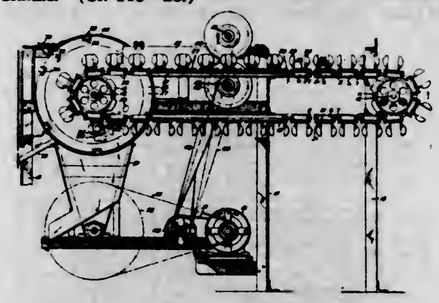
1,901,039. PROCESS OF BRIGHT ANNEALING STEELS AND ALLOYS. ROBERT JOHN OWENS and HUGH JOHN FRASER, Huntington, W. Va., assignors to The International Nickel Company, Inc., New York, N. Y., a Corporation of Delaware. Filed Dec. 9, 1931. Serial No. 579,983. 5 Claims. (Cl. 148—4.)



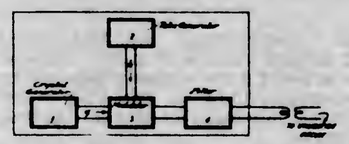
3. The process of annealing a product from the group consisting of nickel stainless steel and nickel-chromium alloys with a bright surface which comprises forming the aforesaid product, imparting a bright surface to said product, treating said product with nitric acid to render the bright surface passive and then heating said product to a temperature of about 1650° F. to about 2000° F. for several hours in the presence of a reducing atmosphere to anneal said product without producing any substantial discoloration of the bright surface.

1,901,040. SEPARABLE WEATHERPROOF PLUG. JOHN H. PERONI, Freeport, N. Y., and SIDNEY H. ALEXANDER, Englewood, N. J. Filed May 4, 1931. Serial No. 534,974. 6 Claims. (Cl. 173—328.)

1. A separable weatherproof plug comprising a socket formed with a chamber open at one end, contacts embedded in said socket and engaged by conductors and having portions exposed through the wall of the chamber in spaced relation to the bottom thereof, a shield movably mounted in said chamber and guarding said contacts from water and foreign elements, a cap detachably applied to the open end of the socket and having a portion extending into said chamber and engaging said shield to move the shield out of its normal position, said extension carrying contacts engaged by conductors and the shield having contacts exposed through side portions thereof and engaged by the contacts of the extension and moved into engagement with the contacts of the socket when the shield is moved to its adjusted position.



1,901,041. ONE-PIECE PLUG AND RECEPTACLE. JOHN H. PERONI, Freeport, N. Y., and SIDNEY H. ALEXANDER, Englewood, N. J. Filed May 29, 1931. Serial No. 541,044. 6 Claims. (Cl. 240—9.)



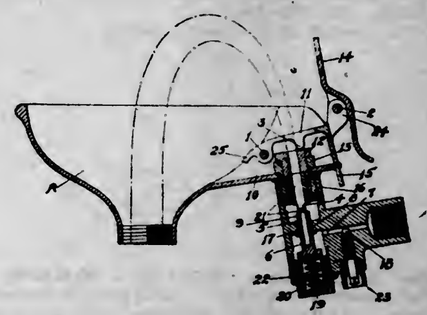
2. In an electrical fixture, a plurality of duplicate units, each consisting of a bulb receiving socket and an arm formed integral therewith and projecting transversely from the socket, a plug projecting upwardly from the free end of said arm, conductors extending longitudinally through said arm and into said socket, terminals carried by said plug and engaged by said conductors, and terminals in said socket engaged by the other ends of said conductors and constituting means to grip the plug and terminals thereof of a companion unit and releasably connect the units for pivotal movement relative to each other and establish electrical communication beween their conductors.

1,901,042. FRUIT PITTING MACHINE. FRANK ROBBINS, Sacramento, Calif., assignor of one-half to Libby, McNeill & Libby, San Francisco, Calif., a Corporation of Maine. Filed Jan. 19, 1927. Serial No. 161,966. 30 Claims. (Cl. 146—28.)

1. A fruit pitting machine comprising means for bisecting a fruit and its contained pit, means for pitting bisected fruit, a chain conveyor for carrying fruit to said bisecting means and said pitting means from a receiving station, and means on said conveyor for receiving and holding fruit against lateral displacement and with the suture of said fruit in a predetermined position with respect to said bisecting means, whereby the fruit is maintained with its suture coincident with the longitudinal axis of the machine irrespective of the varying contours of the fruit placed therein.

1,901,043. OSCILLATION GENERATOR. HANS OTTO ROOSENSTEIN, Berlin, Germany, assignor to Telefunken Gesellschaft fur Drahtlose Telegraphie m. b. H., Berlin, Germany, a Corporation of Germany. Filed Sept. 4, 1929. Serial No. 390,869, and in Germany Sept. 10, 1928. 3 Claims. (Cl. 250—36.)

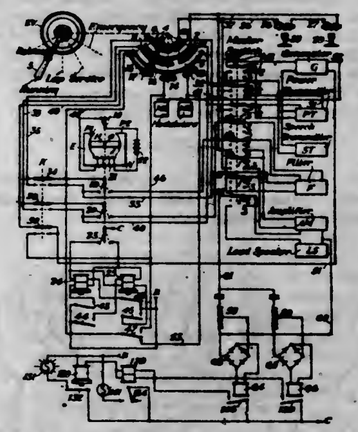
1. The process for the production of artificial masses which comprises heating a non-distillable polymerization product of a butadiene to a temperature between about 100° and 500° C. until the product has practically completely lost its tensile elasticity.



1,901,044. PRODUCTION OF ARTIFICIAL MASSES. OTTO SCHMIDT and BERTHOLD SCHNELL, Ludwigshafen-on-the-Rhine, and EGON MEYER, Mannheim, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed May 4, 1929, Serial No. 360,615, and in Germany May 8, 1928. 25 Claims. (Cl. 18—55.)

1. The process for the production of artificial masses which comprises heating a non-distillable polymerization product of a butadiene to a temperature between about 100° and 500° C. until the product has practically completely lost its tensile elasticity.

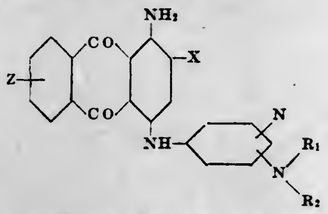
1,901,045. PRODUCTION OF FOILS. OTTO SCHMIDT, Ludwigshafen-on-the-Rhine, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Oct. 11, 1929, Serial No. 399,100, and in Germany Nov. 5, 1928. 12 Claims. (Cl. 18—57.)



1. The process for the production of thin artificial masses which comprises warming a soft foil of a non-distillable synthetic polymerization product of a dioleflne, which is free from sulphur, in the presence of oxygen.

1,901,046. DRINKING FOUNTAIN. WILLIAM H. SCHULTE, Trenton, N. J. Filed Apr. 29, 1932. Serial No. 608,180. 5 Claims. (Cl. 299—13.)

3. In a fountain, the combination with a bowl, of a water supply valve chamber secured thereto by a hollow fitting, a web dividing the valve chamber, a spring pressed valve seated against the lower side of said web, a nozzle slidably mounted in said fitting, a tappet carried by said nozzle and arranged to engage the upper end of said valve, and means for operating said nozzle arranged to prevent finger access to said nozzle and normally providing a cover therefor.

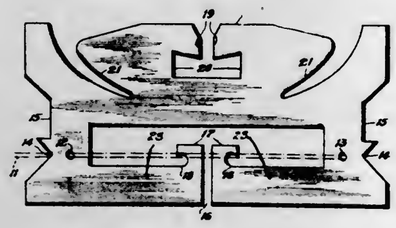


1,901,047. ELECTRIC CONTROL SYSTEM. ANDREW J. SORENSEN, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Dec. 17, 1931. Serial No. 581,553. 16 Claims. (Cl. 246—63.)

1. A control system including, a transmitting circuit, a source of control current of a predetermined frequency, coding means adapted to supply to said circuit from said source periodic impulses of current, telephone means adapted to supply to the transmitting circuit a telephone current of voice frequencies, a receiving circuit influenced by said transmitting circuit, means controlled by said receiving circuit responsive only to current of the predetermined frequency of the control current to establish a signal corresponding to the periodic impulses, and other means controlled by the receiving circuit responsive to the telephone current to establish telephone communication.

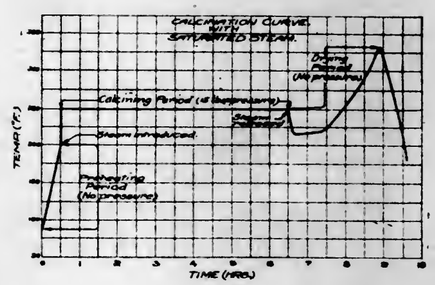
1,901,048. PREPARATION OF NEW DYESTUFFS OF THE ANTHRAQUINONE SERIES. SAMUEL VON ALLMEN, Basel, Switzerland, assignor to Chemical Works formerly Sandoz, Basel, Switzerland. Filed Sept. 22, 1930. Serial No. 483,753, and in Germany Oct. 4, 1929. 5 Claims. (Cl. 260—60.)

1. The dyestuffs of the general formula:



wherein X represents a halogen or a SO_3H-group, Y represents hydrogen, an alkyl or a SO_3H-group, Z represents a halogen, a SO_3H-group or a phenylenediamine group, and R_1 and R_2 represent hydrogen or an alkyl group, which are in dry state dark powders, dissolving in water with a blue to violet coloration and dyeing wool from an acid bath bluish-grey to greenish-grey shades which may be afterchromed yielding pure grey tints.

1,901,049. PROCESS FOR THE PRODUCTION OF GENUINE WATERMARK PAPERS WITHOUT USING RELIEF MOLDS. FRIEDRICH VON HEINRICH, Budapest, Hungary, assignor of one-half to National Bank of Hungary, Budapest, Hungary, a Corporation of Hungary. Filed Oct. 15, 1931, Serial No. 569,113, and in Austria Oct. 20, 1930. 2 Claims. (Cl. 92—48.)



1. The herein described method of producing gradations or half tones in the watermarks of paper, comprising the making of a photographic half tone reproduction of the design to be used as a watermark, decomposing said reproduction by a line screen, and reproducing the said decomposed reproduction on a paper forming surface with the water permeability of said surface at various places proportional to the light tone values of the corresponding parts of the photographic reproduction, the water permeable and water impermeable parts of said surfaces corresponding with the resist covered and uncovered parts of the screen decomposition of the half tone picture.

1,901,050. REELING MEANS. JOHN S. VOORHEES, Derby, Conn. Filed Oct. 17, 1929. Serial No. 400,203. 17 Claims. (Cl. 242—96.)

1. An anchor comprising a body portion having a mouthed opening on the interior thereof, a portion for reeling line thereon substantially overlying said opening, an abutment preventing lateral insertion and withdrawal of a continuous line into and from said opening except upon displacement of the normal position of line previously reeled on said reel portion.

1,901,051. HIGH STRENGTH CALCINED GYPSUM AND PROCESS OF MANUFACTURING SAME. WILBUR S. RANDEL and MANVEL C. DAILEY, Chicago, Ill., assignors to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 8, 1929. Serial No. 384,343. 23 Claims. (Cl. 23—122.)

1. The step in the process of calcining gypsum to produce a high strength calcined gypsum which comprises heating gypsum in a closed container for a period of 5 to 7 hours with the pressure of the steam in contact with the gypsum maintained substantially uniform at approximately 17 pounds per square inch gauge.

22. Calcium sulphate hemihydrate in the form of individual crystal fragments that are entirely homogeneous throughout and have no porosity.

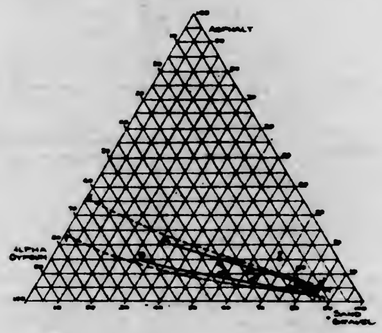
1,901,052. COMPOSITION FOR MOLDING INVESTMENT INLAYS. MANVEL C. DAILEY, Maywood, Ill., assignor to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed July 3, 1930, Serial No. 465,646. Renewed July 30, 1932. 14 Claims. (Cl. 22—188.)

1. A molding composition a mixture of the following ingredients:

	Per cent
Finely ground silica	60–80
Alpha gypsum	20–40

Retarder to regulate the set with water.

1,901,053. DENTAL INVESTMENT COMPOSITION. MANVEL C. DAILEY, Maywood, Ill., assignor to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed July 3, 1930, Serial No. 465,648. Renewed July 30, 1932. 7 Claims. (Cl. 22—188.)



1. An investment composition comprising a mixture of the following ingredients:

	Grams
Alpha gypsum	40
Powdered silica	60
Gum arabic	½

1,901,054. DENTAL MODEL STONE COMPOSITION. MANVEL C. DAILEY, Chicago, Ill., assignor to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 10, 1931. Serial No. 556,336. 6 Claims. (Cl. 18—47.)

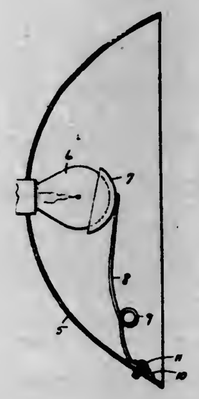
1. A composition of matter suitable for use in the preparation of dental models, which comprises alpha gypsum, and an amount of Rochelle salt sufficient to substantially overcome the setting-expansion of said alpha gypsum.

1,901,055. MASTIC FLOORING, COMPOSITION, AND METHOD OF PREPARING. HARRY K. LINSELL, La Grange, Ill., assignor to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 30, 1931. Serial No. 512,296. 16 Claims. (Cl. 106—34.)

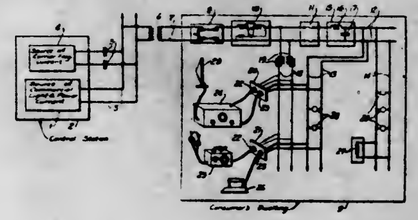
13. A mastic composition comprising from 10 to 77 parts by weight of alpha gypsum, 4 to 36 parts by weight of asphalt, and 0 to 86 parts by weight of an aggregate, the total combined enumerated ingredients always to total 100 parts by weight.

1,901,056. MODEL PLASTER. WILBUR S. RANDEL, Farnams, Mass., assignor to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 13, 1932. Serial No. 586,377. 1 Claim. (Cl. 106—34.)

A molding plaster composition comprising 50–80% alpha gypsum and an amount of Portland cement sufficient to control the setting and expansion of said composition when mixed with water.



1,901,057. ACOUSTIC CORRECTIVE MATERIAL. CARLISLE K. ROOS, Wheaton, Ill., assignor to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed July 10, 1930. Serial No. 466,916. 3 Claims. (Cl. 106—34.)

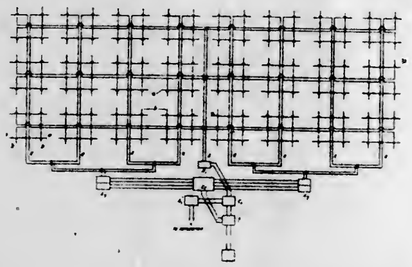


3. An acoustical composition comprising alpha gypsum, a gas-forming agent, a strengthening agent, and wood fiber; the alpha gypsum and wood fiber being so proportioned relative to each other that they will mutually contribute toward the piercing of the cell-walls of the bubbles produced in the mass on gaging the same with water.

1,901,058. GLARE ELIMINATOR FOR VEHICLE HEADLIGHTS. LANCELOT C. ROWLEY, Grand Rapids Township, Kent County, Mich. Filed Feb. 9, 1932. Serial No. 591,883. 1 Claim. (Cl. 240—48.6.)

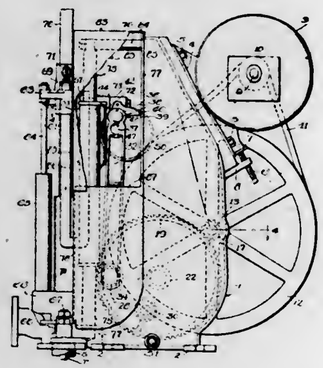
In combination, a main vehicular headlight reflector, a light bulb arranged within said reflector and supported thereby, a resilient support comprising a single length of wire having a substantially straight end, together with a longitudinally curved end, and a looped intermediate portion between said ends, a fastening element engaged with the main reflector adjacent the open side thereof, and said curved end of said support at the free extremity thereof provided with a return bend forming a substantial U engaging said fastening element, and a concaved auxiliary reflector disk fixedly secured to the extremity of the first named end of said support and being urged by said support into yieldable engagement with said light bulb.

1,901,059. SYSTEM OF ELECTRICAL DISTRIBUTION. GORDON BROWN SCHEIBELL, Newark, N. J., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed Oct. 21, 1930. Serial No. 490,181. 2 Claims. (Cl. 179—2.5.)



1. In a wired radio broadcasting system in which both commercial power and signalling energy are transmitted over power lines to consumer's local distribution lines connected with commercial power consuming devices, means for supplying signalling energy from said power lines comprising, auxiliary wire lines designed for the exclusive transmission of signalling energy, said wire lines being coupled to said power lines in a manner such as to prevent the passage of commercial power thereover and means for preventing the passage of signalling energy over said consumer's local power distribution lines, said auxiliary wire lines being disposed with respect to said consumer's local power lines for conjoint use therewith in the operation of a radio receiving system requiring both commercial power and signalling energy.

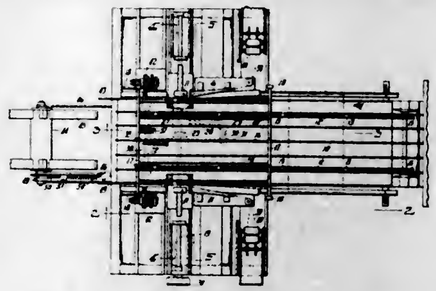
1,901,060. ANTENNA. OMMO SCHMIDT, Berlin, Germany, assignor to Telefunken Gesellschaft fur Drahtlose Telegraphie m. b. H., Berlin, Germany, a Corporation of Germany. Filed Feb. 18, 1930, Serial No. 429,282, and in Germany Feb. 19, 1929. 2 Claims. (Cl. 250—33.)



1. An aerial layout, particularly for short wave operation, employing two antenna systems, one comprising of a number of vertical linear aerials arranged one above the other in one plane, the other comprising a number of hori-

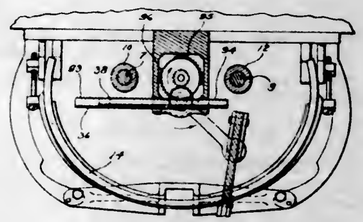
zontal linear aerials arranged in a plane parallel to and spaced from the first, each of the two antenna systems being connected by means of separate transmission lines to

common high frequency apparatus, and phase adjustment apparatus associated with each of said separate transmission lines.



1,901,061. PUMP. DANIEL R. SCHOLES, Oak Park, Ill., assignor to Aermotor Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 19, 1931. Serial No. 509,740. 22 Claims. (74—14.)

1. In a pump having operated and operating means, a shielding means for the operating means and having an overhung portion, and a U-shaped connecting rod operatively connecting said operated and operating means and having a part thereof passing through said overhung portion, and another part thereof operating outside of said shielding means.

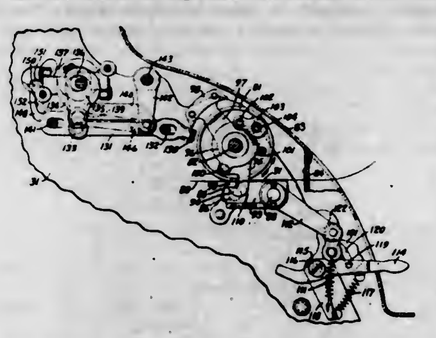


1,901,062. COUNTING AND BUNCHING DEVICE. WILLIAM E. SHARKEY, Middletown, Ohio, assignor to The Raymond Bag Company, Middletown, Ohio, a Corporation of Ohio. Filed Nov. 24, 1930. Serial No. 497,834. 11 Claims. (Cl. 93—93.)

1. The combination with an endless conveyor having means for simultaneously advancing a plurality of articles one behind the other, and driving mechanism for said conveyor, of a device having a plurality of sections movable successively into a position to receive said articles from said conveyor, operating mechanism to impart intermittent movement to said receiving device, means for connecting said operating mechanism with the driving mechanism for said conveyor, means for controlling said connection comprising a movable part, a controlling member mounted adjacent to the path of said articles and connected with said movable part and arranged to be engaged and actuated by said articles as they are advanced by said conveyor to actuate said movable part to cause said connection to be established and to maintain said connection so long as there is an article in engage-

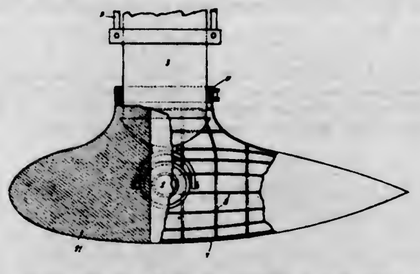
ment with said controlling member, and means for actuating said movable part to interrupt said connection when there is no article in engagement with said controlling member.

1,901,063. GUARD FOR WOOD HEEL TURNING MACHINES. WESLEY J. SHAW, Haverhill, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 23, 1927. Serial No. 242,105. 6 Claims. (Cl. 74—105.)



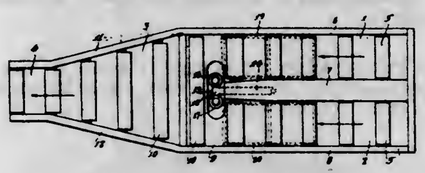
1. A safety device for machines having two horizontally spaced cutters for turning opposite sides, respectively, of a heel block, a clamp for holding the heel block, a jack upon which the clamp is mounted, and a member, carried by the frame on which the jack is swingable toward either cutter from an intermediate position between the cutters, comprising a separate guard for each cutter, the guards being relatively movable, and mechanism for supporting the guards and moving them into positions interposed between the cutters, respectively, and the clamp when the jack occupies the intermediate position, and for moving each guard, in a plane between the jack and the cutters, out of said interposed position, said mechanism comprising toothed gearing co-operating directly with said member on which the jack is swingable, and driven by swinging movement of the jack from the intermediate position toward either of the cutters, and arranged to drive that guard which is interposed between the jack and the cutter toward which the jack is swinging, out of interposed position between the jack and the last-named cutter.

1,901,064. CASH REGISTER. BERNIS M. SHIPLEY, Dayton, Ohio, assignor to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed Jan. 30, 1930. Serial No. 424,690. 18 Claims. (Cl. 235—130.)



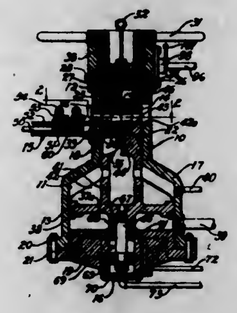
1. In a machine of the class described; the combination with a machine releasing mechanism; a feeding

means; and tension means for the feeding means; of means to releasably hold the tension means in contact with the feed means; means to separate the tension means from



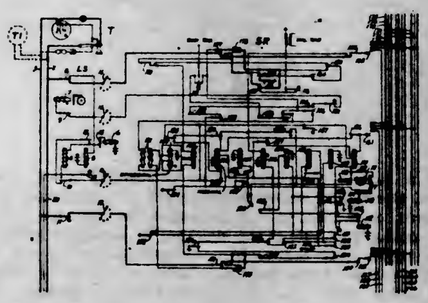
the feed means; and means operable by the holding means to lock the machine releasing mechanism against releasing movement.

1,901,065. MICROPHONE WINDSHIELD. RALPH K. SPOTTS, Los Angeles, Calif., assignor to Radio-Keith-Orpheum Corporation, a Corporation of Maryland. Filed Mar. 27, 1931. Serial No. 525,716. 4 Claims. (Cl. 179—178.)



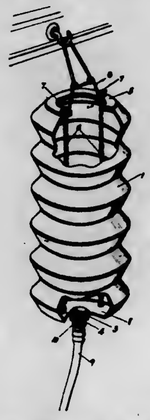
1. A sound pick-up device including a streamlined windshield assembly, and a microphone mounted within said assembly with its sound wave receiving surface parallel to the streamlining of said assembly.

1,901,066. CONVEYER SYSTEM. HERBERT E. TWOMLEY, Riverside, Calif., assignor to Clara B. Parker, executrix of George D. Parker, deceased. Filed Feb. 21, 1931. Serial No. 517,397. 11 Claims. (Cl. 198—32.)



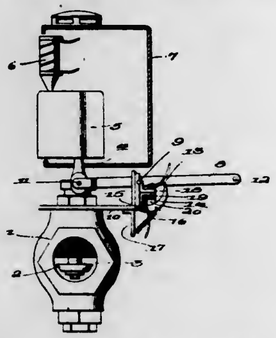
1. In a conveyer system in which several branch conveyers converge into a single continuing conveyer, parcel engaging stopping means for each of said branch conveyers, means mounting each of said stopping means upon its associated branch conveyer for movement into position to engage parcels on that conveyer, and means operable by arrival of a parcel at the junction from either branch conveyer for operating the stopping means in that conveyer to a non-obstructing position and for simultaneously moving the stopping means in the other conveyer to obstructing position.

1,901,067. MACHINE FOR CUTTING METAL BARS AND THE LIKE. HARRY F. VICKERS, Detroit, Mich. Filed Aug. 25, 1930. Serial No. 477,620. 7 Claims. (Cl. 164—56.)



1. A machine of the character described including, a body having a cylinder opening, a stationary die block in the body, a piston in the cylinder operable by fluid pressure, cylinder and piston means for returning the piston after actuation, a die block carried by the piston, there being an opening in the stationary die block and an opening in the die block carried by the piston in register with the opening in the stationary die block, and means for feeding work into the openings, said means including a member shiftable toward and away from the die blocks, a grip on the member operable to grip an object upon movement of the member toward the die blocks, and cylinder and piston means for shifting the member, and a control for the two cylinder and piston means whereby they operate in synchronism during the returning of the piston.

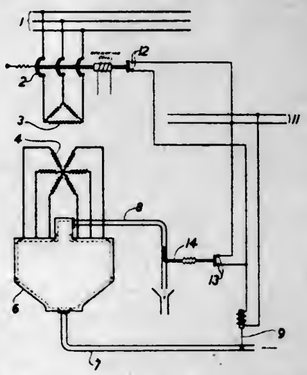
1,901,068. MULTIOFFICE TELEPHONE SYSTEM. JOHN WICKS, Oak Park, Ill., assignor, by mesne assignments, to Associated Electric Laboratories, Inc., Chicago, Ill., a Corporation of Delaware. Filed Sept. 28, 1929, Serial No. 395,882. Renewed Mar. 28, 1932. 53 Claims. (Cl. 179—27.)



1. In a telephone system, a selector repeater having access to local trunks and to outgoing trunks, means including said selector repeater and one of said trunks for extending connections to a subscriber's line, a busy test circuit in said selector repeater for determining the idle or busy condition of a called line, and a discriminating test circuit in said selector repeater for determining the class of connection in which a busy called line is engaged, said circuits being effective only when a call has been extended to a subscriber's line by way of a local trunk.

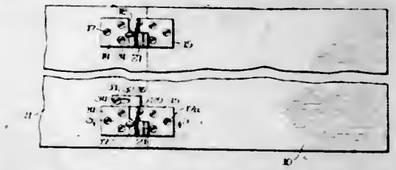
1,901,069. COLLAPSIBLE FOUNTAIN SYRINGE. HARRY S. WILLIAMS, Denver, Colo., assignor to William A. Bryans, Denver, Colo. Filed May 10, 1930. Serial No. 451,270. 4 Claims. (Cl. 128—227.)

1. A device of the character described comprising a circular bellow-like collapsible bag of water proof material, a bottom for the bag having an outlet nipple for connection thereto of a water tube, a flat metal ring secured to the top of said bag by vulcanization, a hinged ball secured to said ring at opposite diametric points, and flexible members connecting said ring and said bottom for limiting the extension of the bag.



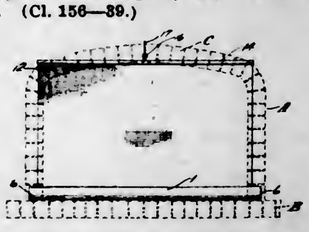
1,901,070. MOTOR OPERATED VALVE. ROBERT T. WILLIAMS, Quincy, Ill. Filed Nov. 22, 1929. Serial No. 409,037. 9 Claims. (Cl. 137—139.)

2. A motor controlled valve comprising a valve element, electrical responsive means for actuating said valve element, a connecting rod arranged between the actuating means and the valve element, a manually actuated lever operatively connected with said connecting rod and having ratchet teeth therein, a pawl in position to engage the ratchet teeth, and an electric switch responsive to a predetermined position of the pawl for controlling an auxiliary circuit to the electrically responsive actuating element.



1,901,071. RECTIFIER COOLING SYSTEM CONTROL. HAROLD WINOGRAD, Collingswood, N. J., assignor, by mesne assignments, to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Oct. 22, 1930. Serial No. 490,462. 7 Claims. (Cl. 175—363.)

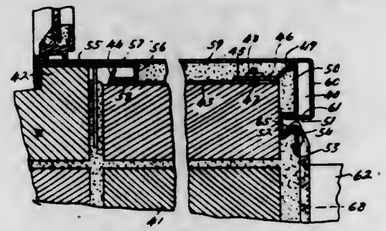
3. In an electric current rectifying system, an electric current rectifier having double walls to provide for the circulation of a cooling medium therebetween, a source of current supply for said rectifier, a circuit breaker operative to connect the said source of current with said rectifier, thermostatic means arranged adjacent the path of the cooling medium, a source of control current, and an electro-magnetically operated valve arranged in the



path of and controlling the flow of the cooling medium, said circuit breaker connecting an operating coil of said valve with said source of control current upon said operating connection of said circuit breaker to open said valve, said thermostatic means connecting the coil of said valve for opening the same with said source of control current at a pre-determined temperature of the cooling medium.

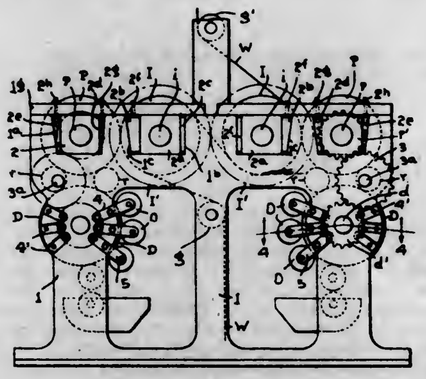
1,901,072. HINGE. GEDOR W. ALDERN, Rockford, Ill., assignor to American Cabinet Hardware Corp., Rockford, Ill., a Corporation of Illinois. Filed Jan. 29, 1930. Serial No. 424,162. 6 Claims. (Cl. 16—172.)

1. A hinge adapted to be secured to the surfaces of two parts to be connected comprising, in combination, a U-shaped socket member having an open side secured to one of said parts with the open side in abutment with the surface thereof, and a second member having a pintle thereon secured to the other of said parts, said pintle having a curved surface in rocking engagement with said socket abutting surface and being irregular in cross section for spaced engagement with opposed portions of said socket member.



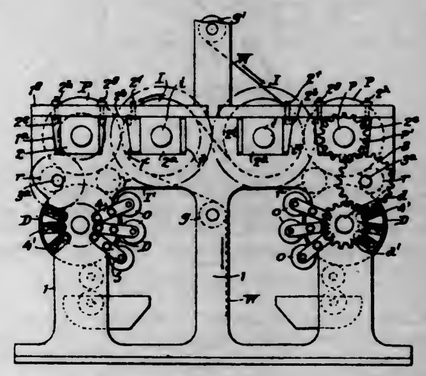
1,901,073. FIREPLACE SCREEN. AGARD H. BAILEY, Altadena, Calif. Filed Apr. 6, 1932. Serial No. 603,496. 1 Claim. (Cl. 156—39.)

In a device of the kind described, an elongated tubular housing having a longitudinal slot adjacent its intended upper side and plugs mounted in the ends of the housing,



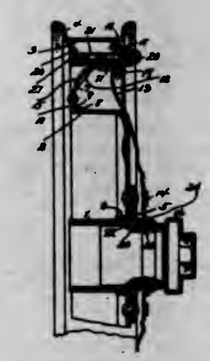
radially spaced pins extending through the said housing into the end plugs adjacent the intended lower side of the housing, the said pins having enlarged heads at their outer ends, the said heads extending beyond the periphery of the housing to act as supporting feet therefor, a roller mounted in the housing between the said end plugs, a screen attached at one end to the roller and wound thereon, the outer end of the screen being extended through the said slot and secured around a rod, a sleeve enclosing the said rod and end of the screen and having a slot to pass the screen, an eye attached to the sleeve, and a hook attached to the said eye.

1,901,074. RADIATOR SUPPORT. GUSTAF IVAR BARCLAY, Detroit, Mich., assignor to Detroit Steel Products Company, Detroit, Mich., a Corporation of Michigan. Filed July 19, 1928. Serial No. 294,019. 9 Claims. (Cl. 248—17.)



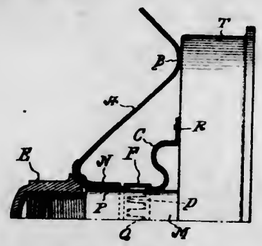
6. A radiator hanger support for use in a wall having a window opening comprising a portion extending into the opening and anchored to the wall and provided with a depending portion formed with inwardly and outwardly opening grooves adapted to respectively receive the radiator hanger and plaster at the inner side of the wall.

1,901,075. CHANGEABLE ROTARY PRESS. HENRY F. BECHMAN, Battle Creek, Mich., assignor to Duplex Printing Press Company, Battle Creek, Mich., a Corporation of Michigan. Filed Sept. 13, 1924. Serial No. 737,553. 12 Claims. (C. 101—220.)



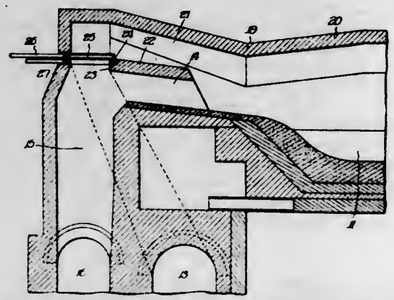
1. A rotary printing press having interchangeable plate and impression cylinders respectively adapted to print sheets of different length; and means for leading a web in either direction between the plate and impression cylinders; with means for inking the plate cylinders including inking drums and ink distributing rollers cooperating with the drums; and means whereby the ink distributing rollers can be set at either side of the ink drums in accordance with the lead of the web and direction of rotation of the plate cylinders.

1,901,076. CHANGEABLE ROTARY PRESS. HENRY F. BECHMAN, deceased, Battle Creek, Mich., by City National Bank & Trust Company of Battle Creek, Battle Creek, Mich., administrator, assignor to Duplex Printing Press Company, Battle Creek, Mich., a Corporation of Michigan. Original application filed Sept. 13, 1924, Serial No. 737,553. Divided and this application filed May 5, 1930, Serial No. 450,008. Renewed Aug. 16, 1932. 9 Claims. (Cl. 101—247.)



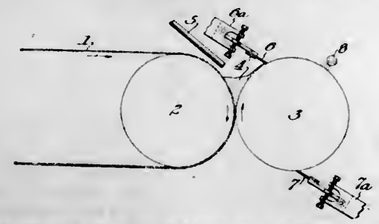
1. In a rotary cylinder web printing press, a main frame provided with a plurality of aligned openings in each side frame for the reception of journal boxes, each opening having an inclined side; rectangular journal boxes mounted in said openings; plate and impression cylinders mounted in said boxes, said cylinders being changeable in accordance with the length of page to be printed, wedge plates for laterally adjusting the plate cylinder boxes in their openings in accordance with the size of the cylinders employed, means for adjusting the wedges and means for leading a web through the press and between the plate and impression cylinders to be printed thereby.

1,901,077. VEHICLE WHEEL. WILLIAM N. BOOTH, Detroit, Mich., assignor to Kelsey-Hayes Wheel Corporation, Detroit, Mich., a Corporation of New York. Filed Apr. 7, 1924. Serial No. 704,889. 13 Claims. (Cl. 301—6.)



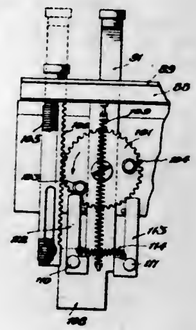
1. In a vehicle wheel, the combination with a brake drum, of a cover plate for said brake drum spaced therefrom, and means upon said cover plate for creating a flow of air through the space between said brake drum and cover plate.

1,901,078. VEHICLE WHEEL. PIERRE MARCEL BOURDON, Paris, France, assignor to Michelin et Cie., Clermont-Ferrand, France, a Corporation of France. Filed Dec. 14, 1931, Serial No. 580,962, and in France Jan. 17, 1931. 6 Claims. (Cl. 301—6.)



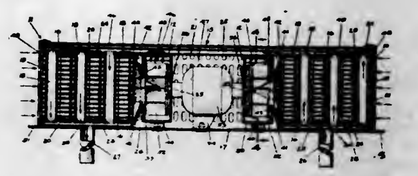
1. In a vehicle wheel construction, a vehicle wheel carrying teeth, a hub, a brake drum, and an elastic member on the brake drum having teeth to mesh with the teeth of the wheel, and securing means for the wheel for binding the teeth together and placing the elastic member under tension.

1,901,079. OPEN HEARTH FURNACE. ARTHUR J. BOYNTON, Chicago, Ill., assignor, by mesne assignments, to Open Hearth Combustion Company, Chicago, Ill., a Corporation of Delaware. Filed Dec. 30, 1929. Serial No. 417,319. 2 Claims. (Cl. 263—15.)



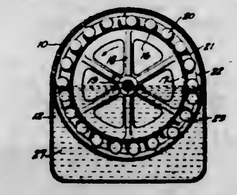
1. In an open hearth furnace, a furnace chamber, separate air and gas slag pockets and uptakes, a central gas port connected to the gas uptake, the air uptakes terminating in the floors of the furnace ends on either side of the gas port, a single air port joining the air uptakes and extending above the gas port, a passage through the gas port wall communicating with the air port, and means for closing said opening.

1,901,080. WIPER MECHANISM FOR COATING MACHINES AND PROCESS. DONALD B. BRADNER, Oxford, Ohio, assignor to The Champion Coated Paper Company, Hamilton, Ohio, a Corporation of Ohio. Filed Feb. 5, 1932. Serial No. 591,207. 7 Claims. (Cl. 91—43.)



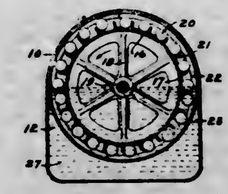
5. In an apparatus for forming on a moving surface an even layer of coating composition containing a liquid vehicle, including a movable doctor member, the association with said doctor member of plural means for cleaning the surface of the latter and preparing it for reuse which in the order of their occurrence are a wiping means, a means for delivering a stream of washing liquid, and a second wiping means.

1,901,081. MONEY HANDLING MACHINE. EDWARD J. BRANDT, Watertown, Wis., assignor to Brandt Automatic Cashier Company, Watertown, Wis., a Corporation of Wisconsin. Original application filed May 24, 1924, Serial No. 715,662. Divided and this application filed Feb. 4, 1932. Serial No. 590,956. 5 Claims. (Cl. 133—4.)



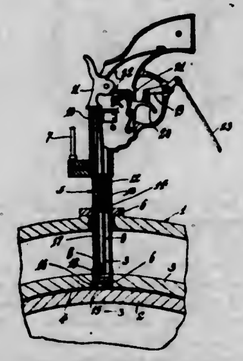
1. A money handling machine comprising a coin tray, coin ejecting mechanism, a slidable plate for operating the coin ejecting mechanism, arms pivotally connected to the plate, and means engageable with the arms for operating the plate.

1,901,082. HEATING APPARATUS FOR AUTOMOTIVE VEHICLES. VERNON J. BUTTERFIELD, Minneapolis, Minn., assignor to Tropic-Aire, Incorporated, Minneapolis, Minn., a Corporation of Delaware. Filed Feb. 20, 1929. Serial No. 341,403. 5 Claims. (Cl. 257—137.)



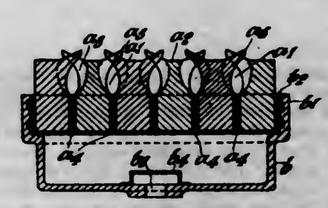
1. In combination, a heating element adapted to be positioned in a closed body and including a plurality of sets of air-circulating passages, the air-circulating passages of each set having their outer portions open to said closed body and the inner portions of the air-circulating passages of the different sets being arranged in spaced apart relation, means for supplying heat to said air-circulating passages, and a plurality of air propelling means between said air-circulating passages of the different sets, each including a casing situated in communication with the inner portions of a set of air-circulating passages, there being an air passage affording communication between each casing and the interior of said closed body, and an air propeller in each casing, for withdrawing air from said closed body and for returning the withdrawn air back into said closed body, the said air propeller being adapted to cause the said withdrawn and returned air to travel through said air-circulating passages, to thus be heated and kept in continuous circulation within the closed body.

1,901,083. HEAT TREATING EDIBLE SUBSTANCES. FRANK D. CHAPMAN, Berlin, Wis. Filed Jan. 19, 1931. Serial No. 509,733. 7 Claims. (Cl. 99—8.)



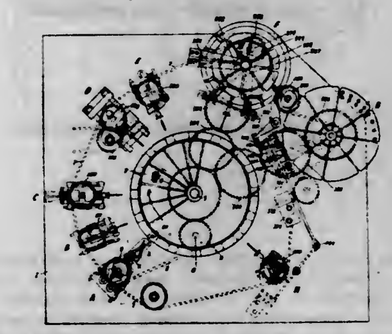
1. The process of heat treating edible substance, which comprises, transporting successive hermetically sealed batches of the substance for a definite period of time through a heated liquid having lower specific heat than that of pure water, and utilising the said specific heat to control the rate of heat transfer.

1,901,084. PROCESS OF TREATING MATERIAL. FRANK D. CHAPMAN, Berlin, Wis. Filed Jan. 19, 1931. Serial No. 509,734. 10 Claims. (Cl. 99—8.)



1. The process of treating edible substance, which comprises, transporting hermetically sealed batches of the substance through liquid having a predetermined density, and varying the depth of submergence and utilising the said density to control the degree of agitation of the batches during said transportation.

1,901,085. FLUID INJECTING DEVICE. CEYLON C. CORKRAN, San Francisco, Calif. Filed Aug. 7, 1928. Serial No. 298,097. 1 Claim. (Cl. 184—18.)

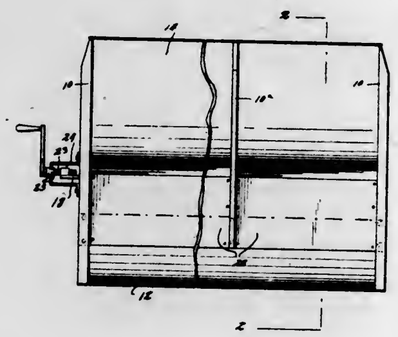


A lubricator device for an engine including a cylinder, a piston operatively mounted therein, a lubricator barrel in communication with said cylinder and having an oil feed means, a plunger operatively mounted in said barrel, a spring for yieldingly retaining said plunger in retracted position, a hammer adapted to strike said plunger to force the oil contained in said barrel into said cylinder, a trigger mechanism adapted to be manually actuated to operate said hammer, and means associated with said trigger for actuating said trigger and thereby said hammer in timed relation with the travel of the piston in the cylinder.

1,901,086. GAS BURNER. FREDERICK JOHN COX, Tufnell Park, London, England. Filed June 13, 1932, Serial No. 616,849, and in Great Britain May 28, 1931. 3 Claims. (Cl. 158—104.)

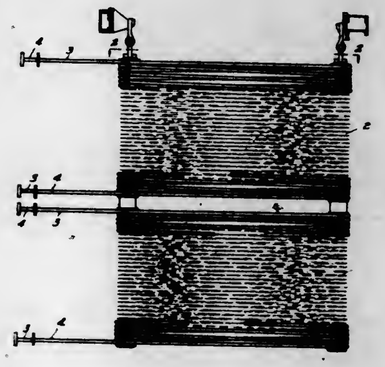
1. A gas burner comprising a burner surface element having a combustion chamber arranged below its outer surface, and means for supplying combustible gas to the combustion chamber, the surface element having a slot extending from the combustion chamber to the outer surface of the element, each side of the slot being in the form of a series of undulations forming projections extending from the opposite side of the slot over the combustion chamber and over said means.

1,901,087. APPARATUS FOR MECHANICALLY MOUNTING ELECTRODES OF THERMIONIC TUBES. WALTHER DALHEIMER, Eindhoven, Netherlands, assignor to Radio Corporation of America, a Corporation of Delaware. Filed Oct. 26, 1927, Serial No. 228,791, and in the Netherlands Aug. 12, 1926. 33 Claims. (Cl. 250—27.5.)



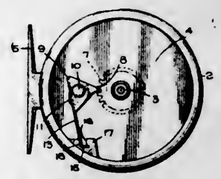
1. A device of the character described, comprising a stationary frame, a rotatable table mounted on said frame, a chuck for holding a glass stem at the periphery of said rotatable table, and a plurality of mechanisms adjacent the periphery of said table for mounting electrodes on the glass stems in said chuck, the said mechanisms being mounted to move radially of said table, and common actuating means for moving said table step by step to bring said chuck into registry with said mechanisms in succession and to move said mechanisms in succession radially of said table to bring them into and out of the path of the traveling stem.

1,901,088. METHOD OF MAKING HOSE CONNECTIONS. BURNS DICK, Ferguson, Mo., assignor to Wagner Electric Corporation, St. Louis, Mo., a Corporation of Delaware. Filed Oct. 6, 1930. Serial No. 486,679. 2 Claims. (Cl. 29—148.2.)



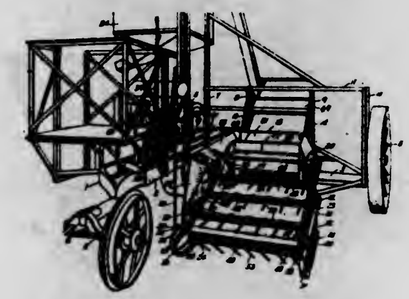
1. The method of making pressure-tight connection between a hose of compressible material and a fitting member, which comprises placing a tubular sleeve of ductile material around the hose end and a cylindrical nipple in the end of the hose, said hose end and sleeve abutting the fitting member and said sleeve being of substantially the same internal diameter as the normal external diameter of the hose except as to the part receiving the extremity of the hose, which part is of smaller diameter than the hose diameter, and then progressively compressing the sleeve from its open end toward the fitting member and throughout substantially its entire length.

1,901,089. HOG FEEDER. JOSIAS D. DUUCK, Sequim, Wash. Filed Feb. 24, 1928. Serial No. 256,780. 1 Claim. (Cl. 119—56.)



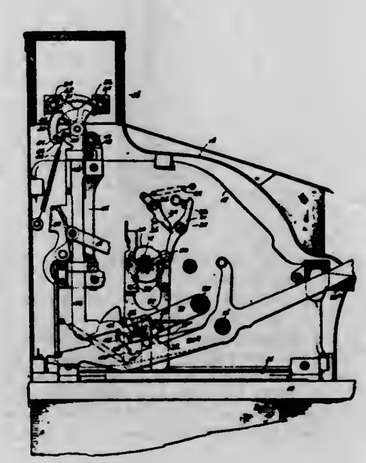
A hog feeder as described comprising a magazine having a longitudinally disposed channel in the bottom thereof, a pair of feed troughs positioned beneath said magazine, a channeled feed guiding member secured to the bottom of the magazine, an apertured bottom member secured to the bottom of said feed guiding member, an apertured slide member engaging said bottom member, a pair of guard plates dependingly supported above said troughs on opposite sides of said feed guiding member, a plate engaging the outer edge of one of said troughs, means for securing said plate in upstanding position, and slide operating means carried by an end of the magazine, said slide operating means consisting of a bracket mounted on one end wall of the magazine, an internally threaded lug secured to one end of the apertured slide member, and a crank journaled in the bracket and having a screw threaded shank engaging the internal threads of the lug to shift the slide member longitudinally.

1,901,090. MULTIPLE HEAT EXCHANGE COIL. MARTIN EULE, Berlin-Spandau, and ERICH ANDERS, Berlin-Charlottenburg, Germany, assignors to Siemens-Schuckertwerke Aktiengesellschaft, Berlin-Siemensstadt, Germany, a Corporation of Germany. Filed July 16, 1931, Serial No. 551,148, and in Germany Nov. 30, 1929. 3 Claims. (Cl. 257—255.)



1. A packet of tubing for heat exchangers or the like, consisting of a plurality of tube lengths, wound into similarly shaped independent helical coils, some running clockwise and others counterclockwise all of said coils being coaxially disposed relatively to one another, each of said coils having the shape of a flattened cylinder, whose lateral surfaces constitute two parallel planes spaced apart from one another, the turns of each coil being inserted between the turns of an oppositely wound coil, the number of spaced parallel planes in which the straight tube portions of the coils are located being equal to the total number of parallel coil sides contained in the packet.

1,901,091. FISHING REEL. JOHN REGINALD FAWCETT, Studley, England, assignor to William Hall & Company Limited, Studley, England, a Company of Great Britain. Filed Sept. 30, 1931, Serial No. 566,118, and in Great Britain Dec. 19, 1930. 5 Claims. (Cl. 242—84.6.)



1. A fishing reel comprising a drum forming the reel proper, a supporting structure on which said drum is mounted rotatably, a toothed wheel associated with the drum, a pawl coacting with said toothed wheel, a lip along one side of said pawl, a blade spring acting on said pawl, one end of said spring blade being bent over to project transversely of the main portion, a housing on the supporting structure, and an internal shoulder in said housing behind which shoulder the bent over end of the spring engages the main part of said spring engaging the pawl and being enclosed between the inner wall of the supporting structure and the lip on said pawl to prevent sideways displacement of said spring.

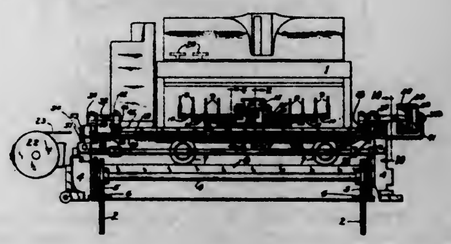
1,901,092. CORN HARVESTING MACHINE. HENRY DAN FISK, Independence, Mo., assignor, by mesne assignments, to Gleaner Harvester Corporation, Independence, Mo., a Corporation of Delaware. Filed Oct. 20, 1930. Serial No. 489,910. 8 Claims. (Cl. 56—364.)

1. In a machine of the character described including a frame, a cylinder and pick-up conveyor housing pivotally supported by the frame, a threshing and shelling cylinder in the cylinder housing, and a pick-up mechanism supported in the front of said housing for picking up and discharging grain directly into the cylinder.

1,901,093. CASH REGISTER. FREDERICK L. FULLER, West Orange, N. J., assignor, by mesne assignments, to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Original application filed Mar. 20, 1919, Serial No. 283,720. Divided and this application filed June 24, 1927. Serial No. 201,156. 21 Claims. (Cl. 235—23.)

1. In a cash register, clerk's and transaction keys, a one-piece indicator bearing both clerk's and transaction indicia, and means for controlling said indicator by a clerk's key or a transaction key or by simultaneous operation of both, to expose the proper indication.

1,901,094. ADHESIVE TAPE. JOHN GABOSCH, Chicago, Ill., assignor to The Kendall Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 13, 1930. Serial No. 488,203. 1 Claim. (Cl. 154—43.)



An adhesive tape comprising a flexible backing, a reinforcing element of open mesh fabric, and an adhesive mass penetrating said fabric, binding the same to said backing and providing a pressure-sensitive adhesive surface for applying the tape.

1,901,095. MODIFIED COTTON. CHARLES F. GOLDTHWAIT, Mount Lebanon Township, Allegheny County, Pa., assignor, by mesne assignments, to Textile Machinery Corporation, a Corporation of Delaware. Filed June 4, 1931. Serial No. 542,105. 4 Claims. (Cl. 8—20.)

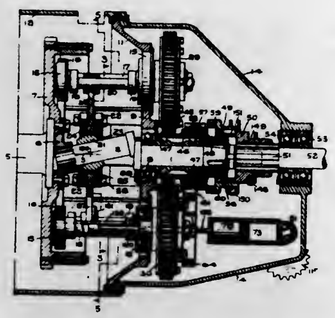
1. A modified cotton fibre retaining approximately its original dimensions and characterised by the X-ray diffraction diagram of highly oriented cellulose.

3. A modified mercerised cotton fibre retaining approximately its original dimensions and characterised by the X-ray diffraction diagram of highly oriented cellulose.

1,901,096. TABULATOR REBOUND TRAP. FREDERICK P. GORIN, Seattle, Wash., assignor to Gorin Shocklesspeed Tabulator Company, King County, Wash. Filed Aug. 11, 1928. Serial No. 299,082. 10 Claims. (Cl. 197—176.)

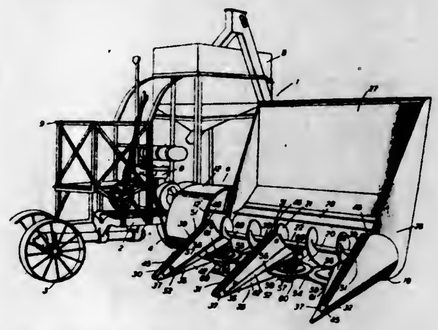
4. In a typewriter, tabulating mechanism, a carriage rebound trap, means for setting the trap, and means acted upon by the carriage movement in letterfeed direction to unset the trap.

1,901,097. CASH REGISTER. CHARLES W. GREEN, Ilion, N. Y., assignor, by mesne assignments, to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Original application filed Oct. 20, 1925, Serial No. 63,695. Divided and this application filed June 7, 1927. Serial No. 197,088. 17 Claims. (Cl. 235—23.)



1. In a machine of the class described, a special key, a pair of normally concealed indicators associated with

said key, a pair of parallel links for supporting the opposite ends of each of said indicators, a bail connecting the links at one end of said pair of indicators, and means for



rocking said bail to rock said pairs of links to cause said related pair of indicators to be elevated into exposed position.

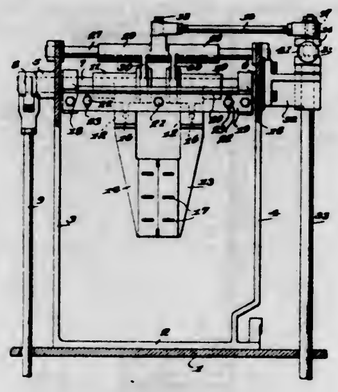
1,901,098. VARIABLE SPEED DEVICE. EDWARD EWART GUINNESS, Rednal, near Birmingham, England, assignor of one-eighth to Hubert Humphreys, Birmingham, England. Filed Nov. 19, 1931, Serial No. 576,167, and in Great Britain July 29, 1931. 1 Claim. (Cl. 74—54.)

A variable speed gear of the kind specified and comprising, a driving member in the form of a crank shaft having a crank pin inclined to its axis, a collar slidable on said crank pin and in which the latter may turn freely, connecting rods carried by said collar, rocker shafts arranged adjacent said crank shaft and to which said connecting rods are connected respectively, a variable speed driven member one way clutch mechanism adapted to transmit a one way drive to said variable speed driven member from said rocker shafts and means adapted to return said connecting rod mechanism from its maximum throw to its minimum throw position, such means comprising a push rod axially slidable in one of said rocker shafts which is made hollow for this purpose, a projection on said push rod extending through a longitudinal slot provided in the said hollow rocker shaft and abutting the connecting rod associated with the said rocker shaft, and means associated with said push rod and adapted to slide the push rod axially to return said connecting rod mechanism to the minimum throw position.

1,901,099. CUTTER MECHANISM FOR CORN HARVESTERS. STEPHEN H. HALE, Kansas City, Mo., assignor, by mesne assignments, to Gleaner Harvester Corporation, Independence, Mo., a Corporation of Delaware. Filed Apr. 11, 1930. Serial No. 443,363. 12 Claims. (Cl. 56—102.)

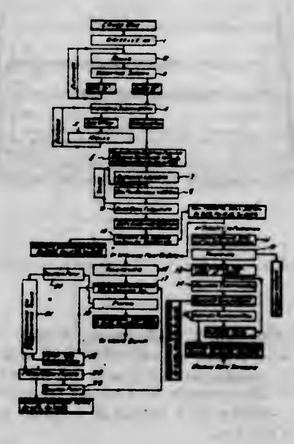
1. In combination with a longitudinal conveyor, cutter mechanism including rotary cutter members having teeth inclined in their direction of rotation and means for rotating said members at different peripheral speeds to direct cut material toward one end of the conveyor.

1,901,100. ILLUMINATED PUMP DIAL. CHARLES W. HOFFRITZ, Los Angeles, Calif. Filed June 27, 1930. Serial No. 464,413. 8 Claims. (Cl. 40—130.)



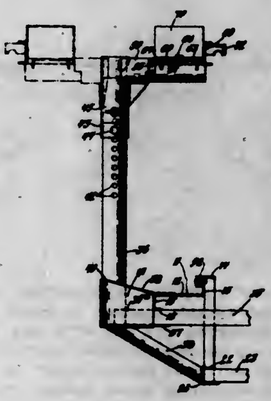
1. In combination with display apparatus, a dial casing carried thereby, a transparent cover for the dial, a glass dial having a series of translucent characters thereon displayed thru the transparent cover, a neon tube arranged in the casing concentrically of said dial and diffusing light upon the dial so as to illuminate the characters thereof, a transformer case adjacent to the dial into which the neon tube extends, and a fluid-tight seal means rendering the separate parts of the dial, transformer, cover, and tube proof against entrance of moisture, air and the like.

1,901,101. LABEL PICKING MECHANISM. CARL HOLM, Worcester, Mass., assignor to Economic Machinery Company, Worcester, Mass., a Corporation of Massachusetts. Filed Sept. 21, 1931. Serial No. 564,167. 23 Claims. (Cl. 216—54.)



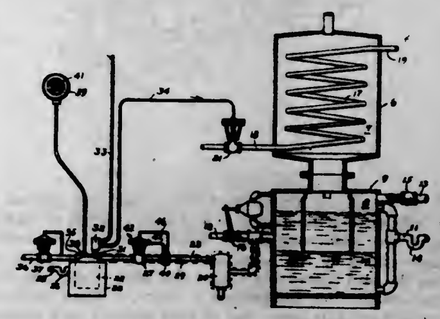
1. In a labeling machine, the combination of a label holder and a label picking mechanism for withdrawing

the exposed label from the holder and advancing the same to the article to be labeled, said picking mechanism com-



prising a pair of pickers and means for relatively moving said pickers while in contact with and prior to the withdrawal of the exposed label from the label holder.

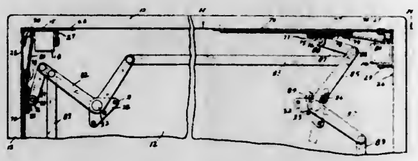
1,901,102. ORE CONDITIONING PROCESS. GROVER J. HOLT, Crosby, RICHARD O. HOCKING, Nashwauk, AMEL E. MATSON, Hibbing, and ARTHUR K. KNICKERBOCKER, deceased, St. Paul, Minn., by Francis D. Butler, special administrator, St. Paul, Minn., assignors to The Reclamation Company, St. Paul, Minn., a Corporation of Delaware. Filed May 29, 1930. Serial No. 457,430. 10 Claims. (Cl. 75—17.)



1. A method of conditioning manganiferous ore comprising sizing the ore, converting the iron content into magnetic iron oxide, and the manganese content into manganous oxide, separating the particles having a high iron content, sulphidizing the remainder to render the manganese compound more susceptible to separation by flotation and then subjecting the treated material to flotation.

1,901,103. MEANS FOR TRANSPORTING VEHICLES AND THE LIKE. IRVING H. JUDD, Detroit, Mich., assignor to Whitehead & Kales Company, River Rouge, Mich., a Corporation of Michigan. Filed Aug. 17, 1931. Serial No. 557,662. 25 Claims. (Cl. 280—33.1.)

11. In a transportation means of the class described, a runway for receiving vehicles to be transported, posts extending upwardly from opposite sides of the runway, and a ramp for one of the vehicles to be carried mounted for rotary, longitudinal and vertical movements upon said posts.



1,901,104. CONDENSER CONTROL APPARATUS. FLOYD L. KALLAM, South Gate, Calif. Filed Jan. 8, 1929. Serial No. 330,121. 11 Claims. (Cl. 196—132.)

1. In apparatus for producing a mixed condensate from hydrocarbon vapors, means providing a condenser chamber, means providing a stream of a cooling medium flowing through said chamber, means automatically operable to maintain a constant pressure in the chamber, and means automatically operable in accordance with the volatility of the condensate to so control the flow rate of said stream as to effect the production of a condensate of a constant and predetermined volatility.

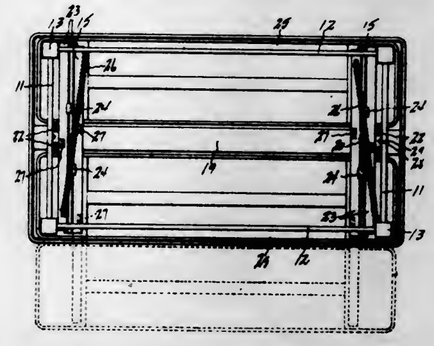
11. In a continuously operating apparatus for fractionating a variable mixture of hydrocarbon vapors, a condenser receiving said mixture for condensing a fraction of the vapors thereof, and control means to variably determine the fraction of condensation in said condenser, said means operable in direct accordance with the vapor pressure of the condensed product of the condenser to continuously maintain the said vapor pressure of said condensed product at a constant value.

1,901,105. FOLDING TABLE. JOHN KOVATS, Fairfield, Conn., assignor to The Leg-O-Matic Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Feb. 28, 1930. Serial No. 432,069. 17 Claims. (Cl. 45—11.)

1. In a table, a plurality of supporting legs pivoted to the table and foldable against it, linked rigid pivoted means for connecting the legs with each other so that movement of any leg will give similar movement to the other legs, and an individual locking means for each leg for holding said connecting means against movement when the legs are in supporting position.

1,901,106. FOLDING TABLE. JOHN KOVATS, Bridgeport, Conn., assignor to The Leg-O-Matic Company, Bridgeport, Conn., a Corporation of Connecticut. Filed May 31, 1930. Serial No. 458,011. 14 Claims. (Cl. 45—11.)

1. In a table, a plurality of supporting legs pivoted to the table on individual pivots and each capable of folding against the under side of the table, a movable connecting means carried by the table, and a hinged connection between the said connecting means and each of the legs, said hinged connection comprising a pair of links pivotally connected at their ends, one of said links of each connection having its free end pivoted to a leg and the other having its free end pivoted to the connecting means, said connection adapted to have the pivotally connected ends of their links pressed downwardly whereby said connections are capable of transmitting movement from any leg to each of the other legs to extend the legs to supporting position and to fold them against the table as the hinged means is straightened and collapsed.



1,901,107. FOLDING TABLE. JOHN KOVATS, Bridgeport, Conn., assignor to The Leg-O-Matic Company, Bridgeport, Conn., a Corporation of Connecticut. Filed May 31, 1930. Serial No. 458,012. 14 Claims. (Cl. 45—11.)

1. In a table, a plurality of supporting legs pivoted to the table on individual pivots and each capable of folding against the under side of the table, and a movable connection connected to each of the legs and capable of transmitting movement from any leg to each of the other legs to extend the legs to supporting position and to fold them against the table, said connection including rigid

straps, pivotally connected links connecting said straps to each other, and slotted guideways by which said straps are guided in their movements.

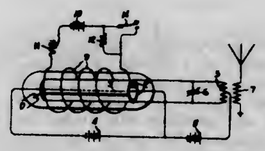
1,901,108. TABLE. OAK LANDAW, Nappanee, Ind., assignor to Mutschler Bros. Co., Nappanee, Ind. Filed May 19, 1930. Serial No. 458,565. 11 Claims. (Cl. 45—113.)

1. In combination, a table frame, a table top shiftable relative to said frame, an extension leaf slidable relative to said frame, means carried by said top for normally holding said leaf therebeneath, and means for urging said leaf to extended position upon release of said leaf by an upward movement of the top.

1,901,109. PROCESS FOR THE PRODUCTION OF STARCH. WERNER MAIER, Baden-Baden, Germany, assignor to American Lurgi Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 22, 1932, Serial No. 588,197, and in Germany Jan. 18, 1928. 4 Claims. (Cl. 127—71.)

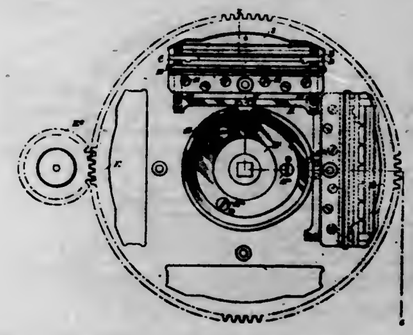
1. Process for the production of finely divided starch forming a paste with cold water which comprises atomising an aqueous suspension of starch into a stream of heated air containing water vapor in such amount that the vaporization of water from the atomised particles occurs at a temperature above the gelatinising temperature of the starch and below a temperature at which further alteration of the starch is effected, whereby the starch is simultaneously gelatinised and dried.

1,901,110. REVERSIBLE MAT. RAYMOND J. MAMMES, Los Angeles, Calif., assignor to Metro-Goldwyn-Mayer Corporation, Culver City, Calif., a Corporation of New York. Filed Dec. 12, 1927. Serial No. 239,354. 3 Claims. (Cl. 88—16.)



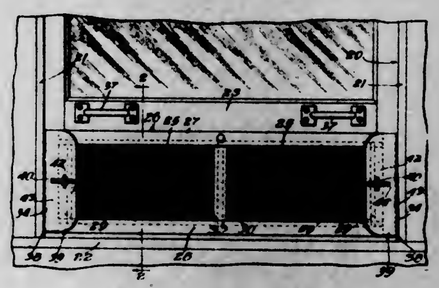
1. An apparatus for producing reversible mats, comprising a frame of non-light reflecting material, a plate of transparent material positioned in said frame, a portion of said plate being covered with opaque but light reflecting material, a non-reflective background for said plate, separate means for illuminating the front and rear of said plate, said illuminating means being adapted to be selectively operated to illuminate the front or rear of said plate, and a camera directed toward said plate and adapted to photograph one side thereof.

1,901,111. ANTIFREEZING SOLUTION. REIBUKE MASUDA, Toledo, Ohio, assignor to Larrowe-Suzuki Company, Detroit, Mich., a Corporation of Ohio. Filed Feb. 17, 1930. Serial No. 429,212. 3 Claims. (Cl. 252—5.)



1. An anti-freezing liquid comprising a water solution of a betaine.

1,901,112. SIGNAL TRANSMITTING MEANS. ELMER D. MCARTHUR, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 20, 1928, Serial No. 320,700. Renewed Oct. 15, 1932. 6 Claims. (Cl. 250—17.)

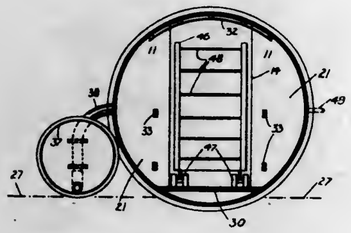


1. The combination, in a high frequency transmitter, of an electron discharge device, having a cathode and a plurality of anodes, said anodes being symmetrically arranged with respect to the cathode and adjacent thereto, an oscillatory circuit connected between said anodes, means for producing a unidirectional magnetic field between said anodes, said magnetic field being independent of current in said oscillating circuit, and means for varying said magnetic field in accordance with the signal to be transmitted thereby to vary the intensity of the oscillations produced in said oscillatory circuit.

1,901,113. SLUG CASTING MACHINE. RICHARD E. MEAD, Queens Village, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Aug. 8, 1930. Serial No. 473,964. 18 Claims. (Cl. 199—55.)

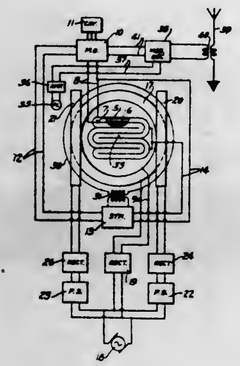
1. A slug casting mold comprising side and end walls which define between them a cavity wherein the slug is cast, one of the side walls of the mold being fixed as a whole, and the other side wall thereof presenting a relatively fixed rear section which determines the effective front section which restricts the width of the mold cavity at the front.

1,901,114. VENTILATOR. AUGUST D. MEISELBACH, Chicago, Ill. Filed July 7, 1930. Serial No. 465,861. 5 Claims. (Cl. 98—99.)



5. In a foraminous structure of the kind described and made up of a plurality of substantially parallel strips, the strips made of thin sheet metal and corrugated transversely and nested together, the strips being interlocked longitudinally by the nesting and means holding the strips thus nested.

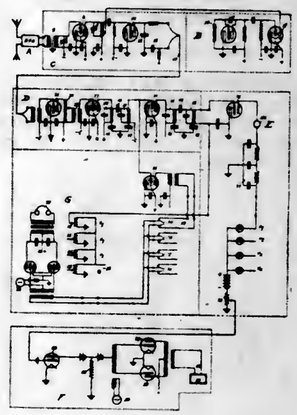
1,901,115. PREPARATION OF BREAD AND THE LIKE FOR WRAPPING. WILHELM MULLER, Enfield, near Sydney, New South Wales, Australia, assignor of one-third to Automatic Bread Baking Company Limited, and one-third to Francis Hawkins, Sydney, Australia. Filed Apr. 24, 1930, Serial No. 447,074, and in Australia June 6, 1929. 1 Claim. (Cl. 34—30.)



In and for the preparation of bread and the like for wrapping a vacuum chamber comprising a cylindrical shell

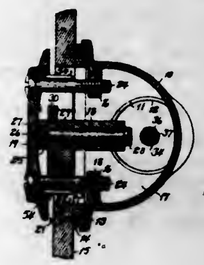
with end walls having doorways, airtight doors hingedly mounted upon said end walls and having fastenings, a flooring, a moisture screen arranged across the top of the said chamber, a drainage pipe with suitable control cock,

a pressure release valve and gauge, a condenser connected by pipe to said vacuum chamber and having a gauge glass, and drainage pipe with control cock and vacuum inducing means coupled to said condenser.



1,901,116. COLOR TELEVISION. ALEXANDER MCLEAN NICOLSON, New York, N. Y., assignor to Communication Patents, Inc., New York, N. Y., a Corporation of Delaware. Filed May 8, 1930. Serial No. 450,630. 20 Claims. (Cl. 178—6.)

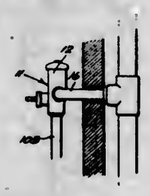
1. In a television system, means for producing an arc for scanning an object, electrode rails for predetermining the path of said arc, means for moving said arc, and means for imparting various colors to said arc.



1,901,117. RECEIVING SYSTEM. HAROLD O. PETERSON, Riverhead, Long Island, N. Y., assignor to Radio Corporation of America, a Corporation of Delaware. Filed Jan. 25, 1930. Serial No. 423,319. 13 Claims. (Cl. 250—20.)

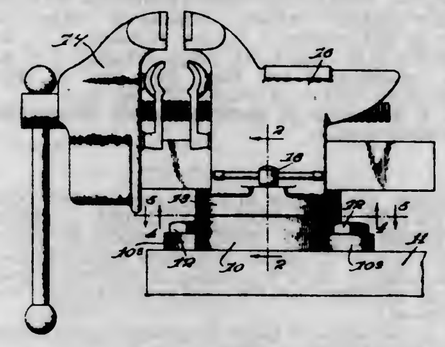
1. In combination, an antenna; means for amplifying the energy collected by the antenna; reactionless monitoring means for determining the strength of the amplified energy, said reactionless monitoring means comprising an electron discharge device having a control electrode, and a substantially non-reactive path connecting said control

electrode to said amplifying means; means for rectifying the amplified energy; and, means for translating the rectified energy.



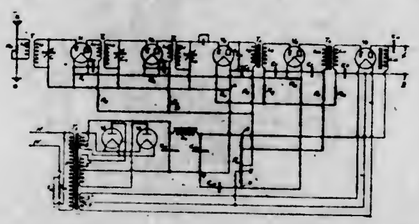
1,901,118. WASTE AND OVERFLOW FITTING. ELTON A. POPE, Oakville, Conn., assignor to The Chase Companies, Incorporated, Waterbury, Conn., a Corporation. Filed Feb. 29, 1932. Serial No. 595,705. 6 Claims. (Cl. 4—203.)

1. In a waste-and-overflow fitting, the combination with an overflow-head; of a face-plate having a substantially unbroken exposed front surface and spaced forwardly of the said overflow-head in position to receive a bathtub-wall therebetween, and provided with means to form an overflow-passage between the rim of the face-plate and the bathtub-wall; a waste-valve; and control-means for the said waste-valve including a finger-lever mounted upon the rear face of the said face-plate and projecting outwardly beyond the periphery thereof.



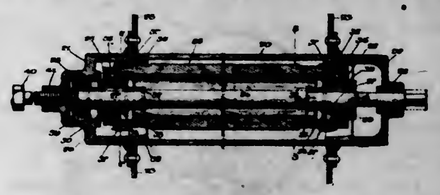
1,901,119. FLUSH VALVE. WALTER PUTNAM, Pasadena, Calif. Filed Jan. 5, 1931. Serial No. 506,714. 6 Claims. (Cl. 137—93.)

6. A valve device of the character described, including: a fluid delivery member having a fluid inlet and an outlet opening; a valve means having a closure element to cooperate with said outlet opening and fluid actuated means tending to move said closure element toward open position when there is fluid pressure in said delivery member and to move said closure element into a position closing said outlet opening when a condition of vacuum is exerted in said delivery member; a fluid operated mechanism having a moving part which is movable between holding posi-



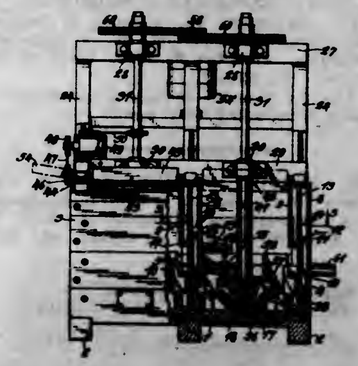
tion and releasing position in accordance with the presence or absence of fluid pressure in said mechanism, said moving part in said holding position maintaining said closure element in its position closing said outlet opening; and means for controlling the fluid pressure in said fluid operated mechanism.

1,901,120. SWIVEL BASE CONSTRUCTION. WILLIAM A. RANKIN, Rock Island, Ill., assignor to Birtman Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 18, 1931. Serial No. 581,970. 4 Claims. (Cl. 81—41.)



1. Swivel base construction, including; a base member; a body member pivotally mounted on the base member; and a clamping screw carried by one of said members, said member having a portion of its periphery recessed opposite said clamping screw whereby tightening of the clamping screw will cause engagement between said members at two points opposite said clamping screw.

1,901,121. RADIO RECEIVING SYSTEM. ALGER S. RIGGS, North Bergen Township, Hudson County, N. J. Filed Mar. 2, 1927, Serial No. 172,093. Renewed May 28, 1932. 11 Claims. (Cl. 250—27.)

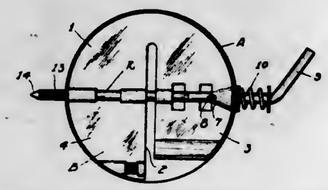


1. A radio receiving system including a plurality of electron tubes connected in cascade, an alternating current power source, a rectification circuit for supplying rectified current to the circuits of said electron tubes, a distribution circuit connected with said rectification circuit and independent reactance devices interposed in series between points in each of the output circuits of said electron tubes and the input circuits of selected electron tubes and points in said power distribution circuit for energizing the output circuits of each of the electron tubes while preventing interference in said electron tube circuits from said alternating current source.

1,901,122. VIBRATOR FOR SCREENS AND OTHER APPARATUS. SAMUEL DAVIS ROBINS, Hewlett, N. Y., assignor to Robins Conveying Belt Company, Passaic, N. J., a Corporation of New Jersey. Filed Jan. 6, 1932. Serial No. 585,061. 16 Claims. (Cl. 74—14.)

1. A vibrator comprising a vibratory element, a shaft, an annular mass element surrounding said shaft and bodily movable by generated centrifugal force into rolling contact with said vibratory element, an annular element also surrounding the shaft and affording an internal bearing for said mass element, and a connection between said internal bearing element and the shaft whereby the bearing element is positively rotatable with the shaft yet movable in paths transversely of the axis of rotation of the shaft.

1,901,123. FLOTATION MACHINE. JOSEPH P. RUTH, Jr., Denver, Colo., assignor to The Ruth Company, Denver, Colo., a Corporation of Colorado. Filed Sept. 14, 1931. Serial No. 562,750. 13 Claims. (Cl. 261—93.)

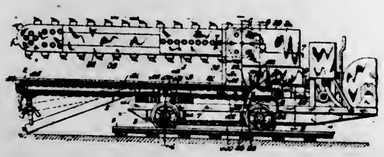


1. A flotation machine comprising, a casing having a bottom, an impeller bowl located near the bottom of the casing, the side of the bowl forming a conical surface, an impeller having a body portion whose outside shape corresponds to that of the inside of the bowl, means, including a shaft, for supporting the impeller so that it may rotate about an axis that coincides with the axis of the bowl, the upper surface of the impeller having a hub for the reception of the lower end of the shaft, a sleeve surrounding the hub, a pipe surrounding the shaft and having its lower end in contact with the upper end of the sleeve, a plurality of radial blades extending upwardly from the upper surface of the impeller, means for introducing pulp into the top of the impeller adjacent the shaft, and means for rotating the impeller.

1,901,124. PROCESS AND PRODUCT FOR COATING MOLDS AND CORES. CHARLES MARSHALL SAEGER, Jr., Bowmanstown, Pa. Filed Feb. 17, 1930. Serial No. 429,228. 21 Claims. (Cl. 22—189.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

1. The method of producing molds or cores consisting of selecting the molding sand or components, tempering same, making the mold or core, coating one or more surfaces of the mold or core with a hydrated rubber mixture, and dehydrating said coating to the desired extent.

1,901,125. DAMPER. JOHN C. F. SCHAFER, Mount Pulaski, and JOSEPH F. BLESER, Springfield, Ill.; said Bleser assignor to said Schafer. Filed Jan. 4, 1932 Serial No. 584,638. 4 Claims. (Cl. 126—292.)



1. A damper for a pipe, comprising a plate of substantially uniform thickness throughout and having a slit extending inwardly from the periphery to enable the plate to straddle said pipe; a pointed screw-threaded damper rod removably mounted on said plate; screw-threaded means on said plate at one side of said slit to receive and guide the threaded rod during the perforating of the pipe; and an abutment formed from said plate on the opposite side of said slit and extending to both sides of said plate to engage the interior wall of the pipe when the latter is straddled by said plate and said rod is rotatably fed in said threaded guiding means.

1,901,126. EXPLOSIVE COMPOSITION. ROBERT SCHLESS, Emporium, Pa., assignor to Pennsylvania Powder Company, Emporium, Pa., a Corporation of Pennsylvania. Filed Oct. 29, 1930. Serial No. 492,092. 14 Claims. (Cl. 52—11.)

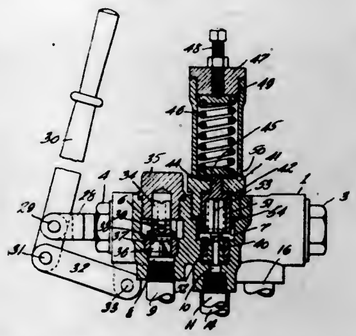
1. A dope for dynamite containing an explosive ingredient and a comminuted cereal straw.

1,901,127. MINING MACHINE. LEON E. SIMMONS, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Dec. 24, 1930. Serial No. 504,610. 40 Claims. (Cl. 262—28.)

1. In a mining machine, a portable support, a guiding frame pivotally mounted on said support for horizontal swinging movement relative thereto, kerf cutting mechanism mounted on said guiding frame for bodily movement therealong including a pivoted kerf cutter swingable in a vertical plane at one side of said guiding frame and arranged to cut, during movement of said kerf cutting mechanism along said guiding frame, a kerf parallel to the direction of such movement, and motor operated devices for feeding said cutting mechanism relative to said guiding frame, for swinging said kerf cutter, and for swinging said guiding frame relative to said support.

1,901,128. ELECTRIC LAMP. CHARLES G. SMITH, Medford, Mass., assignor to Raytheon Inc., Cambridge, Mass., a Corporation of Massachusetts. Filed Apr. 15, 1924, Serial No. 706,658. Renewed July 19, 1932. 16 Claims. (Cl. 176—122.)

1. An electric lamp comprising a vessel containing a rarefied mixture of a gas having a relatively low ionizing potential and a gas having a relatively high ionizing potential, a source of electrons, and means in said vessel whereby substantially all of said electrons are accelerated to a higher velocity than that corresponding to the ionization potential of the gaseous constituent of said mixture having the highest ionization potential and whereby said gas is bombarded by the accelerated electrons.

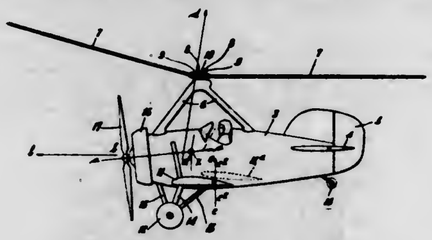


1,901,129. CELLULOSIC COMPOSITION OF MATTER CONTAINING PHENYL STEARATE. HENRY B. SMITH and STEWART J. CARROLL, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed June 25, 1931 Serial No. 546,910. 4 Claims. (Cl. 106—37.)

2. A composition of matter comprising nitrocellulose and phenyl stearate.

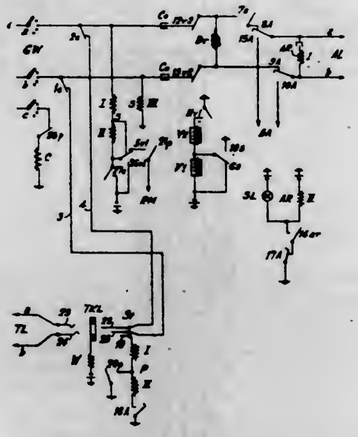
1,901,130. CELLULOSE ORGANIC DERIVATIVE COMPOSITION OF MATTER CONTAINING A BB'-DIALKOXY DIETHYL ADIPATE. HENRY B. SMITH, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 10, 1931. Serial No. 556,327. 8 Claims. (Cl. 106—40.)

2. A composition of matter comprising cellulose acetate and a lower BB'-dialkoxy diethyl adipate.



1,901,131. VALVE DEVICE. THOMAS F. STACY, Piqua, Ohio, assignor to The French Oil Mill Machinery Co., Piqua, Ohio. Filed May 10, 1929. Serial No. 362,074. 9 Claims. (Cl. 138—16.)

1. A valve device for fluid operated presses and the like, comprising a casing having a closed chamber with ports for three pipe connections spaced apart along the same and two annular seats controlling communication between the intermediate port and the other ports, a valve element extending into said chamber from outside and at its inner end movable back and forth within the chamber to position spaced sections thereof alternately in closing positions across said seats, one of said annular seats being smaller than the other and the section of the valve element in the chamber at the point where it passes out of said chamber having a cross sectional area of a size between the area enclosed by the said seats.

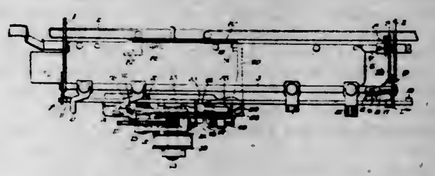


CARNEGIE LIBRARY OF ATLANTA

1,901,132. ROTARY-WINGED AIRCRAFT. PAUL H. STANLEY, Glenside, Pa., assignor to Autogiro Company of America, Philadelphia, Pa., a Corporation of Delaware. Filed Mar. 12, 1932. Serial No. 598,328. 11 Claims. (Cl. 244—19.)

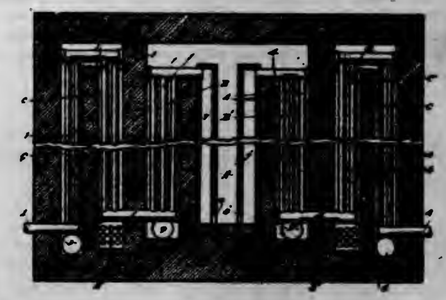
2. In combination in an aircraft, a rotative sustaining system having a forwardly traveling positive effective lift line with increasing forward speed of the craft, and a fixed wing sustaining system having a rearwardly traveling positive effective lift line with increasing forward speed of the craft.

1,901,133. AUTOMATIC TELEPHONE SYSTEM. JOHANNES STICH, Berlin-Siemensstadt, Germany, assignor to Siemens & Halske Aktiengesellschaft of Wernerwerk, Siemensstadt near Berlin, Germany. Filed Feb. 19, 1932, Serial No. 594,066, and in Germany Mar. 2, 1931. 5 Claims. (Cl. 179—27.)



1. In an automatic telephone system, a two-way trunk line, a relay associated with one end of said trunk line adapted to operate as an impulse-repeating relay in calls in one direction and as a ring-cut-off relay in calls in the opposite direction, and subscriber controlled means for operating said relay.

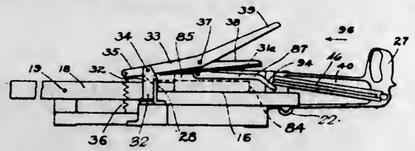
1,901,134. AUTOMATIC DEPTH CONTROL FOR PLOWS. CARL G. STRANDLUND, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Oct. 5, 1931. Serial No. 566,925. 10 Claims. (Cl. 97—103.)



1. The combination with a wheeled plow, of a hitch device pivotally attached thereto and to a tractor, and means attached to the plow and to the hitch device operating to resist a vertical movement of the rearward end of the plow.

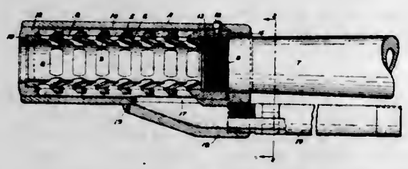
1,901,135. CARRIAGE-RETURN MECHANISM. OSCAR J. SUNDSTRAND, Rockford, Ill., assignor to Sundstrand Corporation, Wilmington, Del., a Corporation of Delaware. Filed May 19, 1928, Serial No. 278,950. Renewed June 22, 1931. 12 Claims. (Cl. 197—65.)

7. The combination of a laterally movable carriage, a set of maximum-limit stops on the carriage, a set of intermediate-limit stops on the carriage, said sets of stops being located in different planes, carriage-return mechanism including controlling means movable into the plane of either set of limit stops, and manipulative means for adjusting the position of said controlling means.



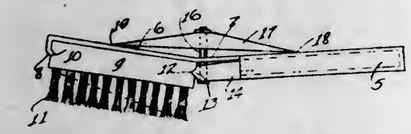
1,901,136. PROCESS OF DISSOCIATING HYDROCARBON GASES AND VAPORS TO PRODUCE A MIXTURE OF NITROGEN AND HYDROGEN IN DETERMINED PROPORTIONS. WILLIAM D. WILCOX, Lawrence, Kans. Filed June 28, 1930. Serial No. 464,690. 7 Claims. (Cl. 23—7.)

1. The process of obtaining a mixture of nitrogen and hydrogen in determined proportions by the dissociation of hydrocarbon gases and vapors, which comprises passing a mixture of hydrocarbon gases with a volume of steam



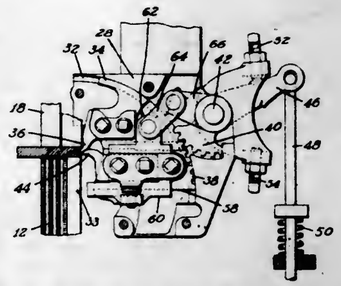
sufficient to supply to oxygen for the oxidation of the carbon in the hydrocarbon gases to carbon monoxide, through a conduit heated to a temperature in excess of 1800° F., thereby effecting a partial dissociation, simultaneously heating a volume of air, sufficient to supply the required proportion of nitrogen in an independent conduit, to a temperature in excess of that at which ignition will take place, bringing the gas and air into intimate mixture in a combustion chamber, withdrawing the resultant product and removing the oxides of carbon.

1,901,137. BOOK SECTIONER. GEORGE BAKER, Los Angeles, Calif., assignor to Oversewing Machine Company, Los Angeles, Calif., a Corporation of California. Filed Aug. 26, 1931. Serial No. 559,522. 20 Claims. (Cl. 164—34.)



1. A book tablet divider for separating into smaller tablets a tablet consisting of sheets having their edges secured together by a back, including: a support for holding a tablet with its back in a position for being divided; a plurality of dividing members in spaced relation transversely of said back; and means for supporting said dividing members and moving said dividing members first between the leaves of the tablet and then through the back of the tablet on said support.

1,901,138. MUZZLE BRAKE AND GAS COLLECTOR. GLADEON M. BARNES, Hastings, Mich. Filed Feb. 17, 1932. Serial No. 593,534. 4 Claims. (Cl. 89—42.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757).



4. In combination with a gun barrel, a tubular muzzle brake connected to the gun, and having gas ports, a collar on the front and the rear end of the brake, a casing mounted on the collar and having an internal flange on its rear end abutting the rear face of the muzzle brake, a gas port in the casing, and means for securing the casing to the muzzle brake.

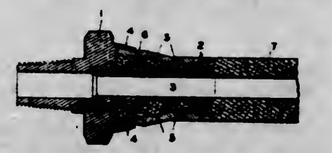
1,901,139. BRUSH. MELVIN C. BARTON, Yuba City, Calif. Filed Dec. 12, 1930. Serial No. 501,976. 1 Claim. (Cl. 300—1.)

The combination of a brush and a handle, said handle having an extension formed thereon said extension having a hooked extremity, said brush comprising a back portion carrying bristles therein, said brush having grooved ends, one of which is adapted to be engaged by said hooked extremity, a block interposed between said handle and said brush said block having a nose adapted to engage the other groove formed in said brush, said extension and said handle being angularly disposed with relation to each other and a bridge piece superimposed on said handle and said extension and engaging said handle and said extension at its ends only and a clamping member for holding said bridge piece in engagement with said handle and said extension.

1,901,140. METHOD OF AND MACHINE FOR SOLE FITTING. ARTHUR BATES, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 14, 1929, Serial No. 362,964, and in Great Britain June 1, 1928. 53 Claims. (Cl. 12—27.)

1. That improvement in methods of channeling soles which consists in relatively moving a sole and means for channeling a sole to form a continuous channel in the sole, and changing the relation between the sole and the channeling means during the continuous channeling operation in such a manner as to locate the channel in the sole face in one portion of the sole and in the sole edge in another portion of the sole.

1,901,141. SUBTERRANEAN AUTOMATIC OIL WELL CONTROL. GRANT BATTELLE, Long Beach, Calif. Filed Mar. 11, 1931. Serial No. 521,719. 8 Claims. (Cl. 166—2.)



1. An apparatus for recovering oil, comprising a non-leaking well casing, a seal within the casing and above the oil-bearing structure, a discharge tube within the casing and extending from the bottom to the top of the well and through the seal, a heat-insulating and compression casing surrounding the discharge tube, a valve at the top of the discharge tube, and means for actuating the valve to open and closed positions actuated by the pressure within the compression tube.

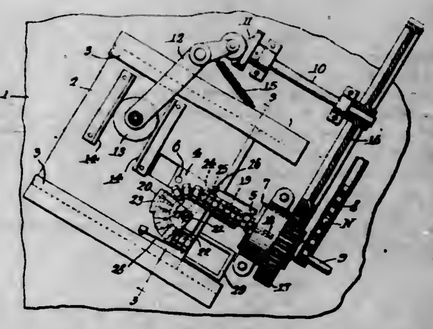
1,901,142. PROCESS FOR THE PRELIMINARY TREATMENT OF RAW SUGAR AND THE LIKE. JULIEN BERGE, Tirlemont, Belgium, assignor to Raffinerie Tirlemontoise, Société Anonyme, Tirlemont, Belgium, a Corporation. Filed Mar. 15, 1930, Serial No. 436,255, and in Germany Aug. 26, 1926. 8 Claims. (Cl. 127—61.)

1. The process of reducing the sugar content of dried syrup adhering to sugar crystals in raw sugar comprising placing said sugar in an enclosure, moistening said syrup to bring it to a fluid-like state and regulating the temperature and moisture content of said syrup to reduce the sugar content thereof by crystallization, and then removing the syrup from the sugar crystals.

1,901,143. HOSE FITTING. ALBERT BRUNNER, St. Louis, Mo., assignor to Wagner Electric Corporation, St. Louis, Mo., a Corporation of Delaware. Filed Mar. 8, 1930. Serial No. 434,193. 1 Claim. (Cl. 285—84.)

The combination with a hose, of a fitting therefor comprising a body portion having a tubular part extending into the hose and an outer annular flange adapted to surround the hose end, the bore of the flange being so tapered that its diameter at the outer end is less than its diameter adjacent the body portion of the fitting, a sleeve surrounding the end of the hose and maintaining it in pressure engagement with the periphery of the tubular part, the inner end of said sleeve being rigid and having a conical exterior surface positioned within said annular flange and in contact with the inner surface thereof whereby longitudinal separation of the sleeve from the body member will be prevented.

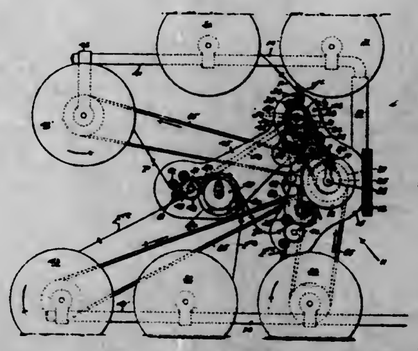
1,901,144. HEEL. JAMES CAVANAGH, Cohasset, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 26, 1927, Serial No. 163,693. Renewed July 19, 1932. 7 Claims. (Cl. 36—24.5.)



1. A wood heel having its attaching surface bounded by a flat rim of substantial width and having a groove substantially parallel to the periphery of the heel and forming an inner boundary for said rim, the portion of the attaching surface bounded by the inner margin of said groove being concave and having its periphery substantially on a level with said flat rim.

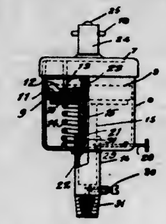
1,901,145. COMPOSITION AND THE PRODUCTION THEREOF. PETER C. CHRISTENSEN, East Orange, N. J. Reissued for abandoned application Serial No. 155,560, filed Dec. 17, 1926. This application filed July 12, 1932. Serial No. 622,109. 16 Claims. (Cl. 134—26.)

7. A composition of the character described, comprising an alkaline solution having one of the group of aldehydes consisting of aldol, acetic aldehyde and paraldehyde mixed therewith and having "leather gum", shellac and urea dissolved therein.



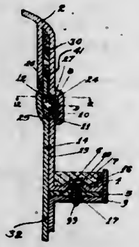
16. The method which consists in commingling protein constituents of leather and shellac in solution and mixing with the solution urea and an aldehyde of the group consisting of aldol, acetic aldehyde and paraldehyde.

1,901,146. DELIVERY MECHANISM FOR NUT TAPPERS. WILLIAM L. CLOUSE, Tiffin, Ohio, assignor to The National Machinery Company, Tiffin, Ohio. Filed Feb. 26, 1932. Serial No. 595,358. 16 Claims. (Cl. 10—139.)



1. A nut tapping machine including a tap mounted for reciprocation having a stem with an arcuate portion, and a thrust receiving device mounted for oscillation relative to and concentric with said arcuate portion.

1,901,147. SOUND TRACK PRINTING ATTACHMENT FOR MOTION PICTURE PRINTERS. FRANK J. COOTS, Jr., and GEORGE SEID, Hollywood, Calif. Filed May 16, 1931. Serial No. 537,826. 7 Claims. (Cl. 95—75.)

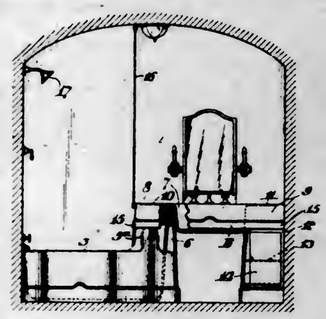


1. An attachment for a film printing machine embodying: an arm plate adapted to be attached to the frame of said machine; an apertured light drum mounted on said arm plate; a gate mounted on said drum opposite the aperture therein for guiding a sensitised film and a record bearing film over said aperture; a sprocket roller mounted on said arm plate in offset relation with said drum and in substantial alignment with said gate; and means for driving said sprocket roller so as to pull said films engaged by said roller across said aperture.

1,901,148. LUBRICATING MEANS. JOHN L. CREVELING, near Tucson, Ariz., assignor to The Lubrication Corporation, South Bend, Ind., a Corporation of Delaware. Filed May 31, 1924, Serial No. 717,149. Renewed July 27, 1932. 3 Claims. (Cl. 221—47.4.)

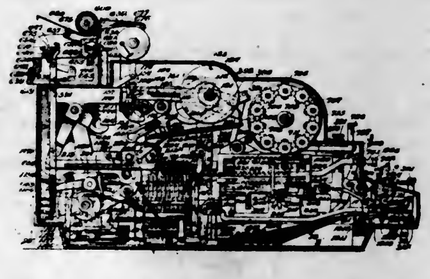
1. A cylindrical reservoir having end closures, one of which has an outlet, a tube having one end fitted as a piston adapted to reciprocate in said outlet and the other end carried by and opening through a piston normally sustained by a spring against pressure of a body of lubricant in the reservoir so that the lubricant is forced through said tube into the nozzle so long as the pressure on the fluid is greater than the resistance or back pressure on the outlet nozzle, means for preventing back flow of lubricant through said tube when the spring pressed piston yields, and means for preventing disengagement of said reciprocating members.

1,901,149. BURIAL VAULT. BEN DANCER, Houston, Tex., assignor of one-half to Phylura E. Skalinder, Houston, Tex. Filed Oct. 31, 1930. Serial No. 492,542. 21 Claims. (Cl. 27—35.)



1. In a vault, a body member having a bottom and side walls extending vertically therefrom, a cover member having downwardly extending walls arranged to overlap said side walls a substantial distance when in operative position thereon, oppositely extending recesses in said members, a gravity operable latch pivotally mounted in one of said recesses, said latch being movable automatically by gravity to engage said other recess when said cover member is in position.

1,901,150. INFLATABLE FIGURE TOY. ISTVÁN DOROGI, and LAJOS DOROGI, Budapest, Hungary, assignors of one-half to DR. Dorogi & Co. Rubber Goods Factory Limited, Budapest, Hungary. Filed June 15, 1931, Serial No. 544,692, and in Hungary Feb. 9, 1931. 6 Claims. (Cl. 46—53.)



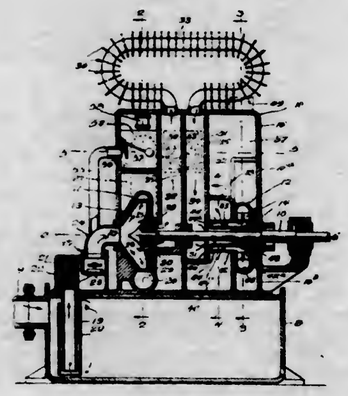
1. An inflatable and deflatable hollow rubber toy, having a rubber wall, said rubber wall being freely stretchable, the outer surface of said wall having separated fibres connected thereto so that the stretchability of said rubber wall is substantially undiminished.

1,901,151. BATHROOM FIXTURE. JOSEPH EBLE DRUCKENMILLER, Edge Hill, Pa. Filed July 22, 1931. Serial No. 552,488. 8 Claims. (Cl. 4—146.)

3. A bathroom fixture comprising a bath tub body, a lavatory adjacent said body and having a basin and shelves at opposite ends of the basin, and pedestals beneath the shelves and spaced apart to provide an open space beneath the basin, one of said pedestals being hollow and containing a foot extension of said body.

1,901,152. CALCULATING MACHINE. JOHN G. DUNKER, Chicago, Ill., assignor, by mesne assignments, to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed Mar. 23, 1915. Serial No. 16,500. 111 Claims. (Cl. 235—60.)

1. In a machine of the class described, the combination of a registering gear wheel, a rotatable gear wheel of the design set forth and movable laterally in respect to said registering gear wheel, racks positioned on opposite sides thereof and united for concurrent reciprocation, means for keeping said second gear wheel and either rack engaged during movement of the latter in both directions, and means to engage the registering gear wheel with the rotatable gear wheel during the movement of the rack in one direction.



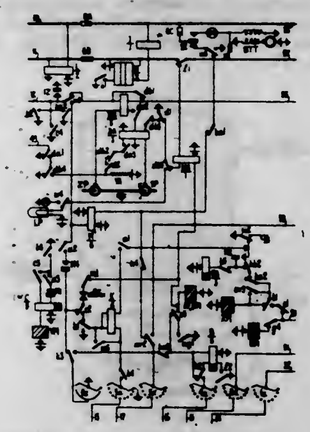
1,901,153. BOOKKEEPING MACHINE. JOHN G. DUNKER, Chicago, Ill., assignor, by mesne assignments, to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed Sept. 8, 1924. Serial No. 736,645. 70 Claims. (Cl. 235—60.)

1. A machine of the class described comprising, in combination, a travelling carriage, a plurality of independent accumulating means, means for independently or jointly at the same time actuating said accumulating

means, and means, determined by the position of the carriage, for automatically conditioning the machine for totalizing from one of said accumulating means.

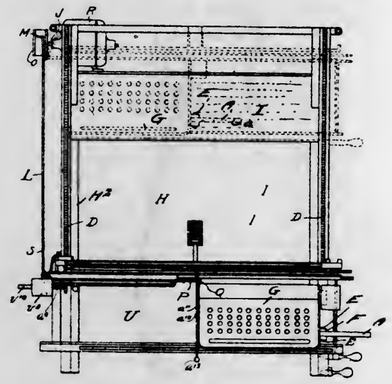
1,901,154. VACUUM CONDENSATION PUMP. AUGUSTUS C. DURDIN, Jr., Chicago, Ill. Filed June 22, 1931. Serial No. 545,916. 13 Claims. (Cl. 103—6.)

1. In a vacuum condensation pump, the combination of a centrifugal water pump having an axially disposed inlet in its casing communicating with the return pipe of a steam heating plant, an impeller having an axially disposed inlet and operating to separate water from gaseous fluid by centrifugal action and discharge the water through a water discharge passageway, there being a separate gaseous fluid outlet in said impeller adjacent its axis of rotation, and a vacuum pump having its inlet connected to said gaseous fluid outlet of the impeller.



1,901,155. RECEPTACLE FOR LIQUIDS. SIMON W. FARBER, Brooklyn, N. Y., assignor to S. W. Farber, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Mar. 3, 1932. Serial No. 596,492. 2 Claims. (Cl. 215—47.)

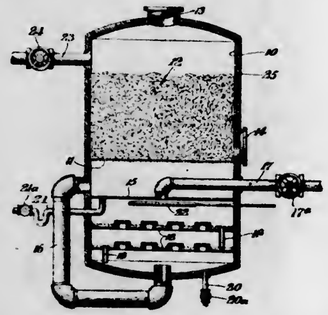
1. A receptacle for liquids having a neck, a top member engaging the neck and forming an outlet, a removable cup-shaped strainer having an extended surface in frictional contact with the inner surface of the top member



and a removable stopper having an extended surface in frictional contact with the inner surface of the cup-shaped strainer.

1,901,156. TELEPHONE SYSTEM. CHARLES GILLINGS and FRANCIS TATLOCK BELAS, Liverpool, England, assignors to Associated Telephone and Telegraph Company, Chicago, Ill., a Corporation of Delaware. Filed June 1, 1931, Serial No. 541,266, and in Great Britain June 23, 1930. 16 Claims. (Cl. 179—18.)

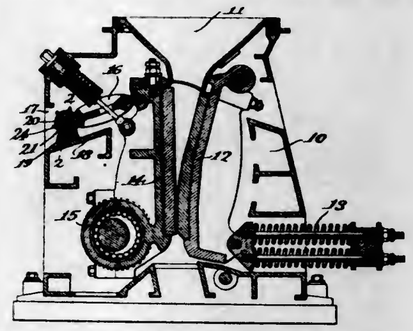
1. In a telephone system employing register controllers to direct the setting up of connections over serially related trunk groups, means effective depending upon an all-trunks-busy condition being encountered at a trunk group during the setting up of a connection to transmit a characteristic signal back over the trunk conductors of the partially set up connection, and means in the register controller responsive to said signal to cause the release of the partially set up connection and to control the transmission of trains of impulses having a value different from the value of the trains of impulses normally transmitted, to set the desired connecton up over another route.



1,901,157. TYPEWRITING MACHINE. FREDERICK P. GORIN, Seattle, Wash., assignor to Gorin Shocklesspeed Tabulator Company, Seattle, Wash. Filed June 8, 1926. Serial No. 114,504. 16 Claims. (Cl. 197—66.)

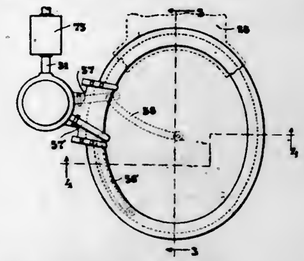
1. The combination with a typewriting machine having a writing bed and a head movable thereon, a line finder upon the head which at all times is in register with a line above a line which is being written.

15. An attachment for a typewriting machine having a writing bed movable with respect to its support for clamping the paper in position, comprising a motor, a carriage movable relative to said bed by the motor, a switch, and connections between the switch and the writing bed which causes the switch to be operated when the writing bed is operated.



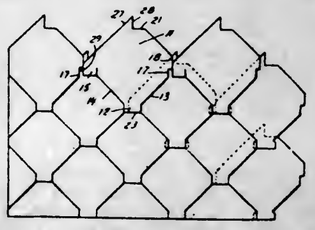
1,901,158. REFINING HYDROCARBONS. THOMAS T. GRAY, Elizabeth, N. J., assignor to The Gray Processes Corporation, Newark, N. J., a Corporation of Delaware. Filed July 29, 1930. Serial No. 471,454. 18 Claims. (Cl. 261—96.)

1. In an apparatus of the character described, a shell, a partition dividing said shell into two compartments, a passage connecting said compartments, means in one compartment for supporting solid adsorptive material for free drainage, a vapor inlet for said last mentioned compartment, a fractionating column contained within said other compartment, and a vapor outlet from said last compartment.



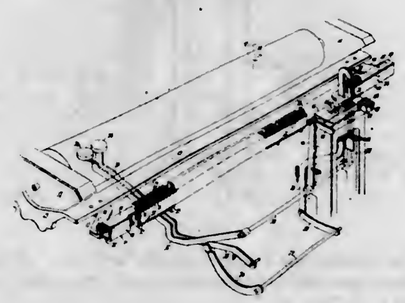
1,901,159. SHEAR PIN FOR CRUSHING MACHINES. WILLIAM W. GUEST, Los Angeles, Calif. Filed Dec. 6, 1930. Serial No. 500,576. 10 Claims. (Cl. 83—53.)

1. In a yielding jaw rock crushing machine, bushings seated in the side walls of the machine, a shear pin having its end portions seated in said bushings and a toggle thrust sleeve arranged on said shear pin between said bushings, the ends of which sleeve and the inner



faces of which bushings constitute shearing elements for cutting the shear pin in the event of abnormal pressures thereupon.

1,901,160. SANITARY WATER CLOSET ATTACHMENT. FERAUCCIO GUIDETTI, Elmhurst, and GIUSEPPE BONTEMPI, New York, N. Y., assignors to The Watairway Manufacturing Corporation, New York, N. Y., a Corporation of New York. Filed Nov. 20, 1930. Serial No. 496,898. 11 Claims. (Cl. 4—7.)

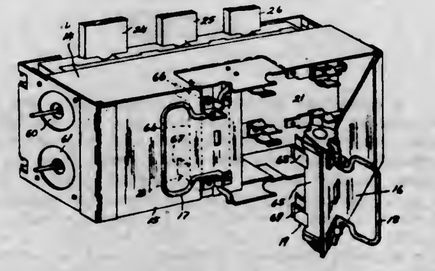


1. In apparatus of the class described, adapted for use in connection with a closet bowl, the combination, with a fluid delivery arm movable between two extreme positions within said bowl, of a supporting bracket for said arm, hook-shaped means inwardly extending from said bracket, for resting said bracket onto, and embracing the rim of said bowl, and adjustable means, carried by said bracket, movable against the outer surface of said bowl, for securely clamping said bracket onto said rim.

1,901,161. SHINGLE. NORMAN P. HARSHBERGER, Scarsdale, N. Y., assignor to The Barrett Company, New York, N. Y., a Corporation of New Jersey. Filed June 5, 1931. Serial No. 542,317. 4 Claims. (Cl. 108—7.)

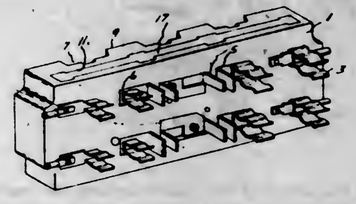
1. An interlocking shingle element having an interlocking lug extending from the converging end of two adjacent edges and having a projection on one side edge and a recess beneath the projection, said projection arranged to abut against a second projection on a non-homologous side edge of a like shingle element to form a slot, the opposite sides of which are defined by an outer edge of the second projection and an edge of said recess, said slot arranged to receive and lock with the interlocking lug of another shingle.

1,901,162. TYPEWRITING MACHINE. WILLIAM F. HELMOND, West Hartford, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 14, 1931. Serial No. 562,696. 11 Claims. (Cl. 197—70.)



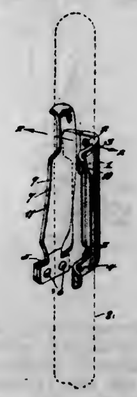
1. In a machine of the class specified, a column-stop-bar in the form of a metal tube, opposite walls of the tube being pierced by slots at regular intervals to divide said walls into duplex sets of rack-teeth, the slots on one side matching those upon the opposite side.

1,901,163. PROCESS OF TREATING EMULSIONS. CARL G. HINRICHS, St. Louis, Mo. Filed Mar. 12, 1926. Serial No. 94,324. 31 Claims. (Cl. 196—4.)



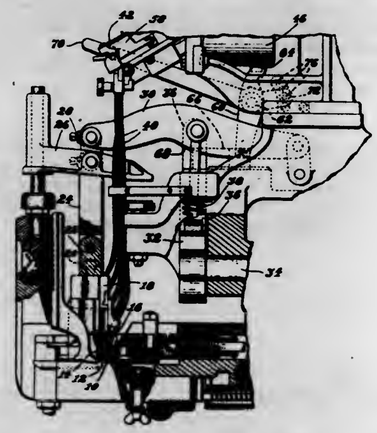
2. The process of treating rolly oils from petroleum wells which includes the addition thereto of a modification of a product resulting from the application of external heat to ricinoleic acid to form and eliminate water molecules therefrom.

1,901,164. FUSE PANEL BOARD. JOHN G. JACKSON, Detroit, Mich., assignor to Square D Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 21, 1931. Serial No. 564,241. 3 Claims. (Cl. 247—10.)



1. A panel board having a groundable cabinet, bus bars in said cabinet, and a switch and fuse unit in the cabinet in front of said bus bars and including a metal casing open at the back and receiving the bus bars and provided at the front thereof with hinged closure means, an insulator block extending longitudinally of the casing between the bus bars and closure means, fuse clips spaced apart on said insulator block and extending toward said closure means, strap connectors extending from the bus bars through the block and having portions forming switch contacts, connectors extending from certain of the fuse clips and having portions cooperating with the potions just mentioned of the bus connectors to form switch contacts, and switch contacts carried by said closure means and operable when the closure means is closed to engage the switch contacts aforesaid and close a circuit between the bus bars and fuse clips.

1,901,165. REENFORCED BLOCK STRUCTURE FOR ELECTRIC FIXTURES. JOHN G. JACKSON, Detroit, Mich., assignor to Square D Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 21, 1931. Serial No. 564,243. 13 Claims. (Cl. 175—369.)



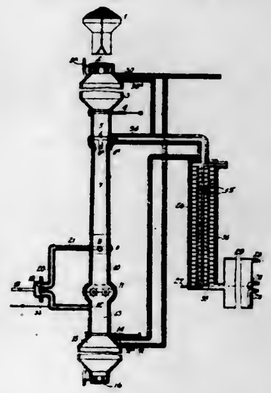
1. In combination, a porcelain base having a recess in an edge thereof, cement in the recess, and a steel reenforcement in the cement.

1,901,166. HANDLE SUPPORT. NEUBURY L. JORDAN, Princeton, N. J. Filed June 24, 1932. Serial No. 619,186. 5 Claims. (Cl. 24—257.)

1. A handle holder or support for fastening to a fixed object, comprising a body having upper and lower arms shaped to conform to a handle, the lower part of the body opposite the lower arm having an outwardly extending arm, and a yieldable clamping element fastened to the last named lower arm, said clamping element being relatively yieldable and normally inclined toward the first upper and lower arms, thereby permitting a handle to be clamped between the element and said upper and lower arms.

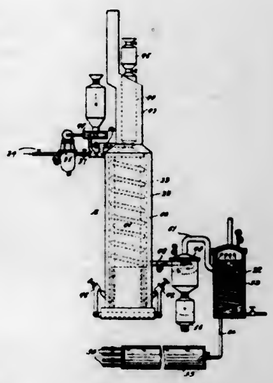
1,901,167. MACHINE FOR INSERTING FASTENINGS. JACOB C. JORGENSEN, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 27, 1931. Serial No. 525,818. 6 Claims. (Cl. 1—18.1.)

1. In a machine of the class described, the combination with means for driving a fastening in a cycle of operations of the machine, and means for feeding a fastening to the driving means in the course of the cycle, of mechanism constructed and arranged for use at the will of the operator either to prevent the feed of any fastening and also the operation of the driving means during the cycle or to prevent such feed without preventing the operation of the driving means.



1,901,168. SECTIONAL ROD COUPLING. MAX KALBEN, San Diego, Calif. Filed Dec. 16, 1930. Serial No. 502,643. 5 Claims. (Cl. 287—116.)

1. In a sectional sewer rod coupling, a connector member provided with a wrench engaging middle portion and reduced threaded portions at its opposite ends and provided with a groove in one side only at one end and a similar groove in its opposite side only at its other end, said grooves being separated from each other so that the inner ends of said grooves are offset in relation to each other.

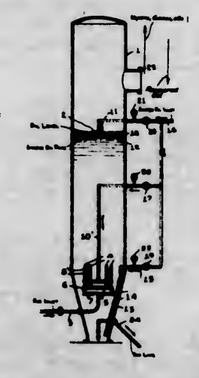


1,901,169. DISTILLATION OF SOLID CARBONACEOUS MATERIAL. LEWIS C. KARRICK, Salt Lake City, Utah. Filed May 7, 1924. Serial No. 711,554. 14 Claims. (Cl. 202—15.)

7. The process of distilling solid carbonaceous material, which consists in feeding carbonaceous material simultaneously through a plurality of parallel retorts at different pressures, heating a first retort by superheated steam, passing the resulting vapors through a heat-exchange device that is provided with a supply of water

thereby generating another supply of steam at lower pressure, and heating a second retort from said other supply.

1,901,170. GASIFICATION OF CARBONACEOUS MATERIAL. LEWIS CASS KARRICK, Salt Lake City, Utah. Original application filed Oct. 29, 1926, Serial No. 144,947. Divided and this application filed Dec. 20, 1927. Serial No. 241,287. 3 Claims. (Cl. 48—206.)

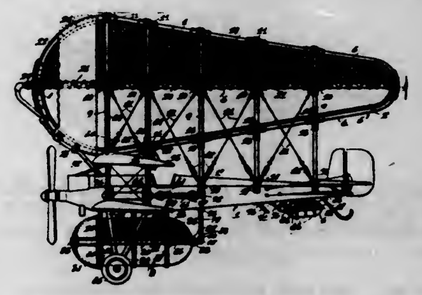


1. A continuous process for producing water gas from material such as coal, coke and the like which comprises preheating granular particles of said material in a chamber, periodically delivering material from the preheated chamber into a second heating chamber which is maintained under pressure, and thereafter continuously discharging said material from the second chamber and passing the same at high pressure by means of steam in a generally downward direction through an externally heated tube of extended length and of restricted cross section at a temperature and period of time sufficient to effect substantially gasification of the carbon constituent of the material, the material while being heated in the pre-heating chamber being maintained under the working pressure of the second chamber by the medium maintaining pressure therein.

1,901,171. STEERING WHEEL ATTACHMENT. THOMAS J. KAUFFMAN, Grosse Pointe Village, Mich., assignor to Square D Company, Detroit, Mich., a Corporation of Michigan. Filed July 18, 1932. Serial No. 623,244. 3 Claims. (Cl. 74—33.)

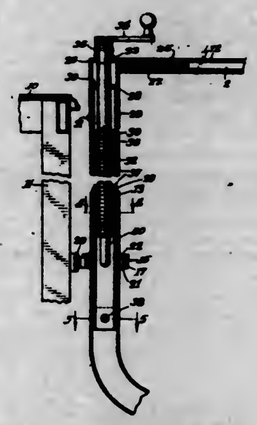
1. A steering wheel attachment including a pair of aligned members, a union between and providing a swivel mounting for one of said members, a knob fixed to the swivelly mounted member, yieldable means associated with one of said members and union for cushioning the knob, and a steering wheel rim clamping member projecting from and actuable by portions of said union and the other of said members.

1,901,172. OIL TREATMENT PROCESS AND APPARATUS THEREFOR. HENRY C. KIRK, Baltimore, Md.; Colonial Trust Company executors of said Henry C. Kirk, deceased. Filed Dec. 8, 1927. Serial No. 238,648. 13 Claims. (Cl. 196—65.)



12. In a process of heat treating oil under conversion conditions of temperature and pressure with air streams injected thereinto to produce lighter distillates therefrom, the step of entirely enveloping such air streams within streams of injected oil.

13. Apparatus for heat treating hydrocarbon oils to produce lighter distillates therefrom which comprises a still for maintaining a body of oil under conversion conditions of temperature and pressure, means for injecting air in upwardly directed streams, into the body of oil near the bottom thereof, means for injecting oil in upwardly directed streams along with the air, and means for injecting downwardly directed oil streams into the body of oil near the upper level thereof, supplementing the upwardly directed streams, whereby circulatory currents are set up in the body of oil.

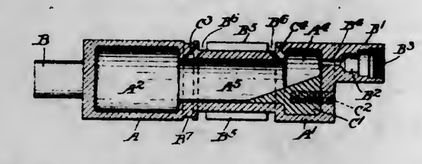


1,901,173. DIRIGIBLE-AIRPLANE. HERMAN L. KUHN, Union, Miss., assignor of fifty per cent to W. H. Coffey, Ludlow, Miss. Filed Mar. 4, 1932. Serial No. 596,843. 24 Claims. (Cl. 244—5.)

1. An aircraft comprising an airplane complete in itself and including a fuselage, bi-planes, landing gear and the usual flight controlling elevators and rudders; combined with dirigible balloons one located over the airplane with

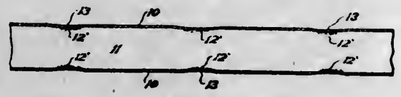
its longitudinal axis approximately parallel to that of the fuselage, and separate dirigible balloons located beneath the airplane at the front and back ends of the same.

1,901,174. HOSPITAL TABLE. FRANK KUSTERLE, Kenosha, Wis., assignor to Simmons Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 9, 1931. Serial No. 514,408. 6 Claims. (Cl. 45—111.)



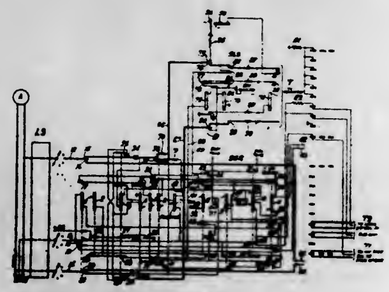
1. In a hospital table the combination of a table top, a hollow post for supporting said top, means for vertically, adjustably mounting said top on said post comprising a nut disposed inside of said post and mounted therein so as to be non-rotatable and supported against downward movement, a screw mounted on said table top so as to be rotatable in axially fixed position relative thereto, said screw depending from said table top and into said post and having co-operative engagement with said nut, whereby the table top is vertically adjustable as an incident to rotation of the screw, and a handle disposed above said table top and connected to said screw for facilitating manual rotation thereof.

1,901,175. CRANK SHAFT. ARNOLD LACK, Beloit, Wis., assignor to H. H. Shockey, Chicago, Ill. Filed Apr. 1, 1931. Serial No. 526,888. 4 Claims. (Cl. 74—38.)



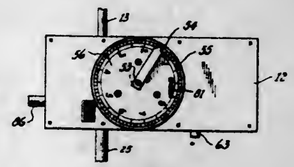
4. A crank shaft comprising an elongated hollow cylindrical member closed at both ends, crank pins pro-

jecting longitudinally from each closed end and parallel with the longitudinal axis of the shaft, a gear integral with the crank shaft, the crank shaft having cylin-



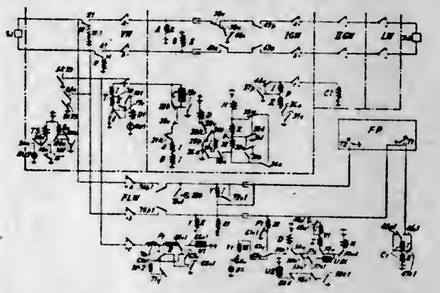
drical bearing surfaces at each side of the gear, the outside diameters of the gear and both bearing surfaces being substantially the same.

1,901,176. METHOD OF WELDING. GOTTFRID C. LAWSON, Canton, Ohio, assignor to The United Metal Products Company, Canton, Ohio, a Corporation of Ohio. Filed Jan. 7, 1932. Serial No. 585,277. 7 Claims. (Cl. 219—10.)



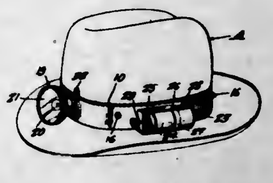
1. The method of welding a sheet metal door and the like, consisting in forming projections upon opposite edges of a metal strip and forming openings in the edge portions of the strip adjacent to and transversely alined with said projections, placing the strip between two parallel sheet metal plates with the strip disposed in a plane transverse to the planes of said plates, and then welding the plates to said strip through said projections.

1,901,177. MULTIOFFICE TELEPHONE SYSTEM. OSCAR C. LEVY, Chicago, Ill., assignor, by mesne assignments, to Associated Electric Laboratories, Inc., Chicago, Ill., a Corporation of Delaware. Filed Mar. 31, 1932. Serial No. 602,124. 12 Claims. (Cl. 179—18.)



1. In a telephone system, a main office and a sub-office, two groups of trunks connecting the offices, local trunks in the sub-office, a selector repeater in the sub-office for extending local or outgoing calls, means in the selector repeater for preliminarily routing all calls to the main office via an idle trunk in one of said groups, means responsive to the receipt of an impulse series of a particular value for switching the call from the trunk in said one group to an idle trunk in the other of said groups, and means responsive to the receipt of a plurality of impulse series of particular values for switching the call from the trunk in said one group to an idle one of the local trunks.

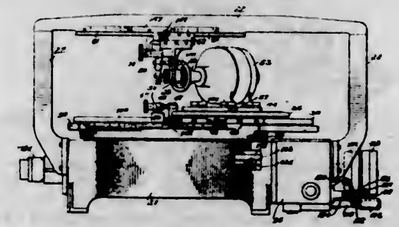
1,901,178. LIQUID DISPENSING METER. JOHN F. MALM, Chicago, Ill., assignor of one-half to Frank A. Adkins, Chicago, Ill. Filed Oct. 28, 1929. Serial No. 402,916. 5 Claims. (Cl. 221—101.)



1. A liquid dispensing meter comprising a reciprocating measuring means, indicating means, means operatively connecting said measuring and indicating means, said indicating and operating means comprising a toothed wheel, a pawl normally coacting with said wheel for rotating it in one direction, means for locking said wheel against rotation in said direction, and means operated by said reciprocating means for reciprocating said pawl with reference to the teeth of said wheel and for unlocking said locking means and rotating said wheel.

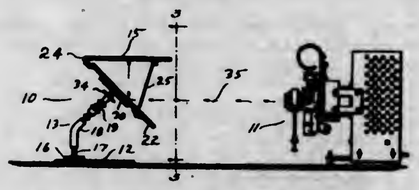
1,901,179. AUTOMATIC TELEPHONE SYSTEM. MAXIMILIAN MATHIAS, Berlin, Germany, assignor to Siemens & Halske Aktiengesellschaft, Siemensstadt near Berlin, Germany. Filed Mar. 31, 1932, Serial No. 602,187, and in Germany May 29, 1931. 7 Claims. (Cl. 179—18.)

1. In a telephone system, a subscriber's line, a timing device individual to the line, means for establishing two classes of connections with the line, and means controlled by the timing device for automatically releasing connections of one class after a predetermined time but not connections of the other class.



1,901,180. ELECTRIC HEAD LAMP. OCTAVE O. McBRIDE, McKinney, Tex. Filed Nov. 17, 1931. Serial No. 575,671. 1 Claim. (Cl. 240—60.)

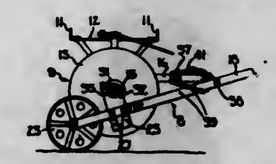
A lamp of the character described, comprising an endless flexible band, battery holders carried at opposite sides thereof, each holder including a retaining frame for removably receiving an electric dry cell battery and having



a releasable bail pivoted to the frame, the frame being fitted with an embracing ring insulated therefrom, an adjustable pole contact on the bail, a lamp housing intermediate of the battery holders and upon the band, an electric lamp within the housing, normally open electric circuit connections between the lamp and said batteries, said circuit connections being confined within the band, and a manually operable switch mounted in the band directly rearwardly of the housing for manual operation for opening and closing the electric circuit.

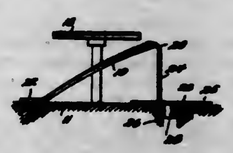
1,901,181. TORIC LENS GENERATING MACHINE. JOSEPH J. MCCABE, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Apr. 5, 1927. Serial No. 181,202. 12 Claims. (Cl. 51—55.)

1. In a machine of the class described, a rotatable support, a tool carriage adjustably mounted on said support, an annular cutter adjustably mounted on said tool carriage, a transversely moving guideway, and means including a member operatively connected with said tool carriage and movable along said guideway when said tool carriage is adjusted relative to said support, for rotating said support.



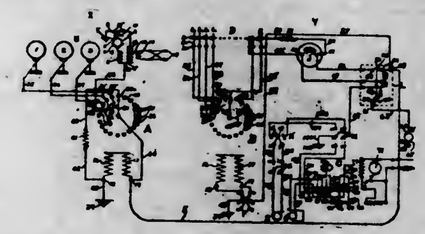
1,901,182. PORTABLE DISPLAY SCREEN. BYRON MCCANDLESS, U. S. Navy. Filed Aug. 31, 1931. Serial No. 560,251. 4 Claims. (Cl. 88—24.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

2. A portable displaying screen comprising an image reflecting means, an image displaying means, means for supporting said displaying means at a suitable angle to said reflecting means, and means for supporting said reflecting means, said reflecting means supporting means comprising a frame, means to secure the reflecting means to the front of said frame, an open socket fixed to the back of said frame, a rectangular plate receivable in said socket, a threaded stud projecting from said plate through the open channel, a nut on said stud to fixedly secure said plate in said socket, an adjustable arm having one end securable to said stud, and a base for the other end of said arm.



1,901,183. TRANSPORT TRUCK FOR DISK HARROWS. HERBERT B. MCKAHIN, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed May 28, 1931. Serial No. 540,527. 7 Claims. (Cl. 55—73.)

1. A transport truck for disk harrows comprising a supporting bar adapted to extend beneath the disk gang of a disk harrow, a wheel mounted on the lower end of the supporting bar, said bar having a plurality of longitudinally spaced perforations near its upper end, a bolt adapted to be inserted in any one of said holes, and a flexible means

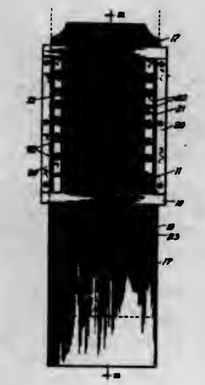


attached to said bolt, whereby the truck may be secured to the harrow frame by wrapping the flexible means around a member of the frame, said flexible means being of sufficient length to extend around frame members of varying proportions.

1,901,184. FOOT REST DEVICE. WILLIAM MOLONEY, Hamilton Beach, N. Y. Filed Nov. 28, 1931. Serial No. 577,835. 1 Claim. (Cl. 74—81.)

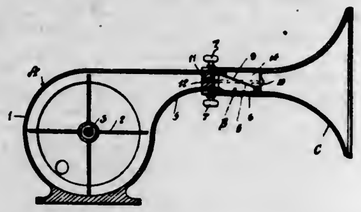
In a device of the class described, in combination, a motor vehicle accelerator pedal comprising a movable part provided with a head curved in cross section and having a smooth foot contacting surface and laterally extending flanges, and a separately formed foot guiding member spaced rearwardly of said pedal and secured to the floor of said vehicle, said member also being of considerable lateral extent and provided with a smooth laterally and downwardly inclined foot contacting surface, whereby a downward pressure of the foot of an operator will cause the foot to slide laterally to gradually depress said pedal.

1,901,185. SUBMARINE MINE CONTROL. PAUL R. NELSON, Fort Totten, N. Y., assignor to the Secretary of War, in behalf of the United States. Filed Nov. 12, 1928. Serial No. 318,930. 26 Claims. (Cl. 102—8.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)



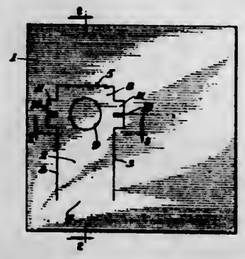
1. A system of submarine mine control comprising a plurality of submerged mines, a remote control, a single conductor interconnecting mines and remote control to provide a path of electrical distribution therebetween and means for automatically firing any of said mines on impact.

1,901,186. APPARATUS FOR TESTING PHOTOPAPER. JACK NORWORTH, New York, N. Y. Filed Feb. 17, 1932. Serial No. 593,548. 3 Claims. (Cl. 95—10.)



1. An apparatus as characterized comprising a frame, means for supporting sensitized paper therein, a slide hav-

ing an opening of less size than the frame and adapted to be brought to various positions in the frame and obtain an exposure therethrough at different parts of the sensi-



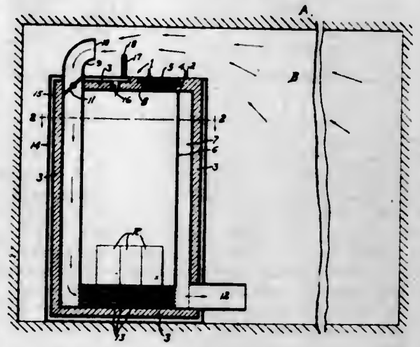
tized paper, and means for simultaneously printing an exposure designation with each exposure through the opening.

1,901,187. AIR OPERATED HORN. ROBERT T. OSBORNE, Warren, Ohio. Filed Jan. 21, 1932. Serial No. 587,979. 2 Claims. (Cl. 116—137.)

1. A voice or reed member for air operated horns, comprising a member having an inclined wall provided with openings, reeds secured to said wall and arranged opposite said openings, a vertical wall at each end of said member, and a partition intermediate of said walls, said walls and partition being spaced from one another to provide recesses for said reeds.

1,901,188. DISPLAY CARD. LOUIS A. PHILLIPS, Tenafly, N. J. Filed Feb. 25, 1932. Serial No. 594,991. 2 Claims. (Cl. 206—79)

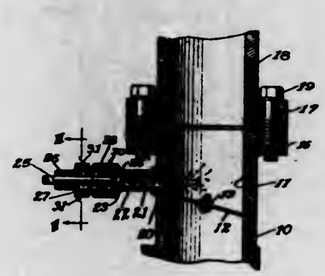
1. A display card having a tongue struck out therefrom but integrally connected with the body of the card at the base of the tongue, said tongue having a portion adapted to be bent to provide an article-holding ledge and provide an opening in the body of said card when so bent, said ledge portion being provided with slots adapted to receive adjacent edge portions of the body of the card when the ledge portion is bent in transverse position.



1,901,189. METHOD OF FORMING SEPARABLE FASTENER SLIDERS. ROLAND J. POUX, Meadville, Pa., assignor to Hookless Fastener Company, Meadville, Pa., a Corporation of Pennsylvania. Filed Apr. 5, 1929. Serial No. 352,793. 12 Claims. (Cl. 29—148.)

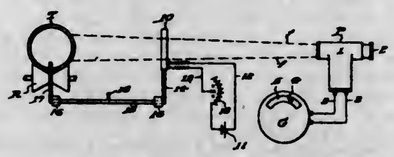
1. The method of forming separable fastener sliders by a series of successive operations, which includes feeding a continuous strip of metal to a coining press for forming a plurality of spaced lugs on said strip, feeding said strip to a blanking die for blanking said strip to the shape of a series of interconnecting slider elements each of which has two flat wing portions connected by a narrow relatively thick portion, said blanks being connected in the strip, and feeding said strip to a severing machine for cutting said elements from said strip.

12. The method of forming separable fastener sliders by a series of successive operations which comprises forming a series of connected slider blanks in a metal strip, each of said blanks having two flat wing portions, each of which is wider at one end than at the other end, and connected by a relatively narrow neck portion, said slider blanks being connected by relatively narrow integral portions of the strip, bending up flanges on the side edges of each of said wing portions of said blanks while so connected, and trimming said flanges while said blanks are connected in the strip.



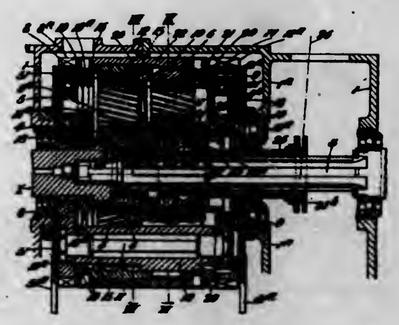
1,901,190. REFRIGERATING APPARATUS. FREDERICK W. RABE, St. Louis, Mo. Filed Feb. 3, 1930. Serial No. 425,425. 5 Claims. (Cl. 62—91.5.)

1. A refrigerating apparatus including a refrigerated compartment, a refrigerant receptacle, said refrigerant receptacle being provided with an air duct disposed so as to substantially surround a chamber located within the refrigerant receptacle which receives a refrigerant that gives off gas when sublimation thereof takes place, an air inlet element leading to said air duct, an air discharge element leading from said air duct and so arranged as to discharge air passing therethrough into said refrigerated



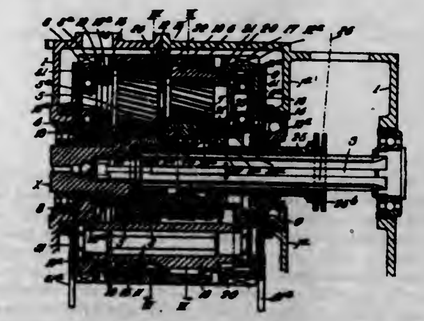
compartment, a gas chamber arranged to substantially surround said refrigerant receptacle and having an outlet opening, and a gas discharge duct leading to said gas chamber from the interior of said refrigerant chamber.

1,901,191. GAS AND AIR MIXER FOR HYDROCARBON ENGINES. WILLIAM B. RAWLS, Chicago, Ill., assignor, by direct and mesne assignments, to Gas Krakker Corporation, Chicago, Ill., a Corporation of Illinois. Filed Mar. 21, 1930. Serial No. 437,671. 2 Claims. (Cl. 123—119.)



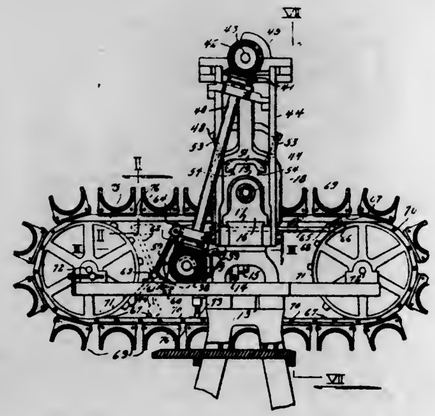
1. In combination with a carbureter and throttle, a port opening into the carburetor above the leading edge of the throttle when the latter is in idling position, a passaged body engaged in said port, a valve seat in said passage, a valve cooperating with said valve seat, a valve stem extending outwardly from said valve, a valve guide engaging said valve stem and having a chamber to receive said valve when opened, a spring in said chamber acting against the valve to close the same, said valve guide being threadingly engaged with said passaged body to vary the compression of said spring, and offset radial air ports in the valve guide and opening into said chamber substantially tangentially thereto whereby to create a swirling motion of the entering air prior to entry into the carbureter.

1,901,192. APPARATUS FOR MEASURING TEMPERATURES OF MOVING BODIES. GUSTAV A. REINHARDT and RICHARD H. EURICH, Youngstown, Ohio, assignors to Bacharach Industrial Instrument Company, Pittsburgh, Pa. Filed Feb. 20, 1929. Serial No. 341,382. 6 Claims. (Cl. 73—32.)



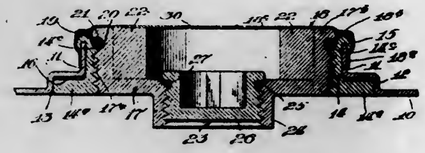
1. In combination with a radiation pyrometer, means for causing the pyrometer to normally indicate a temperature approximating that of a body whose temperature is to be measured and means for rendering said first-mentioned means ineffective upon the pyrometer when the body whose temperature is to be measured is introduced into its field.

1,901,193. POWER TRANSMISSION MECHANISM. PIERO MARIANO SALERNI, Westminster, London, England. Filed Oct. 8, 1930, Serial No. 487,186, and in Great Britain Oct. 16, 1929. 13 Claims. (Cl. 74—34.)



1. Epicyclic gearing comprising a driving sun-member and a planet-carrying member carrying a compound planet thereon, a driven sun-member having a hollow annular formation to adapt it to receive clutching-means, an internally toothed annular member, and means for rotatably connecting the said members with the driven shaft, the driving sun-member being provided with a roller-bearing surface, the larger planets of the compound planet pinions having rollers engaged therewith, said rollers revolving around the rollers of the driving sun-member, a roller track on the internally toothed annular member for the said planet rollers, the driven sun wheel having rollers thereon, roller-bearing surfaces for the smaller planets of the compound planet pinions, said latter rollers being engaged by the rollers on the driven sun wheel, whereby the driven sun wheel is externally supported.

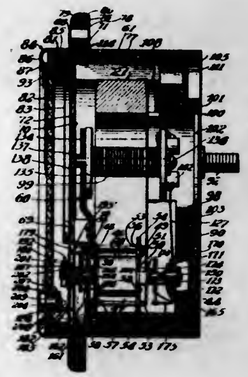
1,901,194. POWER TRANSMISSION MECHANISM. PIERO MARIANO SALERNI, Westminster, London, England. Filed Oct. 8, 1930, Serial No. 487,188, and in Great Britain Oct. 16, 1929. 30 Claims. (Cl. 74—34.)



1. Epicyclic gearing, comprising a driving sun member, a planet-carrying member with at least one compound planet thereon, one planet-pinion being in mesh with the driving sun member, a driven sun member in mesh with another planet pinion, an internally toothed annular member disposed around and engaged by the first mentioned planet pinion, and axially movable clutch means rotatable with the driven shaft and movable within the driven sun member to operatively engage with the driving sun member, such clutch means being arranged for engaging also with other members of the gearing.

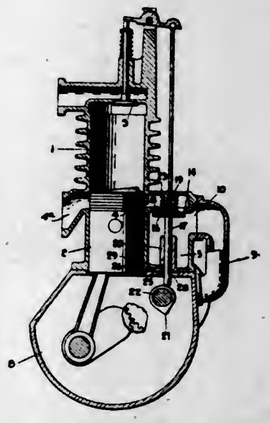
1,901,195. TILE MANUFACTURE. WILLIAM SALISBURY, Toledo, Ohio. Filed Jan. 14, 1931. Serial No. 508,592. 12 Claims. (Cl. 25—42.)

3. A duct section handling machine comprising a cradle, operating means for positioning a clamp on a duct section in the cradle, and radial piercing means for the clamped section.



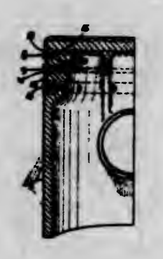
1,901,196. CLOSURE DEVICE. JOHN W. SHERA, Chicago, Ill., assignor to American Flange & Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 6, 1932. Serial No. 585,091. 2 Claims. (Cl. 220—39.)

1. A closure plug for structure of the class described which comprises a cylindrical body externally threaded, said body having a cylindrical open-top chamber formed therein and extending into close proximity to the bottom thereof providing a relatively thin-walled, cup-shaped structure, and two diametrically opposite lugs extending inwardly from the circular chamber wall and integral therewith, the lugs being of triangular shape in plan view to permit a tool or object to be inserted between the ends of the lugs and engage oppositely-facing and non-aligned sides of the lugs.



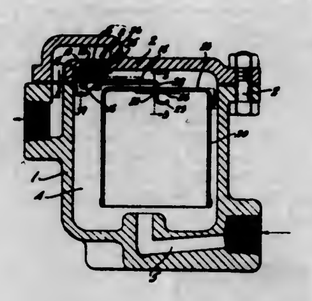
1,901,197. ELECTRICAL MEASURING INSTRUMENT. RAY SIMPSON, River Forest, Ill., assignor, by mesne assignments, to Jewell Electrical Instrument Company, a Corporation of New Jersey. Filed June 17, 1930. Serial No. 461,766. 8 Claims. (Cl. 171—95.)

1. In an electrical measuring instrument the combination of a magnetic structure comprising a permanent magnet, and a pole piece unit comprising a member formed with opposed pole pieces and integrally joined with each other, said magnet having a pair of legs resiliently engaging and securing said pole piece unit to said magnet, a pair



of spacers having a drive fit in the body of said magnetic structure, and a bridge permanently secured to the ends of said spacers.

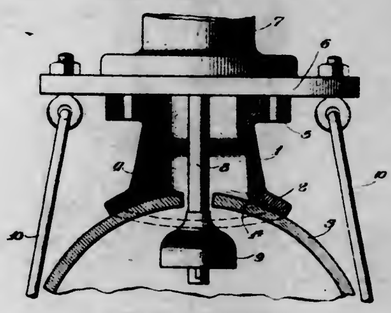
1,901,198. CYLINDER PORT CONTROL. OWEN H. SPENCER, Indianapolis, Ind. Filed June 11, 1929. Serial No. 369,996. 2 Claims. (Cl. 123—75.)



1. The combination with a cylinder of an engine having valve controlled inlet and exhaust ports in its outer end, a piston controlled exhaust adjacent its inner end, and tappets for operating said valves, of an air chamber independent of said tappets and having an air inlet port opposite the lower exhaust port, a partition in said chamber, a valve seat in said partition, a valve adapted to slide through said seat for controlling the passage of air through the air chamber and air inlet port cooperating therewith, a tappet carrying said valve, means for operating said latter tappet in timed relation with the first mentioned tappets, and means for conveying air to said chamber.

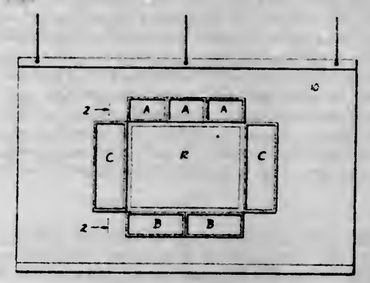
1,901,199. PISTON AND RING THEREFOR. WALTER H. STINE, Los Angeles, Calif., assignor of one-half to Lyman M. King, jr., Los Angeles, Calif. Filed Dec. 11, 1931. Serial No. 580,389. 9 Claims. (Cl. 74—109.)

1. A piston provided with an annular convexity which extends therearound, said convexity forming two oppositely disposed piston ring seats and piston rings provided with concave seating faces adapted to ride upon said convexity, there being clearances provided adjacent to said seats to maintain a perfect abutment of the external faces of said piston rings within the piston cylinder during the operation of said piston.



1,901,200. STEAM TRAP. LESLIE P. STRONG, Lakewood, Ohio, assignor to The Clark Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 16, 1932. Serial No. 599,116. 15 Claims. (Cl. 137—103.)

1. A steam trap, comprising a chambered casing having an inlet and an outlet, valve means for controlling said outlet, a vertically movable inverted bucket in the chamber of said casing, said bucket being provided in its top wall with an air vent opening, and means connecting said bucket and said valve means so as to effect operation of said valve means by vertical movement of said bucket in said chamber, said connecting means being associated with said air vent opening and being adapted to prevent said opening from becoming clogged, such as with impurities entering said chamber through said inlet.

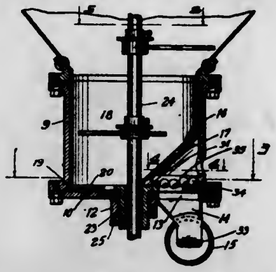


1,901,201. METHOD OF FORMING AND REENFORCING FLANGED APERTURES IN HOLLOW BODIES. JAMES HALL TAYLOR, Oak Park, Ill. Filed Dec. 12, 1929. Serial No. 413,498. 2 Claims. (Cl. 29—148.2.)

1. The method of forming and reenforcing a flanged aperture in a hollow body which consists in forming an aperture in said hollow body, forming a nozzle with a flange of increased thickness to fit the curvature of said hollow body adjacent said aperture, superposing said nozzle upon said hollow body, flanging the wall of said aperture

against the interior surface of said nozzle, welding the upper portion of said flanged wall to said nozzle and the lower flange of said nozzle to said hollow body.

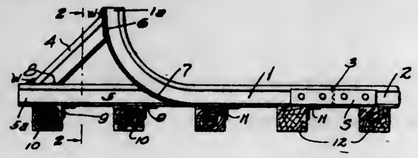
1,901,202. ELECTROSTATIC LOUD-SPEAKER. ADOLPH A. THOMAS, New York, N. Y. Filed Apr. 30, 1929. Serial No. 359,235. 10 Claims. (Cl. 88—16.2.)



1. The combination of a motion picture screen and a plurality of electrostatic loud-speakers arranged around said screen, said loud-speakers being flat structures mounted substantially parallel with said screen and having different natural frequencies to accentuate the entire musical scale within practical limits.

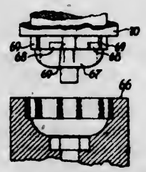
2. In talking movie apparatus, a curtain having a motion picture screen, and an electrostatic loud-speaker mounted on said curtain adjacent said screen, the vibratory electrode of said loud-speaker being open to the free air at the front of said curtain.

1,901,203. COAL FEEDER. GEORGE S. THOMPSON, Pueblo, Colo., assignor to The Colorado Fuel and Iron Company, Denver, Colo. Filed Feb. 9, 1931. Serial No. 514,510. 5 Claims. (Cl. 221—136.)



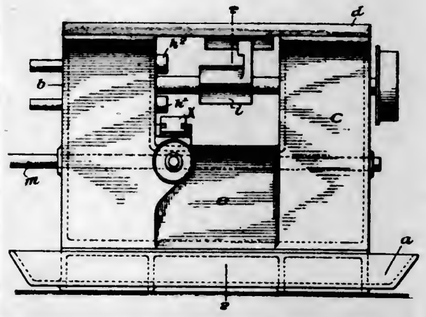
1. A coal feeder comprising a housing having a discharge-opening and having a spaced partition dividing the housing into a compartment over the discharge-opening and a supply-chamber exteriorly of the compartment, a

rotary disk having an opening to convey coal from the chamber through the space of the partition, into the compartment for its delivery through the discharge-opening,



gravity-impelled bodies in the compartment to effect the discharge of coal from the opening of the disk, and means for rotation of the disk.

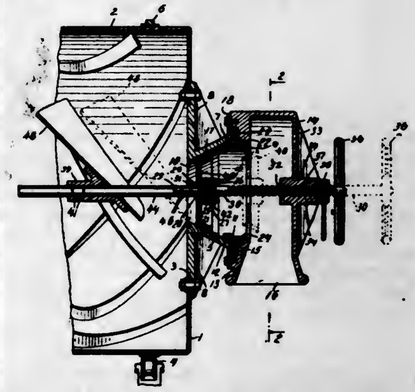
1,901,204. WHEEL STOP. ARNOLD H. TOLD, Chicago, Ill. Filed July 30, 1932. Serial No. 626,886. 11 Claims. (Cl. 104—254.)



1. In a wheel stop, a section of a rail having a substantially horizontal portion, terminating at its forward end in a face adapted to abut the end of a traffic rail, and having a rear part inclined upwardly of said horizontal portion to form a wheel engaging element, and a structure at the rear of said upwardly inclined part arranged to brace the latter to road bed ties located beyond the end of the traffic rail, said bracing structure consisting of rail pieces corresponding in cross section to said wheel-engaging element and having their forward ends abutting spaced points on the base flange of said element and secured thereto.

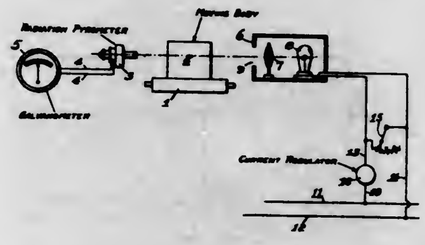
1,901,205. APPARATUS FOR MOLDING INSULATING ARTICLES. WILLIAM C. TREGONING, Wauwatosa, Wis., assignor to Cutler-Hammer, Inc., Milwaukee, Wis., a Corporation of Delaware. Original application filed May 7, 1928, Serial No. 275,768. Divided and this application filed Oct. 30, 1930. Serial No. 492,166. 5 Claims. (Cl. 18—42.)

1. In a device for molding under pressure insulation articles having bayonet grooves formed in a surface thereof, the combination with male and female pressure die members, one of said die members having fixed elements adapted to form portions of the groove respectively, said last mentioned die member also having elements adapted to form other portions of the grooves, said last mentioned elements being movable relatively to said fixed elements to permit separation of the article from said die member by sequential rotary and longitudinal movements relatively thereto upon completion of the molding operation.



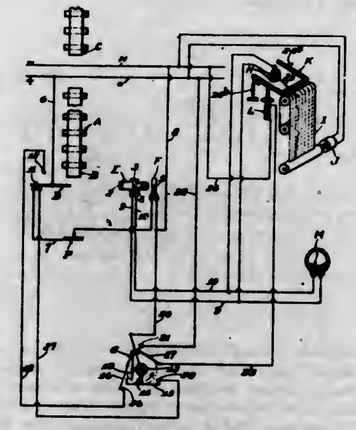
1,901,206. MULTIPLE SPINDLE METAL WORKING MACHINE. OLOF ENOCH TROBECK, Berlin, Germany, assignor to The National Acme Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 25, 1931, Serial No. 518,045, and in Germany Nov. 1, 1930. 11 Claims. (Cl. 29—37.)

1. A multiple spindle automatic machine having a base and a chip receiving pan, two upright standards secured to said base and spaced apart to provide an open sided frame and adapted to carry an indexible work spindle carrier and its co-operating mechanisms, and a bracing roof formed member between said standards and below said work spindle and in position to deflect chips and turnings from the work into the chip receiving pan.



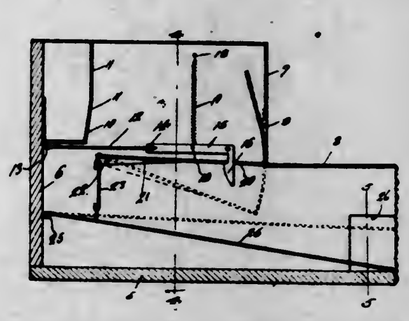
11. An automatic multiple spindle machine having a frame comprising a bed provided with a pair of spaced upright box formed standards unconnected at their sides and beam connected at their top and within which space a reciprocating tool carrier is located in position to leave a clear opening below the tool carrier and from standard to standard, and a roof shaped member filling a part of said space below the tool carrier and connected at its ends with the standards to give rigidity to the framework and having its sides converging to the top and spaced below the tool carrier thereby to deflect the chips and turnings away from the operating mechanisms of the machine.

1,901,207. MIXING DEVICE. HERBERT RYAN TUMIM, Buffalo, N. Y., assignor to National Aniline & Chemical Co., Inc., New York, N. Y., a Corporation of New York. Filed Aug. 14, 1930. Serial No. 475,196. 17 Claims. (Cl. 259—8.)



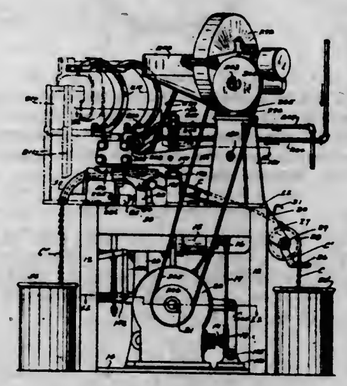
1. The combination comprising a rotatable mixing chamber having a discharge opening at one end thereof providing a seat for a closure, a closure seated in the discharge opening and rotatable therewith, a discharge hopper communicating with said opening and normally rotatable with the mixing chamber, and means to hold said discharge hopper in fixed position while the mixing chamber and closure rotate.

1,901,208. PROCESS AND APPARATUS FOR MEASURING TEMPERATURES OF MOVING BODIES. LOUIS L. VAYDA, Aspinwall, Pa., assignor to Bacharach Industrial Instrument Company, a Corporation of Pennsylvania. Filed Feb. 16, 1929. Serial No. 340,874. 6 Claims. (Cl. 73—32.)



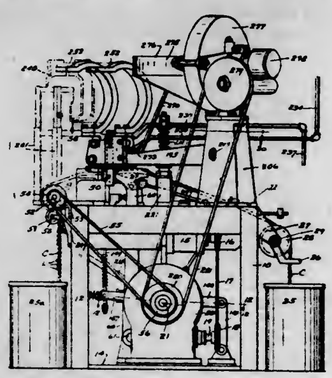
6. A process of measuring the temperature of a heated body, which consists in first creating in a measuring instrument which is responsive to radiant energy, by means other than said body, an electro-motive force approximately equal to that produced in the instrument equal to that produced in the instrument by radiation from the body, when the body is moved through the field of reception of the instrument, then passing said body through such field, and at the same time cutting off the effect of such other means on the instrument as long as the radiation from the body effects the instrument.

1,901,209. APPARATUS FOR MEASURING TEMPERATURES OF MOVING BODIES. LOUIS L. VAYDA, Aspinwall, Pa., assignor to Bacharach Industrial Instrument Company, a Corporation of Pennsylvania. Filed May 17, 1930. Serial No. 453,206. 4 Claims. (Cl. 73—32.)



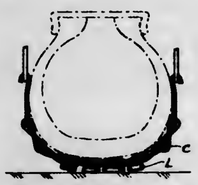
4. In a thermo-electric radiation pyrometer, a source of heat adapted to maintain the thermocouple in a controlled degree of activity, said source of heat located on the side of the thermocouple opposite that acted upon by heat from the body to be measured, and means for rendering said source of heat inactive during the time of passage of an article to be measured through the focus of said pyrometer.

1,901,210. ANIMAL TRAP. JAMES S. VICKERS, Alexander City, Ala. Filed June 2, 1931. Serial No. 541,672. 2 Claims. (Cl. 43—70.)



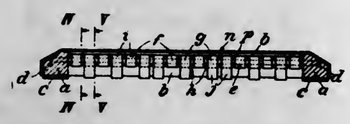
1. A trap of the character described comprising a housing, a cage adjacent the housing, a tiltable plate mounted within the housing, a pedal swingably supported within the housing, said plate being provided with an opening therein, and located beneath the pedal, a rockable trigger, said trigger being provided with a head engageable through the opening to support the plate in a horizontal position, and being engageable at its opposite end with the pedal, said trigger being rockable by the said pedal when a weight is imposed thereon releasing the plate so that an animal will drop into the bottom of the housing and subsequently pass into the cage.

1,901,211. ELECTRIC WELDING MACHINE. MERRITT R. WELLS, Cleveland Heights, Ohio, assignor, by mesne assignments, to The McKay Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 15, 1930. Serial No. 502,362. 39 Claims. (Cl. 219—4.)



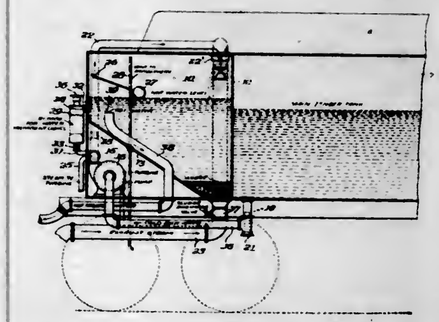
2. In a machine adapted to weld metallic parts to the links of a chain, a guideway through which the chain is progressed, means including a plurality of independently movable slides adapted to position metallic parts in contact with the links and means acting thereafter to simultaneously weld the metallic parts to the chain.

1,901,212. ELECTRIC WELDING MACHINE. MERRITT R. WELLS, Cleveland Heights, Ohio, assignor, by mesne assignments, to The McKay Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Mar. 5, 1931. Serial No. 520,191. 30 Claims. (Cl. 219—4.)



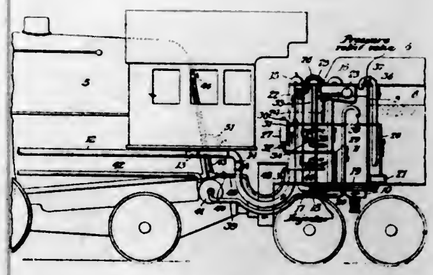
1. In a welding machine, the combination with a guideway for work, of means to grip the work, a plurality of means adapted to simultaneously bring a plurality of metallic parts into contact with the work, and wherein one of said last named means is bodily shiftable relative to another one of said last mentioned means.

1,901,218. METHOD OF MAKING TIRE CHAINS. MERRITT R. WELLS, Cleveland, Ohio, assignor, by mesne assignments, to The McKay Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Original application filed Dec. 15, 1930, Serial No. 502,862. Divided and this application filed Sept. 3, 1931. Serial No. 560,970. 12 Claims. (Cl. 59—85.)



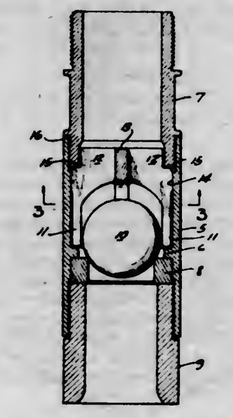
1. In the method of making tire chains, the steps of holding a link of a chain by means engaging its interior, simultaneously feeding a pair of lugs on opposite regions of a link, simultaneously welding the lugs thereto while pressing them against the lugs and while supporting the link on the opposite side.

1,901,214. MOVABLE KEY DEVICE FOR MUSICAL INSTRUMENTS HAVING KEYS. EDGAR WILLEMS, Chenes-Bougeries, Geneva, Switzerland. Filed Aug. 20, 1932. Serial No. 629,567, and in Switzerland Aug. 1, 1932. 6 Claims. (Cl. 84—465.)



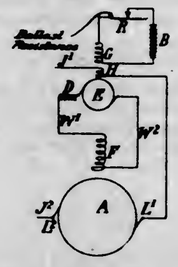
1. Movable key device for musical instruments having keys, for the musical development of the ear, intended to be placed on the keys of the instrument and comprising a support on which the keys are arranged, the said keys hiding the notes of the instrument, having the same height, the same lenght, the same colour and being situated at the same distance one from the other, each forming an intermediary by which the note of the instrument situated underneath the key of the device may be struck.

1,901,215. APPARATUS FOR CONDITIONING BOILER FEED WATER. LYNDON F. WILSON, Chicago, Ill. Filed July 30, 1928, Serial No. 296,180. Renewed July 30, 1932. 5 Claims. (Cl. 122—434.)



1. A locomotive tender including a raw water tank having a forward portion partitioned off to form a hot water compartment provided with a sloping bottom forming the top of a chamber beneath the compartment, a pump mounted in said chamber, pipes connecting the suction side of the pump with the tender tank and the delivery side of the pump with said compartment, an exhaust steam heater connected with the delivery side of the pump, means for conducting exhaust steam to said heater, a sludge discharge at the bottom of said compartment, and a pipe communicating with said compartment above the bottom thereof through which the hot water may be withdrawn from the compartment.

1,901,216. FEED WATER CONDITIONER. LYNDON F. WILSON, Chicago, Ill. Filed Oct. 10, 1929. Serial No. 398,692. 14 Claims. (122—454.)



1. A method of conditioning feed water for locomotive boilers which comprises utilizing exhaust steam from the locomotive boiler to heat and deliver water from a tender tank to a compartment on the tender, utilizing a predetermined water level in said compartment for controlling the steam supplied for said water delivery, utilizing exhaust steam supplemented by live steam without delivering water to maintain the water in said compartment at a predetermined temperature, and delivering the water at said temperature from said compartment to the locomotive boiler.

1,901,217. INSERTED GUIDE AND BUMPER FOR BLIND CAGES. JOHN A. YERKES and REES H. LEMMON, Long Beach, Calif. Filed Feb. 12, 1930. Serial No. 427,979. 4 Claims. (Cl. 251—121.)

1. In combination with a tubular valve cage for a check valve, an integral insertable valve guide unit initially of larger diameter than the bore of said valve cage positioned in the bore of said valve cage and having a press fit therewith to restrain it against downward movement therein, said guide unit including a plurality of axially extendng ribs and an upper abutment in said cage to retain said unit against upward movement.

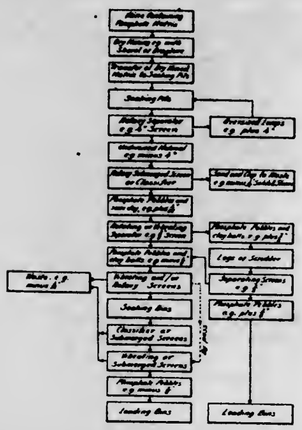
1,901,218. CONSTANT CURRENT VARIABLE VOLTAGE ELECTRIC GENERATING SYSTEM. GILBERT AUSTIN, JAMES COLQUHOUN MACFARLANE, and WILLIAM ALLEN MACFARLANE, Glasgow, Scotland. Filed July 30, 1931, Serial No. 553,956, and in Great Britain Nov. 15, 1930. 7 Claims. (171—224.)

1. In or for a constant current-variable voltage generating system, the combination with a main constant current dynamo of size smaller than the normal for the required output, of an exciter the capacity of which is such that under transient conditions it is capable of giving a voltage at its terminals several times (the limits being from twice to about 100 times, in accordance with the design required) higher han that required from the exciter by the main dynamo field under full load excitation, the field excitation of the exciter consisting of an abutment coil supplied from a separate source of constant voltage and an opposing coil the current in which is either the main constant current or a current strictly proportional thereto, the magnet system the exciter being made of extremely low reluctance in order to enable it to work with a small difference in M. M. F. between the two coils for the purpose of providing "rigidity" of current output, and having a small number of ampere turns in each coil for the purpose of obtaining "rapidity" of operation under transient conditions, the number of ampere turns in each coil being as small as possible concomitantly with the desired voltage and low reluctance of the exciter.

1,901,219. BREATHING APPARATUS. JOSEPH L. BELCHER, Long Beach, Calif. Filed July 30, 1932. Serial No. 626,260. 1 Claim. (Cl. 9—20.)

A breathing apparatus comprising a housing having an opening provided with resilient pneumatic cushion edges to snugly embrace the face and enclose the nostrils and mouth of a wearer; means for holding said housing in operative position; a pair of air tubes, each having one end connected to the interior of said housing to provide air passages; an elongated float mounted adjacent to and between the ends of said tubes remote from the mask to normally retain said ends projected in a substantially vertical position above the surface of a body of water within which said wearer may be submerged, whereby air may be supplied through said tubes to said wearer when submerged, by the natural breathing process; and suitable valves interposed between the submerged ends of said tubes and the interior of said housing and arranged to permit passage of air in opposite directions only through said tubes whereby a circulation of air in one direction only may be maintained through said tubes by the natural breathing process of said wearer.

1,901,220. GUY GUARD. THEODORE BIRKENMAIER, St. Louis, Mo., assignor to W. N. Matthews Corporation, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 24, 1931. Serial No. 558,898. 3 Claims. (Cl. 189—31.5.)



1. A guy guard comprising a longitudinal body portion, spaced gripping means formed on said body portion, said means being adapted to freely receive a guy strand therebetween when said body portion is angularly disposed to said guy strand, said means being adapted to securely engage said guy strand when said body portion is angularly turned to substantially align with said strand, and means associated with said gripping means adapted to reenforce said means, said reenforcing means comprising a strip extending from one of said gripping means and fastened to said body portion.

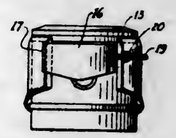
1,901,221. MINING AND TREATMENT OF PHOSPHATE-ROCK. JOHN TREADWELL BULLWINKEL, Brooklyn, N. Y., assignor to The Phosphate Mining Co., New York, N. Y., a Corporation of New York. Filed May 9, 1931. Serial No. 536,182. 12 Claims. (Cl. 209—2.)

1. The method of mining and treating phosphate rock embedded in a matrix of clay and sand, etc., which comprises dry mining the material or matrix, transferring the dry mined material to one or more soaking pits where it is submerged in water, causing the material to

remain submerged for a sufficient period of time to effect disintegration or softening of the phosphate matrix or material preparatory to further treatment for the sepa-

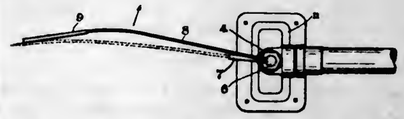
ration of the phosphate rock and maintaining the material substantially free throughout said steps from any disintegrating force which would break down any soft pebbles.

1,901,222. TREATMENT OF PHOSPHATE ROCK. JOHN TREADWELL BULLWINKEL, Brooklyn, N. Y., assignor to The Phosphate Mining Co., New York, N. Y., a Corporation of New York. Filed Apr. 17, 1931. Serial No. 531,012. 5 Claims. (Cl. 209—2.)



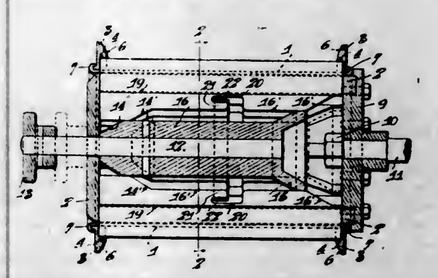
1. The improvement in the treatment of phosphate rock which comprises preliminarily removing débris from a matrix or material having phosphate rock embedded therein by a wet separating process, subjecting the phosphate rock product of such process with its relatively small remnant of clay to a soaking treatment for a sufficient period of time to effect disintegration of the clay, and then subjecting the material to a washing treatment to remove the disintegrated clay from the phosphate rock.

1,901,223. AUTOMOBILE ROBE OR BLANKET. LESTER C. BUSH, Columbus, Ohio. Filed Oct. 27, 1931. Serial No. 571,846. 2 Claims. (Cl. 2—88.)



1. A robe formed with a slit of a length sufficient to receive the head and neck of the wearer, slide fasteners attached to the side edges of said slit and extending the full length thereof, longitudinally extending flaps attached to the side edges of the slit and arranged flat on one side of the robe, said flaps being shorter in length than said slit and when extended therethrough serving as a collar around the neck of the wearer, the flaps when in this position will lie between the neck and the fastener and protect the former when said fastener is drawn up tight to hold the collar snugly in place.

1,901,224. PISTON RING COMPRESSOR. SELMA B. BUSAINGER, San Leandro, Calif. Filed Jan. 6, 1932. Serial No. 584,941. 2 Claims. (Cl. 29—86.4.)

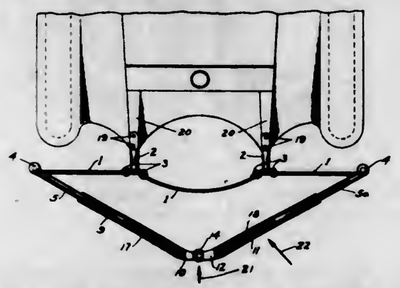


1. A piston ring compressor comprising a cylindrically-shaped sleeve open on one side and composed of spring sheet metal, the edges of said opening being spaced a material distance apart, one of the curved ends of the sleeve being bent inwardly and the other being bent outwardly, each of the said opening edges having an outwardly and backwardly extending flange thereon, means adapted to coact with each of said flanges and to draw them together, said means comprising an arcuate band having a hook on one end adapted to hook onto one of the flanges of the sleeve, said band having a flange on its other end, and means for drawing together said latter flange and the other flange of the compressor.

1,901,225. LAWN SPRINKLER. JOHN HENDERSON BUTLER, Berkshire Township, Delaware County, Ohio. Filed June 25, 1932. Serial No. 619,185. 4 Claims. (Cl. 299—69.)

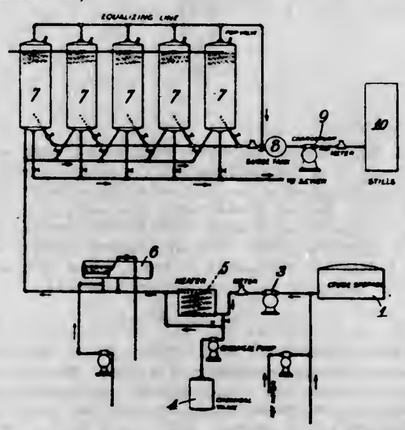
1. In a sprinkling device, the combination of a rotatably mounted water jet discharging nozzle and a vane placed at such a distance from the nozzle that in operation the amount of water that hits the vane is automatically adjusted to the minimum necessary to drive the vane.

1,901,226. FLANGED SPOOL AND HOLDER THEREFOR. RALPH H. CARTER, Johnson City, Tenn., assignor to American Glanzstoff Corporation, New York, N. Y., a Corporation of Delaware. Filed July 13, 1932. Serial No. 622,349. 10 Claims. (Cl. 242—130.)



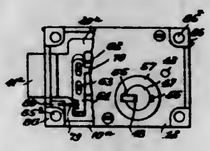
1. In combination, a collapsible spool holder with blades associated therewith, and a spool portion provided with flanges, slotted throughout its length to a distance sufficient to extend into the flanges of said spool.

5. In combination, a spool holder including blade-like elements adapted to be projected outwardly, and a spool, said spool having a flange at either end, slots running lengthwise of the spool and positioned so as to coincide with the position of the above-noted blade-like elements,



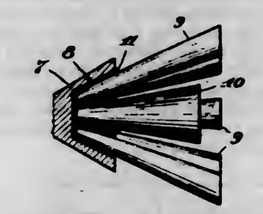
said blades and slots being of sufficient length to extend partly into the said flanges when the said blade-like elements are in projected position, said flanges being provided with openings coinciding with the ends of the slots, and adapted to accommodate the blades when they are in projected position, said flanges being provided with surfaces adapted to limit the outward motion of said blades when they are being projected.

1,901,227. VEHICLE BUMPER. FRANK M. COSSALTER, Goldbar, Wash. Filed Mar. 19, 1932. Serial No. 599,999. 1 Claim. (Cl. 293—55.)



In a vehicle bumper the combination of a pair of tubular members having one of each of their ends hinged together, a rod slidable within the free end of each of the tubular members, means for pivotally securing the projecting end of each rod to the chassis of a vehicle so that said projecting ends are in spaced relation with respect to each other, a spring within each tubular member and between its rod and the hinge point of the said tubular members whereby the action of said springs normally preserves the entire assembly in V-shaped formation so that a blow upon the said hinge point of the tubular members will cause both tubular members to slide toward the pivotal connections between the rods and the chassis, and a blow upon either of the tubular members will cause the other tubular member to slide towards the pivotal connection between its rod and the chassis.

1,901,228. PROCESS FOR THE REMOVAL OF IMPURITIES FROM CRUDE PETROLEUM. LLOYD L. DAVIS, ALFRED HENRIKSEN, and JOHN J. ALLINSON, Ponca City, Okla., assignors to Continental Oil Company, Ponca City, Okla., a Corporation of Delaware. Filed July 5, 1928. Serial No. 290,409. 8 Claims. (Cl. 196—4.)



1. A process for the removal of water soluble mineral compounds from petroleum oil including the steps of adding water to the salt-containing petroleum oil, thereafter heating the mixture thus formed with sufficient incidental agitation to dissolve the salt in the added water, said heating being to a temperature below the boiling point of such mixture, but sufficiently high to rupture the asphaltic films surrounding the salt whereby the added water is enabled to dissolve the same, filtering the mixture and separating the brine from the oil by settling.

1,901,229. MULTIPLE KEY LOCK. WILLIAM F. DIESEL, Rochester, N. Y., assignor to Sargent & Greenleaf, Inc., Rochester, N. Y., a Corporation of New York. Filed May 18, 1929. Serial No. 364,251. 19 Claims. (Cl. 70—71.)

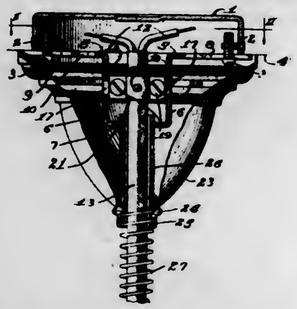
1. A lock comprising a support, a bolt movable thereon, a rotary key receiving element for moving the bolt, and means including relatively adjustable parts for controlling the bolt arranged to be conditioned by the use at one operation of a control key operating in said element whereby to render said parts responsive to subsequent operations by a different key inserted in said element for adjusting the parts to free the bolt.

1,901,230. TOOTHBRUSH. HAROLD PALMER DUBY, Los Angeles, Calif. Filed Apr. 5, 1932. Serial No. 603,269. 4 Claims. (Cl. 15—167.)

1. In a tooth brush, a brush head comprising a central tuft of bristles, and an annular arrangement of spaced individual tufts of bristles encircling said central tuft and protruding at their outer ends beyond the outer end of said central tuft.

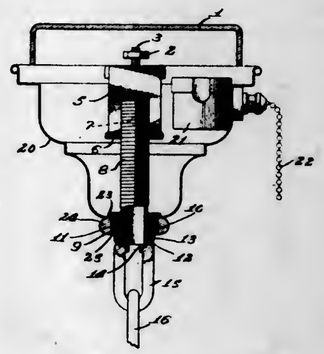
1,901,231. TIRE CASING REPAIR APPARATUS. ALBERT H. FISHER, East Cleveland, Ohio, assignor to Kex Company, Incorporated, St. Louis, Mo., a Corporation of Missouri. Filed July 25, 1927. Serial No. 208,152. 2 Claims. (Cl. 152—27.)

1. A tire casing repair apparatus forming an individual semi-permanent, self-contained unit, comprising a rubber plug of mushroom-shape having a head section and a stem



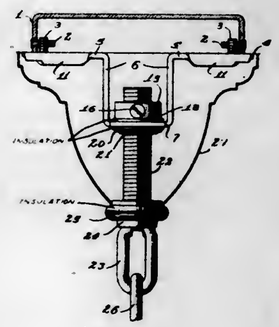
section and a metal inserting terminal semi-permanently connected with the extreme end only of said stem section, said terminal providing an inserting point adjacent one end of a plurality of outwardly diverging clamping elements with hook shaped jaws adjacent the opposite end and a tapered sleeve engaged over said clamping elements and holding the ends thereof in firm clamping engagement with the end of the stem, the taper and position of said sleeve providing for an increase of clamping engagement with the end of the repair plug as the sleeve is drawn through the puncture aperture in the tire casing.

1,901,232. DROP CORD PROTECTOR. JOHN B. GLOWACKI, Chicago, Ill. Filed Nov. 29, 1929. Serial No. 410,541. 3 Claims. (Cl. 247—30.)



1. The combination with an outlet box cover and a drop cord projecting therethrough, of a protector for said drop cord comprising an apertured split member, apertured projections integrally formed thereon, a clamping member projecting through said apertured projections to permit the apertured split member to be clamped on the drop cord, and means on said apertured member coacting with the cover to hold the protector against rotation with respect to said cover.

1,901,233. DROP CORD AND CANOPY SUPPORTING BRIDGE. JOHN B. GLOWACKI, Chicago, Ill. Filed Feb. 9, 1931. Serial No. 514,475. 19 Claims. (Cl. 247—20.)

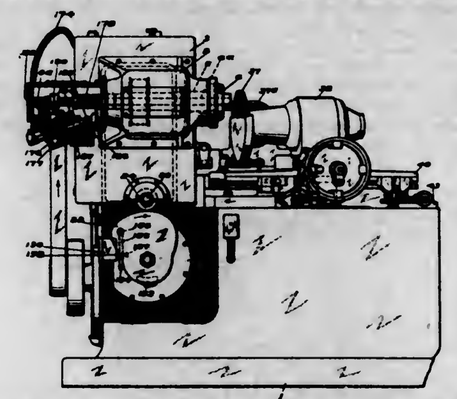


1. A drop cord and canopy supporting device comprising a U-shaped bridge having openings therein to adapt the same to be fitted to outlet boxes of different sizes, a drop cord gripping means bridged across the U-shaped bridge and a canopy supporting means adjustably connected with the bridge to enclose the bridge and hold the canopy in position.

1,901,234. FIXTURE AND CANOPY SUPPORT. JOHN H. GLOWACKI, Chicago, Ill. Filed Feb. 18, 1931. Serial No. 515,568. 8 Claims. (Cl. 240—85.)

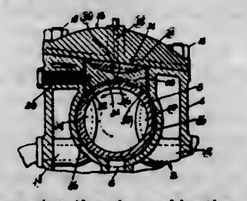
1. A fixture and canopy supporting unit comprising a coupler attachable to a fixture supporting stem, a fixture supporting unit having a split head projecting into said coupling and engaged on said stem to hold the coupler locked in position, and a canopy supporting unit adjustably engaged on said coupler for supporting a canopy.

1,901,235. FIXTURE BRIDGE. JOHN B. GLOWACKI, Chicago, Ill. Filed Feb. 24, 1931. Serial No. 517,673. 4 Claims. (Cl. 240—85.)



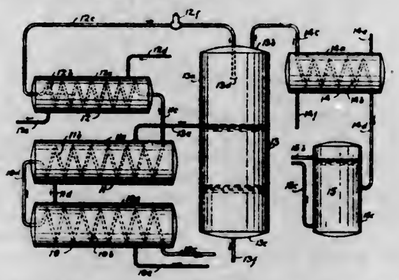
1. A fixture supporting device comprising a bridge member having slots therein to permit the bridge member to be removably attached to standard outlet boxes of different sizes by means of the outlet box cover supporting screws, guide flanges formed on said bridge member, and slotted extension blades slidably engaged between said guide flanges and adapted to be supported in position by means of the outlet box cover supporting screws.

1,901,236. GRINDING MACHINE. WALDO J. GUILD, Worcester, Mass., assignor to The Heald Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed Jan. 11, 1929. Serial No. 331,838. 19 Claims. (Cl. 51—8.)



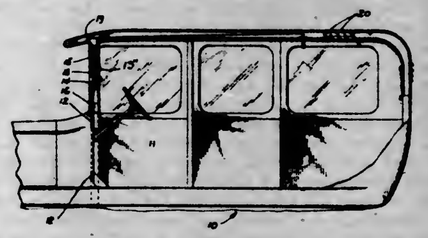
1. In apparatus of the class described, a pair of tables or carriages, individual fluid pressure means to operate

said carriages, means for setting in operation the fluid pressure to procure movement of one of said carriages,



and means responsive to movement of said first carriage for setting the fluid pressure in operation to move the other carriage.

1,901,237. VALVE CONSTRUCTION. HARVEY H. HALLER, Los Angeles, Calif., assignor to The Wehr Motor Company, Los Angeles, Calif., a Corporation of California. Filed July 19, 1930. Serial No. 469,179. 9 Claims. (Cl. 123—190.)

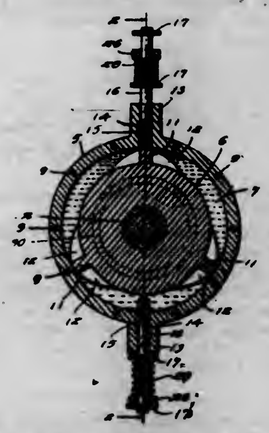


1. In a valve construction, in combination with a double-concave shoe, a plano-convex shoe provided with cut-out portions in the sides thereof for rendering said plano-convex shoe more elastic.

1,901,238. PROCESS OF RECOVERING DRIP OIL FROM CERTAIN RESIDUUMS. GUY N. HARCOURT, Larchmont, N. Y., assignor, by mesne assignments, to Alco Products Incorporated, New York, N. Y., a Corporation of Delaware. Filed Apr. 2, 1930. Serial No. 440,937. 1 Claim. (Cl. 196—5.)

A process of recovering drip oil from water gas tar comprising heating the tar above the boiling point of water in a plurality of heating stages, the first of which comprises a heat exchange step with water previously separated from the process and the second of which comprises a heating step with heat supplied from an independent source, spraying the oil under sub-atmospheric pressure into a vaporizing and separating zone, continuously withdrawing unvaporized water and tar from separate points within said zone, utilizing the heat from said water to preheat the tar in said first heat exchange step, continuously withdrawing vapors from said zone, condensing said vapors and separating the drip oil from the aqueous portion of the condensate.

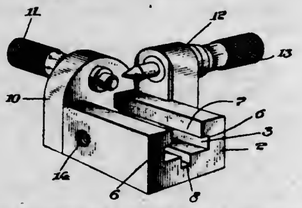
1,901,239. INCLOSED BODY FOR AUTOMOBILES. GEORGE N. HEIN, San Francisco, Calif. Filed Feb. 23, 1926. Serial No. 89,833. 6 Claims. (Cl. 296—28.)



3. An inclosed body for motor vehicles comprising a body, a top therefor, a door on each side of said body hinged to said body, a front corner post of elongated cross sectional area disposed with its major cross sectional dimension in the line of vision of the operator and extending from said body to said top and inclined rearwardly from the axis of the hinge connection between said door and said body, and a windshield of trapezoidal configuration supported between said corner posts in a rearwardly inclined position.

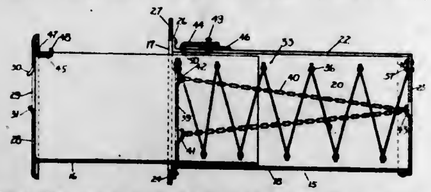
1,901,240. METHOD OF DEWAXING OILS. ALFRED HENRIKSEN, Ponca City, Okla., assignor to Continental Oil Company, Ponca City, Okla., a Corporation of Delaware. Filed Jan. 18, 1930. Serial No. 421,815. 4 Claims. (Cl. 196—19.)

1. A method for removing wax from wax-containing oils comprising the steps of adding a suitable solvent and a colloidal asphaltite, chilling the mixture to the desired temperature, and subjecting the chilled mixture to a centrifugal action.



1,901,241. HYDRAULIC CLUTCH. WILLIS O. HIGBY, West Leyden, and WILLARD C. HIGBY, Ithaca, N. Y. Filed Feb. 11, 1932. Serial No. 592,850. 1 Claim. (Cl. 192—58.)

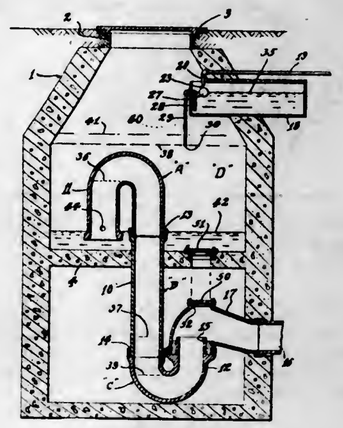
A clutch of the character described comprising a casing formed to provide a circular chamber and having a side wall, an end wall integral with the side wall, and a second end wall removably attached to the side wall, means for coupling one end of a shaft to the radial center



of the first mentioned end wall, a rotor within the chamber and concentric with said shaft, a second shaft secured at one end in the radial center of the rotor and extending through the removable end wall, said rotor being of materially less diameter than the chamber, a plurality of paddles disposed transversely of the periphery of the rotor and extending the full width thereof and further engaging at their free edges the wall of the chamber, said casing side wall having diametrically opposed recesses therein opening into the chamber, a blade reciprocably mounted in each of said recesses for extension into the chamber for contact with said rotor, said chamber containing a fluid surrounding the rotor, a stem carried by each of said blades and extending through the casing wall to the exterior thereof, a pair of lever members each having two angularly disposed arms and each further having one arm pivotally attached to the casing adjacent a stem and having its other arm arranged with the adjacent stem slidably extended therethrough, a pair of stops carried by each stem with the attached arm disposed therebetween, a spring member surrounding each stem between the inner stop and the attached arm, means for oscillating said levers, and cam means carried by the rotor at each side of each paddle for facilitating the passing of the paddles and blades in the slipping of the clutch.

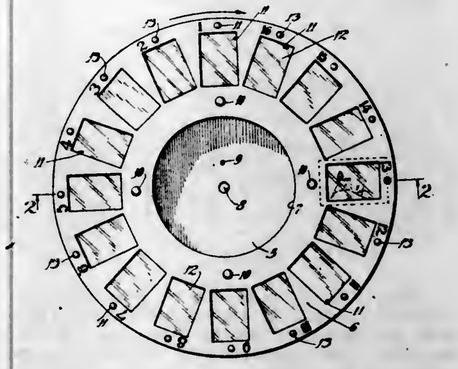
1,901,242. CIRCULAR CHASER GRINDING GAUGE. WILLIAM J. HOGG, Cleveland, Ohio, assignor to The National Acme Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 9, 1931. Serial No. 543,098. 11 Claims. (Cl. 33—185.)

3. A circular chaser gauge having a chaser supporting block having a guide-way for the insertion of a chaser slide therein, an adjustable stop and an adjustable micrometer located transversely to each other on said block.



1,901,243. DISPENSER. PAUL H. HORWITT, Springfield, Mass., assignor to The Menasha Products Company, Chicago, Ill., a Corporation of Wisconsin. Filed Jan. 17, 1930. Serial No. 421,336. 1 Claim. (Cl. 312—61.)

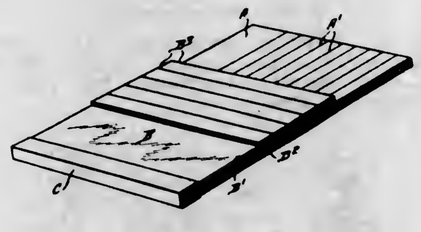
In a dispenser, a casing having a rear wall, a follower plate, spring means to urge said plate towards the front of said casing, and means to limit forward movement of said plate, said limiting means comprising a chain anchored at the middle thereof on a hook centrally positioned on said rear plate and having the two ends thereof secured, respectively, to points adjacent the upper and lower margins of said plate.



1,901,244. APPARATUS FOR AUTOMATICALLY FLUSHING SEWERS. HOWARD W. JEWELL, Los Angeles, Calif. Filed Apr. 18, 1931. Serial No. 531,135. 3 Claims. (Cl. 137—106.)

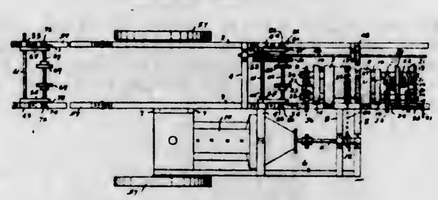
2. In a sewer flushing system, a tank, a siphon of large capacity for periodically discharging liquid contents from said tank in response to the rapid rise of liquid in said tank above a predetermined level, an auxiliary tank positioned above said predetermined level, a second siphon for discharging liquid contents from said auxiliary tank into said first tank, said second siphon requiring an initial flow of liquid in excess of a predetermined rate of flow to start its siphonic action, and having its discharge end positioned in said first tank substantially at said predetermined level, means for constantly supplying liquid to said auxiliary tank at less than said predeter-

mined rate of flow, whereby liquid from said means fills said auxiliary tank and overflows through said second siphon into said first tank without setting up siphonic action in said second siphon until the liquid in said first tank rises to said predetermined level and contacts with the discharge end of said second siphon to initiate siphonic action therein, whereby the contents of said auxiliary tank are quickly transferred to said first tank, thus producing a rapid rise of liquid in the first tank to start the siphonic action of the first siphon.



1,901,245. INTERCHANGEABLE HOLDING MEMBER FOR PROJECTION MACHINES. FRANK N. JONES, Chicago, Ill. Filed Sept. 6, 1930. Serial No. 480,128. 4 Claims. (Cl. 88—27.)

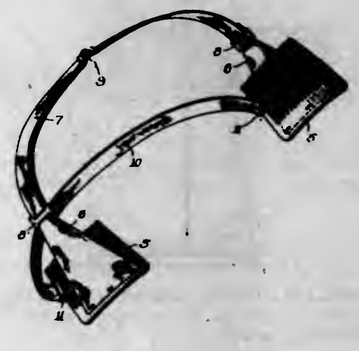
1. An interchangeable holding member for projection machines, comprising a main circular light weight disc



member composed of aluminum or equivalent light weight material, a supplementary disc member of similar material overlapping said main disc member and having its inner edge spaced from the center of said main disc member, registering openings in both said main disc member and said supplementary disc member, a picture film inserted between said disc members, and permanent fastening elements securing said disc members together adjacent said openings to prevent removal of said picture film.

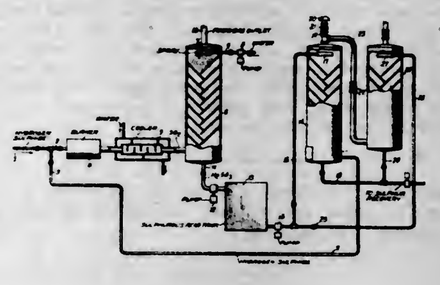
1,901,246. BOOK, PAD, AND TABLET, AND LINE RULER THEREFOR. PHILLIP H. KAUFMANN, Cleveland Heights, Ohio. Filed Sept. 26, 1930. Serial No. 484,604. 10 Claims. (Cl. 281—3.)

1. A line ruler comprising a sheet provided with spaced narrow, line-like, relatively weak areas extending thereacross for facilitating bending, the distance between said areas being great relative to the width thereof.



1,901,247. PIPE CLEANING MACHINE. FRANK KINZBACH, Houston, Tex. Filed Feb. 1, 1927. Serial No. 165,100. 4 Claims. (Cl. 29—81.)

1. A pipe cleaning machine including means for propelling a pipe lengthwise, a rotatable frame adapted to surround the pipe, cleaning means mounted in the frame and adapted to operate against the surface of the pipe, means for driving said propelling means and frame and means for moving said cleaning means outwardly from the pipe, said moving means including a ring on said frame and normally rotatable therewith, means for retarding the rotation of said ring relative to the frame rotation and operative connections between said ring and cleaning means.

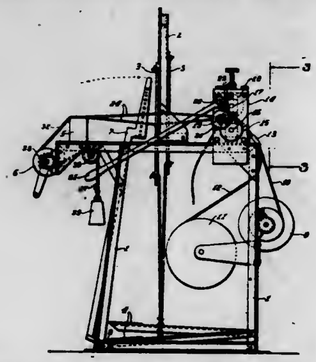


1,901,248. DEVICE FOR ELIMINATING FACIAL WRINKLES. EDITH A. LARSEN, Chicago, Ill. Filed Nov. 20, 1929. Serial No. 408,607. 6 Claims. (Cl. 128—76.)

4. A device for eliminating facial wrinkles comprising, in combination, a pair of combs having teeth adapted to be inserted upwardly and rearwardly into and to grip firmly the hair adjacent the temples respectively, and a pair of head bands attached to the backs of said combs

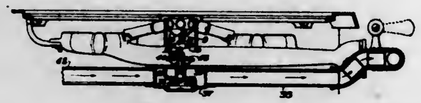
and adapted to pass around the head to place a tensioning draw on the combs and make them pull the hair and scalp.

1,901,249. METHOD AND APPARATUS FOR CONVERTING HYDROGEN SULPHIDE INTO SULPHUR. BERT H. LINCOLN, Ponca City, Okla., assignor to Continental Oil Company, Ponca City, Okla., a Corporation of Delaware. Filed July 25, 1932. Serial No. 624,641. 4 Claims. (Cl. 23—226.)



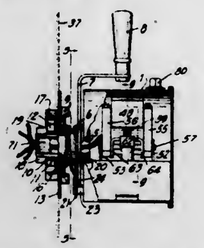
1. A process of converting hydrogen sulphide into sulphur comprising the steps of burning a portion of the hydrogen sulphide to form sulphur dioxide, absorbing the sulphur dioxide thus formed in water to form sulphurous acid, and contacting the sulphurous acid with the remaining portion of the hydrogen sulphide to form sulphur.

1,901,250. METHOD AND APPARATUS FOR WEAVING. PETER MATTLER, St. Louis, Mo., assignor to Johnson-Stephens & Shinkle Shoe Company, St. Louis, Mo., a Corporation of Missouri. Filed Mar. 23, 1929. Serial No. 349,337. 13 Claims. (Cl. 139—11.)



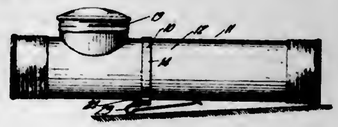
1. A machine for weaving fabrics, comprising, means for feeding a wide band of weaving material simul-

taneously with a similar band of backing material, means for putting the weaving material into a plurality of



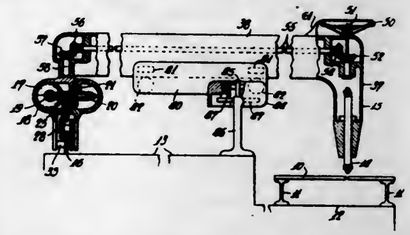
strips against the backing material, and weaving mechanism mounted to receive the cut strips as the warp for the fabric to be woven.

1,901,251. IGNITION SYSTEM FOR GAS BURNERS. RUFUS H. MAURER, Brookline, Mass., assignor to Spencer Thermostat Company, Cambridge, Mass., a Corporation of Massachusetts. Filed Oct. 14, 1929. Serial No. 399,657. 2 Claims. (Cl. 158—115.)



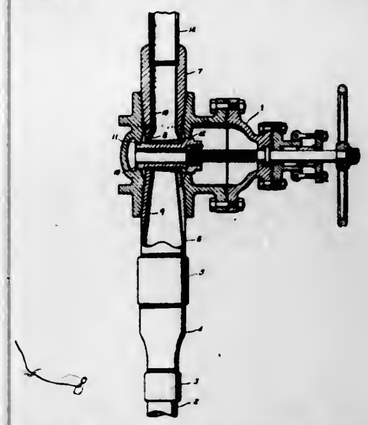
1. In combination, a gas range having a plurality of burners, a pilot light casing, tubes branching from said pilot light casing to each of said burners, said pilot light casing and said tubes forming an integrated, rigid, removable structure normally supported by said burners, a pilot burner separate from said pilot light casing and unattached thereto, said pilot burner being constructed and arranged to maintain a flame within said casing, and a thermostatically controlled valve controlling the gas supply of all said burners in accordance with the condition of the pilot burner.

1,901,252. SWITCH. FRANCIS R. MEGINNISS, Albany, N. Y. Filed Apr. 3, 1930. Serial No. 441,365. 14 Claims. (Cl. 200—69.)



13. In a switch of the character described, the combination with a fluid-tight container, of means therein for making or breaking an electrical circuit, movable means exterior of the container for building up potential energy, and means for transforming said energy into kinetic energy and transmitting it by a bodily movement of said container to said first mentioned means to effect an actuation thereof.

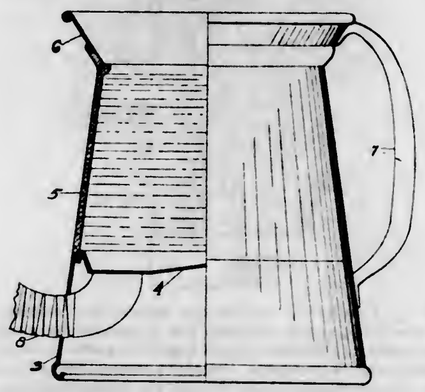
1,901,253. CLAMP AND SUPPORT FOR FLASH LIGHTS. FRANCIS R. MEGINNISS, Albany, N. Y. Filed Dec. 10, 1930. Serial No. 501,876. 7 Claims. (Cl. 240—52.5.)



1. In combination, a flashlight provided with a casing, a clamping member comprising a loop formed of resilient material having slitted portions interfitted with each other and movable relatively to each other whereby said loop may frictionally engage said casing, and a support for the flashlight on said loop.

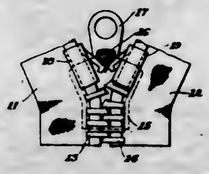
1,901,254. CUTTING MECHANISM. ADOLF MESSER, Frankfort-on-the-Main, Germany. Filed Apr. 19, 1932, Serial No. 606,274, and in Germany May 1, 1931. 15 Claims. (Cl. 266—23.)

1. A cutting apparatus having a frame structure, a pair of spaced supports therefor, a torch on said frame structure, power driven means remote from the torch for moving said frame structure and said torch along the work, and means amnually operable from a point close to said torch for guiding said torch.



1,901,255. GATE VALVE. DANIEL J. MORAN, Ponca City, Okla., assignor to Continental Oil Company, Ponca City, Okla., a Corporation of Delaware. Filed Aug. 15, 1931. Serial No. 557,229. 4 Claims. (Cl. 251—62.)

1. In an oil well valve assembly, a conventional gate valve having a valve seat and inlet and outlet ports, a member to protect the seat from the abrasive action of the solid particles in the oil comprising, an abrasion

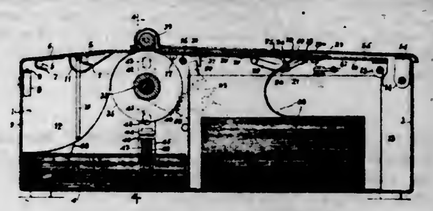


resisting fitting removably positioned in the inlet port through which the effluent oil is adapted to flow, said fitting having an internal cross-section of progressively decreasing diameter and terminating in an orifice having a smaller diameter than the valve seat, said fitting adapted to convert the effluent oil stream into a jet for projection thereof past the valve seat without contacting the same.

1,901,256. NONDECANTING LIQUID MEASURE. RICHARD B. MUNDAY, Dayton, Ohio, assignor, by mesne assignments, to The Cincinnati Ball Crank Co., Cincinnati, Ohio, a Corporation of Ohio. Filed July 17, 1929. Serial No. 378,899. 2 Claims. (Cl. 221—25.)

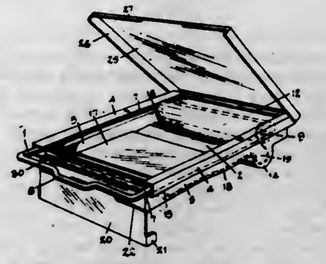
1. A non-decanting open top liquid dispensing measure, comprising, a transparent shell, a metallic outwardly flaring rim socketed within the upper end of the shell, a metallic base for the lower end of the shell providing a bottom for the shell and a supporting skirt, the base formed with an annular recess at the juncture of the bottom and skirt for a socketed connection with the lower end of the shell, and a handle connecting said metallic rim and base.

1,901,257. LOCK SLIDER. SAMUEL H. NORTON, Meadville, Pa., assignor to Hookless Fastener Company, a Corporation of Pennsylvania. Filed Jan. 10, 1930. Serial No. 419,816. 10 Claims. (Cl. 24—205.)



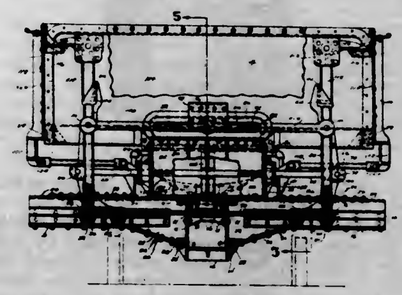
1. In a slide fastener having opposed series of fastener elements, a slider movable along the same to control the interlocking thereof, said slider having a wedging portion which enters between the fastener elements to disengage them when the slider is moved in one direction, and slider locking means for engagement with said wedging portion to lock the slider against unintended movement in fastener opening direction.

1,901,258. AUTOGRAPHIC REGISTER. FRANK E. PFEIFFER, Dayton, Ohio, assignor to The Egry Register Company, Dayton, Ohio, a Corporation of Ohio. Filed May 4, 1931. Serial No. 534,874. 30 Claims. (Cl. 282—16.)



1. In an apparatus for feeding and aligning a plurality of superimposed strips of paper having transverse creases

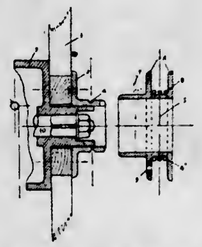
therein, a fixed table having an edge thereon, means for pulling the strips over the table, and means operable at a



certain stage in the operation of the apparatus for moving and holding the strips against the edge whereby the strips are aligned when the creases reach the edge.

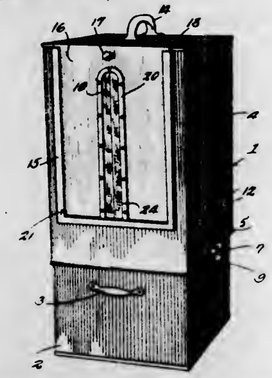
1,901,259. CONTAINER AND ROLLER OF CIGARETTES. JAMES G. POSTTEUS, Toledo, Ohio. Filed Oct. 14, 1931. Serial No. 568,682. 2 Claims. (Cl. 131—5.)

1. In a contained for cigarettes, the side walls of the container having channels, a U-shaped handle member slidably supported in the channels, a cross head connected to the handle and adapted to be reciprocated through substantially the entire length of the container in a plane parallel to the plane of the major portion of the bottom wall of the container, and a flexible element connected to the container at points proximate to the ends of the stroke of the cross head, the flexible sheet element being adapted to be slidably engaged by the cross head, portions of the flexible sheet element being adapted to receive cigarette materials and located between the cross head and the bottom wall of the container for compressing the cigarette materials into cigarette form.



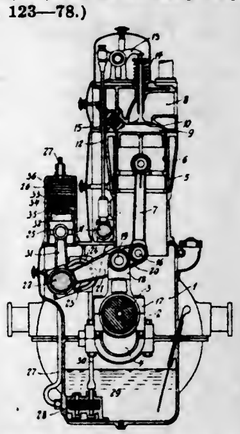
1,901,260. DUMP CAR. ROBERT E. POWERS, New York, N. Y. Filed Nov. 1, 1927. Serial No. 230,257. 56 Claims. (Cl. 105—265.)

2. In a dump car, a body, an underframe comprising a center sill and transverse members adjacent each end thereof, rocker elements connected to said body and



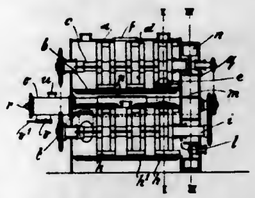
mounted on the center sill for tilting said body, connected sectional strut elements mounted for lateral movement on the transverse members, said strut elements supporting the body in normal position, fluid pressure means for moving said strut elements to free the latter from body supporting position, and side gates normally retained in closed position by said strut elements.

1,901,261. AUTOMOBILE EXTRACTOR. SEBASTIÃO KNEIPP RAMOS, Lagoa Vermelha, Brazil. Filed Jan. 29, 1930, Serial No. 424,348, and in Brazil Feb. 24, 1929. 1 Claim. (Cl. 242—95.)



An automobile extractor for use in connection with automobiles having a rear wheel and a hub forming part thereof including a sleeve element to slidably interfit with and overlie the full length and extend beyond the hub of the rear wheel, means for securing the sleeve to the hub, the sleeve being integrally formed with spaced annular flanges to provide a cable drum, the outer flange being coincident with the extreme outer edge of the sleeve, the inner flange being coincident with that portion of the sleeve immediately overlying the extreme outer end of the hub of the wheel when the sleeve is in position on the hub, the sleeve inwardly of the inner flange being without projection, the disposition of the drum forming flanges maintaining the cable wholly beyond the end of the wheel hub to thereby avoid contact of such cable with the hub of the forward wheel of the vehicle in the operation of the extractor.

1,901,262. DUST COLLECTOR. ELI ROBIDEAU, Malone, N. Y. Filed Dec. 10, 1929. Serial No. 413,094. 2 Claims. (Cl. 15—142.)

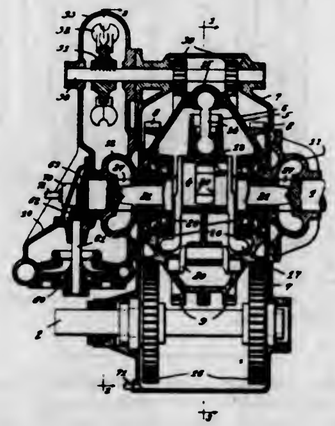


1. A dust collector comprising a cabinet having an opening for the reception of the article which is to be rid of dust, the cabinet including a base and a cap fitting over the base, the cap being provided at its lower end with an outwardly flared flange which facilitates the introduction of the upper end of the base into the lower end of the cap, a stud carried by the base, and a nut on the stud and engaging the side wall of the cap, the flange of the cap having in its lower edge a notch which receives the stud, the flange extending outwardly beneath the nut to retain the cap when the nut is loosened slightly, the cap being supplied with an internal support which engages the upper end of the base.

1,901,263. INTERNAL COMBUSTION ENGINE. OTTO SEVERIN RUUD, Oslo, Norway. Filed Nov. 25, 1931. Serial No. 577,341, and in Germany July 4, 1930. 14 Claims. (Cl. 123—78.)

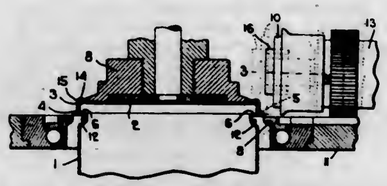
1. In an internal combustion engine the combination of a working piston, a crank pin, a pitman rod made in two parts, a leverage connecting the pitman parts together, and a yieldable resistance controlling the position of said leverage and thereby the operative length of the pitman.

1,901,264. METHOD OF PRODUCING ANIMAL FOOD. CONRAD SCHLOTTERHOSE, Wesermunde-Wulsdorf, Germany. Original application filed Jan. 30, 1931, Serial No. 512,426, and in Germany Nov. 26, 1930. Divided and this application filed Feb. 20, 1932. Serial No. 594,353. 3 Claims. (Cl. 99—11.)



1. A method for producing animal foods from protein substances containing water, especially from fish having a low percentage of fat and other material containing glue, consisting in heating the material and in removing the adhesive property of the glue causing the caking on the heating surfaces by repeated cooling of the material during the heating periods.

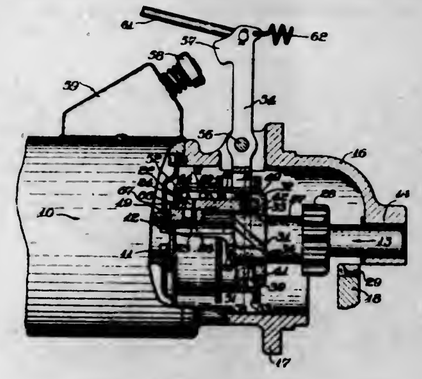
1,901,265. TRANSMISSION. HEINRICH SCHNEIDER, Beloit, Wis. Filed July 7, 1928. Serial No. 291,075. 19 Claims. (Cl. 60—54.)



10. In a hydraulic transmission the combination of driving and driven members, a differential pump comprising a crank driven by the driving member, an inner cylinder rotor bearing on the crank, an outer piston rotor eccentric with relation to the inner rotor but having a driving connection therewith and serving to drive the driven member, and pistons flexibly connected with the outer rotor and operating in cylinders of the inner rotor, a turbine having a driving connection with the driven member for transmitting its torque thereto, said driving

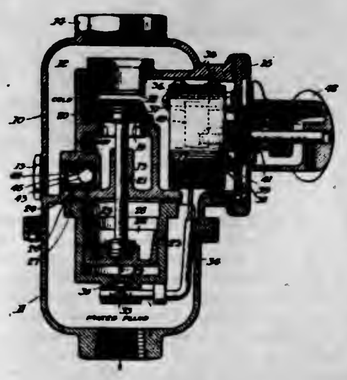
connection being afforded through a step-down gearing connection with the outer rotor, the same comprising a pinion driven by the turbine meshing with a toothed rim provided on the outer rotor, and an adjustable nozzle for

discharging fluid from the pump to operate the turbine, said nozzle being arranged to be controlled to determine the power transmission ratio between the driving and driven members.



1,901,266. MACHINE FOR SEALING CANS. HARRY SEBELL, Boston, Mass., assignor to Arthur H. Parker, Lexington, Mass. Filed July 11, 1930. Serial No. 467,177. 6 Claims. (Cl. 113—1.)

1. In a can-sealing machine for sealing a can cover to a can body with a U-shaped sealing strip, the combination with two rotatable sealing members between which the U-shaped sealing strip passes and by which said sealing strip is applied to the can cover and can body, one of said sealing members being in the form of a wheel, of a presser roll situated axially of the sealing wheel and rotatable relative thereto and arranged to act on the portion of the can cover which overlies the edge of the can body.

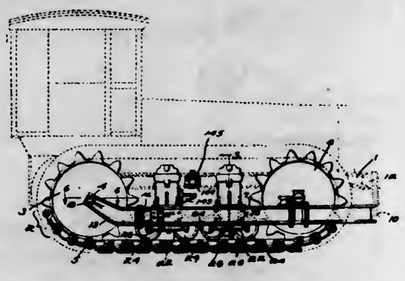


1,901,267. STARTING MECHANISM FOR INTERNAL COMBUSTION ENGINES. YOUSTON SEKELLA, Elmira Heights, N. Y., assignor to Eclipse Machine Company, Elmira, N. Y., a Corporation of New York. Filed June 30, 1931. Serial No. 548,019. 16 Claims. (Cl. 74—7.)

1. In a starting mechanism for internal combustion engines, a power shaft, a driving member slidably mounted thereon for movement into and out of engagement with a member of an engine to be started, an actuating member, cooperating means on said driving and actuating members including an inclined connection and a yielding detent whereby longitudinal movement of the actuating member is positively transmitted to the driving member

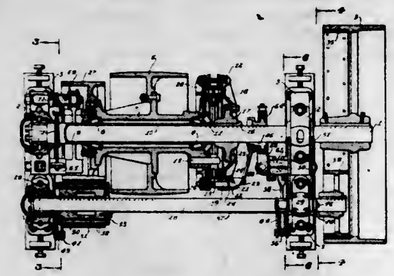
when the parts are in their normal driving relative positions, said means allowing substantially unimpeded relative longitudinal movement toward their normal positions.

1,901,268. WATER MIXER. MORTON O. SNEDIKER, Chicago, Ill., assignor to The Powers Regulator Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 11, 1931. Serial No. 580,363. 6 Claims. (Cl. 236—12.)



1. In combination, a casing having a mixing valve and a piston for controlling the same and provided with hot and cold fluid chambers and connections thereto for hot and cold fluid supply lines, a thermostat immediately adjacent to the outlet from the mixing valve, a pilot valve operated by said thermostat for controlling the admission of fluids to both sides of said piston, and means within the casing, sensitive to an unbalanced pressure condition in the hot and cold supply lines for utilizing the fluid having the dominant pressure for positioning said piston under the control of said pilot valve.

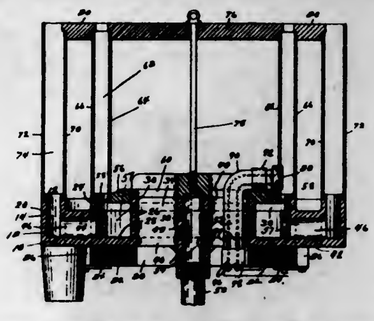
1,901,269. TRACKLAYING TRACTOR. FREDERICK O. SNOW, Jr., Winchester, Mass., assignor to Mead-Morrison Manufacturing Company, East Boston, Mass., a Corporation of Maine. Filed Oct. 6, 1926. Serial No. 139,892. 5 Claims. (Cl. 305—9.)



1. In a track laying tractor, a pivoted track laying structure having a driving sprocket arranged with its axis coincident with the axis of the track laying struc-

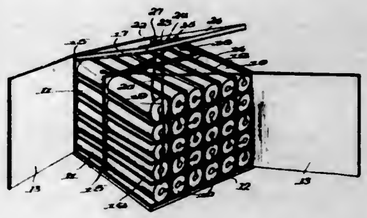
ture, said track structure including a U-shaped frame pivoted at the open end of the U, the outer leg of said U-shaped frame having a detachable bearing portion sepa-

rable from said frame at a point beyond the rim of said driving sprocket whereby said sprocket may be removed without removing said track structure.



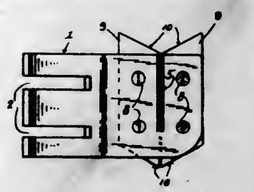
1,901,270. DRIVING MECHANISM. FRED D. STANLEY, Coffeyville, Kans., assignor to The Oil Country Specialties Mfg. Co., Coffeyville, Kans., a Corporation of Kansas. Filed Nov. 26, 1930. Serial No. 498,240. 2 Claims. (Cl. 74—26.)

1. A reversible driving mechanism, comprising, a base, a main shaft journaled thereon, a wheel on said shaft, a yielding friction lining on an inner cylindrical surface of said wheel, means for driving said wheel, a driven wheel mounted on said shaft, a friction drum having a plain exterior cylindrical friction surface and rigidly connected to rotate with said driven wheel, an auxiliary shaft having a pair of friction elements rigidly secured to rotate together thereon, one of said elements having a plain exterior cylindrical friction surface engageable with the lined interior surface of said first wheel and the other having a yielding cylindrical friction facing engageable with the friction surface of said drum, means for mounting said auxiliary shaft including bearings at both ends thereof mounted for movement on said base, means for moving said bearings individually to force said friction elements into and out of engagement with their respective cooperating surfaces, and a clutch adapted to connect said driven wheel to rotate with said first wheel.



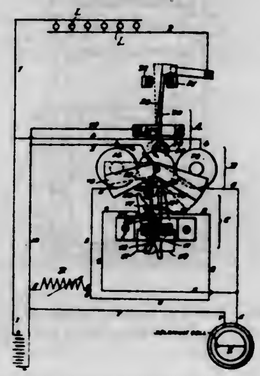
1,901,271. LIQUID FUEL BURNER. WILLIAM EDWARD TAFT, Athol, Mass., assignor to Taft Oil Burner Company, Athol, Mass., a Corporation of Massachusetts. Filed May 31, 1930. Serial No. 457,854. 4 Claims. (Cl. 158—81.)

1. A liquid fuel burner having a vaporizing channel that has an opening at the top, spaced combustion tubes surrounding and upstanding above said opening, an electric heating element located in a position to heat and vaporize the liquid fuel in said channel, and a resistance conductor disposed within the bottom of the space between said tubes and immediately above the open top of said channel in position to ignite the fuel vapors at the time



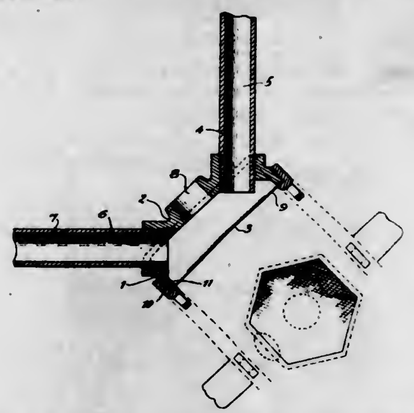
they issue from said open top, said heating element and resistance conductor being connected together for concurrent energization.

1,901,272. COORDINATED BATTERY CONSTRUCTION. LYSLE G. TATRO, Decorah, Iowa, assignor to H. B. Montgomery, Decorah, Iowa. Filed Apr. 16, 1930. Serial No. 444,822. 3 Claims. (Cl. 136—109.)



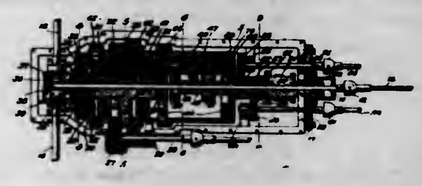
2. A battery unit comprising a casing, a group of relatively deep series connected cells, a second group of series connected cells of the same diameter as those of the first group but relatively short in comparison thereto, said two groups of cells being assembled in diametrically superposed relation in said casing, and terminals carried by said casing connected to the ends of said two groups of cells, substantially as and for the purposes described.

1,901,273. SILK CLEANER. JAMES FYFE TAYLOR, South Bethlehem, Pa. Filed Apr. 16, 1932. Serial No. 605,712. 2 Claims. (Cl. 28—68.)



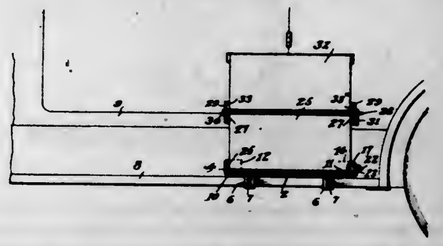
1. A silk cleaner comprising a supporting arm, means for mounting said supposting arm in position on a machine, said arm having a thread retaining slot extending transversely thereinto from one longitudinal edge thereof, the arm further having holes therein adjacent one side of the slot and comparatively short, longitudinal slots therein adjacent the other side of the thread slot, duplicate, removable interchangeable guides mounted on the arm on opposite sides of the thread slot, and securing elements for the guides engaged in the holes and in the longitudinal slots.

1,901,274. CONTROLLING MEANS FOR ELECTRIC LIGHTING INSTALLATION OF RAILWAY CARS. FERUCCIO TRINCHERO, Genoa, Italy, assignor to Enrico Garda, Turin, Italy. Filed Feb. 6, 1928. Serial No. 252,343. 1 Claim. (Cl. 250—41.5.)



An electric lighting installation especially adapted for lighting railway cars including a main circuit, a shunt circuit connected with the main circuit and including a selenium cell and an electro-magnet, a second circuit connected in shunt with the main circuit and including a second electro-magnet and a variable resistance, a circuit interrupter in said main circuit, an armature associated with said interrupter and actuated by said magnets to effect the opening and closing of said main circuit, means for cutting out said resistance temporarily in said second named shunt circuit in response to a current in said second named shunt circuit larger than the current in said first named shunt circuit and means for cutting out said selenium cell temporarily in said first named circuit in response to a current in said first named shunt circuit larger than the current in said second named shunt circuit whereby said main circuit may be opened and closed according to any variation of intensity of light.

1,901,275. PREPARING DYE PASTE FOR PRINTING AND DYEING. ROBERT O. WOOD, Hamburg, N. Y., assignor to National Aniline & Chemical Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 26, 1929. Serial No. 388,526. 7 Claims. (Cl. 209—250.)

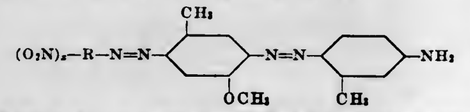


1. In the process for screening a dye paste which is so viscous through a screen which is so fine that under the static influence of gravity little of the paste will pass therethrough, the improvement which comprises sweeping a body of said dye paste across and in contact with the surface of the screen under the influence of an initial velocity head in excess of that due to normal gravity flow directed at an acute angle to the surface of the screen, and collecting the dye paste which passes through the interstices of the screen.

1,901,276. MOTOR VEHICLE DIFFERENTIAL GEAR DRIVE AND GUIDE IN FOUR WHEELS, COMBINED WITH TRIPLE DIFFERENTIAL AND BRAKE IN ONE UNIT. PETER PAUL ADAMS, Turkey River, Iowa. Filed Jan. 6, 1930. Serial No. 418,928. 6 Claims. (Cl. 74—99.)

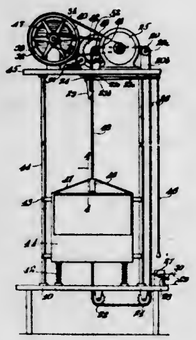
1. A differential comprising a housing, a drive shaft journalled in said housing, a drive gear secured to said shaft, pinions journalled to said gear, driven gears meshing with said pinions, pinions journalled to said driven gears, power delivering gears in mesh with the second named pinions, front and rear power axles connected with said power delivering gears, brakes for holding either of the driven gears against rotation, and a braking means whereby the driven gears may be simultaneously held against rotation.

1,901,277. EGG CASE CARRIER. LEMMET L. AMSPACKER, Glasco, Kans. Filed Apr. 7, 1930. Serial No. 442,322. 2 Claims. (Cl. 224—29.)



1. A carrier for holding end-cleated cases on autos, comprising a rectangular frame provided on one end, at two of its corners, with overhanging brackets, and supplied at its opposite end, at a third of its corners, with a straight, upstanding tongue, the frame being provided on one side with spaced upstanding stops, the opposite side of the frame, at the tongue, being open, so that a case can be slid upon the frame, against the stops, between the brackets on the one hand and the tongue on the other hand, with the cleat at one end of the case overhung and engaged by the brackets, a retainer having a vertical flange overlapping the open side of the frame, to hold the case against the stops, the retainer having a horizontal flange overhanging the tongue and overhanging the cleat at the opposite end of the case, to supplement the brackets in

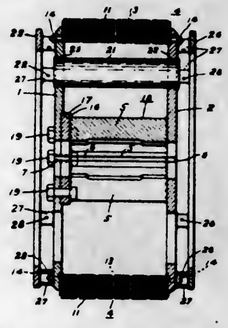
holding down the case on the frame, and means for securing the retainer to the tongue removably, and for adjustment toward and away from the stops and the open side of the frame.



1,901,278. SECONDARY DISAZO DYESTUFFS. JAMES BADDILEY, Manchester, and JAMES HILL, Glastonbury, England, assignors to Imperial Chemical Industries Limited, Westminster, England. Filed July 21, 1932, Serial No. 623,906 and in Great Britain Feb. 12, 1926. 5 Claims. (Cl. 261—81.)

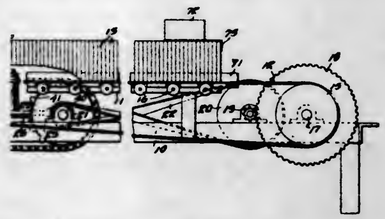
1. The process of manufacturing new secondary disazo dyestuffs, suitable for dyeing acetyl cellulose in even level shades, which comprises combining a diazotized nitroamine of the bensine or naphthalene series, including derivatives thereof except sulphonic acids and sulphonates with cresidine, rediazotizing and combining with *m*-toluidine, to produce dyes having the general formula

where *x* is 1 or 2 and R represents an aromatic residue free from sulphonic acid or sulphonate groups and which dye acetyl cellulose in even level shades.



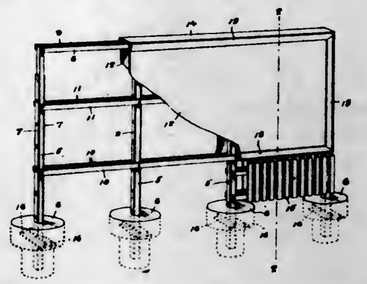
1,901,279. PACKAGE CARRIER. JAMES L. BALDWIN, Chicago, Ill. Filed Dec. 16, 1927. Serial No. 240,492. 5 Claims. (Cl. 187—3.)

1. An elevator lift comprising a power element, a driving clutch member operated by said power element, a driven clutch member automatically engaged by the driving clutch member when the power element has attained a suitable value, an elevator-operating shaft, a reduction-gearing between said driven clutch member and said shaft for the operation of the carrier in the lifting direction, a brake effective upon said driven clutch member, and a speed-responsive device energized by said shaft when the shaft is rotated at excess speed in the lowering direction to apply said brake.



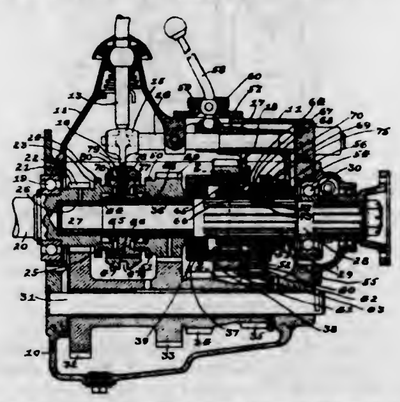
1,901,280. ROTOR CONSTRUCTION. HAROLD L. BARNHOLDT, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 26, 1929. Serial No. 350,024. 10 Claims. (Cl. 171—206.)

1. A fabricated rotor for a dynamo-electric machine comprising a shaft, a laminated core, two end plates disposed in spaced axial relation, a plurality of axially-disposed spacing pieces the ends of which are rigidly welded to one of said plates, means for removably attaching the



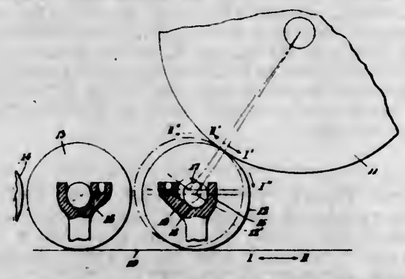
other of said plates to the opposite ends of said axial spacing pieces, said plates and one of said spacing pieces being keyed to said shaft.

1,901,281. TILE FEEDER. JAMES ARTHUR BOWER, Anderson, Ind., assignor to The National Tile Company, Anderson, Ind., a Corporation of Ohio. Filed June 1, 1931. Serial No. 541,496. 7 Claims. (Cl. 198—35.)



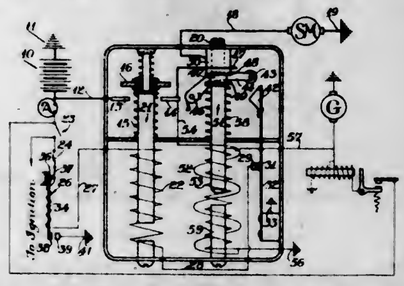
1. A tile feeder comprising an endless conveyor and means for intermittently driving the conveyor, a weighted hook for holding tile in an upright position on said conveyor, and an escapement device for releasing tile at the delivery end of the conveyor, means for intermittently operating the escapement device, and resilient means adjacent said escapement device for assisting in ejecting a tile upon the beginning of the operation of the said escapement device, substantially as set forth.

1,901,282. BILLBOARD CONSTRUCTION. ELIAS G. BURKET, Altoona, Pa. Filed Nov. 30, 1932. Serial No. 645,067. 1 Claim. (Cl. 40—125.)



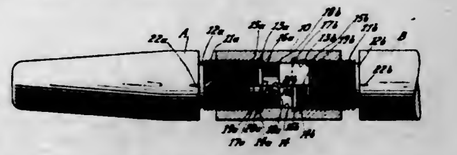
A billboard comprising a series of uprights, spaced longitudinal strips carried by said uprights and disposed at opposite sides thereof, face boards imposed upon said strips, a marginal framing about said face boards, the face boards being disposed opposite each other, end strips on the outermost of the uprights, and a head strip imposed upon the uppermost longitudinal strips.

1,901,283. TRANSMISSION MECHANISM. EVERETT R. BURTNETT, San Marino, Calif. Filed Oct. 28, 1931. Serial No. 570,715. 20 Claims. (Cl. 74—57.)



5. In transmission mechanism, a drive shaft, a driven shaft aligned with said drive shaft and having its driven end in journal engagement therewith, a sleeve shaped member, said sleeve shaped member being rotatably sleeved on said driven shaft member with its ends terminating within the ends of the latter, means for driving said sleeve shaped member from said drive shaft at the same speed as, or at different speed than, said drive shaft, said sleeve shaped member having a bell shaped portion with the bell opening toward the driving end of said driven shaft, cams rotatable with said driven shaft and disposed thereon within the bell portion of said sleeve shaped member, roller clutch members between said cams and the bore of said bell and to be actuated by the bell portion of said sleeve shaped member to drive said driven shaft through the medium of said cams in one direction and permit over-run of said driven shaft in the same direction under momentum of the latter, a coupling member mounted nonrotatable but axially movable on said driven shaft, said sleeve shaped member and coupling member each having parts to be engaged to positively prevent relative rotation therebetween, and means to shift said coupling member into positive engagement with said sleeve shaped member to optionally supplant the overrunning drive couple between said sleeve shaped and driven shaft members with a positive drive couple therebetween.

1,901,284. PRINTING PRESS. FRANK P. CARLSON, Astoria, N. Y. Filed Feb. 12, 1932. Serial No. 592,459. 5 Claims. (Cl. 101—358.)

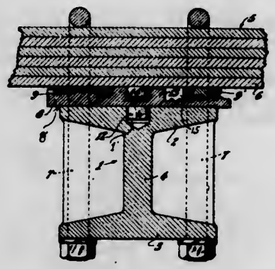


1. A printing press having an inking roller permanently in frictional engagement with the vibrator, adapted to be alternately elevated above and lowered into contact with the press-form through the alternate changes in rotation of said vibrator.

1,901,285. AUTOMATIC STARTING MECHANISM FOR INTERNAL COMBUSTION ENGINES. FRANK T. CHRISTIAN, Elmira, N. Y., assignor to Eclipse Machine Company, Elmira, N. Y., a Corporation of New York. Filed Apr. 2, 1931. Serial No. 527,234. 8 Claims. (Cl. 290—38.)

1. In combination with an internal combustion engine, electrical starting and ignition circuits therefor, said starting circuit including a battery and a motor, said ignition circuit including an ignition switch, electro-magnetic means whereby closure of the ignition switch causes closure of the starting motor circuit, means whereby said starting motor circuit is opened when the engine starts, means for limiting the time of cranking the engine by opening said starting motor in case the engine fails to start after a predetermined time of cranking, means for delaying for a predetermined time the effective reclosure of the starting motor circuit in case of engine stall, said means for limiting the time of cranking being arranged to prevent reclosure of the starting motor circuit until reset by the operator.

1,901,286. ROD COUPLING. GEORGE B. COE, Montclair, N. J., assignor, by mesne assignments, to Tube Reducing Corporation, Wilmington, Del., a Corporation of Delaware. Filed Mar. 14, 1931. Serial No. 522,535. 2 Claims. (Cl. 287—105.)

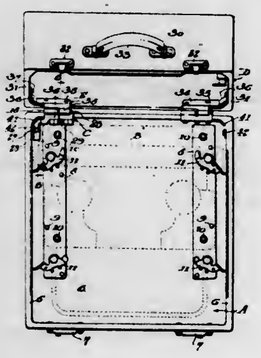


2. A rod coupling comprising in combination, oppositely threaded rod parts having reduced complementary unthreaded splined portions at their inner ends and flat annular abutment faces disposed in planes normal to the axis, and a sleeve having oppositely threaded end portions and an internal annular abutment rib of less internal diameter than the threaded portions said rib being provided with flat annular abutment faces disposed in planes normal to the axis for cooperating with the faces of the rod parts to lock the parts together when assembled.

1,901,287. ADJUSTABLE SPRING AND AXLE WEDGE. ALOYSIUS W. CORRIVEAU, West Springfield, Mass. Filed June 30, 1932. Serial No. 620,110. 6 Claims. (Cl. 267—52.)

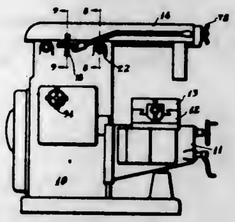
1. In a device for adjusting the plane of a front axle of a motor vehicle, a wedge comprising two members the bottom one having a pin for engaging the recess in the

axle and a hub formed with a recess to receive the pin of the lower leaf of a front spring, the said members having intermeshing teeth formed on the same arc of a



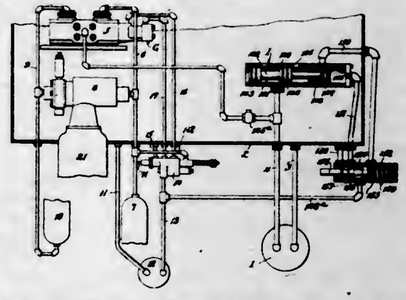
circle, whereby the upper member may be adjusted relative to the lower member to offset the caster or twist of an axle.

1,901,288. MANUFACTURE OF VAT DYESTUFFS AND OF INTERMEDIATE PRODUCTS RELATING THERETO. ALFRED DAVIDSON and ARNOLD SHEPHERDSON, Blackley, Manchester, England, assignors to British Dyestuffs Corporation Limited, Blackley, Manchester, England. Filed May 9, 1929, Serial No. 276,500, and in Great Britain May 26, 1927. 4 Claims. (Cl. 260—60.)



4. In the manufacture of new chlorinated vat dyes from 1-araylamino anthraquinone-2-carboxylic acid compounds, the step which comprises heating to a temperature between 180 and 190° C., a mixture comprising said anthraquinone carboxylic acid compound and thionyl chloride in the presence of a high boiling solvent, the amount of thionyl chloride being greater than that necessary to form the corresponding acid chloride of said anthraquinone carboxylic acid compound.

1,901,289. HINGE. BERNARD J. DOWD, West Hartford, Conn., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 4, 1931. Serial No. 555,132. 9 Claims. (Cl. 16—177.)

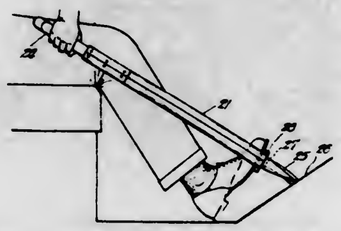


1. A hinge comprising a base section, and a cover section, one section having a hinge pintle, the other section having a pintle receiving roll to receive the pintle when the sections are moved to present the pintle and roll in coaxial relation and then relatively longitudinally to bring the pintle and roll into cooperative relation, and a manually releasable latch to secure the pintle and roll against separation.

1,901,290. MILLING MACHINE. SOL EINSTEIN and LESTER F. NENNINGER, Cincinnati, Ohio, assignors to The Cincinnati Milling Machine Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 13, 1930. Serial No. 428,178. 3 Claims. (Cl. 90—18.)

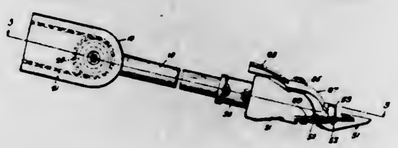
1. In a milling machine having a column, a work table slidably mounted thereon, a variable speed transmission for the table supported by the column, said column having an overarm projecting over said table, means to adjust the overarm relative to the column, speed change control means for said transmission mounted on the end of the overarm and additional speed change control means for said transmission on the side of the column, indicating means with each control means, and means to interconnect said control means in all positions of adjustment of the overarm whereby operation of one will simultaneously operate the other.

1,901,291. HYDRAULIC PRESS. WALTER ERNST, Mount Gilead, Ohio, assignor to Hydraulic Press Manufacturing Company, Mount Gilead, Ohio. Filed June 27, 1929. Serial No. 373,985. 15 Claims. (Cl. 138—17.)



1. The combination with a hydraulic press including a reciprocatory platen; of a continuous discharge pump; means forming with the press and the pump a hydraulic circuit; a reversing valve operatively connected in said circuit for controlling the direction of movement of the platen; means for moving the reversing valve when the platen reaches the end of its pressing stroke to effect a return of the platen; a by-pass valve operatively connected in said circuit and adapted to open when the platen reaches the end of its return stroke for diverting the pressure fluid from the press to thereby bring the platen to rest at the end of the return stroke thereof simultaneously with the continued discharge of the pump; and hydraulic means controlled by the platen for operating said by-pass valve from its closed to its fully open position and vice versa.

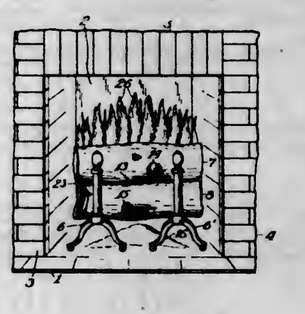
1,901,292. BRAKE THROW MEASURING DEVICE. LEON L. GRAHAM, Chicago, Ill., assignor to Bendix-Cowdrey Brake Tester, Inc., South Bend, Ind., a Corporation of Delaware. Filed July 9, 1928. Serial No. 291,468. 5 Claims. (Cl. 33—169.)



1. A device for measuring the throw of an automobile brake pedal or the like comprising a brace bar arrangeable

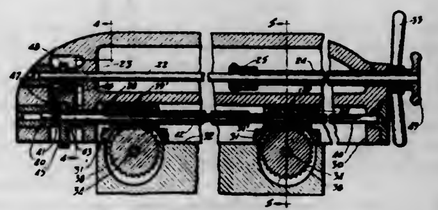
alongside the pedal with one end engaging the floor of the automobile, a movable member carried by said brace bar and having a part engageable by the underside of the pedal whereby said member may be moved correspondingly to the pedal throw, said brace bar having graduations thereon to show the extent of movement of said member caused by depression of the pedal, and means affording a yielding connection between said brace bar and said movable member.

5. A device for measuring the throw of an automobile brake pedal or the like comprising two adjacent relatively movable bars, one having a hand-hold and a part adapted to rest on the floor of the automobile and the other having thereon a member adapted to be moved in the operation of the pedal, means yieldingly connecting said bars and a casing in which said bars are enclosed, said casing having an opening therein and having graduations adjacent said opening and said last-mentioned bar having an indicator point thereon, the movement of which may be observed through said opening with reference to said graduations.



1,901,293. MOWING DEVICE. BENJAMIN F. GRAVELY, Dunbar, W. Va. Filed Aug. 8, 1931. Serial No. 555,972. 4 Claims. (Cl. 56—257.)

1. A mowing device comprising a tubular support, a cutting mechanism including a finger guard carrying bar and a cutter bar, a casing secured to said guard carrying bar, and mounted on said support for lateral rocking movement, a drive shaft within said support having a rotatable head fixed thereon and operable within said casing, a vertical rock shaft supported in the casing, a yoke straddling said rock shaft and pivotally connected thereto, an arm on the yoke pivotally connected with said head, and a lever secured intermediate its length on the rock shaft and having one end connected with said cutter bar and the other end free.

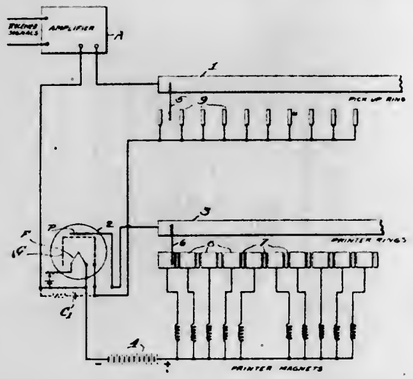


1,901,294. ANIMATED IMITATION HEARTH FIRE. FRANK A. GRITT and FENTON STEWART, Indianapolis, Ind., assignors to Gritt, Incorporated, Indianapolis, Ind., a Corporation of Indiana. Filed June 30, 1930. Serial No. 464,952. 6 Claims. (Cl. 272—15.)

1. An animated imitation hearth fire having a backless imitation log shell with openings therein, colored translucent material seated in the log shell covering the openings, a lamp arranged rearward of the lower portion of the log shell, a distorting reflector arranged between the log shell and the lamp and facing towards the

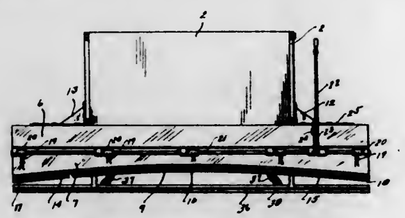
lamp, the reflector having openings therein to admit light from the lamp to the translucent material, and a rotary light-interrupter mounted upon the lamp.

1,901,295. MILLING MACHINE. MAX DE HAAS and BERNARD SASSEN, Cincinnati, Ohio, assignors to The Cincinnati Milling Machine Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 5, 1931. Serial No. 513,665. 13 Claims. (Cl. 90—18.)



1. In a milling machine having a column and a cutter arbor journalled therein, an overarm slidably mounted on the column for supporting the outboard end of said arbor, means for effecting longitudinal adjustment of the overarm relative to the column, mechanism for clamping the overarm to the column comprising a plurality of clamping bolts mounted in the column, rotating means mounted on said bolts, and means carried by the overarm in operative engagement with said rotating means for effecting actuation thereof and thereby clamp the overarm in any position of longitudinal adjustment.

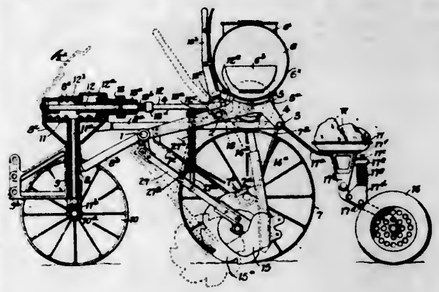
1,901,296. MULTIPLEX TELEGRAPH SYSTEM. HAKON H. HAGLUND, Flushing, N. Y., assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Feb. 27, 1929, Serial No. 343,109. Renewed Oct. 14, 1931. 75 Claims. (Cl. 178—52.)



1. In a multiplex telegraph system, the combination of a source of periodic telegraph signals, a distributor equipment including pick-up rings and storage rings, telegraph storage elements connected to said storage rings, a thermionic device of the type described having input and

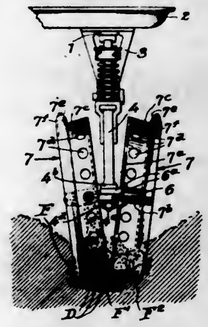
output circuits, said thermionic device being characterized by continued operation unaffected by grid potential after starting, said source of signals and said pick-up

rings being included in said input circuit, and said storage rings, said telegraph storage elements and a source of current being included in said output circuit.



1,901,297. AGGREGATE SPREADER AND TRUCK BODY. FRANK B. HURT, La Grande, Oreg. Filed Mar. 30, 1931. Serial No. 526,346. 19 Claims. (Cl. 94—44.)

1. In a device of the class described, the combination of a truck body, a discharge opening for aggregates disposed within the rear of the bottom of the truck body and the lower edge of the side walls of the truck body, an aggregate spreader head disposed in registry with the openings and therebelow, spreader head ends extending laterally beyond the side walls of the truck body, a bottom to the spreader sloping downwardly and outwardly, a hinged plate associated with one of the side walls of the spreader head, hydraulic and manually manipulative means for setting a plate to variably predetermine an opening through which aggregates may be distributed, an air blast pipe extending transversely of the truck body and mounted beneath the aggregate distributing opening, nozzles disposed along the pipe, and means for forcing an air blast through the aggregates as the same leave the spreader head.

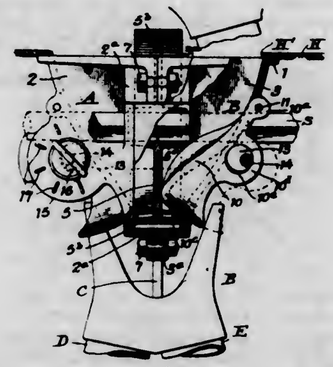


1,901,298. SEEDING MACHINE. BEN P. JOHNSON, Springfield, Ohio, assignor to Edward E. Greiner, Springfield, Ohio. Filed Feb. 6, 1932. Serial No. 591,407. 12 Claims. (Cl. 111—52.)

1. In a seeding machine, a frame; a supporting wheel adjacent each end of the frame; a combined steering and balancing wheeled forecarriage connected to the frame on the center line thereof; a series of furrow openers vertically adjustably mounted with respect to the frame; seed distributors, a cylindrical seed hopper on each side of the center line of the frame; means connected with the distributors for holding the hoppers on the frame; distributing pipes extending from the distributors and discharg-

ing behind the respective furrow openers; a drive shaft for operating the distributors; and means operated by the forecarriage for rotating the shaft.

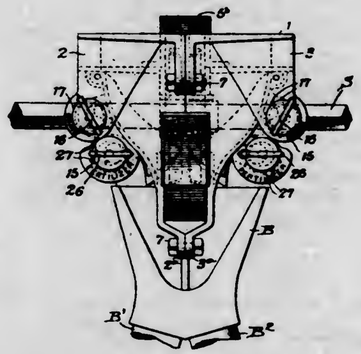
1,901,299. MULCHING WHEEL FOR SEEDING MACHINES. BEN P. JOHNSON, Springfield, Ohio, assignor to Edward E. Greiner, Springfield, Ohio. Original application filed Feb. 6, 1932, Serial No. 591,407. Divided and this application filed Feb. 6, 1932. Serial No. 591,408. 13 Claims. (Cl. 97—56.)



1. A mulching device for operating in a seed furrow, comprising a wheel closed at one side and open at its other side, means as the wheel is rolling for collecting soil from the furrow through the open side of the wheel, and means as the wheel is rolling for discharging the soil in the form of a loose mulch through the closed side of the wheel.

3. In a device as set forth in claim 1, the periphery of the wheel adjacent the closed side being substantially flat, and the periphery of the wheel adjacent the open side being of substantially half rounded cross-section and of larger diameter than the flat portion.

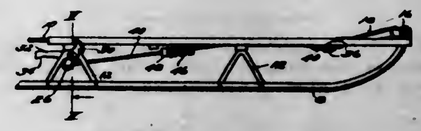
1,901,300. DOUBLE RUN FORCE FEED GRAIN DISTRIBUTOR. BEN P. JOHNSON, Springfield, Ohio, assignor to Edward E. Greiner, Springfield, Ohio. Original application filed Feb. 6, 1932, Serial No. 591,407. Divided and this application filed Feb. 6, 1932. Serial No. 591,409. 10 Claims. (Cl. 221—137.)



1. In a grain distributor, a casing; a force-feed wheel rotatably mounted in the casing; a grain compartment

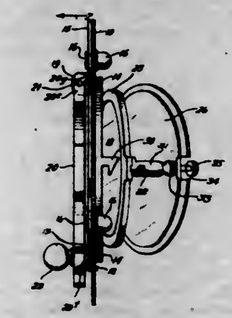
cooperating with the web of the wheel and contracting towards the points of discharge; an adjustable throat in said compartment forming part of the wall thereof and

adjustable towards and away from the web of the wheel to regulate the amount of grain passing through the compartment; and means for adjusting the throat.



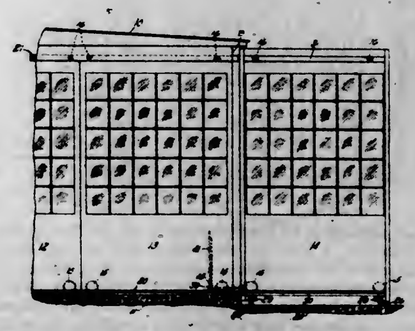
1,901,301. COMBINED GRAIN AND FERTILIZER DISTRIBUTOR. BEN P. JOHNSON, Springfield, Ohio, assignor to Edward E. Greiner, Springfield, Ohio. Filed Feb. 8, 1932. Serial No. 591,727. 10 Claims. (Cl. 221—137.)

1. In a combined grain and fertilizer distributor, a casing; a force-feed wheel rotatably mounted in the casing; separate grain and fertilizer compartments cooperating with the web of the wheel and contracting towards their points of discharge; an adjustable throat in each compartment forming part of the wall thereof and adjustable towards and away from the web of the wheel to regulate the amount of material passing through each compartment; and means for adjusting each throat.



1,901,302. SLED BRAKE. GEORGE W. JOHNSTON and SAMUEL MUCHNIK, St. Joseph, Mo.; said Johnston assignor to said Muchnik. Filed July 20, 1931. Serial No. 551,870. 6 Claims. (Cl. 188—8.)

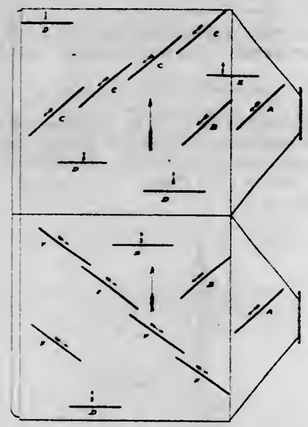
1. The combination with a sled having a runner-supported bed and a longitudinally extending neck forming a part of said bed, of braking apparatus comprising a transverse shaft; a plurality of gripper members on said shaft; a connecting rod reciprocably mounted beneath said bed; and laterally extending operating handles join-



ing said connecting rod beneath said neck said handles projecting horizontally to positions between said neck and runners.

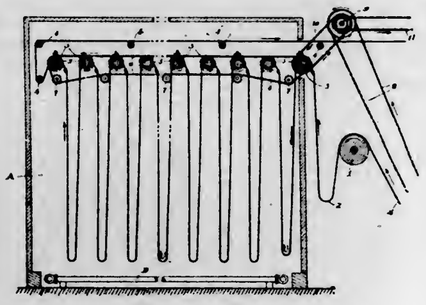
1,901,303. ATTACHMENT FOR DOORS. HENRY F. KEIL, Scarsdale, N. Y., assignor to Francis Keil & Son, Inc., a Corporation of New York. Filed Dec. 12, 1928. Serial No. 325,595. 14 Claims. (Cl. 20—39.)

11. In a device of the character described, in combination, a door having an opening therein; means secured to said door and having an aperture therein over said opening; a signaling member movably carried by said door, said signaling member having opposed portions between which said aperture is exposed; and means mounted on that side of the door remote from the side on which said signaling member is mounted for closing or exposing said aperture.



1,901,304. SLIDING DOOR ARRANGEMENT. PATRICK F. KING, New Britain, Conn., assignor to The Stanley Works, New Britain, Conn., a Corporation of Connecticut. Filed Feb. 9, 1931. Serial No. 514,426. 8 Claims. (Cl. 20—19.)

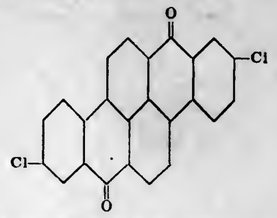
1. A door arrangement for aircraft hangars and the like, comprising a supporting track adapted to receive a plurality of doors in end to end relation, a truck located



at one end of said track and movable at an angle thereto, and a plurality of tracks on said truck one behind the other and adapted to be respectively brought into registry with said first mentioned track.

1,901,305. CONCRETE MIXER BLADE. ALBERT KNOWLES, San Francisco, Calif. Filed Dec. 28, 1929. Serial No. 417,109. 4 Claims. (Cl. 83—73.)

1. In combination with a revolvable cylindrical concrete mixer drum which is relatively long to its diameter, a series of angularly arranged blades secured to the inner surface thereof extending substantially from end to end of the drum, and a similar series of opposite angular arrangement and a plurality of non-angularly disposed lifting blades placed at various places throughout the drum in a manner to successively exert a lifting action on material from end to end of the cylinder.

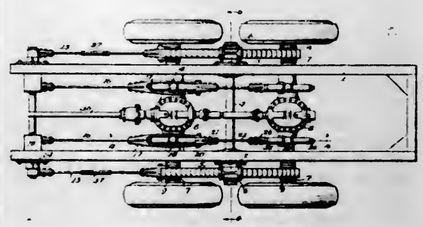


1,901,306. VULCANIZING OR DRYING APPARATUS. GEORGE H. KNOWLTON, Westbrook, Me. Filed Apr. 10, 1929. Serial No. 354,050. 16 Claims. (Cl. 271—2.3.)

1. An apparatus of the class described, including means for supporting a sheet of material draped or festooned to form a series of depending loops having free lower ends, the said means being arranged for continuously feeding the sheet of material for passing the same into, through and out of a drying and vulcanizing chamber, and means for varying the frictional contact between the sheet and the feeding means, whereby overrun or feed of the material in the loops may be taken up without interrupting the feed of the sheet.

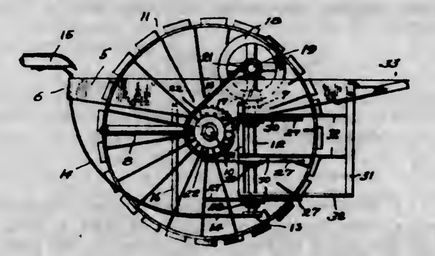
1,901,307. HALOGENATED VAT DYESTUFFS OF THE 3.4.8.9- and 4.5.8.9-DIBENZPYRENEQUINONE SERIES AND A PROCESS OF PREPARING THEM. GEORG KRAENZLEIN, HEINRICH VOLLMANN and MARTIN CORELL, Frankfort-on-the-Main-Hochst, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Nov. 25, 1929, Serial No. 409,752, and in Germany Dec. 4, 1928. 6 Claims. (Cl. 260—61.)

6. As a new product dichloro-3.4.8.9-dibenzpyrene-5.10-quinone of the following probable formula:



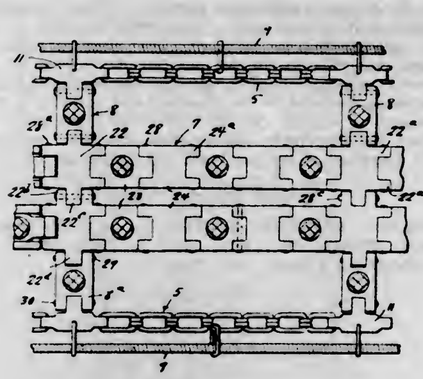
being an orange yellow powder which crystallizes from nitrobenzene in the form of orange needles, dissolving in concentrated sulfuric acid to a blue solution and dyeing cotton reddish-yellow tints.

1,901,308. VAT DYESTUFFS OF THE ISODIBENZANTHRONE SERIES AND METHOD OF MAKING THEM. MAX ALBERT KUNZ, Mannheim, and KARL KOEBERLE, Ludwigshafen-on-the-Rhine, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Dec. 21, 1929, Serial No. 415,780, and in Germany Apr. 8, 1927. 11 Claims. (Cl. 260—45.)



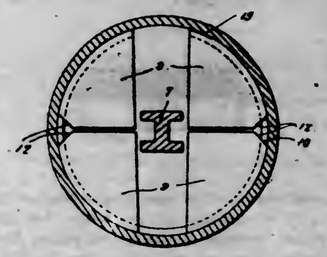
1. The process of producing vat dyestuffs which comprises condensing in the presence of a copper salt an isodibenzanthrone containing at least one nitrogen atom having a reactive hydrogen atom attached thereto with a polynuclear compound containing at least one negative substituent selected from the group consisting of halogen and nitro substituents.

1,901,309. FOUR-WHEEL VEHICLE DRIVE CONSTRUCTION. AXEL R. LE MOON, Chicago, Ill. Filed Apr. 7, 1930. Serial No. 442,165. 6 Claims. (Cl. 280—124.)



1. In a vehicle, a frame structure, a pair of driving axle housings, springs centrally secured to the frame and having their ends slidably resting upon the axle housings, parallel link structures connecting said housings above and below the axes of the housings, said link structures including compression spring connections with the axle housings for resisting relative motion between said housings, and thrust bars connecting said link structures with the frame.

1,901,310. STALK-CUTTING MACHINE. WILLIAM JULIUS LEWIS, Clarksdale, Miss. Filed Sept. 8, 1932. Serial No. 631,714. 8 Claims. (Cl. 55—62.)



1. In a machine for cutting stalks, the combination of an axle having spindles at its ends and a horizontal U-shaped intermediate part extending to the rear of the machine, opposite traction wheels journaled on the spindles of the axle, a frame mounted on the spindle parts of the axle, a vertical shaft journaled in the frame in advance of the U-shaped part of the axle, a gearing for transmitting the drive of at least one of the tractor wheels to the vertical shaft to rotate the latter, sets of horizontal cutting blades fixed on the vertical shaft in spaced vertical relation, stationary cutting blades respectively coacting with the sets of cutting blades fixed on the vertical shaft, and a grating mounted in the forward part of the frame to guide the stalks between the coacting cutting blades as the machine moves forward.

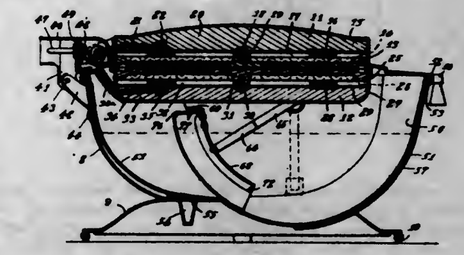
1,901,311. ANTISKID DEVICE. FRED LLOYD, Wilkes-Barre, Pa Filed May 11, 1932. Serial No. 610,649. 2 Claims. (Cl. 152—14.)

1. In an anti-skid device, a pair of side chains each consisting of a plurality of sections composed of interconnected loop like links and lug equipped plates connecting said sections; a pair of intermediate tread chains, each consisting of a plurality of sections composed of longitudinally arranged caulk equipped tread plates, and plate like links connecting the caulk equipped tread plates, lug equipped plates connecting the sections of each intermediate tread chains, means pivotally connecting the lug equipped plate of one intermediate tread chain with the lug equipped plate of the other intermediate tread chain, and transversely disposed caulk equipped tread plates connecting the lug equipped plates of the intermediate tread chains with the lug equipped plates of the side chains.

1,901,312. PISTON CONSTRUCTION. WILLIAM J. LUCAS, Oklahoma City, Okla. Filed Mar. 30, 1932. Serial No. 602,068. 2 Claims. (Cl. 74—108.)

1. As a new article of manufacture, a split radially expansible resilient ring having one end knurled for anchorage purposes, a plurality of segmental plates having their outer peripheral edge portions attached to said ring, said plates being spaced apart to facilitate expansion and contraction of the ring.

1,901,313. HEAT-PRODUCING COMPOUND. LEO MANN, Providence, R. I., assignor to Harry Dexter Peck, Providence, R. I. Filed Nov. 11, 1931. Serial No. 574,360. 10 Claims. (Cl. 44—3.)



2. A composition of matter for producing heat upon the addition of water comprising, in combination, a metal, an element of cathodic relation to said metal, a depolarizer and electrolyte-forming salts of said metal and said depolarizer.

3. A composition of matter for producing heat upon the addition of water comprising, in combination, a metal, graphitic carbon, manganese hydroxide and electrolyte-forming salts of the metal and for manganese salts.

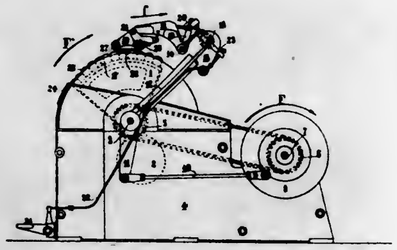
6. A composition of matter producing heat upon the addition of water comprising, in combination, the following constituents.

Iron	17 ounces
Manganese hydroxide	1 ounce
Graphitic carbon	30 grains
Ferric chloride	30 grains
Ferrous sulfate	30 grains
Manganese chloride	30 grains
Manganese sulfate	30 grains

1,901,314. GRIDDLE. MICHAEL W. MCARDLE, Chicago, Ill. Filed July 3, 1930. Serial No. 465,511. 15 Claims. (Cl. 53—10.)

1. An electric griddle comprising upper and lower grids, an open top batter bowl, a tray having a bowl supporting portion, said grids being supported over said bowl, and means connecting the grids to the tray, the batter bowl being positioned on said bowl supporting portion with the grids located so as to normally close the top of the batter bowl.

1,901,315. FABRICATED FRAME. ROY A. MCCARTY, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 27, 1929. Serial No. 366,481. 4 Claims. (Cl. 171—252.)

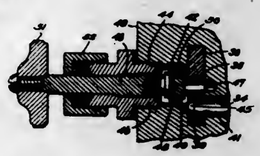


1. In a dynamo-electric machine, a stator frame comprising a pair of annular plates, means for rigidly holding said plates in fixed relation, said plates having equal outer diameters but one of said plates having an inner diameter somewhat less than the other, a movable concentric plate nested within the one of said plates having the larger inner diameter, a laminated core disposed between said concentric plate and the plate having the smaller inner diameter, longitudinally extending core-supporting rods extending through perforations in both of said annular plates for holding the laminations in fixed radial relation, and lamination-clamping means cooperating with said rods for clamping said concentric plate against said core to hold the laminations in fixed face-to-face relation.

1,901,316. PROCESS OF PREPARING TRIBROMOETHYLALCOHOL. HANS MEERWEIN, Marburg-on-the-Lahn, Germany, assignor to Winthrop Chemical Company, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 16, 1932, Serial No. 593,420, and in Germany Feb. 25, 1931. 17 Claims. (Cl. 260—156.)

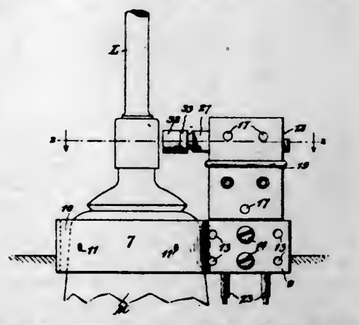
1. In the process of preparing tribromoethylalcohol, the step which comprises treating tribromoacetaldehyde with an aluminium alkyl compound in the presence of an organic solvent being inert to the starting materials.

1,901,317. HIDE AND LEATHER DRESSING MACHINE. DANIEL MERCIER, Annonay, France. Filed May 1, 1931. Serial No. 534,411. 6 Claims. (Cl. 149—14.)



1. A machine for dressing hides and leathers, comprising a cylindrical member, at least a portion of the periphery of the cylindrical member being provided with an abrading device, means for rotating the cylindrical member, an oscillating system mounted about the axis of the cylindrical member and oscillatable by the means for rotating the cylindrical member, said oscillating system comprising stretching means overhanging the cylindrical member, and means for approaching the stretching means toward the abrading device on the cylindrical member to dress a hide or leather positioned between the cylindrical member and the stretching means.

1,901,318. MEANS FOR BALANCING CABLES EQUIPPED WITH A LONG SEA-EARTH. JOSEPH W. MILNOR, Maplewood, N. J., assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Sept. 11, 1931. Serial No. 562,379. 16 Claims. (Cl. 178—63.)

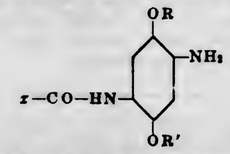


1. A submarine cable telegraph system comprising a duplex bridge having equal impedance arms, a main artificial line and a sea-earth cable in one of said arms and a main cable and an artificial line for balancing said sea-earth cable disposed in the other impedance arm, said main and sea-earth cables being arranged in inductive relationship and said main and sea-earth artificial lines being similarly inductively related.

1,901,319. FOUNTAIN CUSPIDOR. CLARENCE W. MOORE, Roslyn, Pa., assignor to Ritter Dental Manufacturing Company, Inc., Rochester, N. Y., a Corporation of Delaware. Original application filed Nov. 30, 1926, Serial No. 151,736. Divided and this application filed Sept. 5, 1929. Serial No. 390,487. 5 Claims. (Cl. 251—167.)

5. In a fluid distributing element, a valve comprising a valve seat disc having a concentric bore and a valve seat surrounding the bore, the seat disc partially enclosed and embedded in the material of the element, said element having a chamber adjacent the seat, and a stem removably mounted in the chamber and carrying a valve arranged to engage the valve seat, said disc having a second bore laterally spaced from the first mentioned bore and out of registry with the valve stem.

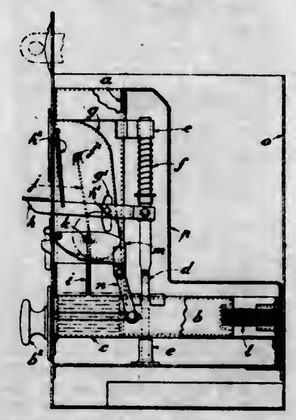
1,901,320. ELECTRIC SWITCH. GUSTAV M. MORTENSON, Warren, Pa. Filed Apr. 8, 1929. Serial No. 353,537. 3 Claims. (Cl. 200—59.)



1. A switch comprising a casing having alined non-circular openings in two opposed sides and a removable side section extending between said sides, a non-circular bar slidably engaged with said openings and having an end projecting from the casing to be inwardly pushed, a spring in the casing acting on said bar in a direction to move its projecting end outwardly, an insulating block in the casing secured to said bar and normally abutting one of said sides of the casing to limit the movement of said bar under the influence of said spring, and a switch mounted on said removable side section of the casing, said switch having an actuating portion in the inward path of said insulating block.

1,901,321. PROCESS FOR RENDERING HARMLESS THE PRECIPITATES FORMED BY HARD WATER. FERDINAND MÜNZ, Frankfort-on-the-Main-Fechenheim, Germany, assignor to General Aniline Works Inc., New York, N. Y., a Corporation of Delaware. Filed Apr. 6, 1929, Serial No. 353,272, and in Germany Apr. 17, 1928. 3 Claims. (Cl. 210—23.)

1. A process which comprises adding to hard water a derivative of an unsaturated fatty acid compound, containing at least one sulfonic acid group directly linked to a carbon atom which is obtainable by acting with fuming sulfuric acid on the unsaturated fatty acid compound.



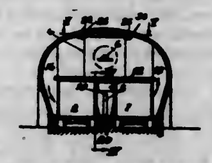
1,901,322. MONOACYLATED 2.5-DIAMINOHYDROQUINONEETHERS. WILHELM NEELMEIER, EUGEN RIMELE, and EUGEN GLIETENBERG, Leverkusen-on-the-Rhine, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Dec. 5, 1930, Serial No. 500,416, and in Germany Dec. 24, 1929. 10 Claims. (Cl. 260—124.)

6. As new products monoacylated 2.5-diaminohydroquinoneethers of the general formula:

wherein R and R' stand for alkyl groups and α stands for one of the radicals aryl and aralkyl, being generally white to yellowish crystalline substances, insoluble or scarcely soluble in water and being valuable intermediate products in the manufacture of dyestuffs.

1,901,323. COIN EXCHANGING MECHANISM. WILLIAM FRANCIS NEWALL, Winsford, England. Filed Dec. 11, 1931, Serial No. 580,335, and in Great Britain Dec. 17, 1930. 4 Claims. (Cl. 194—68.)

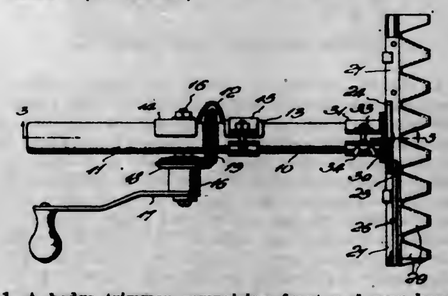
1. Coin-exchanging mechanism for prepayment meters, vending machines and like purposes comprising a drawer to receive the minor coins to be exchanged, a bolt normally holding the drawer closed, a manually operated bolt-retracting member adapted to be made operable by the inserted major coin acting as a fulcrum therefor, and means to support the major coin whilst the drawer is closed but to release the major coin when the drawer is opened, as set forth.



1,901,324. ABRASIVE BODY AND METHOD OF MAKING THE SAME. EMIL E. NOVOTNY, Philadelphia, Pa., assignor to John Stogdell Stokes, Huntingdon Valley, Pa. Filed July 26, 1929. Serial No. 381,884. 17 Claims. (Cl. 51—278.)

17. A composition for the production of abrasive bodies comprising, a liquid condensation product of phenol and formaldehyde, abrasive granules, and solidified carbon dioxide.

1,901,325. ABRASIVE BODY AND METHOD OF MAKING THE SAME. EMIL E. NOVOTNY, Philadelphia, Pa., assignor to John Stogdell Stokes, Huntingdon Valley, Pa. Filed Sept. 6, 1929. Serial No. 390,848. 10 Claims. (Cl. 51—280.)



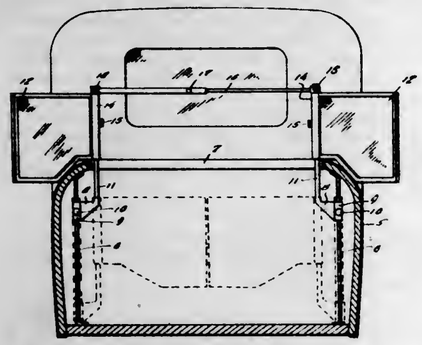
4. A composition for the production of abrasive bodies comprising, abrasive grains having dry surfaces, said surfaces coated with a dry and fusible synthetic resin, the resin surface being coated with a sticky synthetic resinous material.

1,901,326. DRYING DEVICE. JOHAN GUSTAF OLSSON, Lidingon, and FRANS IVAR EUGEN STENFORS, Alsten, Sweden, assignors to Aktiebolaget Svenska Fläktfabriken, Stockholm, Sweden. Filed Nov. 4, 1930, Serial No. 493,448, and in Sweden Apr. 12, 1929. 4 Claims. (Cl. 34—46.)

2. In a drier, two canals for the material to be dried, said canals having substantially horizontal top and bottom walls, means for admitting fresh air to said canals, and air exhausting suction conduit extending longitudinally between said canals and having longitudinally spaced exhaust air inlets, said suction conduit being adjacent one of said horizontal longitudinal walls, longitudinally disposed partition means between the two canals, said partition means extending from said suction conduit to the other of said horizontal walls and embodying air heating means, and means for forcing air alternately in opposite directions across said canals and through said heating means.

1,901,327. HEDGE TRIMMER. AMOS R. PAULLIN, Newton, Iowa. Filed Feb. 17, 1932. Serial No. 593,609. 2 Claims. (Cl. 30—11.)

1. A hedge trimmer comprising front and rear handle sections spaced apart in end-to-end relation, a connecting

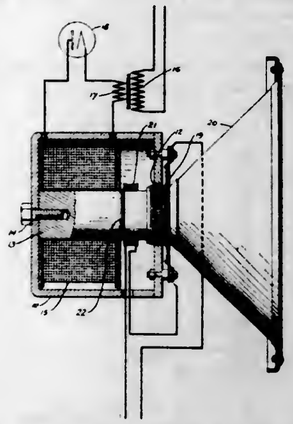


member for said handle sections having channel-shaped terminals lying against said handle sections, means fixedly securing one of said terminals to one of said handle sections, a contractible collar clamped around the other of said terminals and the other of said handle sections, a rotary member mounted between said handle sections, driving means for said rotary member, trimming means mounted on the front end of the front handle section, and driving connections between said rotary member and said trimming means.

1,901,328. LAWN MOWER SHARPENING TOOL. BENJAMIN B. PHELPS, Minneapolis, Minn., assignor of one-third to William J. Kelly and one-third to Harry Haskell, Minneapolis, Minn. Filed Jan. 21, 1932. Serial No. 587,994. 1 Claim. (Cl. 76—82.1.)

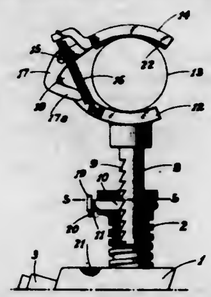
In a device of the class described, the combination of a frame having an elongated slot, a file, a pair of gripping elements slidably attached to said frame, each of said gripping elements comprising a foundation disposed parallel to said frame, a plate having a downwardly bent flange attached to the bottom of said foundation, the straight portion of said plate being parallel throughout its entire length with said foundation, another plate attached to the bottom of the first mentioned plate and being parallel throughout its entire length to said foundation, a strip attached to the top of said foundation and adapted to enter said elongated slot, a bolt passing through said foundation, plate, said other plate and said strip, and a wing nut associated with said bolt for slidably fastening each of said gripping elements and file to said frame.

1,901,329. RUMBLE SEAT WINDOW APPLIANCE. JOSEPH D. PHILLIPS, Helena, Mont., assignor of one-half to John E. Phillips, Helena, Mont. Filed Nov. 10, 1931. Serial No. 576,293. 1 Claim. (Cl. 296—85.)



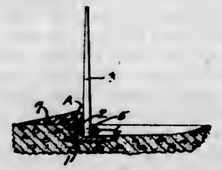
In combination with a rumble seat compartment of an automobile, a pair of vertically arranged rods located in the front part of the compartment, one adjacent each side thereof and having their lower ends connected with the bottom of the compartment and their upper ends with portions of the top thereof, a pair of substantially horizontal brackets, each having a vertically arranged sleeve thereon through which a rod passes, whereby each bracket is slidably and rotatably mounted on its rod, a set screw passing through each sleeve engaging the rod for holding the bracket in adjusted position, a second pair of vertically arranged rods having their lower ends connected with those ends of the brackets which are opposite the ends carrying the sleeves, whereby the second pair of rods are offset from the first pair and can pass through the top opening of the compartment when the brackets are moved upwardly on the first pair of rods, a rod adjustable as to its length having its ends detachably connected to the upper ends of the second pair of rods, a pair of windshield frames, each having a sleeve at one side thereof for telescoping a rod of the second pair, a set screw passing through the sleeve last-mentioned and engaging the last-mentioned rod to hold the frame in adjusted position, and clips in the compartment for engaging the frames, when the same have been lowered in the compartment, to hold said frames against rattling.

1,901,330. FLUID-CONDUCTIVE HOSE. JACQUES POBEREJSKY, Bois Colombes, France, assignor to "Superflexit," a Corporation of France. Filed Oct. 11, 1930, Serial No. 488,097, and in Germany Mar. 20, 1930. 2 Claims. (Cl. 137—90.)



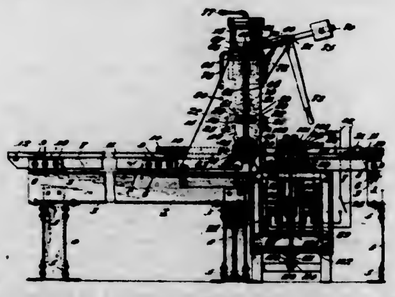
1. A hose for inflammable fluids especially adapted for conveying inflammable fluids to internal combustion engines subject to vibrations, comprising a helical wire coil, a cellulose layer thereon, said cellulose layer being formed of cellulose film wound about the coil and cemented together by means of adhesive material, a fabric covering surrounding the cellulose layer, a sheath of soft yielding material encasing the fabric, a layer of asbestos, encasing the sheath of soft yielding material, and a protective metallic braid covering the asbestos.

1,901,331. ELECTRODYNAMIC LOUD-SPEAKER. EDWIN S. PRIDHAM, Oakland, Calif., assignor to The Magnavox Company, Oakland, Calif., a Corporation of Arizona. Filed May 15, 1929. Serial No. 363,311. 18 Claims. (Cl. 179—115.5.)



1. In a signal reproducer, means for electro-magnetically producing a magnetic field, a diaphragm, a conductor for actuating said diaphragm capable of being energized from an external source of modulated current and moving transversely to said field, and a second stationary conductor connected in series circuit with said first conductor and disposed in inductive relation with respect to said electromagnetic field for neutralising currents induced in said conductor by variations in the strength of said magnetic field.

1,901,332. AUTOMOBILE JACK. LEO E. PRYOR, Delano, Calif. Filed Feb. 1, 1932. Serial No. 590,039. 5 Claims. (Cl. 254—134.)

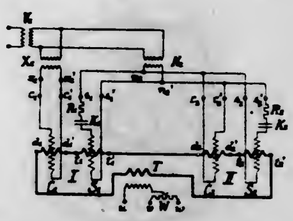


1. A jack including a load supporting member, an axle engaging hanger on the upper end of said member, a vertically movable jack element, a stem depending from the member and slidably mounted in the element, said stem having a row of downwardly facing ratchet teeth down one side, a pawl mounted in the element, means holding the pawl yieldably engaged with the teeth, a body in which said element is mounted, and means between the pawl and body to hold the pawl against disengagement from the teeth when the element is fully retracted in the body.

1,901,333. TRAFFIC SIGN. KARL C. PARKHURST, Wichita, Kans. Filed Aug. 14, 1931. Serial No. 557,040. 7 Claims. (Cl. 40—125.)

1. In a traffic sign, a base member having a vertical portion and an approach obliquely extending downward to the road bed level, and a flexible indicia plate carried by the vertical portion opposite from the approach and being attached thereto near the lower portion thereof, for the purpose specified.

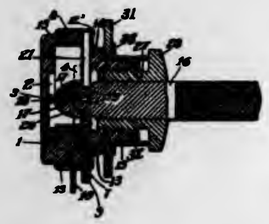
1,901,334. APPARATUS FOR FORMING LADDERS. CLAUDE D. REED, Lebanon, Pa., assignor to Bethlehem Steel Company, a Corporation of Pennsylvania. Filed June 11, 1930. Serial No. 460,385. 38 Claims. (Cl. 219—2.)



1. In a machine for fabricating metal ladders having side stringers and rungs with projecting end portions, electrodes for engaging and electrically heating both ends of the rungs, and means independent of the electrodes operated by fluid pressure for clamping and attaching the rungs to the side stringers by upsetting the ends of the rungs.

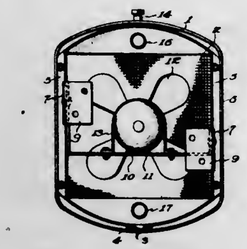
1,901,335. BOTTLE FILLING MACHINE. ADOLPH R. REYNOLDS, Columbia, S. C. Filed Feb. 16, 1932. Serial No. 593,332. 12 Claims. (Cl. 226—111.)

1. In a filling valve for a liquid tank, the combination of a valve casing having a liquid exit, valve and tank connecting means, an exit closing member freely disposed in said valve casing and arranged to close said exit under pressure of the liquid, a piston casing, a piston in said casing, means connecting said piston casing with said valve casng, plunger means secured to said piston and adapted to unseat said exit closing member with the stroke of said piston, and pressure controlling means whereby said piston is actuated.



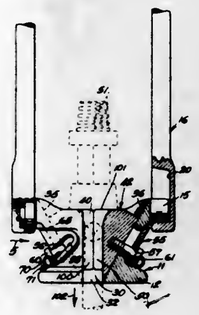
1,901,336. MEASURING ARRANGEMENT FOR MEASUREMENT OF RATIO OF TRANSFORMATION AND PHASE ANGLES OF VOLTAGE AND CURRENT TRANSFORMERS. JOSEF SLAVIK, Brunn, Czechoslovakia. Filed Apr. 2, 1929, Serial No. 351,861, and in Czechoslovakia Apr. 5, 1928. 18 Claims. (Cl. 175—183.)

1. In a device for calibrating instrument transformers, the combination with two similar electric meters each including two driving systems, of an unknown transformer to be calibrated, a standard instrument transformer, an auxiliary current source, one driving system of said meters being connected to the secondary of the said unknown transformer and to the said auxiliary current source, while the three other driving systems of the meters are connected to the secondary of the said standard transformer and to the said auxiliary current source, and means whereby both meters are simultaneously driven by the cooperation of currents supplied from the said secondaries



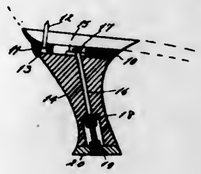
with currents supplied from the said auxiliary source, to compare the electrical energy passed through the meters within a given time and to deduce therefrom the calibration values of the unknown transformer.

1,901,337. CANOPY SWITCH. SAMUEL L. SNEIERSON, Roxbury, and EIFFEL B. GALB, Auburndale, Mass., assignors, by direct and mesne assignments, to Carling Tool & Machine Company, Hartford, Conn., a Corporation of Connecticut. Filed Apr. 2, 1932. Serial No. 602,770. 5 Claims. (Cl. 200—63.)



1. An electric switch adapted to be mounted on a support including a switch body having contacts therein, a spring contact in said body adapted to be moved to different positions to complete and interrupt the circuit between said contacts, a casing for the body having an aperture therein, a rotary actuating member extending through the opening in the casing and arranged to rotate said spring contact, an internally threaded sleeve having a shoulder thereon independent of the casing and an externally threaded sleeve having a shoulder thereon adapted to be threaded in said internally threaded sleeve and to function as a guide for the rotary spring actuating member, whereby said switch may be mounted on the support held between the projecting shoulders on the internally and externally threaded sleeve members.

1,901,338. UNIT HEATER. JOHN T. SORENSEN, Chicago, Ill., assignor to Zenith Heater Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 14, 1931. Serial No. 568,781. 9 Claims. (Cl. 257—137.)

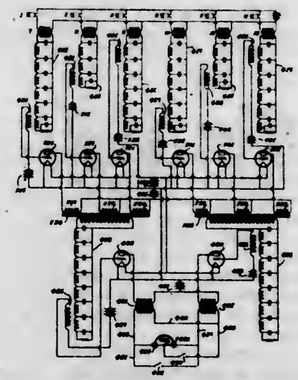


4. In a device of the class described comprising a radiator core, a motor, a fan, a one-piece sheet metal shell laterally surrounding said core, turned back edges on the adjoining ends of said shell, a drive cleat enfolding said edges to secure the ends of said shell and cause said shell to tensionally embrace said core, a frame plate secured to said shell, a backwardly extending sheet metal bracket arm secured to each side of said shell and having one end bent at right angles to provide means to fasten said bracket arm to a support, said arms being disposed on said shell in staggered relation to each other, and means carried by said arms to support said motor and fan.

1,901,339. SUCKER-ROD ELEVATOR. EDWARD E. STEVENSON, Los Angeles, Calif., assignor to Emsco Derrick & Equipment Company, Los Angeles, Calif., a Corporation of California. Filed May 14, 1932. Serial No. 611,345. 10 Claims. (Cl. 294—91.)

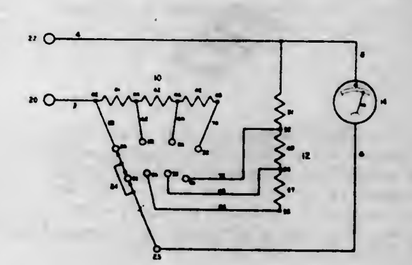
1. In a sucker-rod elevator of the type described, the combination of: a body having an opening therein, said opening being adapted to receive a sucker-rod; walls forming a passage in said body communicating with said opening, said passage being adapted to accommodate the passage of said sucker rod into said opening; a closure mechanism operable to close said passage; locking means operable to releasably retain said closure mechanism in open position, said locking means being adapted to be released by contact with said sucker-rod when said sucker-rod is positioned in said opening; automatic means adapted to operate said mechanism to close passage when said locking means is released; and manual means for operating said mechanism to open said passage.

1,901,340. HEEL FOR LADIES' SHOES. GORDON A. TAYLOR, Camden, N. J. Filed Mar. 20, 1931. Serial No. 524,036. 3 Claims. (Cl. 36—42.)



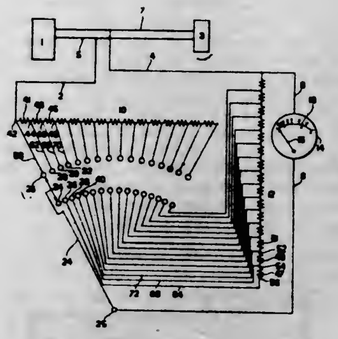
1. In a shoe heel, a metal attaching member adapted for permanent securement to the heel portion of a shoe, a flange formed around a portion of said member, a wooden heel, the upper portion of which is adapted to fit and be housed in said flange, an anchor bolt passing through the wooden heel lengthwise thereof, said bolt having a beveled head for engagement with the contracted portion of a button hole slot formed in the attaching member, a setting up nut threaded upon the lower portion of the anchor bolt whereby the wood-end heel is held in place and a sleeve nut threaded upon the lower end of said bolt whereby a top lift may be secured to the bottom of the heel.

1,901,341. REFLECTOR UNIT FOR SIGNS. SIDNEY C. VINCENT, Baltimore, Md., assignor to The Automatic Lighting Company, Baltimore, Md., a Corporation of Maryland. Filed Apr. 4, 1930. Serial No. 441,644. 7 Claims. (Cl. 88—1.)



1. A reflecting device including a lens having an abutment, a cap surrounding the lens and provided with threads, a threaded lock washer adapted to cooperate with said threads on the cap and with said abutment, whereby the lens may be secured to a suitable plate or support.

1,901,342. SOUND RANGING SYSTEM. HORATIO W. LAMSON, Arlington, Mass., assignor to General Radio Company, Cambridge, Mass., a Corporation of Massachusetts. Filed Mar. 20, 1929. Serial No. 348,631. 5 Claims. (Cl. 177—386.)

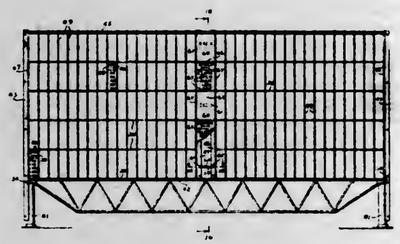


2. An electric system having, in combination, two units for independently picking up sound impulses and for translating them into electrical impulses, each unit comprising a plurality of sound pick-up devices, a lag line associated with each pick-up device, means for retarding the electrical impulses picked up from the lag lines, a plurality of vacuum tubes, one for each pick-up device, and each having an input circuit and an output circuit, means for biasing the vacuum tubes to keep the current flow in the input circuits at a negligible value, means for connecting the lag lines individually with the corresponding input circuits, two circuits respectively connecting together the output circuits corresponding to each unit, a lag line associated with each connecting circuit, means for retarding the electrical impulses in each of the last-named lag lines, a vacuum tube for each of the last-named lag lines and having an input circuit and an output circuit, means for connecting each last-named lag line with the corresponding last-named input circuit, means including two transformers each having a primary winding in each of the last-named output circuits and a secondary winding, phase-indicating means, and means connecting the latter to the secondary windings.

1,901,343. ELECTRIC INSTRUMENT. MELVILLE EASTHAM, Cambridge, Mass., assignor to General Radio Company, Cambridge, Mass., a Corporation of Massachusetts. Filed Mar. 30, 1931. Serial No. 526,170. 2 Claims. (Cl. 171—95.)

1. An instrument of the class described having, in combination, a network having a series arm and a shunt arm, an input connection and an output connection connected with the network, a meter connected with the output connection and provided with an indicator having a predetermined range of movement, and means for adjusting the series arm and the shunt arm to vary the significance of the indications of the indicator and for maintaining the impedance of the network and the meter substantially constant irrespective of the adjustment of the series arm and the shunt arm.

1,901,344. POWER-LEVEL INDICATOR. JOSEPH WARREN HORTON, Cambridge, Mass., assignor to General Radio Company, Cambridge, Mass., a Corporation of Massachusetts. Filed June 27, 1931. Serial No. 547,444. 7 Claims. (Cl. 171—95.)

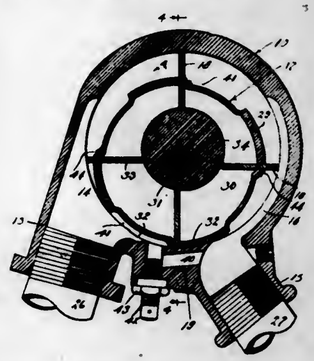


2. In a power-level indicator, a source of alternating electric power, a load, a junction connecting the source with the load, a network connected with the junction and having a high impedance in order that it shall draw but little power from the junction, an indicator controlled by the network having a predetermined range of movement, and means for adjusting the network to vary the significance of the indications of the indicator and for maintaining the said impedance substantially constant irrespective of the adjustment of the network, the network being of such nature as to present a purely resistive load, independent of frequency, throughout the said range.

1,901,345. CHAIN CONNECTING LINK. EDWIN G. CARLSON, Riverside, R. I., assignor to Speidel Chain Co., Providence, R. I.. a Firm composed of Frederic Speidel and Eugen Speidel. Filed Dec. 19, 1930. Serial No. 503,507. 7 Claims. (Cl. 59—85.)

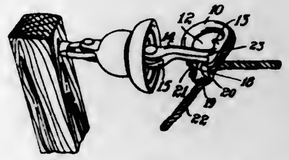
1. In a chain, body links, connecting links comprising two members, and means for connecting or disconnecting said members by a relative movement of said members with parts of one sliding on parts of the other substantially throughout the length of said members in a plane between the planes of the opposite surfaces of the body links of the chain laterally of the chain.

1,901,346. INDICATOR DEVICE. JOSEPH C. CONN, Boonton, N. J. Filed July 19, 1932. Serial No. 623,334. 13 Claims. (Cl. 40—28.)



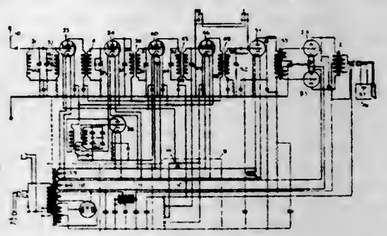
1. In a quotation board, the combination of a frame including a base, upright partitions supported in spaced relation thereon and horizontal members extending across the space between said partitions, a plurality of indicator units removably mounted one upon another in said space and between adjacent vertically spaced horizontal members with the lowermost of said units resting upon the lower of said horizontal members, and means for releasably locking said indicator units in operative stacked relation between said vertically spaced members.

1,901,347. BUILT-IN TABLE. DAVID A. HILDEBRAND, Oakland, Calif., assignor of one-half to John A. Rolph, Oakland, Calif. Filed June 27, 1932. Serial No. 619,444. 1 Claim. (Cl. 45—51.)



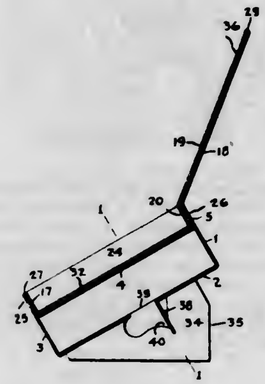
An extensible table, in combination, an extensible supporting element consisting of a plurality of successively variable frictionally cooperating sliding members, a fixed table top member and a free table top member, means for automatically raising the rearward boards of the free table top member as the table is moved to closed position, means for automatically positioning the free table top member as the table is extended, the final extending movement of the table automatically locking the free table top member in position.

1,901,348. FLUID DISPENSER OR METER. DAVE KAPUCZIN, Los Angeles, Calif. Filed Feb. 21, 1928. Serial No. 255,879. 5 Claims. (Cl. 73—37.)



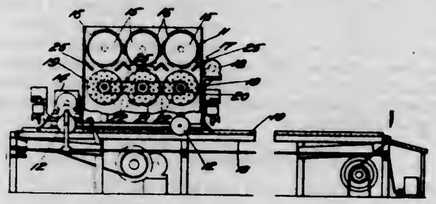
2. A meter of the character described having a cylindrical body with spaced ports, a rotor mounted eccentric in the body and having sliding engagement with the body between the ports, and blades carried by the rotor; there being means for by-passing fluid between the ports, said means including two cooperating conduits, one stationary and in the body and the other in the rotor.

1,901,349. 270° CLAMP. JOHN S. LAPP, Le Roy, N. Y., assignor to Lapp Insulator Company, Inc., a Corporation of New York. Filed May 23, 1930. Serial No. 455,002. 9 Claims. (Cl. 24—135.)



2. A clamp having a substantially 270° exteriorly grooved body portion, a tangential extension at one end to secure said clamp to an insulator support or the like, an apertured tangential extension at the other end, a clamping element cooperating with said apertures to secure said tension member to said extension, and an inwardly extending projection on said body portion.

1,901,350. RADIO SIGNALING SYSTEM. MAURICE L. LEVY, Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed Feb. 20, 1931. Serial No. 517,190. 13 Claims. (Cl. 179—171.)



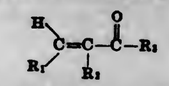
1. The method of adjusting the amplification of an amplifier including a vacuum tube having cathode, control grid, and anode elements and a screen shielding said control grid from said anode, said vacuum tube having its parts so proportioned and arranged and being operated so that the anode current varies in exponential relation to the voltage applied to said control grid which comprises simultaneously varying the voltages applied to said control grid and said screen in such a manner that the transconductance of the vacuum tube varies substantially as an exponential function.

1,901,351. DUMMY DISPLAY BOX. FRANK A. MARX, Cincinnati, Ohio, assignor, by mesne assignments, to The Richardson Taylor-Globe Corporation, Cincinnati, Ohio, a Corporation of Ohio. Filed July 24, 1930. Serial No. 470,438. 9 Claims. (Cl. 206—44.)

1. A cardboard dummy display box comprising a collapsible body having front and back walls and a bottom, hinged ends adapted to extend outward from the body in the flat condition, a top on the body connected to the front and back walls and depressed below upward extensions of the front and back walls and of the ends to form a tray in the upper part of the dummy box and substantially parallel into the bottom, and a display lid connected with the extension of the back wall of the body.

1,901,352. MACHINE FOR MAKING COMPOSITE SHEETS. LOUIS MCCARTHY, Boston, Mass., assignor to The Macallen Company, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 23, 1930. Serial No. 422,928. 3 Claims. (Cl. 154—2.5.)

1. In a machine for forming composite sheets from flaky or plate-like material, the combination with a bed and an elevated, horizontally disposed, rotating foraminous drum for showering the flakes or plates by gravity upon said bed, of a rotating, horizontally disposed squirrel cage of substantially the same length and diameter as said drum located directly beneath the latter and comprising parallel end heads connected by a number of parallel rods spaced at various distances from the center of said end heads.



1,901,353. ARCH SUPPORT. JEAN G. MITCHIE, Boston, Mass., assignor to Stephenson Laboratories Trust, Boston, Mass., a Voluntary Trust of Massachusetts. Filed Jan. 7, 1932. Serial No. 585,188. 4 Claims. (Cl. 12—146.)

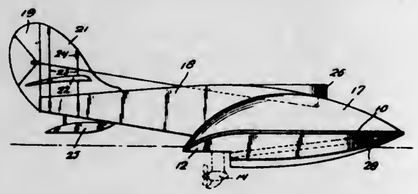
1. The process of producing an insole for reenforcing articulated members of the foot which comprises producing from plastic material a model conforming to the undistended sole of an individual's normal foot, smoothly applying light fabric to the sole portion of said model throughout its entire area and detachably securing margins of the same to said model, cementing a sheet of resilient material to said fabric, fashioning the upper surface thereof while secured to the model to conform to the surface contour of the inner sole of the shoe, cementing a covering of pliable material to said resilient material permitting the cement to harden while the insole is secured to said model, and detaching the insole thus formed from the model.

1,901,354. MIXED RUBBER-LIKE MASSES AND PROCESS OF PREPARING CAME. KURT MEISENBURG, Leverkusen-on-the-Rhine, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed Jan. 16, 1931, Serial No. 509,280, and in Germany Jan. 20, 1930. 12 Claims. (Cl. 260—6.)

1. Process which comprises heating a mixture of a butadiene hydrocarbon and of a ketone of the general formula

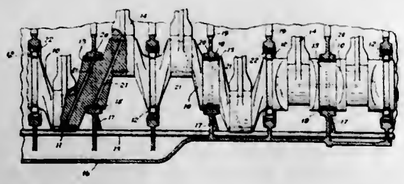
wherein R_1 denotes hydrogen or an alkyl group or an aryl group of the benzene series, R_2 means hydrogen or an alkyl group, and R_3 an alkyl group or an aryl group of the benzene series, said mixture containing the ketone in an amount between about 5–50% by weight (calculated on the butadiene hydrocarbon-ketone mixture), to a temperature between about 80–150° C., until polymerization is complete.

1,901,355. SELF ALIGNING INTERFITTING SPINDLE AND SOCKET ELEMENT. FRED NOLTIN, Berwyn, Ill., assignor to The Oscar C. Rixson Co., Chicago, Ill., a Corporation of Illinois. Filed Oct. 21, 1931. Serial No. 570,245. 2 Claims. (Cl. 64—98.)



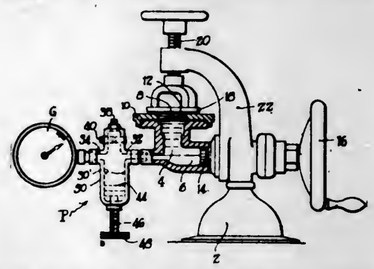
1. An interfitting spindle and socket member, comprising a spindle having a socket fitting end with opposite sides inclined inwardly toward the end of the spindle, and a socket element formed with a socket to receive the tapered end of the spindle, said socket having opposed faces formed for engagement with the spindle along the edges only of the inclined faces thereof.

1,901,356. ROLL ROOFING PACKAGE. JOHN H. PLUNKETT, Beverly Hills, Calif., assignor to The Patent and Licensing Corporation, Boston, Mass., a Corporation of Massachusetts. Filed Feb. 25, 1932. Serial No. 595,096. 5 Claims. (Cl. 206—59.)



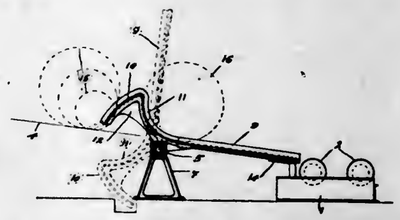
1. A package comprising a roll of roofing material enclosed by a rendible wrapper, a rip cord between said roll and said wrapper, the ends of said cord extending beyond the ends of the wrapper and being bent back against the outer face thereof, and means for sealing said cord to the outer face of the wrapper adjacent the ends of the cord with the free ends of the cord extending beyond said sealing means.

1,901,357. SPEED BOAT. FELDER J. RAULERSON and HARDY H. RAULERSON, Jacksonville, Fla. Filed Dec. 14, 1931. Serial No. 580,952. 3 Claims. (Cl. 114—66.5.)



1. A boat of the character described comprising a relatively broad hull, and a relatively narrow body projecting centrally therefrom, said hull including a stepped bottom and spaced parallel extensions projecting rearwardly beyond the step, a cockpit adapted for the installation of either an outboard or inboard motor, and a cowl partly embracing said body and curved downwardly and connected to the adjacent edges of the hull, both body and cowl being of framework, covered with air-plane cloth.

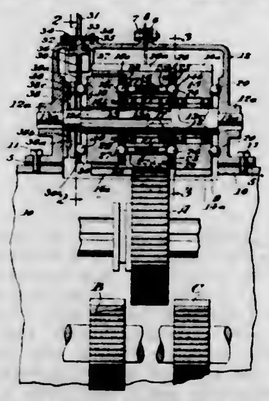
1,901,358. CRANK SHAFT. EARLE A. RYDER, West Hartford, Conn., assignor to The Pratt & Whitney Aircraft Company, East Hartford, Conn., a Corporation of Delaware. Filed Jan. 24, 1931. Serial No. 510,950. 1 Claim. (Cl. 74—88.)



An engine crank shaft construction comprising, a shaft having a plurality of cranks thereon, a plurality of alined bearings for supporting said shaft, said bearings being alternately of plain journal and anti-friction types, said cranks having plain journal surfaces, continuous lubricant supplying means for said journal shaft bearings, and means provided within said shaft supporting bearings and said shaft whereby said cranks may be lubricated.

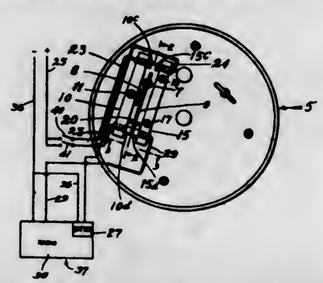
1,901,359. TESTING APPARATUS. SAMUEL N. SENNA, Chicopee, Mass., assignor to B. F. Perkins & Son, Inc., Holyoke, Mass., a Corporation of Massachusetts. Filed May 6, 1929. Serial No. 360,695. 1 Claim. (Cl. 265—14.)

Testing apparatus of the class described comprising in combination, a base including a fluid chamber, a yieldable diaphragm clamped thereover, a piston associated with said chamber for displacing fluid therein, a pump having a bore in communication with said chamber, a piston in said bore at a side of its point of communication with said chamber and a valve plug in the bore at another side of said point of communication to facilitate introduction of fluid into said bore.



1,901,360. APPARATUS FOR HANDLING CYLINDRICAL ARTICLES AND THE LIKE. KARL F. SNOW, Brecksville, Ohio, assignor to The C. O. Bartlett & Snow Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 17, 1930. Serial No. 482,389. 3 Claims. (Cl. 214—130.)

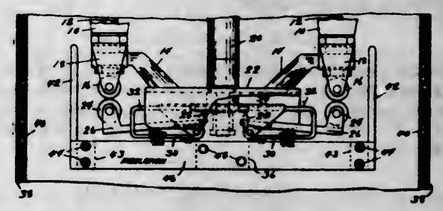
1. In apparatus of the class described, the combination of a pair of laterally spaced arms provided with inwardly sloping surfaces, said arms pivotally supported on a transverse axis and on one side of their center of gravity so as to normally occupy a substantially vertical position, said arms provided with arcuate terminal portions adapted to engage cylindrical articles upon an inclined conveyor and singly feed the same on to said arms upon pivotal movement thereof.



1,901,361. SAFETY DEVICE FOR MOTOR VEHICLES. ELWYN B. TRACY, Littleton, Mass., assignor of one-half to The Macallen Company, Boston, Mass., a Corporation of Massachusetts. Filed June 25, 1932. Serial No. 619,257. 14 Claims. (Cl. 192—4.)

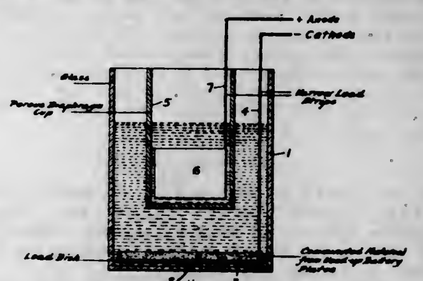
1. In combination with the power transmission and gear shift mechanism of an automobile, of a safety device for preventing unauthorized movement of the vehicle, comprising a casing attached to the transmission housing, a fixed shaft within the casing, rotatable gears mounted on the shaft and adapted to be intermeshed with a sliding gear of the transmission, a non-rotatable member cooperating with one of said gears, clutch devices, one interposed between said gears and the other between one of said gears and said non-rotatable member to lock the parts

together, and a releasing device mounted on the shaft and cooperating with said non-rotatable member to maintain said member and said gears in cooperative relation, and shiftable to permit axial separation of the gears and non-rotatable member to release the clutch devices.



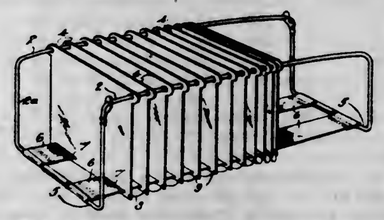
1,901,362. TIME CONTROL MECHANISM. NORMAN O. TRAIN, Los Angeles, Calif. Filed Apr. 16, 1930. Serial No. 444,798. 1 Claim. (Cl. 200—35.)

In an electric switch, a pair of cooperating switch arms arranged in a generally parallel relation to each other, each of said arms carrying at each end a contact which is directed toward and is adapted to engage the corresponding contact on the other arm, means to support one of said arms in a stationary manner, means to pivotally support the other of said arms between its ends, yielding means tending to draw the end portions of said switch arms toward each other at one end of the switch and thus close the contacts at that end of the switch while opening the contacts at the other end of the switch, means to operate the switch in opposition to said yielding means to close the last recited contacts and open the other set of contacts, said switch-operating means consisting of a spring arm, and a clock operatively related to said spring arm by means of a stem operable by the clock and located between said switch arms.



1,901,363. CIRCUIT INTERRUPTER. GEORGE A. BURNHAM, Saugus, Mass., assignor to Condit Electrical Manufacturing Corporation, South Boston, Mass., a Corporation of Massachusetts. Filed Feb. 1, 1930. Serial No. 425,295. 14 Claims. (Cl. 200—150.)

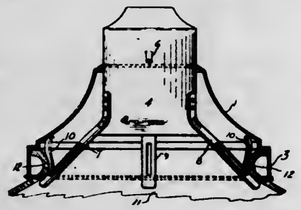
1. A circuit interrupter having the combination of an oil containing enclosing casing, separable arcing members immersed in the oil in said casing, and an insulated metal plate immersed in the oil between the wall of said casing and said arcing members and located in a plane parallel with the line of separation of said contact members and



in position to intercept the circuit interrupting arc drawn between said contact members and prevent it from engaging said wall, said plate also having good heat-absorbing ability and adapted to cool the circuit interrupting arc.

1,901,364. PROCESS OF MAKING BASIC METAL SULPHATES AND RECOVERY OF METAL FROM WASTE METALLIC COMPOUNDS. EDMUND OLIN CUMMINGS, High Point, N. C. Filed Nov. 28, 1930. Serial No. 498,601. 18 Claims. (Cl. 204—9.)

1. In a process of making basic metal sulphates, electrolytically reducing in the cathode compartment of a two-compartment cell powdered waste metal compounds containing sulphate material while simultaneously dissolving an anode consisting of the previously reduced waste metal compounds, using as anolyte a solution which forms no precipitate with a water soluble compound of the anode metal and as catholyte a solution which gives no precipitate with alkali metal sulphates, after the electrolysis removing separately the anolyte and catholyte, adjusting the alkali and sulphate content of the catholyte so that when mixed with the anolyte a basic metal sulphate having the desired percentages of oxide and sulphate will be obtained, then mixing the two solutions, filtering, and washing the pigment.

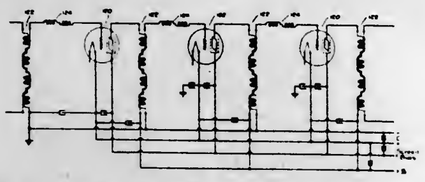


1,901,365. FILING DEVICE. JAMES H. FIELD, Newark, N. J. Filed Aug. 7, 1926. Serial No. 127,787. 12 Claims. (Cl. 129—16.)

12. A filing device comprising a container open at its upper side, longitudinally extending supporting means at opposite sides of the container, a partition in said con-

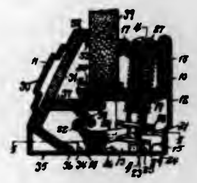
tainer slidably suspended on said supporting means transversely of said container, and means mounted in the container and resiliently engaging said partition for normally retaining said partition in said sliding engagement with the supporting means.

1,901,366. SCREWLESS HOLDER. JAMES J. FLYNN, Camden, N. J., assignor to Faries Manufacturing Company, Decatur, Ill., a Corporation of Illinois. Filed Sept. 26, 1932. Serial No. 634,899. 4 Claims. (Cl. 240—133.)



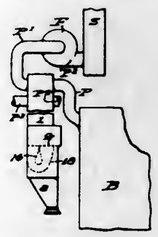
1. A device of the character described comprising an outer collar having a central opening therein, there being a plurality of notches in the edge of said opening, a cylinder member which fits said opening, a plurality of lugs thereon adapted to register with said notches, a plurality of arms secured to said cylinder member which extend radially therefrom and in an outward and downward direction, a vertical tongue on each arm adjacent its lower end, said tongue adapted to engage the inner side of a globe to be supported.

1,901,367. PROCESS FOR PRODUCING METALS AND METAL ALLOYS LOW IN CARBON. EMIL GUSTAF TORVALD GUSTAFSSON, Stockholm, Sweden. Filed Feb. 10, 1930, Serial No. 427,429, and in Sweden Feb. 19, 1929. 13 Claims. (Cl. 75—17.)



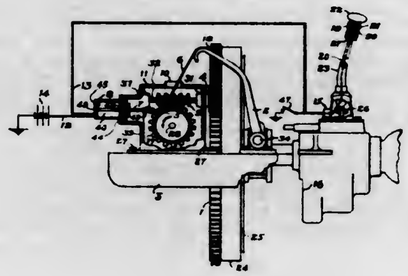
1. A process for producing metals and metal alloys low in carbon, consisting in reducing and melting a charge containing oxide ore and reducing agent in deficit of the amount theoretically required for complete reduction of the metal oxides in the ore, treating the thereby formed slag rich in metal oxide, in presence of the produced metal poor in constituents of reducing character, with thermic reducing agent in such a quantity as to obtain below the slag a metal bath containing said reducing agent only in a proportion insufficient to substantially influence the properties of the metal produced, separating metal and slag, and treating the slag with reducing agent in such a quantity as to obtain a metal rich in said reducing agent from remaining metal oxide in the slag.

1,901,368. TRANSFORMER. LESTER L. JONES, Oradell, N. J. Filed Oct. 25, 1929. Serial No. 402,379. 20 Claims. (Cl. 179—171.)



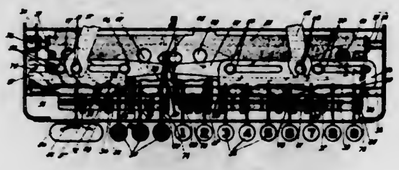
16. An amplifier for use over a predetermined range of frequencies such as the broadcast band, said amplifier comprising a plurality of electron emission tubes, coils for coupling said tubes in cascade, said coils consisting of sections so selected that the natural frequency of each of the sections is outside of the frequency range.

1,901,369. STORE FRONT CONSTRUCTION. FRED HIMMEL and ISIDORE HIMMEL, New Haven, Conn., assignors to The Himmel Brothers Company, New Haven, Conn., a Corporation. Filed Jan. 7, 1932. Serial No. 585,289. 3 Claims. (Cl. 20—56.4.)



1. In a store-front construction, the combination with inner and outer strips thereof, of a mounting-block connected with the inner strip, said mounting-block comprising a head, a shelf and perforated lugs below the shelf, the head and shelf formed with aligned threaded openings, a screw extending through said openings, a rocker pivotally mounted between said lugs and connected with said screw, a supporting-member connected with the outer strip and formed with a rearwardly-projecting plate adapted to engage with the under-surface of said shelf, and with a cam-surface adapted to be engaged by said rocker.

1,901,370. DUST SEPARATING AND COLLECTING DEVICE. MAX H. KUHNER, Cornwells Heights, Pa., assignor to Badenhausen Corporation, Cornwells Heights, Pa., a Corporation of Pennsylvania. Filed Sept. 27, 1930. Serial No. 484,730. 8 Claims. (Cl. 183—79.)



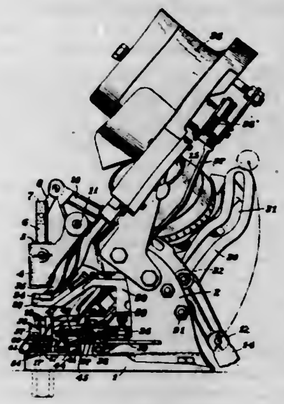
1. In combination, in a dust removing system including a dust generator, a flue leading from said dust generator, an exhaust fan in said flue for producing a strong induced draft through said flue to carry the dust from said generator, and a dust remover and collector in said flue between said generator and said exhaust fan and comprising a casing having an inlet chamber through which said dust carrying gases pass, said inlet chamber decreasing in cross-sectional area in the direction of gas travel to substantially increase the linear speed of said gases as they pass therethrough, said casing also being provided with a passage of the same cross-sectional area as that of the delivery end of said inlet chamber and communicating therewith, said passage following substantially a semicircle or path, the radius of which is relatively small, to produce in the particles of dust floating in said stream centrifugal force sufficient to throw said particles out of said stream to the outer wall of said semicircular passage, said outer wall being provided with narrow openings therethrough spaced relatively widely from each other to provide an extensive inner curved gas-guiding surface between said openings over which surface the gas may travel at a relatively high speed, whereby the dust borne by said stream and thrown outwardly by the centrifugal force developed therein is impelled through said openings, and a closed settling chamber below said outer wall of said passage.

1,901,371. AUTOMOBILE CLUTCH CONTROL SYSTEM. EDWARD H. LANGE, Baltimore, Md. Filed Oct. 9, 1929. Serial No. 398,549. 10 Claims. (Cl. 192—82.)

1. In an automobile having a source of mechanical power, a manually operated transmission gear shift lever, a source of electrical power, and a clutch lever, a clutch lever operating apparatus which comprises a rotating drum operated by means of the source of mechanical power, a speed proportioning mechanism interrelating the speed of the drum and of the source of mechanical power, an electric switch located upon the transmission gear shift lever, an electromagnetic solenoid actuated by the source of electrical power and from the electric switch, and a frictional belt variably coupled with the drum, having one end connected to the plunger of the electromagnetic solenoid and the other to the clutch lever.

1,901,372. CALCULATING MACHINE. HARRY LANDSIEDEL, Norwood, Ohio, assignor, by mesne assignments, to Remington Rand Inc., New York, N. Y., a Corporation of Delaware. Filed Mar. 31, 1924. Serial No. 703,101. 22 Claims. (Cl. 235—60.)

1. A calculating machine comprising a type carrier, a laterally movable paper carriage, a device preventing operation of said type carrier, means controlled by the paper carriage for operating said device to position to permit operation of said type carrier, a differential device for limiting movement of said type carrier, and a series of keys settable for engagement by said differential device.



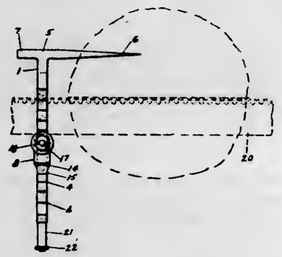
1,901,373. UREA-FORMALDEHYDE CONDENSATION PRODUCT AND PROCESS. ERNEST LIONNE, Swampscott, Mass. Filed Sept. 28, 1928. Serial No. 309,120. 12 Claims. (Cl. 260—3.)

1. The combination of a urea formaldehyde resin in an intermediate jelly stage of condensation and a colloidal retarder intimately associated therewith which acts to hinder further condensation of said product.

1,901,374. PRODUCTION OF MASSES RESEMBLING LINOXYN. MARTIN LUTHER, Mannheim, and HANS BELLER, Ludwigshafen-on-the-Rhine, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed June 26, 1929, Serial No. 373,932, and in Germany July 3, 1928. 10 Claims. (Cl. 260—8.)

1. The process for the production of masses resembling linoxyn, which comprises treating with oxygen a mixture of esters of polyhydric alcohols with the unsaturated acids prepared by splitting off water from the mixture of acids resulting from the oxidation of waxes.

1,901,375. BUTTON ATTACHING MACHINE. FREDERICK H. PETERSON, Watertown, Conn., assignor to The Patent Button Company, Waterbury, Conn., a Corporation of Connecticut. Filed Apr. 8, 1931. Serial No. 528,680. 31 Claims. (Cl. 218—6.)



1. A button attaching machine including an undercut anvil post for supporting a button fastening member, a jaw carrier slidably mounted on said post, jaws secured to said carrier, a spring for normally holding the jaws under compression, and the jaws and the anvil post interlocking to normally hold the button fastening member on said anvil post.

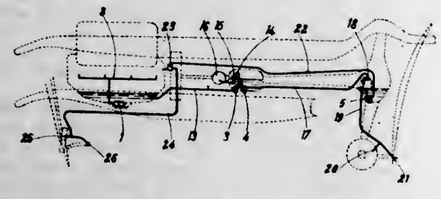
12. A button attaching machine including an anvil for supporting a button fastener, a plunger located above the same for driving a button head on the fastener, fastener gripping means including jaws associated with the anvil and normally interlocking with said anvil, and means for lowering said jaws, said means being synchronized with the stroke of the plunger whereby the jaws remain closed during the greater part of the downstroke of the plunger and remain open during substantially one-third of the initial upstroke of the plunger.

30. An anvil, a jaw carrier on said anvil, pivotal jaws in said carrier, means on the jaws and carrier for normally locking the jaw carrier against movement when in its upper position, a two-piece compressible lever provided with spring means therein, and a tucker lever cooperating with said two-piece lever, said tucker lever being provided with a cam whereby a movement of said tucker lever will move said jaw carrier downwardly when the jaws are unlocked from said anvil.

1,901,376. GUIDE FOR SAW BLADES IN WOOD SAWING. MERRITT E. PIXLEY, Clackamas County, Oreg. Filed June 6, 1932. Serial No. 615,481. 6 Claims. (Cl. 143—163.)

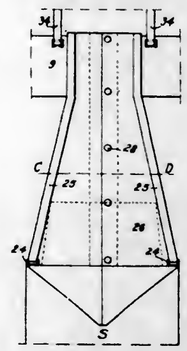
1. A saw guide which consists of the combination with a supporting post and means for anchoring it at one end to the stock to be cut, of a collar adjustable upon the post, a resilient arm pivotally secured to the collar, and means for effecting graduated adjustment of the collar on the post.

1,901,377. BUFFER. DE FOREST ROE, Elyria, Ohio, assignor to The Colson Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 10, 1929. Serial No. 361,875. 8 Claims. (Cl. 45—137.)



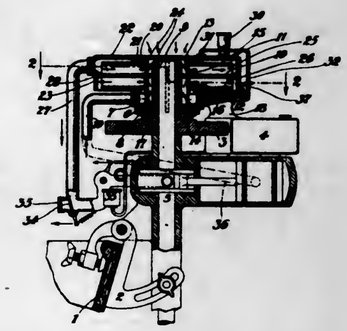
1. A buffer for furniture legs comprising a rubber annulus of substantial thickness divided transversely at one point of its length and having an interior bore of gradually diminishing transverse area proceeding from the middle toward both ends of the bore.

1,901,378. MANUFACTURE OF PAPER-BOARD. PAUL H. ROGERS, Hartsville, S. C. Filed Sept. 2, 1931. Serial No. 560,865. 3 Claims. (Cl. 92—3.)



1. Corrugating paper-board composed of semi-chemical pulp having in admixture therewith cotton fibers.

1,901,379. SYSTEM FOR THE CENTRAL LUBRICATION OF VEHICLES. LÉON SAIVES, Billancourt, France, assignor to Louis Renault, Billancourt, France. Filed Feb. 29, 1928, Serial No. 258,033, and in France Apr. 23, 1927. 2 Claims. (Cl. 184—7.)



1. A lubricating installation for motor vehicles, including a main reservoir and auxiliary reservoirs, pumps driven by the moving parts of the vehicle for delivering the lubricants in a circuit from the main reservoir to the several auxiliary reservoirs and return, receiving troughs arranged in each auxiliary reservoir for retaining a portion of the delivered lubricants, and wicks leading from said trough to parts of the vehicle requiring lubrication.

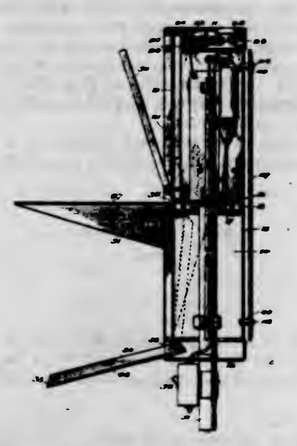
1,901,380. PARACHUTE EQUIPMENT. JACQUES CHARLES GERMAIN SALONE and GEORGES DENIS LUCAS, Paris, France, assignors to Société Salone, Ing. E. C. P. & Lucas, Paris, France. Filed Aug. 27, 1931, Serial No. 559,788, and in France Sept. 12, 1930. 1 Claim. (Cl. 244—21.)

A parachute equipment of the type described comprising in combination, a parachute, a cable connected to the suspension ropes of said parachute, a bag provided with a hole in its bottom for the passage of said cable, said bag being adapted to normally contain said parachute, a belt normally carried by the passenger, means for quickly connecting said belt to said cable, a skirt, two strong straps, disposed along the edges of said skirt and secured to said belt, two rings on the bag for receiving said straps, whereby the bag may be used as a seat equipment.

1,901,381. GAS ENGINE MUFFLER AND SUPERCHARGER. GARFIELD P. SMITH, Brooklyn, N. Y. Filed Feb. 6, 1930. Serial No. 427,915. 4 Claims. (Cl. 60—32.)

8. Combined supercharger and exhaust expeller for internal combustion engines comprising a unitary rotor adapted to be secured to the crank shaft of the engine and having inner and outer series of radially disposed chambers separated by a heat conductive partition, a fixed casing for connection with a carburetor and contacting one end of said rotor and encompassing the sides thereof

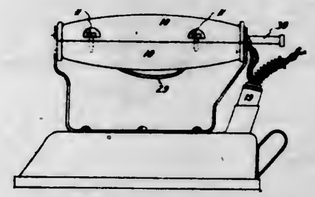
in spaced relation to said chambers by contacting said partition to segregate said series of chambers, that part of the casing communicating with the lower series of chambers being open to atmosphere adjacent the periphery of said rotor, an air inlet, the upper series of chambers communicating centrally with the air inlet and the lower series of chambers being adapted to communicate centrally with the exhaust of the internal combustion engine.



1,901,382. FIBROUS COMPOSITION CONTAINING FILLER AND BINDER SUBSTANCES AND PROCESS OF MAKING THEM. EARL P. STEVENSON, Newton, Mass., assignor to The Richardson Company, Lockland, Ohio, a Corporation of Ohio. Filed Apr. 6, 1931. Serial No. 528,248. 20 Claims. (Cl. 92—21.)

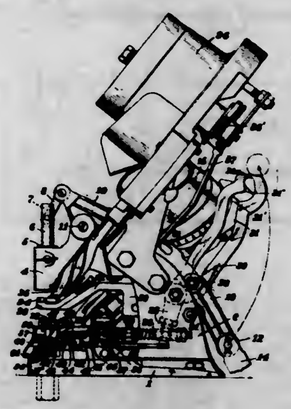
1. A fibrous pulp in water suspension in association with a binder substance in particle form, the binder particles containing filler materials in substantially homogeneous distribution therein.

1,901,383. PROCESS FOR RECOVERING THE OIL-SOLUBLE SULPHONIC COMPOUNDS FORMED IN THE ACID REFINING OF MINERAL OILS. GEORGE VOOGT, Hamburg, Germany, assignor to Shell Development Company, San Francisco, Calif., a Corporation of Delaware. Filed Mar. 25, 1931, Serial No. 525,827, and in Germany Mar. 31, 1930. 4 Claims. (Cl. 260—159.)



1. The process of recovering the oil-soluble sulphonic compounds formed in the acid refining of mineral oils, which consists in separating the acid sludge from the oil, adding an alkaline solution and alcohol to the oil, whereby the oil soluble sulphonic compounds are separated from the oil in the form of alkali sulphonates, drawing off the alcoholic alkaline sublye containing the alkali sulphonates and treating said sublye with a salting out agent, drawing off the bulk of alcohol, water and dissolved mineral matters from the salted out sulphonate oil mixture, treating the said mixture with concentrated alcohol so as to dissolve the alkali sulphonates, separating the non-dissolved residue from the solution and evaporating the latter to dryness.

1,901,384. CABINET FOR ARC LAMPS. JAMES H. WAGENHORST, Detroit, Mich. Filed Mar. 8, 1930. Serial No. 434,854. 14 Claims. (Cl. 176—115.)

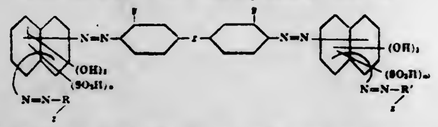


1. In an arc lamp, the combination of a casing for the lamp elements having a light opening in one side thereof, a lower reflector having an upwardly extending flange for retaining ash falling from the arcing elements and hinged to the casing adjacent its bottom and swingable to a position wholly within the casing when not in use, and an upper reflector hinged to the casing swingable downwardly to form a closure for said opening.

1,901,385. ELECTRIC IRON. HORACE KINTON WARNER and GEORGE ROBERT ELLIOTT, Auckland, New Zealand, assignors to Warnell Patents Limited, Auckland, New Zealand, a Company of New Zealand. Filed Mar. 17, 1931, Serial No. 523,328, and in New Zealand July 24, 1930. 2 Claims. (Cl. 200—157.)

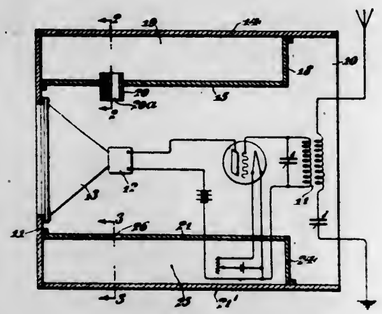
1. In electric irons, a hollow handle, a horizontal base board of insulator material arranged within such hollow, a pair of contact studs fixed upon the surface of such base board and interposed in the current supply lead to the iron heating element, a bridging plate or disc mounted to rotate on such board and adapted in one position to connect the studs and in other to disconnect them, a stem piece mounted to slide longitudinally in the handle above the base board, connected to such bridging plate or disc by a tension spring, adapted when moved forwardly to turn it to the connecting position, a spring acting on the stem piece and forcing it to the rearward, or disconnecting, position, a bell crank lever mounted to extend vertically in the handle and having an upwardly extending arm engaging the rear end of the stem piece and its second arm extending rearwardly and downwardly, and a bow shaped lever arranged to extend along beneath the handle with its bow downward, and having its forward end pivoted in the handle and its rear end articulated to the second arm of the said bell crank lever.

1,901,386. BUTTON ATTACHING MACHINE. FRANKLIN R. WHITE, Waterbury, Conn., assignor to The Patent Button Company, Waterbury, Conn., a Corporation of Connecticut. Filed Jan. 7, 1932. Serial No. 585,319. 20 Claims. (Cl. 218—6.)



6. A button attaching machine including a plunger, an anvil beneath said plunger, a jaw carrier slidable up and down said anvil and provided with tack gripping jaws,

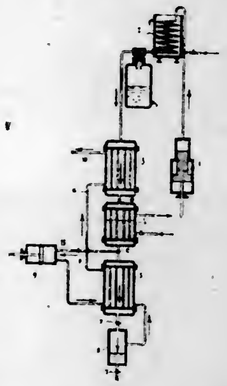
means for normally holding the jaw carrier in an upper position, a cam-operated lever bearing on said jaw carrier, a tucker lever, a cam on said tucker lever for operating said lever, and an oscillating lever for operating said tucker lever, said oscillating lever cooperating and being synchronized with the said plunger whereby the said jaw carrier will be lowered and the jaws spread when the said plunger has nearly completed its stroke.



1,901,387. AZODYESTUFFS. KARL WIEDEMANN, Leverkusen-I. G. Werk, and HEINRICH CLINGESTEIN, Cologne-on-the-Rhine, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Mar. 2, 1932, Serial No. 596,404, and in Germany Mar. 9, 1931. 5 Claims. (Cl. 260—71.)

1. Azodyestuffs of the probable general formula:

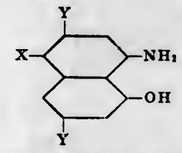
wherein "—a—" stands for a carbon-carbon linkage or for the urea bridge, "y" stands for the carboxylic acid group or for an alkoxy group, "z" stands for the carboxylic acid group or for an alkoxy group, "R" and "R'" stand for radicals of the benzene or naphthalene series, the substituents "s" being attached to "R" or "R'" respectively in ortho-position to the azo-group, each azo-group being attached to the respective hydroxy-naphthalene-sulfonic acid radical in ortho-position to a hydroxy group, and "n" and "n'" stand for the numbers one or two, being in form of their alkali metal salts dark powders, soluble in water, dyeing the vegetable fibre reddish- to greenish-grey shades, which by after-treating in substance or on the fibre with copper-yielding agents form copper complex compounds.



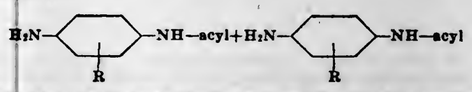
1,901,388. METHOD AND APPARATUS FOR ELIMINATING THE EFFECT OF CABINET RESONANCE. IRVING WOLFF, Merchantville, N. J., assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y., a Corporation of Delaware. Filed Apr. 18, 1930. Serial No. 445,448. 17 Claims. (Cl. 274—2.)

1. In the art of avoiding undesired acoustic action in sound-producing apparatus comprising a cabinet resonant within a given frequency range and a sound producer diaphragm associated with said cabinet, the method which comprises developing during operation of said apparatus within said frequency range, a relatively low pressure region at a region about the diaphragm within said cabinet where a relatively high pressure region would otherwise develop.

5. In apparatus of the character described, a cabinet normally resonant within a given frequency range, a vibratory member associated with said cabinet, and means disposed within said cabinet and providing a resonator operable to compensate for acoustic action of said cabinet with respect to said member during vibration of the latter within said frequency range.

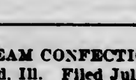


1,901,389. PROCESS FOR LIQUEFYING AND RECTIFYING AIR. MAURICE HAZARD-FLAMAND, Douai, France. Filed Oct. 9, 1929, Serial No. 398,459, and in France Oct. 18, 1928. 3 Claims. (Cl. 62—175.)



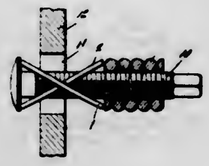
1. A process for liquefying air which comprises passing the air under high pressure through an exchanger and then through a refrigerator, dividing the air after it has passed through the refrigerator into two streams, expanding one of said streams in a low pressure liquefying chamber, expanding the other of said streams in a work performing device operable by the expansion, returning the unliquefied air under low pressure from the liquefying chamber in heat exchange relationship to the air flowing to the liquefying chamber, and also returning the expanded, low pressure air from the work performing device in heat exchange relationship to the air flowing to the liquefying chamber.

1,901,390. BLACK AZODYESTUFFS AND PROCESS OF MAKING SAME. RICHARD FLEISCHHAUER and CARL-THEO SCHULTIS, Frankfort-on-the-Main-Fechenheim, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Oct. 2, 1930, Serial No. 486,052, and in Germany Oct. 9, 1929. 10 Claims. (Cl. 260—70.)

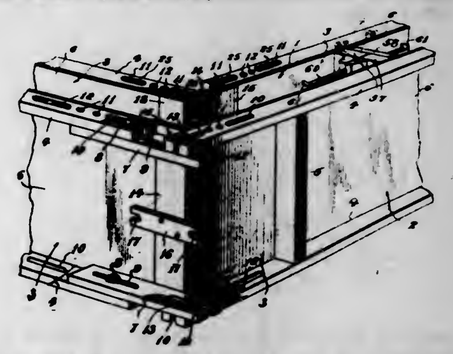


1. A process which comprises combining a 1-amino-8-hydroxy-naphthalene sulfonic acid of the general formula:

wherein one X means hydrogen, the other X a sulfonic acid group and Y means hydrogen or a sulfonic acid group, with the diazo compounds of two amines of the formulæ:



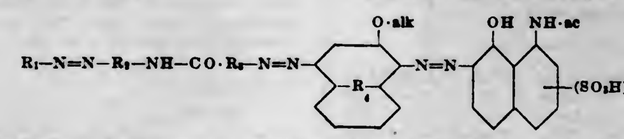
wherein one R means hydrogen, an alkoxy, hydroxyl or carboxylic acid group, the other R an alkoxy, hydroxyl or carboxylic acid group, and the benzene nuclei may contain a halogen, alkoxy, alkyl or sulfonic acid group, transforming in the disazo dyestuffs thus produced the acylamino groups into amino groups by saponification, tetrazotising and combining these tetrazo compounds with two compounds of the formula:



wherein each Z means an amino or hydroxy group.

1,901,391. COMBINATION WASHER. CHRISTIAN FORBERG, St. Thomas, Ontario, Canada. Filed Mar. 8, 1932. Serial No. 597,578. 3 Claims. (Cl. 85—3.)

2. A washer of the class described comprising two members of loop-like shape with the sides elongated, and means for pivoting one part on the other part at substantially the centers of the side portions thereof.



1,901,392. CONCRETE FORM. JOHN S. FREDERICK, Emaus, Pa. Filed July 31, 1930. Serial No. 472,005. 7 Claims. (Cl. 25—131.)

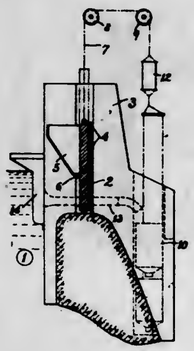
7. In a building mold, a bracket for connecting ends of mold forming sections, said bracket having leaves adapted to be secured to mold sections longitudinally thereof, one leaf having a tongue extending from its inner end, a hinge block pivoted to said tongue for turning in a plane parallel to the tongue, and a sleeve hinged to said block and having a shank swiveled to the inner end of the other leaf axially thereof.

1,901,393. POLYAZODYESTUFFS. EUGEN GLIETENBERG, Leverkusen-I. G.-Werk, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed June 5, 1931, Serial No. 542,466, and in Germany June 10, 1930. 5 Claims. (Cl. 260—72,.)

1. The azodyesuffs of the probable general formula:

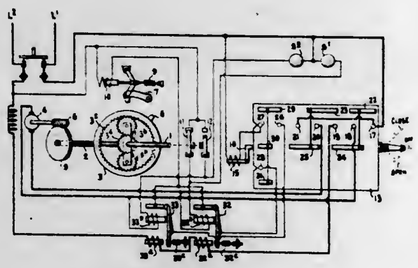
wherein R_1 stands for the radical of a coupling component of the group consisting of phenols, salicylic acid compounds, aceto-acetic acid arylamides, methylketol and pyrazolones, R_2 stands for a benzene nucleus which may be substituted by a sulfonic acid group, R_3 stands for a benzene nucleus which may be substituted by halogen, alkyl or alkoxy, R_4 may be subetituted by a sulfonic acid group "alk" stands for an alkyl group, "ac" stands for an acyl group and "n" stands for one of the numbers one and two, being in the form of their alkali metal salts dark powders, dyeing the vegetable fibre green shades of good fastness to light.

1,901,394. ICE CREAM CONFECTION BAR. BERT R. J. HASSELL, Rockford, Ill. Filed July 6, 1931. Serial No. 548,845. 3 Claims. (Cl. 99—11.)



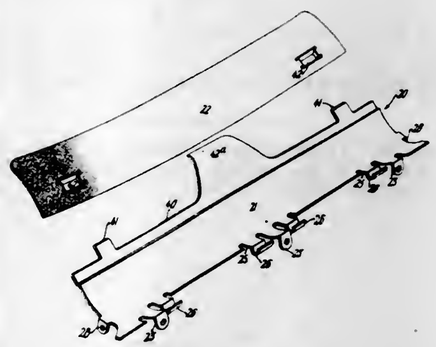
1. A confection comprising a core of normally liquid material frozen to a substantially solid state, the core being adapted to be coated by dipping into molten, edible, coating material, said first mentioned material having mixed therein a granular, edible, farinaceous material which is unaffected by the heat of the molten coating material when dipped therein, whereby to provide solid projections on the surface of the core for adhesion thereon of the coating material, and an edible coating for the core.

1,901,395. DIRECTION SIGNAL. ALVIN L. JOHNSON, Worcester, Mass. Filed Jan. 13, 1931. Serial No. 508,490. 2 Claims. (Cl. 116—39.)



1. The combination with a car having a window and a steering column, of a pneumatic direction signal having a suction cup thereon for holding it against the window on the inside, said signal having two opposite collapsible arms connected with the interior of the signal separately, a flexible band detachably mounted on the steering column having two flexible air bags therein, and a flexible tube connecting each air bag with one of said arms.

1,901,396. AUTOMATIC REGULATING AND CONTROLLING GATE. SHINICHIRO KAMBARA, Yokohama, Japan. Filed Feb. 10, 1932. Serial No. 592,087. 3 Claims. (Cl. 61—26.)

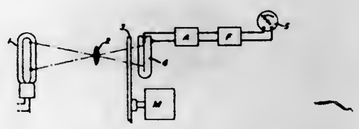


1. An automatic regulating and controlling gate comprising a gate suspended by a rope, a regulating casing secured in front of said gate having means for gradually flowing water therein, a vessel suspended by the rope connected to said gate and having a limited drain hole, an overflow receiver having a passage for discharging water into said suspended vessel, said regulating casing being adapted to increase buoyancy in the case of sudden rise of water level for opening the gate while it being unaffected by the slow rise of level and said suspended vessel being effective to operate the gate when the over-flow of water is discharged into said vessel.

1,901,397. DRIVING MECHANISM FOR VALVES AND OTHER DEVICES. CLARENCE W. KUHN, North Milwaukee, Wis., assignor, by mesne assignments, to Cutler-Hammer, Inc., Milwaukee, Wis., a Corporation of Delaware. Filed June 13, 1928. Serial No. 285,111. 2 Claims. (Cl. 172—239.)

1. The combination with a part to be driven into a definite limit, a driving motor therefor, a quickly interruptible driving connection therebetween, a relay responsive to interrupt said driving connection, said relay having an operating winding connected in circuit with said motor to effect response thereof under given current conditions, and having a restraining winding to prevent response thereof under the action of said former winding, and means for controlling said restraining winding to prevent response of said relay except during final movement of said part into said limit.

1,901,398. TYPEWRITING MACHINE. LAWRENCE E. LENTZ, Harrisburg, Pa., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 18, 1928. Serial No. 270,867. 8 Claims. (Cl. 197—143.)



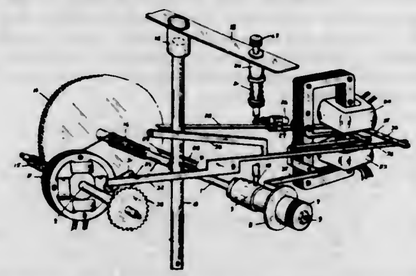
1. A paper-table for typewriting machines, including a flexible upper and a lower section, and means associated with both sections for securing the same laterally in position, including in the lower section a central member and a member at each end thereof to engage the upper section when flexed, to retain the upper section in position on the lower section by the former's own resiliency.

1,901,399. SIGHT. CHARLES E. LYMAN, Jr., Middlefield, Conn., assignor to The Lyman Gun Sight Corporation, Middlefield, Conn. Filed Feb. 25, 1930. Serial No. 431,191. 9 Claims. (Cl. 33—47.)

1. In a front sight, a generally hollow cylindrical hood, an insert having a generally circular peripheral portion adapted to closely fit within said hood, there being longitudinally directed slots in said hood, and radially extending arms on said insert received in said slots.

1,901,400. HARMONIC ANALYZER. WARREN A. MARRISON, Maplewood, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 27, 1931. Serial No. 559,605. 10 Claims. (Cl. 175—183.)

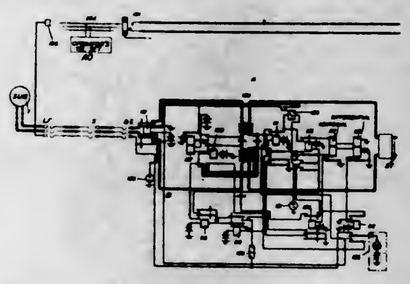
1. A wave analyzer comprising in combination a source of light, a light responsive device, a disc between said source and said device whose periphery has been cut to represent a wave to be analyzed in polar coordinates, means for rotating said disc sequentially at speeds proportional to the frequencies of the wave component in the wave to be analyzed, and means for obtaining an indication of the current in said light responsive device.



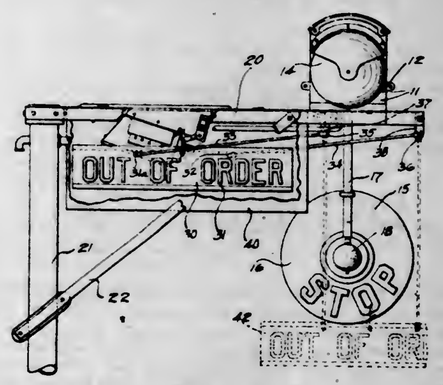
CARNEGIE LIBRARY OF ATLANTA

1,901,401. CONDUCTOR SUPPORT. SAMUEL S. MATTHEW, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Mar. 11, 1931. Serial No. 521,659. 15 Claims. (Cl. 191—43.)

1. A conductor support comprising an inverted U shaped sheet-metal-member having a groove and depending lips, a recess formed at each end of the member opening into the groove and having a passage thereunto through the wall of said member, a yoke member having a boss and arms projecting therefrom and having a passage through each end, each passage coinciding with one of the passages through the ends of the first member, a bolt for each recess and having a head therein and a shank projecting through the said corresponding passages and means on each shank to draw and hold the U member and yoke member together.



1,901,402. MOTOR OPERATED MECHANISM. IRA E. MCCABE, Chicago, Ill. Filed Feb. 11, 1932. Serial No. 592,219. 10 Claims. (Cl. 172—239.)

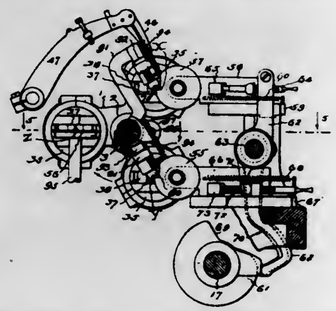


1. A motor operated mechanism of the character described including an electric motor, an electric circuit therefor, an actuating rod, means operated by the motor to impart axial movement to the rod in one direction and means to impart opposite axial movement thereafter when the motor circuit is broken, a relay having a movable coil, a circuit therefor, a relay energizing switch in said circuit, a switch in the motor circuit, means actuated by the closing of the energizing switch to cause the movement of the movable coil to close the motor switch, means for opening the closed motor switch actuated by a predetermined movement of the actuating rod, and means for holding the rod against movement in the opposite direction, said holding means active only as long as the relay remains energized following the opening of the motor switch by the movement of the actuating rod.

1,901,403. TELEPHONE SYSTEM. PAUL B. MURPHY, Nyack, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 6, 1930, Serial No. 500,517. Renewed Apr. 15, 1932. 11 Claims. (Cl. 179—27.)

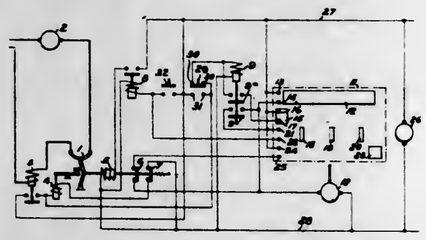
1. In a telephone system, a first office, a second office, a subscriber's line at the first office, an operator's position at the second office, means for establishing a connection from the subscriber's line to the operator's position, means for establishing a second connection from the operator's position to the subscriber's line, means for transmitting a direct current signal from the operator's position toward the subscriber's line, and means for translating said direct current signal into an alternating current signal for transmission over said connections.

1,901,404. OUT-OF-ORDER SIGNAL. BURNETT D. NEWTON, Los Angeles, Calif., assignor to Magnetic Signal Co., a Corporation of California. Filed Nov. 19, 1924. Serial No. 750,746. 11 Claims. (Cl. 177—379.)



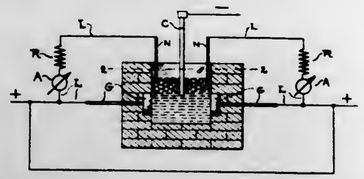
10. In combination: a wigwag signal; an out-of-order signal; a source of energy for operating said signals; latch means for holding said out-of-order signal in non-indicating position; electrical means for holding said latch means in latching position; and means for neutralizing said electrical means upon failure of said wigwag to operate when energized, said electrical means releasing said latch means upon failure of said source of energy.

1,901,405. MACHINE FOR SHAVING AND SLOTTING SCREWS. FRANK E. NEWTON, Hartford, Conn. Filed Dec. 18, 1931. Serial No. 581,827. 10 Claims. (Cl. 10—3.)



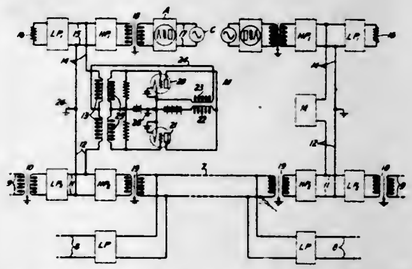
1. A shaving and slotting machine comprising a rotatable head, mechanism for imparting three intermittent rotary movements of one hundred and twenty degrees each during each complete rotation of said head, three spindles rotatably mounted one hundred and twenty degrees apart in said head, means for rotating said spindles at the first and second stops and interrupting the rotation of the spindles at the third stop of said head, blank holding chuck jaws carried by said spindles, means for opening and closing said chuck jaws at the first stop of said head, a re-shaving tool movable toward the axis of the chuck jaws at the first stop, a shaving tool movable

toward the axis of the chuck jaws at the second stop, a rotatable slotting saw adjacent the third stop, and means for drawing the spindles axially toward the slotting saw



at said third stop, said stops of the head carrying the spindles being only as long as the shaving tool operates on the blanks.

1,901,406. CIRCUIT BREAKER CONTROL SYSTEM. HENRY V. NYE, West Allis, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed June 20, 1928. Serial No. 286,812. 20 Claims. (Cl. 175—294.)



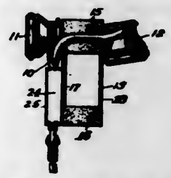
1. In combination, a circuit breaker, means for closing said circuit breaker, means including an overload relay for causing said circuit breaker to open, a rotary timing device having an initial position, a single motive device for rotating said timing device in one direction only, means responsive to the actuation of said overload relay for energizing said motor and thereby causing said timing device to rotate from its initial position continuously through one complete revolution, and means for causing said timing device to actuate said circuit breaker closing means to reclose said circuit breaker.

1,901,407. ELECTROLYTIC PROCESS FOR PRODUCING ALLOYS OF LITHIUM. HANS OSBORG, Frankfort-on-the-Main, Germany. Filed June 5, 1931, Serial No. 542,460, and in Germany June 6, 1930. 7 Claims. (Cl. 204—19.)

1. The process of producing a lithium alloy containing a metal melting at a relatively high temperature above about 600° C., which comprises establishing an electrolytic cell having a fused bath containing a lithium compound capable of permitting the electro-deposition of lithium and maintaining a cathode and a plurality of anodes including a graphite anode and an anode of a metal to be electro-deposited, and passing an electric current through said cell via said graphite anode and said metal anode to cause the deposition of an alloy of lithium and the said metal at the cathode.

1,901,408. BILATERAL MODULATOR CIRCUIT. EUGENE PETERSON, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 21, 1929. Serial No. 348,740. 8 Claims. (Cl. 179—171.)

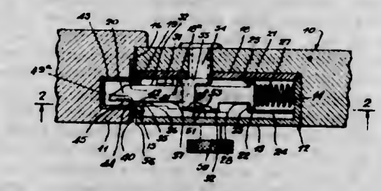
1. In combination, a transmission line, means for impressing relatively low frequency waves on said line, means for impressing carrier waves on said line, a modulating device, circuit means connecting the input circuit of said modulator to said line, and circuit means connecting the output circuit of said modulator to said line contiguous to said input circuit connecting means, said input and output connecting circuits being conjugately related so that output energy produces substantially no difference of potential between the input terminals of the modulator device.



1,901,409. COATING MATERIAL FOR CASTING MOLDS. FRED M. POE, Suffern, N. Y., assignor to The American Brake Shoe and Foundry Company, New York, N. Y., a Corporation of Delaware. Filed May 4, 1932. Serial No. 609,283. 5 Claims. (Cl. 22—189.)

1. A coating for casting molds consisting of a liquid mixture containing ground fused silica and ground graphite.

1,901,410. COATING FOR BUILDINGS AND METHOD FOR MAKING SAME. EMIL POEGEL, Newark, N. J. Filed May 31, 1930. Serial No. 458,891. 4 Claims. (Cl. 134—78.5.)



1. A coating for weatherproofing buildings comprising a cod liver oil base, a bee's wax filler, and acid acetic glacial.

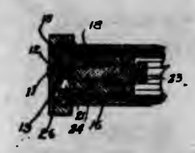
1,901,411. METHOD OF SIGNALING TRAFFIC BY A HAND DEVICE. CLARENCE A. RICH, Lynn, Mass. Filed May 5, 1926. Serial No. 106,867. 1 Claim. (Cl. 177—329.)

In a road arm and hand signaling device, a hand harness, means for mounting the harness on the hand of the operator, a casing having a red lens, a casing having a green lens, a lamp mounted in each casing adapted to illuminate the lens, circuits for the lamps and a source of electrical energy, means mounting the first mentioned casing on one side of the harness, means mounting the second mentioned casing on the opposite side of the harness, at substantially a right angle to the first casing, switch means for automatically closing the circuit to the lamp in the first mentioned casing when the arm and hand of the operator are raised to an upright position, and for closing the circuit to the lamp in the second mentioned casing and opening the circuit to the lamp in the first casing when the hand and forearm of the operator is bent back over the upper arm, and means for opening the circuit to both lamps when the arm of the operator is dropped to the side, all three movements conforming to the natural movements of the hand and arm for regulating traffic.

1,901,412. LOCK. WILLIAM A. RICHTER, New York, N. Y. Filed July 10, 1931. Serial No. 549,898. 9 Claims. (Cl. 70—14.)

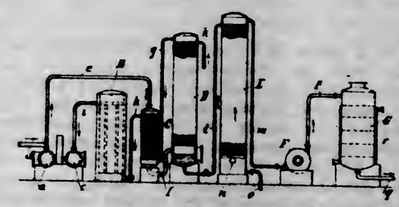
2. In a lock, a casing adapted to be mounted on a door, a keeper adapted to be mounted on a door jamb, a latch bolt slidably mounted for longitudinal movement within said casing, and having a ramped portion on one face thereof adapted to engage the keeper to permit the door to be slammed shut, said bolt being adapted to move transversely of said casing and having a portion on the opposite face thereof for engaging a portion of the keeper upon being transversely moved, and resilient means for normally retaining the bolt out of engagement with said portion of said keeper.

1,901,413. VALVE CONSTRUCTION FOR CONTAINERS. WALTER A. ROSELLE, New York, N. Y. Filed Oct. 30, 1931. Serial No. 572,098. 13 Claims. (Cl. 221—60.)



13. As an article of manufacture, a valve device for a tube closure, formed of a strip of thin, flexible, non-corrodible metal substantially non-resilient and provided with an integral boss-like finger piece near one end drawn from the metal of the strip.

1,901,414. COMBINATION FOUNTAIN PEN AND PENCIL. SOLOMON M. SAGER, Evanston, Ill. Filed Apr. 24, 1930. Serial No. 446,808. 2 Claims. (Cl. 120—14.)

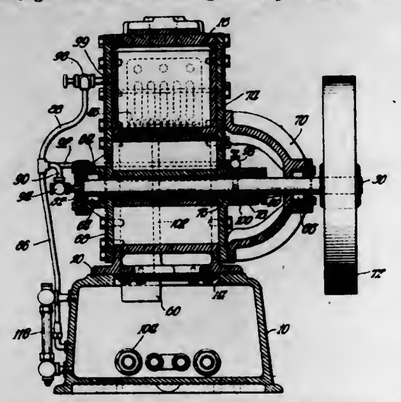


1. A writing instrument comprising, a fountain pen having an ink visible barrel with a plunger rod reciprocable therein and extending therefrom terminating in a plunger head, a casing provided with means defining a chamber adapted to receive pencil leads and being open at one end to permit removal or insertion of said leads, and a cylindrical member removably connecting said pen and said casing, said member having an interior partition providing closure means for the plunger head and of said pen and for an end of said casing, said casing being insertible in said cylindrical member to abut said partition.

1,901,415. ATOMIZER. FRANK A. SCHNEIDER, San Francisco, Calif. Filed Sept. 24, 1930. Serial No. 484,110. 9 Claims. (Cl. 299—120.)

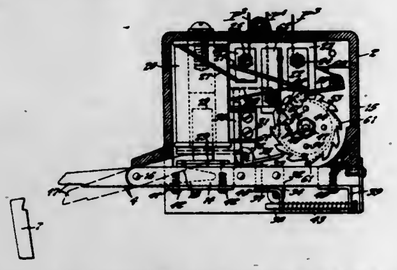
1. In a liquid atomizer a cup open at one end, a nozzle disc at the other end of the cup to close the same, said disc having a discharge orifice therethru; an atomizer within the cup having its periphery spaced from the inner periphery of the cup to form an intake chamber thereat, said cup having an aperture thru its wall to admit fuel into the said intake chamber, said atomizer having a whirling chamber therein in communication with the said orifice, and having passages thru the wall thereof to admit liquid from the intake chamber tangentially into the whirling chamber; means secured to the open end of the cup to cover the same and to hold the atomizer in the cup; and attachment means on said cup whereby the cup is attached to a conduit so that the apertures thereof communicate with the interior of the said conduit.

1,901,416. PRODUCTION OF GASEOUS MIXTURES CONTAINING SULPHUR DIOXIDE. MAX SCHROEDER, Berlin, Germany. Filed June 22, 1929, Serial No. 373,024, and in Germany May 15, 1929. 15 Claims. (Cl. 23—178.)



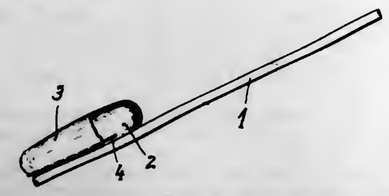
1. The method of producing a mixture of sulphur dioxide and oxygen which comprises forming a liquid solution of sulphur dioxide at a predetermined pressure, and passing a gas containing oxygen in contact with the solution at a lower pressure.

1,901,417. PUMP. OLIVER S. SLEEPER, Mount Vernon, Ill., assignor to J. P. Devine Manufacturing Company, Mount Vernon, Ill., a Corporation of Illinois. Filed Oct. 20, 1930. Serial No. 489,817. 5 Claims. (Cl. 230—205.)



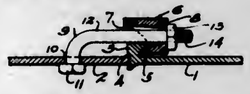
4. A pump comprising a housing, an eccentric cylinder in said housing, the periphery of the cylinder being smooth and devoid of oil grooves, the ends of the cylinder each lying all in one plane and being smooth and devoid of oil grooves, said housing having complementary peripheral and end faces also smooth and devoid of oil grooves, and oil supply means for delivering oil to the parts, the clear-

ances between the parts being such that the capillary oil film necessary for mechanical lubrication has capillary strength in excess of the gaseous pressure differences



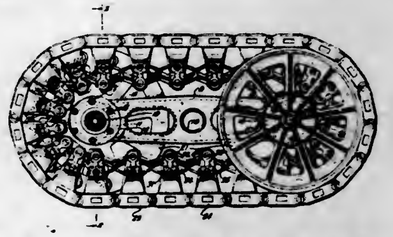
generated by said pump, whereby an effective capillary seal may be maintained at every point without flooded lubrication.

1,901,418. TIMING DEVICE FOR LOOM STOP-MOTIONS. EDWIN C. SMITH, Providence, R. I., assignor to Rhode Island Warp Stop Equipment Company, Portland, Me., a Corporation of Maine. Filed Dec. 2, 1931. Serial No. 578,491. 10 Claims. (Cl. 139—371.)



1. In a timing device for loom stop-motions, the combination with an electro-magnetic stop-device, and an electrical circuit therefor, of a timing unit in circuit with said stop-device, contact means incorporated with said timing unit for closing the circuit and constituting one terminal thereof exposed at intervals by turning the timing unit, a driving member constituting the other terminal of the electric circuit to turn the timing unit and at the stated intervals encounter the exposed contact means to close the circuit, and means to impel the driving member.

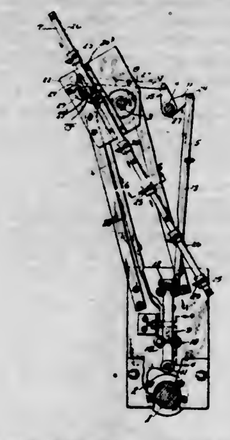
1,901,419. TOOTH-CLEANER. MARIE HELENE STEINERT, Chemnitz, Germany. Filed Jan. 19, 1932, Serial No. 587,466, and in Germany Dec. 31, 1930. 2 Claims. (Cl. 15—210.)



1. A tooth-cleaner of the character described, comprising a handle, a wedge-shaped back forming a part of said handle and projecting from one of the sides thereof, the cleansing surface of said back being flat and wider than the portion of said back adjacent to said handle, and a removable fabric cover surrounding said back, said cover narrowing towards said handle and being held in position by the narrow portion of said back.

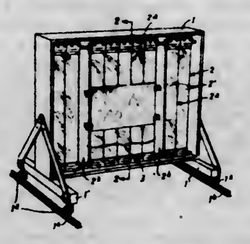
1,901,420. PIPE STRUCTURE. JOHN R. STERNAMAN, Springfield, Ill. Filed Sept. 26, 1929. Serial No. 395,487. 3 Claims. (Cl. 285—140.)

1. Means for securing together the ends of adjacent pipe sections comprising an outward ridge on one of said ends, and a hook member having an end portion secured to the wall of the other section and a shank extending along said sections, a lug engaging the surface of said ridge facing away from said ends, said shank extending outside of said ridge and through said lug, and a nut threaded on said shank for drawing said sections together, said shank being spaced a substantial distance from the referred to end portion of said hook member and there being a curved portion of substantial radius between said shank and end portion, and the engaging surfaces of said ridge and said lug forming an acute angle with the wall of the adjacent section whereby expansion and contraction of said sections is facilitated without straining the sections or loosening the joint.



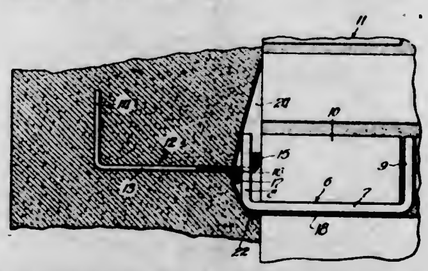
1,901,421. TRACKLAYING DEVICE. FREDERICK A. STREICH, Oshkosh, Wis., assignor to A. Streich & Bro. Company, Oshkosh, Wis., a Corporation of Wisconsin. Filed Jan. 6, 1930. Serial No. 418,949. 2 Claims. (Cl. 305—8.)

2. In a track laying device having a longitudinal support, having a pair of spaced apart wheels rotatably mounted on each end of the support, and having a plurality of shoes pivotally connected together to form an endless band extending around the pairs of wheels, said shoes each having side edges overlapping the peripheries of the wheels; spaced apart upright portions in connection with each shoe, pins extending between said upright portions, links connecting the pins of adjacent shoes, and braces in connection with the outer sides of the upright portions and curving outwardly to a spaced position therefrom and being there connected to a shoe, said braces and upright portions fitting between the pairs of wheels, and the outwardly curved portions of the braces being positioned adjacent the inner sides of the wheels to clear dirt therefrom during movement of the device.



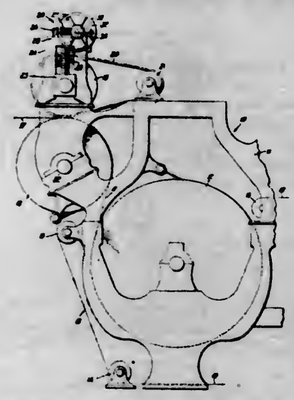
1,901,422. CONTROLLING MECHANISM FOR FULL FASHION TEXTILE MACHINES. GEORGE S. WEINERTH, Reading, Pa. Filed Mar. 27, 1930. Serial No. 439,289. 15 Claims. (Cl. 66—167.)

5. In combination with the cam shaft, control rod and take-up shaft of a full fashion textile machine, control mechanism comprising manipulating mechanism directly connected to said control rod and release mechanism for releasing said manipulating mechanism for movements



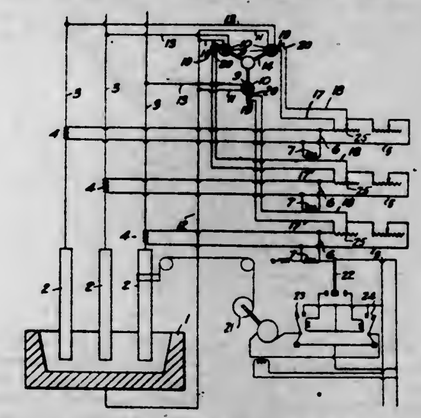
into operative and inoperative connection with said cam shaft in accordance with the number of rotations of said take-up shaft.

1,901,423. COMBINED FOCUSING SCREEN AND RETAINING MEMBER FOR SENSITIZED MATERIAL. ELLIS WEISKER, New York, N. Y. Filed Mar. 23, 1931. Serial No. 524,610. 18 Claims. (Cl. 88—24.)



1. A combined focusing screen and retaining member for sensitized material composed of a series of sections comprising strips of transparent material, and means for mounting said transparent strips in adjustable relationship.

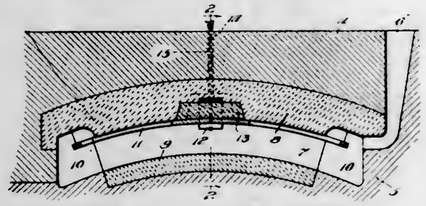
1,901,424. LINING ANCHORING MEANS. ROGER F. WILEY, Denver, Colo., assignor to Plibrico Jointless Firebrick Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 14, 1930. Serial No. 475,147. 6 Claims. (Cl. 72—101.)



1. In combination, a retaining wall, a refractory lining, an anchor member embedded in said wall, an anchor member embedded in said lining, a connection between said members at a point outside the plane of said retaining wall permitting expansion and contraction of the lining in every direction in the plane thereof independently of the retaining wall, and a shield having a slot therein accommodating one of said members and cooperating with said retaining wall and the other of said members for encasing said joint.

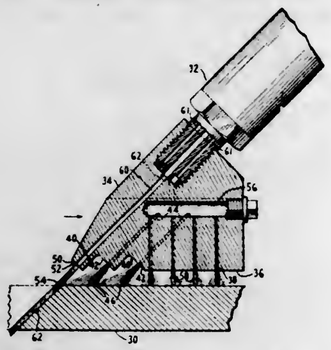
1,901,425. PAPER-MARKING MACHINE. HARRISON R. WILLIAMS, New York, N. Y. Filed Mar. 14, 1929, Serial No. 347,001. Renewed July 19, 1932. 8 Claims. (Cl. 92—48.)

1. In combination with a paper making machine through which the paper passes as a continuous web, a pair of metal rolls, the paper web being arranged to pass continuously between said rolls, a vertically slidable bearing block disposed at each end of one of said rolls, a guide for each of said bearing blocks, a vertically disposed threaded stud integral with each of said bearing blocks, an internally threaded worm wheel carried by each of said studs, means for holding said worm wheels against vertical movement, and means for rotating said worm wheels synchronously.



1,901,426. ARC FURNACE CONTROL APPARATUS. JOHN YOUNG, Welland, Ontario, Canada. Filed May 1, 1931. Serial No. 534,215. 3 Claims. (Cl. 13—13.)

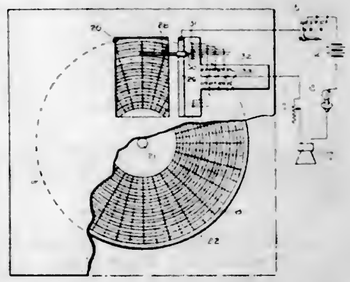
1. In a three-phase arc control apparatus, in combination a furnace hearth, three electrodes, bus bars supplying current to the three electrodes, a current regulating circuit including a current regulator associated with each electrode, and a shunt circuit including a rheostat in circuit with each current regulator, a voltage regulator com-



prising a magnetic coil connected between each bus bar and, the furnace hearth, a movable member superimposed above the coils, a plurality of contacts on the member, a plurality of contacts adapted to coact with the contacts on the member, each pair of coacting contacts being connected into a current regulating circuit and when out of contact with each other causing a further resistance to be inserted into the shunt circuit with a consequent increase of current through the corresponding current regulator, and means due to the weakening of the current in a magnetic coil for causing the member to break contact between the contacts connected with the current regulating circuit associated with such coil.

1,901,427. LINING FOR CASTING MOLD CAVITIES. JOHN D. ALLEY, Pittsburgh, Pa., assignor to The American Brake Shoe and Foundry Company, Wilmington, Del., a Corporation of Delaware. Original application filed Aug. 22, 1929, Serial No. 387,817. Divided and this application filed June 1, 1932. Serial No. 614,697. 3 Claims. (Cl. 22—189.)

1. A lining of low thermal conductivity and capable of resisting repeated heat shocks for a casting mold cavity lining and consisting of fused silica and a refractory binder composed of Kentucky ball clay and Georgia kaolin.



1,901,428. METHOD OF CUTTING METAL BY MEANS OF GASES. JAMES L. ANDERSON, Tenafly, N. J., assignor to Air Reduction Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 13, 1930. Serial No. 502,026. 8 Claims. (Cl. 148—9.)

1. A method of cutting continuously across the flange portions of metallic members formed by the intersection of two plate-like portions, in which at least one of such portions terminates at the intersection, which includes: directly obliquely at the flange portion a jet of an oxidising gas in quantities greater than necessary to penetrate only the metal of said flange, effecting relative movement of the flange portion and the oxidizing gas jet so that the direction of the jet is opposite to the movement thereof relative to the portion, and acting on the metal of the flange in advance of such jet with an extensive series of successive preheating flame jets, part at least of said preheating jets being directed obliquely in the same general sense as the oxidising jet.

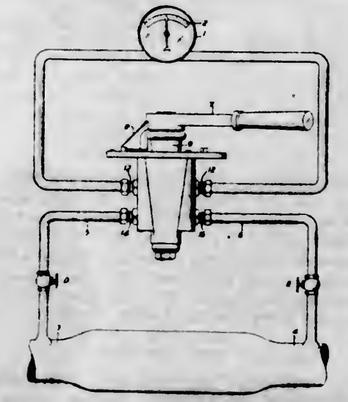
8. A method of cutting metallic members along a proposed line, in which relative motion of the member and an oxidising jet is effected, which includes: heating the metal of the member by a series of forward heating jets acting substantially in line with the line of the cut, directing a plurality of other heating jets at the metal on each side of the previously heated metal, and finally subjecting the metal to the action of the oxidizing jet substantially along the initially heated line.

1,901,429. METHOD AND MEANS FOR SOUND CORRECTION IN AN ELECTRIC CIRCUIT. WILLIAM N. BARLOW, Yonkers, N. Y. Filed Apr. 23, 1930. Serial No. 446,692. 3 Claims. (Cl. 179—100.3.)

1. In an apparatus for charting sound corrections required in talking picture reproduction apparatus having sound reproduction means, the combination of a turn table rotating at a predetermined speed, a charted disc carried by the turn table, a rheostat in electrical connection with the sound reciproduction means of a film projector, comprising a series of resistances, contact members for each resistance, and a contact finger movable from one contact to the next to bring each resistance into a circuit, said finger having a stylus movable therewith and in contact with the charted disc to translate movement of the finger in terms of lines upon the charted disc.

1,901,430. HAIR WINDING MECHANISM. GEORGE EDWARDZ BJÖRKMAN, Djursholm, Sweden. Filed Apr. 17, 1931. Serial No. 530,790. 3 Claims. (Cl. 132—38.)

3. A winder element for hair waving devices, comprising a stem, a hollowed element of insulating material having a central bore, whereby to permit insertion for



reciprocation and rotation of the same over said stem, said element having a notch formed thereon, the terminals of said notch being defined by a plurality of substantially parallel disposed tongues extending oppositely in spaced relationship one with respect to the other, said tongues being adapted to guide and maintain within the notch the hair wound by said element on said stem as the winder element is rotated in either direction.

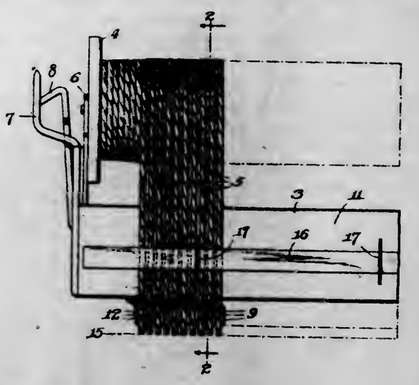
1,901,431. METHOD OF AND APPARATUS FOR DETERMINING TRUE ROCK TEMPERATURE IN ROTARY DRILLED WELLS. LEWIS A. BOND, Los Angeles, Calif., assignor to Shell Oil Company, San Francisco, Calif., a Corporation of California. Filed Sept. 22, 1928. Serial No. 307,621. 3 Claims. (Cl. 234—11.)

2. A method of determining true rock temperatures in a bore-hole, which comprises: lowering a heat-sensitive element a distance below the normal bottom of said bore-hole; and recording the temperature to which said heat-sensitive element is subjected.

1,901,432. PRESSURE LEAK INDICATOR. ROBERT WALTER BRADLEY, Aldwych, London, England, assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 21, 1930, Serial No. 469,609, and in Great Britain Nov. 20, 1929. 3 Claims. (Cl. 137—77.)

3. In combination with a gas filled cable, a pressure leak indicator comprising a differential pressure gauge, two pilot tubes connecting said indicator to the cable to be tested, a means in the line of said pilot tubes between said cable and said indicator for controlling the passage of gas from said cable to said indicator, said means comprising a valve having a single operating handle, said valve being designed to be rotated to permit a flow of gas either through one or both of said pilot tubes, or for completely stopping the passage of gas.

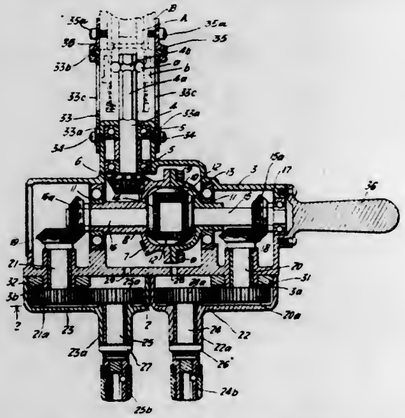
1,901,433. ARTIFICIAL LARYNX. GEORGE W. BURCHETT, Peekskill, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed May 14, 1931. Serial No. 537,307. 17 Claims. (Cl. 3—1.)



1. An artificial larynx comprising electrical means for producing sound waves, and means for conducting said sound waves into the vocal cavities of a user of said larynx.

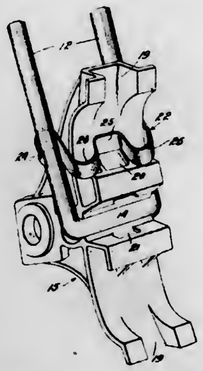
1,901,434. GERMICIDAL AND DETERGENT SUBSTANCES. ARTHUR R. CADE and HALVOR O. HALVORSON, Minneapolis, Minn. Filed Oct. 15, 1928. Serial No. 312,742. 7 Claims. (Cl. 167—14.)

1. A composition of matter comprising an alkali soap of an unsaturated soap forming acid and an alkaline reacting substance in such proportions that an aqueous solution thereof shall have a pH value between 10 and about 12.6 when the concentration of soap in such solution is 0.1%.



1,901,435. TUFT YARN FRAME FOR LOOMS FOR WEAVING TUFTED PILE FABRIC. EUGENE F. CLARK, Damariscotta, Me., assignor to Marshall Field Mills Corporation, Philadelphia, Pa., a Corporation of Pennsylvania. Refile of application Serial No. 454,949, filed May 23, 1930. This application filed June 18, 1931. Serial No. 545,293. 8 Claims. (Cl. 139—10.)

1. In a tuft yarn frame, a body bar provided with spool supporting means and provided also with parts forming a row of passages for yarn strands and a yieldable element carried by and extending longitudinally of

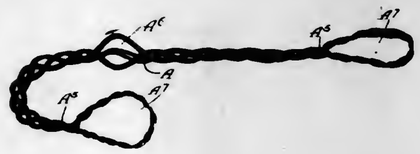


the bar and having an uninterrupted surface extending continuously across the paths of a multiplicity of yarn strands passing from a spool supported by said means to said passages and constructed to engage and press against the strands.

1,901,436. DUPLEX EQUALIZING APPARATUS. CHARLES B. COATES, Cleveland, Ohio, assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 23, 1928. Serial No. 264,193. 8 Claims. (Cl. 81—57.)

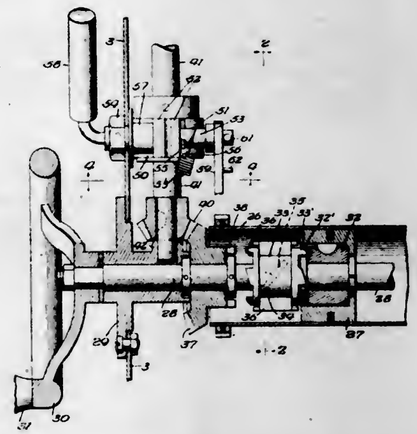
1. The combination with a machine having a rotatable spindle extending therefrom, of an attachment therefor for driving threaded securing members simultaneously to the same degree of tightness, said attachment having a plurality of spindles projecting therefrom, means for transmitting the rotation of said rotatable spindle differentially to said plurality of spindles, means for supporting said attachment upon said machine, and means for adjusting said attachment rotatably relative to said machine.

1,901,437. BRAKE BEAM ADJUSTER AND RELEASE DEVICE. SETH A. CRONE, East Orange, N. J., assignor to Buffalo Brake Beam Company, New York, N. Y., a Corporation of New York. Filed June 18, 1930, Serial No. 461,872. Renewed Oct. 7, 1931. 9 Claims. (Cl. 188—216.)



5. In combination, a brake head, a hanger with which the head is movably connected, and a release spring having a bearing relation with the oppositely disposed sides of the hanger and head.

1,901,438. FILTERING MATERIAL. WALTER C. DAVIDSON, North Canton, Ohio, assignor to The Hoover Company, a Corporation of Ohio. Filed Oct. 5, 1929. Serial No. 397,743. 1 Claim. (Cl. 183—51.)

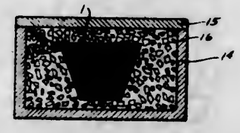


A dust separating bag for use with a suction cleaner comprising an air-porous fibrous sheet the fibers of which have a coating of latex and which has greater strength longitudinally than transversely of its length.

1,901,439. SLING AND METHOD OF MAKING THE SAME. JAMES F. DREW, Kenosha, Wis., assignor to Macwhyte Company, Kenosha, Wis., a Corporation of Illinois. Filed Mar. 17, 1931. Serial No. 523,316. 12 Claims. (Cl. 96—25.)

1. As a new article of manufacture a cordage article formed of a single continuous flexible member braided upon itself to form a plurality of integral eyes.

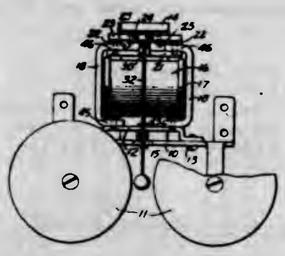
1,901,440. DUPLICATING MACHINE. JOHN J. FLANIGAN, Oak Park, Ill., assignor to Vivid, Incorporated, Chicago, Ill., a Corporation of Illinois. Filed Sept. 11, 1931. Serial No. 562,245. 20 Claims. (Cl. 242—55.)



1. The combination of a frame having a bed, a winding reel at one end of said bed, an operating member for said reel and aligned therewith, a gelatin band in a roll at the other end of the bed and stretched over the bed and connected to the reel, a shaft connected to said roll and extending to said operating member at an angle thereto, and means for operatively connecting said operating member to or disconnecting it from the shaft or the reel.

1,901,441. PROCESS OF MAKING PHOTOGRAPHIC SILVER SALT EMULSIONS. STEFAN FRÄNKEL, Berlin, Germany. Filed July 8, 1931. Serial No. 549,577, and in Germany Oct. 17, 1930. 6 Claims. (Cl. 95—7.)

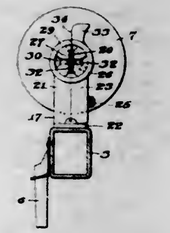
1. A process for making emulsions of the type described which comprises mixing, in the presence of a colloid, a silver salt and a halogen salt that forms insoluble salts with silver, said silver salt and said reacting halogen salt containing anions and cations respectively that form an insoluble precipitate during said reaction.



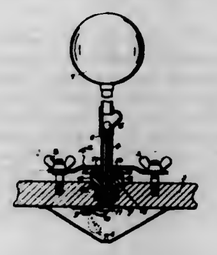
1,901,442. PROCESS FOR MANUFACTURING BELTS. ABRAHAM L. FREEDLANDER, Dayton, Ohio. Filed Apr. 16, 1931. Serial No. 530,535. 19 Claims. (Cl. 154—4.)

1. In a method of manufacturing a driving belt, superimposing a plurality of layers of rubberised fabric, stretching said layers of fabric, freezing the layers of fabric in prestretched, superimposed condition, and shearing portions therefrom while frozen.

14. In a method of manufacturing a belt, forming a belt in a prestretched condition on a form and stretching it while so forming it, freezing it while so formed and stretched, and vulcanizing it in its frozen stretched condition before it can thaw.



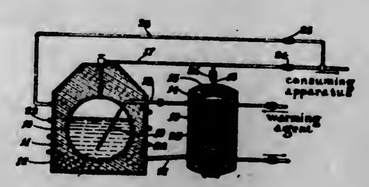
1,901,443. SIGNALING DEVICE. JOHN S. GARVIN, Bogota, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 4, 1929. Serial No. 411,459. 2 Claims. (Cl. 177—7.)



1. A polarized electromagnetic device comprising a coil, a core on which said coil is mounted provided at each end with two polar extensions, the extensions of one end being poled oppositely to the extensions of the other end of said core upon the energization of said coil, a permanent magnet having each pole thereof bridging a pair of oppositely poled core extensions and an armature interposed between one pole of said permanent magnet and a pair of oppositely poled core extensions.

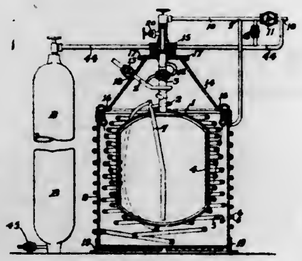
1,901,444. TUBE FRAME. JAMES A. GRUNDY and WILLIAM MCK. PAYNE, Philadelphia, Pa., assignors to John Bromley & Sons, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 24, 1932. Serial No. 594,764. 17 Claims. (Cl. 189—10.)

1. In a tube frame, a frame bar, two coaxial spools having adjacent end portions and remote end portions, means on the bar for rotatably supporting the remote end portions of the spools, a bearing bracket carried by the bar for the adjacent end portions of the spools, a spool connecting member rotatably supported by the bracket and having transversely extending grooves in the respective end portions thereof, and transversely extending parts projecting from the adjacent end portions of the spools and into said grooves and adapted to engage the walls thereof for causing equal rotation therewith, said parts being adapted to be inserted into and removed from said grooves by transverse movement of said spools.



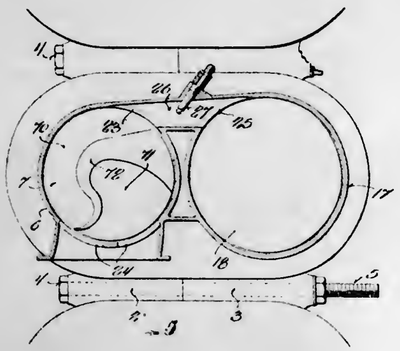
1,901,445. APPARATUS FOR TRANSFERRING AND STORING LIQUEFIED GASES. CHRISTIAN WILHELM PAUL HEYLANDT, Lankwitz, Germany, assignor to Flüga Aktien-Gesellschaft, St. Moritz, Switzerland. Filed Nov. 12, 1927, Serial No. 232,924, and in Germany Nov. 13, 1926. 6 Claims. (Cl. 226—73.)

1. In apparatus for transferring and storing liquefied gas, the combination with a container for liquefied gas of the pressure type having a wall provided with a filling orifice and means for maintaining the same normally closed, of a filling vessel for holding a charge of liquefied gas provided with a neck adapted to extend through said filling orifice, means in said orifice for guiding said neck to operative position arranged to have thermal contact with the same over a relatively small area, and means in said neck for releasing said charge from said filling vessel when moved to operative position.



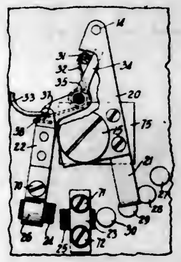
1,901,446. METHOD OF CONSERVING LIQUEFIED GASES. CHRISTIAN WILHELM PAUL HEYLANDT, Lankwitz, Germany, assignor to Flüga Aktien-Gesellschaft, St. Moritz, Switzerland. Filed Nov. 21, 1927, Serial No. 234,914, and in Germany Nov. 24, 1926. 3 Claims. (Cl. 62—1.)

1. The method of conserving liquefied gas held in a container which comprises cooling an adsorbent by passing the



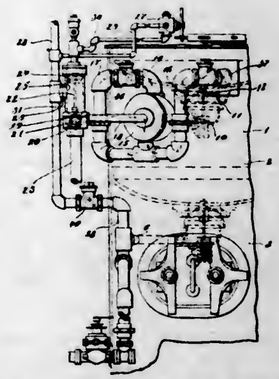
liquefied gas in thermal contact with the adsorbent during periods of consumption of the liquefied gas, and adsorbing the gas evaporated from the liquefied gas in the adsorbent during periods of non-consumption.

1,901,447. APPARATUS FOR PREPARING PRESSURE GASES. CHRISTIAN WILHELM PAUL HEYLANDT, Berlin-Britz, Germany, assignor to Flüga Aktiengesellschaft, St. Moritz, Switzerland, a Corporation of Switzerland. Original application filed Oct. 5, 1927, Serial No. 224,268. Divided and this application filed June 8, 1932. Serial No. 616,044. 6 Claims. (Cl. 62—1.)



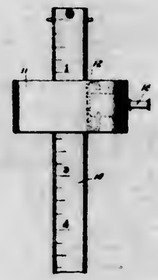
2. Apparatus for supplying gas material in the gas phase converted from liquefied gas, comprising an insulated container for the liquefied gas, a receiver for gas in the gas phase, a gas phase withdrawal conduit leading from said container to a consuming device, flow controlling means in said conduit, a liquid phase withdrawal conduit leading from said container and communicating with said first named conduit in advance of said flow controlling means, and a connection leading from said receiver to said conduit for supplying gas conserved from said container.

1,901,448. INTERNAL COMBUSTION ENGINE. CARL F. HIGH, Madison, Wis. Filed June 5, 1929. Serial No. 368,572. 4 Claims. (Cl. 123—65.)



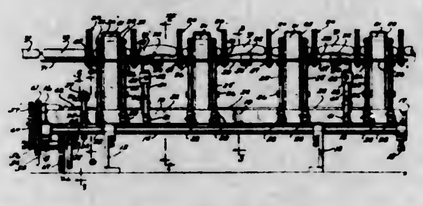
2. In an internal combustion engine of the two stroke cycle type, a piston provided with a peripheral channel of helical contour, and a central pocket inclined downwardly and outwardly toward the periphery of the piston, the lower edges of said channel and said depression being substantially in the same horizontal plane.

1,901,449. MULTICONTACT SWITCH. JOSEPH F. D. HOGE, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 24, 1930. Serial No. 430,472. 2 Claims. (Cl. 200—146.)



1. In a multi-contact switch, a brush guiding member having an axle pivoted to a stationary support, a metal brush fastened rigidly to said member, a secondary arm having a separate axle bearing, a carbon contact attached to said secondary arm, an axle pin for said secondary arm rigidly attached to said guiding member in a position to eccentrically pivot said secondary arm, a series of stationary metal contacts arranged to contact with said metal brush, a stationary carbon contact arranged to contact with said secondary arm carbon contact, a tension spring for holding said carbon contacts together, means to move said guiding member to wipe said metal brush over said metal contacts and thereby rotate said axle pin in said secondary arm bearing for wiping the surface of said secondary carbon contact over the surface of said stationary carbon contact during a period of rotation of said brush guiding member, a stationary pin mounted in said guiding member, and an extension on said secondary arm for engaging said pin to open said carbon contacts.

1,901,450. SAND BLAST MACHINE FOR APPLYING PRESSURE TO ABRASIVE. FOSTER J. HULL, Hagerstown, Md., assignor to Pangborn Corporation, a Corporation of Maryland. Filed Dec. 10, 1930. Serial No. 501,175. 4 Claims. (Cl. 51—12.)



4. The combination in a sand blast machine for applying pressure to abrasive, having upper and lower tanks with means for admitting the abrasive to the upper tank and transferring it from the upper to the lower tank by gravity, means providing a supply of air under pressure means for maintaining the pressure in the lower tank and alternately applying and exhausting the pressure in the upper tank including an air pressure operated double controller valve connected to the air pressure supply and to the lower tank and means for preventing expansion of the air in the lower chamber and consequent backflow from the lower chamber into said controller valve.

1,901,451. GAUGE. HARRY G. JACKSON, Jenkintown, Pa. Filed Apr. 15, 1932. Serial No. 605,447. 4 Claims. (Cl. 33—42.)

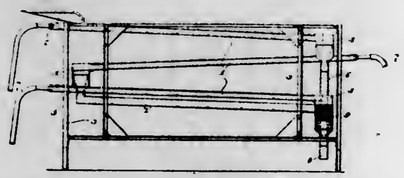
1. A gauge comprising a bar and a head slidable thereon, said head having a slot adjacent to the bar, a resilient member occupying the slot, and a clamping unit positioned to exert pressure upon the resilient member, said resilient member having ends engaging and locking the clamping unit against withdrawal from said head.

1,901,452. SAUSAGE LINKING MACHINE. PARKER A. JACOBSON, Winona, Minn. Filed June 13, 1930. Serial No. 460,935. 18 Claims. (Cl. 17—34.)

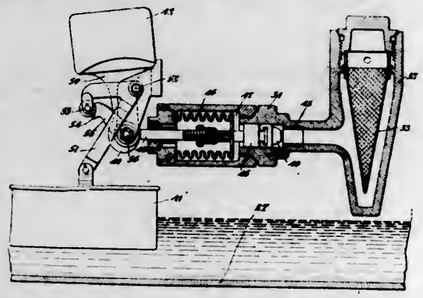
1. In a sausage linking machine, a pair of rock-shafts, two pairs of arms mounted on the rock-shafts and spaced longitudinally thereof, cooperating spacers and squeezers carried by the arms, a pair of cooperating twisting belts mounted on the rock-shafts between said two pairs of arms, means for driving the belts, means for operating the rock-shafts to open and close the spacers and squeezers and belts, said arms having hinge joints that permit secondary opening and closing movements of the spacers and squeezers in respect to the rock-shafts and belts, and which structure further includes yielding means under strain to close the spacers and squeezers.

1,901,453. WHIPSTOCK. LAURENCE C. KELLY, Beverly Hills, Calif. Filed Nov. 1, 1929. Serial No. 403,968. 7 Claims. (Cl. 255—1.)

1. A whip-stock, comprising an elongated body having a cutter deflecting upper end, a bore extending from said upper end down into the body and adapted at its upper end for communication with a pipe string, and lateral discharge passages from the bore out through the sides of the body.

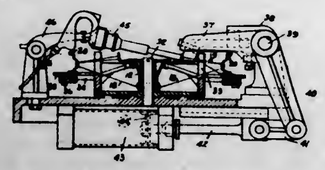


1,901,454. METHOD OF CEMENTING WHIPSTOCKS IN WELL BORES. LAURENCE C. KELLY, Beverly Hills, Calif. Original application filed Nov. 1, 1929, Serial No. 403,968. Divided and this application filed Nov. 21, 1932. Serial No. 643,616. 7 Claims. (Cl. 255—1.)



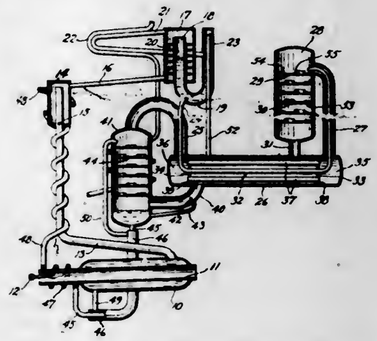
1. The method of setting a hollow whipstock in a well bore, that includes lowering the whipstock to position in the well bore on the lower end of a pipe string, forcing cement down through the pipe string into the hollow of the whipstock and thence through openings in the whipstock to the exterior thereof, whereby the cement surrounds at least a portion of the whipstock, allowing the cement to set, and then disconnecting the pipe string from the whipstock, and removing the pipe string, leaving the whipstock set in the cement.

1,901,455. APPARATUS FOR WASHING FRUITS. RIDGWAY R. KENNEDY, Philadelphia, Pa., assignor to Abbotts Dairies, Inc., Philadelphia, Pa., a Corporation. Filed Nov. 27, 1928. Serial No. 322,117. 2 Claims. (Cl. 146—194.)



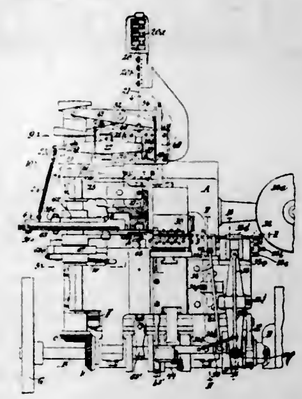
1. A fruit washer comprising a flume formed of a series of reversely inclined longitudinal channel sections positioned laterally in offset relation, means for supplying water to the upper end of each section, screens respectively connecting the lower end only of one section with the upper end of the next succeeding section and extending laterally, and in inclined relation relatively to the sections connected thereby, and drains below the respective screens.

1,901,456. OIL BURNER. GORDON KINSMAN, Jersey City, N. J., assignor to Caloroil Burner Corporation, a Corporation of Delaware. Filed Aug. 18, 1927. Serial No. 213,745. 1 Claim. (Cl. 158—42.1.)



In a cutoff for oil burners the combination of an oil tank, a plunger valve for cutting off the supply of oil to said tank, a bellows connected to said plunger valve and normally maintaining it open, said plunger valve acting to maintain the bellows out of contact with the oil, a weight for actuating said valve to shutoff position, a cam operative thereby, a plunger loosely interposed between said cam and said bellows, a trip for the weight normally maintaining it in inoperative position, a float in said tank, and connections between said float and said trip effective to release the weight when the oil in the tank rises above a predetermined level.

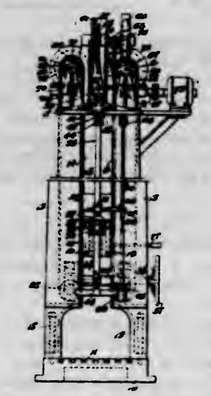
1,901,457. APPARATUS FOR MAKING WIRE WHEELS. HARRY W. KRANZ, CHARLES S. HOLDEN, and HAROLD R. UBER, Lakewood, Ohio, assignors to The Cleveland Welding Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 18, 1931. Serial No. 523,490. 10 Claims. (Cl. 219—2.)



1. In a wheel making apparatus, the combination of a spindle for securing the hub of the wheel, with a spider mounted coaxially therewith and adapted to secure the rim of said wheel, complementary spoke and rim securing means movable axially of said spindle, and means for upsetting the ends of said spokes.

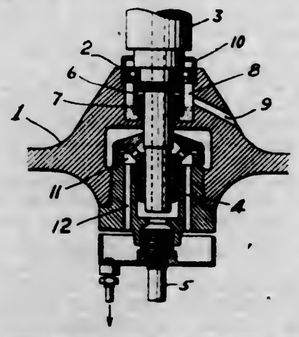
1,901,458. REFRIGERATION. ALVAR LENNING, Jackson Heights, N. Y., assignor to Electrolux Servel Corporation, New York, N. Y., a Corporation of Delaware. Filed May 28, 1929. Serial No. 366,700. 9 Claims. (Cl. 62—119.5.)

1. In an absorption refrigerating apparatus, a generator, a condenser, an evaporator and an absorber, means to supply liquid refrigerant to the evaporator, means to circulate an absorption liquid between and through said generator and absorber, a gas conduit for conducting vaporous refrigerant from said evaporator and introducing the same above the liquid level in said absorber and adapted to receive excess unevaporated refrigerant from the evaporator, and a branch conduit connected to said gas conduit for withdrawing unevaporated refrigerant from said gas conduit and introducing the unevaporated refrigerant below said liquid level in the absorber.



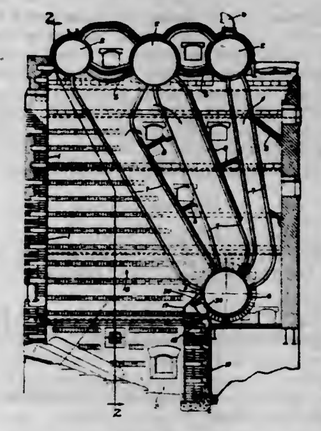
1,901,459. MACHINE FOR MAKING AND ASSEMBLING A VALVE PIN AND VALVE GASKET SUPPORT. ARTHUR J. LEWIS, Stratford, Conn., assignor to A. Schrader's Son, Inc., New York, N. Y., a Corporation of New York. Filed June 29, 1929. Serial No. 374,782. 24 Claims. (Cl. 29—33.)

2. A machine of the class described, comprising a pin-forming mechanism, a mechanism for forming a cup having a tubular extension, means for transferring the formed cup and axially aligning the tubular portion thereof with a pin, and means for assembling the cup on said pin and rivetting the pin over the ends of the tubular extension.



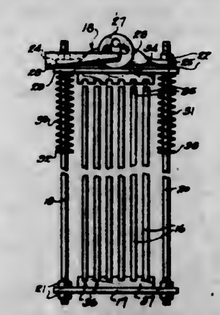
23. A method of forming a valve pin and gasket-supporting cup assembly which comprises forming a gasket-supporting member with a disc-like portion and a central tubular extension having an inner diameter somewhat larger than the diameter of the valve pin, mounting said member upon a valve pin and uniting said parts together by increasing the diameter of the pin within the tubular extension of the supporting member to fit therein to provide a joint between the members, which joint, at the disc-like portion of the supporting member, will be circumferentially spaced from the normal surface of the pin.

1,901,460. DROP TESTING MACHINE. ROBERT B. LEWIS, Philadelphia, Pa., assignor to Tinius Olsen Testing Machine Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 17, 1930. Serial No. 444,895. 14 Claims. (Cl. 265—13.)



9. In a testing machine of the drop weight type, the combination of a weight, lifting devices movably mounted at opposite sides of said weight, supporting arms pivoted to said weight for respectively cooperating with said lifting devices, a relatively movable element carried by said weight and normally holding said arms spaced apart to be engaged by said lifting devices, means actuated at a predetermined point in the upward travel of said weight to remove said element from said arms and release said weight to fall by gravity, restoring means operated by the impact of said weight to replace said element for holding said arms in spaced relation, and means to catch and hold said weight elevated after each testing impact.

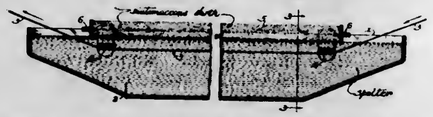
1,901,461. CENTRIFUGAL SEPARATOR MACHINE. HANS OLOF LINDGREN, Appelviken, Sweden, assignor to Aktiebolaget Separator, Stockholm, Sweden, a Corporation of Sweden. Filed Sept. 18, 1931, Serial No. 563,541, and in Sweden Nov. 8, 1930. 2 Claims. (Cl. 233—45.)



1. The combination, with a centrifugal bowl, a rotary spindle carrying the bowl and having an axial channel communicating with the interior of the bowl, a fixed pipe communicating with the spindle channel, a device positioned adjacent the end of the spindle communicating with the fixed pipe and adapted to maintain a substantially tight joint, and a bearing for the spindle between the bowl and said tightening device, of a collar between the bearing and said tightening device and rotating with the spindle, a stationary collar surrounding the spindle and surrounded by the rotary collar, and a third collar surrounding the spindle and arranged over the bearing and regulating the supply of oil thereto.

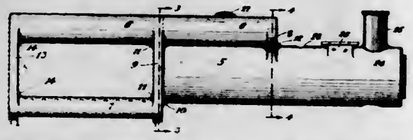
1,901,462. MUD-DRUM SEAL. MICHAEL LIPTAK, St. Paul, Minn. Filed Oct. 15, 1928. Serial No. 312,594. 9 Claims. (Cl. 122—302.)

1. In combination with a furnace including walls, a bridge wall having ends extending into two of the side walls, a channel iron upon the bridge wall having its channel side facing upwardly, said iron extending into the said side walls, a mud drum, blocks interlocked with the channel iron, and sealing elements swingably socketed in the blocks and engaging the drum.



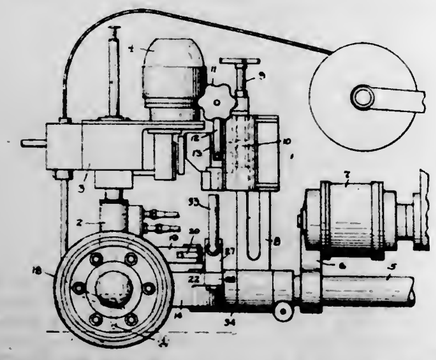
1,901,463. APPARATUS FOR HANDLING GLASS SHEETS. RAOUL J. LOUVIAUX, Toledo, Ohio, assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed May 14, 1932. Serial No. 611,379. 13 Claims. (Cl. 51—217.)

1. A device for transferring a plurality of sheets of glass simultaneously from the discharge end of one edging machine to the receiving end of the same or a second edging machine, comprising a stationary member, a second member spaced from the stationary member and movable toward and away from the same, means for moving said movable member toward said stationary member to clamp



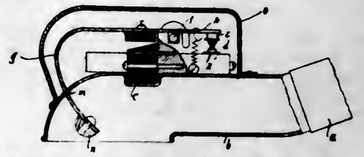
a plurality of glass sheets therebetween, and means carried by the stationary and movable members for maintaining the sheets in properly spaced relation relative to one another.

1,901,464. METHOD OF INSULATING ZINC SPELTER BATHS AND MEANS FOR EFFECTING THEIR PRACTICE. JOHN A. MORITZ, Crawfordsville, Ind. Filed Apr. 23, 1931. Serial No. 532,224. 2 Claims. (Cl. 91—70.2.)



1. The method of preventing oxidization and the formation of oxides, ashes, skimmings and dross during the coating of iron or steel materials with molten zinc spelter, which consists in covering the surface of a molten metal bath with diatomaceous earth, passing the materials to be coated through such metal bath beneath that covered with such earth, and confining the earth to a defined area so as to prevent the materials coming into contact with the earth on entering and leaving the metal bath.

1,901,465. STEAM BOILER STRUCTURE. JOHN E. MUHLFELD, Scarsdale, N. Y. Filed May 11, 1929. Serial No. 362,273. 4 Claims. (Cl. 122—94.)

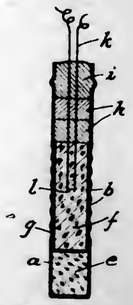


1. A unitary steam boiler structure comprising a boiler shell proper, upper and lower drums extending longitudinally of the boiler shell, and water and steam circulating conduits having their walls integrally formed with the walls of said boiler shell and the drums, and said integral connections consisting of joint forming wall section curved on a comparatively large radius to permit of relative movement between the walls of the conduits and the walls of said drums and boiler shell.

1,901,466. WELDING APPARATUS. SAMUEL C. OSBORNE, Cleveland Heights, Ohio, assignor to The Lincoln Electric Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 16, 1931. Serial No. 515,982. 3 Claims. (Cl. 219—8.)

1. In a welding mechanism adapted to run on the work to be welded, a carriage, work engaging wheels supporting one end of said carriage, and means on said carriage adapted to present a welding electrode in arcing relation to the work on the shortest line on the work surface connecting the work areas engaged by said wheels.

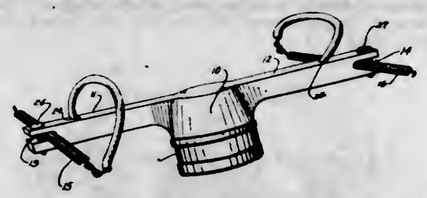
1,901,467. VACUUM CLEANING APPARATUS. CARL OTTO, Essen-Bredeney, Germany. Filed Feb. 8, 1930, Serial No. 427,017, and in Germany Feb. 19, 1929. 6 Claims. (Cl. 15—18.)



1. In a vacuum cleaner, a tubular mouthpiece adapted to be connected with a vacuum device, a rockable arm on the mouthpiece and having a free lashing end, beating means on the rockable arm mounted within the mouthpiece for acting on a surface to be cleaned, and a magnetic hammer break for operating said rockable arm, the free lashing end of said rockable arm having a curved portion extending through an opening and into the interior of said mouthpiece.

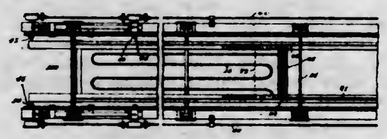
1,901,468. METHOD OF PRODUCING PHOTOGRAVURE PLATES. AXEL A. PEARSON, Kansas City, Mo. Filed July 13, 1931. Serial No. 550,662. 8 Claims. (Cl. 95—5.7.)

1. The process of producing photogravure printing plates which comprises twice photographing the image to be reproduced to make a continuous tone negative and a screened negative; producing a transparent positive from each negative; exposing the presensitized printing plate to light passing through the screened positive; developing said plate to establish an acid-resisting coating; sensitizing said printing plate directly over the coating; exposing said last sensitizing coating to light passing through the continuous tone positive, with the images on the plate and continuous tone positive in register; and then etching said printing plate in a solution of copper dissolvent.



1,901,469. BLASTING CAP. JEAN PICCARD, Marshallton, Del., assignor to Hercules Powder Company, Wilmington, Del., a Corporation of Delaware. Filed May 12, 1932. Serial No. 610,758. 8 Claims. (Cl. 102—9.)

1. A blasting cap including in combination a casing provided with an opening, an explosive charge within the casing and a water soluble closure for said opening.



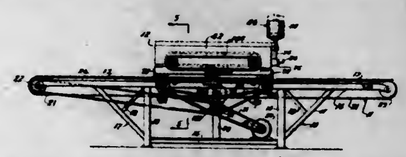
1,901,470. ELECTRICAL SOCKET DEVICE. BERT H. PLISKE, Cleveland, Ohio. Filed July 27, 1931. Serial No. 553,265. 1 Claim. (Cl. 173—358.)

An electrical socket device comprising a single cast body and integral arms of insulating material, the body having a socket with terminals molded therein and the arms having conductors molded therein and leading to the terminals, the outer ends of the conductors being exposed for

connection to line wires and the inner ends of the conductors and the socket and terminals being sealed by the molded material against the leakage of water around the same.

1,901,471. ROTARY CONVEYER SYSTEM AND APPARATUS THEREFOR. KURT T. POTTHOFF, Brooklyn, N. Y. Filed Oct. 19, 1928. Serial No. 313,515. 52 Claims. (Cl. 266—7.)

1. In combination, a tank for liquid; a closed basket; intermittent means for conveying the basket downwardly into the liquid of the tank and upwardly out of the liquid near the discharge end of the tank; the intermittent means coming to rest after the basket is thus raised; and means for rotating the basket when thus brought to rest.

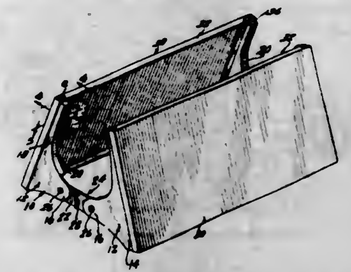


1,901,472. REFLECTOR FOR CHRISTMAS TREES. LAMBERT L. RAYMOND, Minneapolis, Minn. Filed Mar. 16, 1931. Serial No. 522,940. 7 Claims. (Cl. 240—103.)

1. A reflector for a Christmas tree or similar decorative use, comprising a sheet of material having a flat central portion with an aperture therein for receiving the plug portion of a lamp bulb, said sheet being slitted to form a plurality of radially extending tongues, and a plurality of radially extending tongues disposed respectively between said first mentioned tongues and curved forwardly out of the surface occupied by said first mentioned tongues, thus forming spaces between the front of the first mentioned tongues and said second mentioned tongues through which light may be reflected, all of said tongues extending from and being integral with said flat central portion.

1,901,473. STENCILING MACHINE. WILLIAM R. REPPSS, Grassmere, Staten Island, N. Y., assignor to Nas-Dar Company, Chicago, Ill., a Corporation of Illinois. Filed June 14, 1930. Serial No. 461,229. 20 Claims. (Cl. 101—123.)

1. A stenciling machine for printing sheet stock and the like comprising, a bed plate, a stencil, a stencil supporting frame mounted for free vertical movement relative to said bed plate, a squeegee, including a wiping element for moving a batch of paint over the stencil, and means for advancing the squeegee across the face of the stencil when said frame is in the lowered position

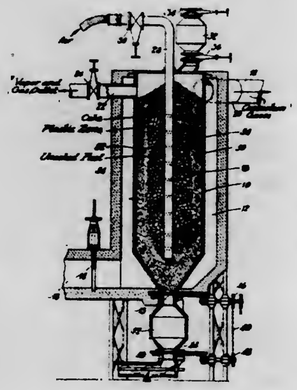


on the bed plate, said means being operable to return the squeegee from the forward edge of the stencil along an endless path back into printing position at the rear edge of the stencil preparatory to the printing of the next succeeding sheet.

1,901,474. MOTOR SUPPORT. JAMES A. RODGERS, St. Louis, Mo., assignor to The Emerson Electric Mfg. Co., St. Louis, Mo., a Corporation of Missouri. Filed May 31, 1932. Serial No. 614,891. 14 Claims. (Cl. 248—16.)

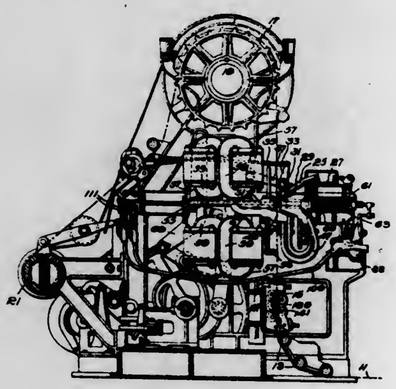
1. A motor support comprising a pair of resilient bars, means intermediate the ends of the bars for attaching them to the frame of the motor symmetrically with reference to a central vertical plane passing axially through the motor and parallel to such plane, a base having upstanding lugs, clamping means for securing the bars to the lugs, and shock absorbing elements interposed between the bars and the lugs.

1,901,475. FOLDING TIRE DISPLAY HOLDER. EDWIN A. SHANK, New Rochelle, N. Y. Filed May 1, 1931. Serial No. 534,263. 7 Claims. (Cl. 211—24.)



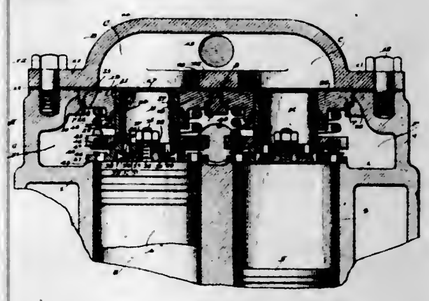
1. In a folding tire support two tire clamps each comprising half-clamps pivotally connected to clamp a tire by its weight, said half-clamps also pivotally connected to fold with their outer faces toward one another, and clamp connecting means to which the clamps are pivotally attached.

1,901,476. PROCESS OF CARBONIZING COAL. THEODOR EBERHARDT WERNER SCHUMANN, Elisabeth, N. J., assignor to Combustion Utilities Corporation, New York, N. Y., a Corporation of Maine. Filed Mar. 7, 1929. Serial No. 345,026. 10 Claims. (Cl. 202—6.)



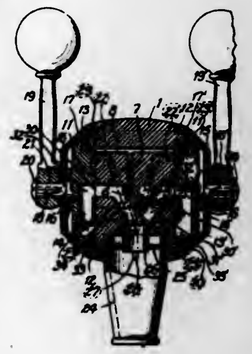
4. The process of carbonizing solid bituminous fuel comprising heating a body of fuel indirectly from an external source so as to progressively carbonize the fuel

mass in a direction away from said source of heat and to form a plastic layer between the carbonized fuel and the yet uncarbonized fuel, and supplying and dis-



tributing an oxygen-containing fluid to the said plastic layer only on that side thereof adjacent the uncarbonized fuel.

1,901,477. FABRIC WELDING MACHINE. WILLIAM S. SOUTHWICK, Lynn, Mass., assignor to Thomson-Gibb Electric Welding Company, Lynn, Mass., a Corporation of Massachusetts. Filed June 7, 1930. Serial No. 459,804. 17 Claims. (Cl. 219—4.)

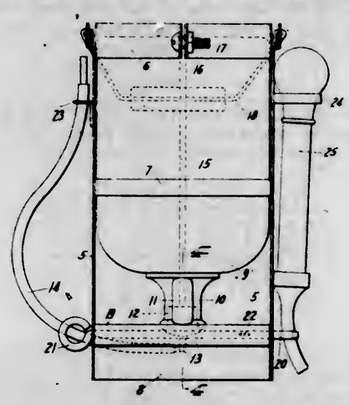


1. In a machine for electrically welding wire fabric, the combination with a series of stationary welding jaws, of a series of movable welding jaws, the same presenting successive pairs of cooperating, relatively movable jaws for welding a series of strand wires and transverse stay wires, means for moving said movable jaws toward the stationary jaws to effect a weld, supports extending transversely the machine on which said jaws are adjustably mounted to permit the adjustment of the spacing of successive pairs, and means for circulating cooling fluid through successive jaws, comprising means for supplying said fluid to inner members of each series, flexible conduits connecting successive members to cause the fluid to circulate outwardly in opposite directions through the series from the inner members to the outer members thereof.

1,901,478. COMPRESSOR AND VALVE THEREFOR. GROVER C. SUTTON and PETER H. WITSCHGE, Spokane, Wash., assignors to General Machinery Company, Spokane, Wash., a Corporation of Washington. Filed Mar. 29, 1932. Serial No. 601,746. 8 Claims. (Cl. 230—230.)

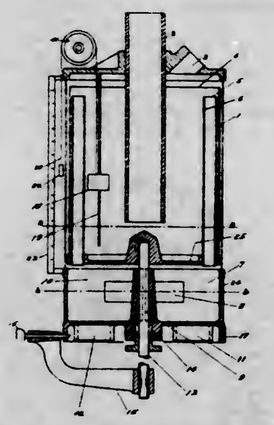
6. In a non-return passage valve structure for compressors, a hollow valve shell having ingress and egress ports, closures therefor, and said shell having a stop shoulder, an abutment ring slidable along said shell, and a safety release spring adapted normally to hold said abutment ring against said shoulder.

1,901,479. FAUCET. JOHN M. TRAVIS, St. Louis, Mo. Filed May 5, 1930. Serial No. 449,901. 7 Claims. (Cl. 225—26.)



1. A faucet including a main body embodying independent supply passages and having a delivery passage for one of said supply passages and having separate delivery passages for the other of said supply passages, means for interconnecting one of said supply passages with the first-named delivery passage and for interconnecting the other of the supply passages with one of the separate delivery passages, and other means for interconnecting the first-named delivery passage with the supply passage connected therewith and for interconnecting the said other supply passage with the other of the separate delivery passages.

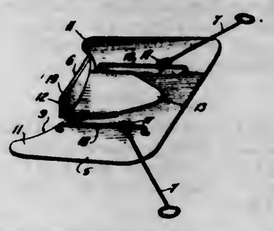
1,901,480. LIQUID DISPENSING APPARATUS. EDGAR W. VAHLE, Dayton, Ohio, assignor to The Huffman Manufacturing Campany, Dayton, Ohio, a Corporation of Ohio. Filed Apr. 14, 1930. Serial No. 444,207. 12 Claims. (Cl. 221—25.)



11. In a portable liquid dispensing apparatus, a container having a discharge spout, a frame adapted to be supported on the floor with either end uppermost and

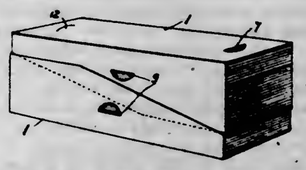
to receive said container through one end thereof and support the same with said spout directed either upwardly or downwardly, a transverse member supported at its ends by said frame and arranged normally beneath and in the path of a part of said container to positively

hold said container against downward movement with relation to said frame when said container is positioned with its spout directed downwardly, said member being movable into and out of the path of said part while said container is supported in said frame.



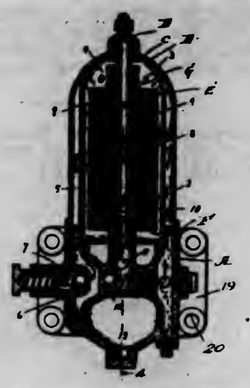
1,901,481. DISTRIBUTOR FOR LIQUIDS. ROBERT H. VAN SCHAACK, Jr., Evanston, Ill., assignor to Van Schaack Bros. Chemical Works, Inc., Chicago, Ill., a Corporation of Illinois. Filed Feb. 25, 1929. Serial No. 342,359. 7 Claims. (Cl. 137—166.)

1. A distributor for liquids comprising a plurality of tubes which may be so placed by rotation of the vessel containing them that any number of them will deliver liquid to one receptacle and the remaining tubes will deliver liquid to another receptacle.



1,901,482. ROLL HANDLING DEVICE. FREDERICK VON DER HORST, Chicago, Ill., assignor to The Tribune Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 1, 1930. Serial No. 499,242. 4 Claims. (Cl. 214—130.)

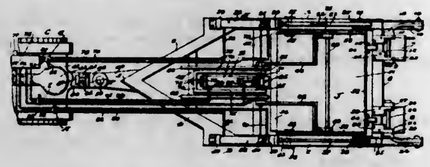
1. A portable device for handling rolls of paper comprising a flat base plate adapted to be slid over a supporting surface into position adjacent the roll, and a cradle hingedly connected to said base plate adjacent one edge thereof, said cradle having a lip adapted to engage under the end of a roll with the latter standing on end and an arcuate portion at right angles to said lip adapted to



engage the side of the roll and to support the latter as the same is being turned from vertical to horizontal position on the same level.

1,901,483. DISPLAY BOX. JOHN H. WARE, Jr., Oxford, Pa. Filed Jan. 23, 1931. Serial No. 510,758. 4 Claims. (Cl. 206—44.)

4. A display device comprising a box having one end higher than the other, a plurality of packages covering the bottom wall of said box, additional packages arranged on said first mentioned packages and on each other in stepped relation, the end wall of said box at the lower end being of a height equal to the height of one of the packages, and the end wall at the higher portion of said box being of a height which is approximately a multiple of the height of one of said packages, the side walls of said box having a portion equal in height to said higher end wall and extending the distance of the width of one of said packages, and said side walls of said box having a portion cut away diagonally from said higher height to said lower height, whereby said box and the packages therein may interfit detachably with a similar box and packages to form an object rectangular in outline.

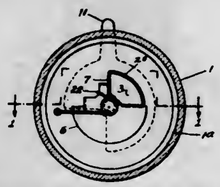


1,901,484. OIL FILTER. CHARLES A. WINSLOW, Vallejo, and ELBERT J. HALL, Berkeley, Calif. Filed Jan. 27, 1926. Serial No. 84,234. 7 Claims. (Cl. 210—165.)

4. A filter comprising a body member, a shell member detachably secured in respect to the body member, which members constitute the filter casing proper that provides

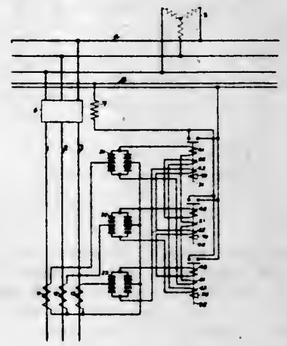
therein a sump, a filtering medium within the casing and extending above the sump, said body member having a flange portion with inlet and outlet openings therethrough into and from which oil to be filtered and filtered oil passes, said flange portion also having openings in the same face with the aforesaid openings for receiving means for attaching the filter in place.

1,901,485. TRACTOR SCOOP STRUCTURE. HARRY M. WIRT, Spokane, Wash., assignor to March Construction Co., composed of George H. March and Harry M. Wirt. Filed Aug. 25, 1931. Serial No. 559,178. 8 Claims. (Cl. 37—129.)



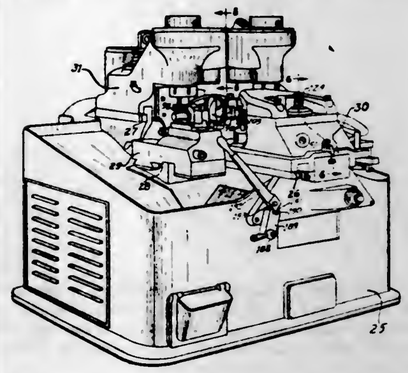
7. In a scoop structure adapted to be drawn by a tractor, a frame having side members and provided at its front end with a swivelled draft coupling adapted to support the front end of said frame and permit the latter to be tilted, a pair of supporting wheels at the rear end of said frame, a scoop disposed between and pivotally mounted on said side members to swing free from interference therewith and disposed rearwardly of said frame and relatively close to said wheels to dispose the major weight of the load on the latter, means for shifting and holding said scoop into dirt scooping, carrying, dumping, road scraping or road shaping positions, and mechanism for independently changing the relation of either or both of said wheels with respect to said frame to raise or lower the latter in horizontal planes, or tilt said frame from the horizontal and thereby alter the position of said scoop or afford clearance of the latter from the road surface, in accordance with any of the functions being performed by said scoop.

1,901,486. PURE ANHYDROUS ALUMINIUM CHLORIDE. CARL WURSTER, Ludwigshafen-on-the-Rhine, and MAX GRUBER, Mannheim, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed Feb. 10, 1931, Serial No. 514,907, and in Germany Feb. 14, 1930. 4 Claims. (Cl. 23—92.)



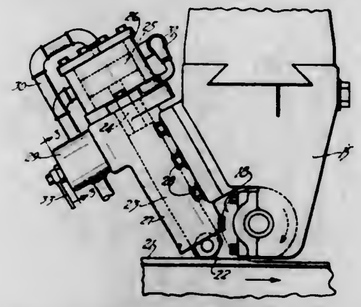
1. A process of producing pure anhydrous aluminium chloride, which comprises bringing crude aluminium chloride containing iron chloride into contact with a melt containing aluminium chloride and a chloride of a metal selected from the group consisting of alkali and alkaline earth metals, kept at a temperature at which aluminium chloride sublimes, in the presence of a reducing agent, and withdrawing the subliming aluminium chloride.

1,901,487. DISPENSING DEVICE. EGBERT ALEXANDER, Los Angeles, Calif. Filed Apr. 26, 1932. Serial No. 607,553. 6 Claims. (Cl. 221—116.)



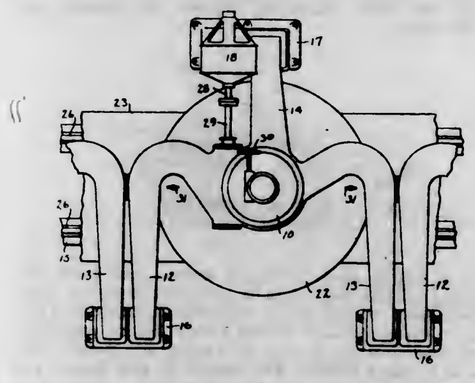
1. A dispensing device of the kind described comprising, in combination, a container, a cap member secured to said container and forming a closure therefor, said cap member having a dispensing opening, and a manually operable dispensing element rockably mounted upon said cap member to repeatedly dispense measured quantities of material from said container through said opening in the cap, said cap member having a bent plate provided with wings which form two of the side walls of the dispensing recess, the middle portion of said bent plate forming a bearing for the pivot of the manually movable parts.

1,901,488. ELECTRIC CIRCUIT PROTECTIVE SYSTEM. LINDSAY M. APPLEGATE, Seattle, Wash. Filed Apr. 5, 1930. Serial No. 441,962. 5 Claims. (Cl. 175—294.)



1. An electric system comprising a polyphase circuit, means for obtaining a unidirectional current proportional to each of the phase currents of said polyphase circuit, and relays each having a single magnetic circuit and a plurality of coils operatively arranged on said single magnetic circuit, the system being arranged so that the operation of said relays will be a function of the inequalities of said phase currents.

1,901,489. MACHINE TOOL. WALTER D. ARCHEA, Cincinnati, Ohio, assignor to The Cincinnati Milling Machine Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Dec. 6, 1929. Serial No. 412,243. 20 Claims. (Cl. 90—15.)



1. In a milling machine the combination of a bed, a plurality of slides carried by the bed movable toward and from one another, rotating cutter tools carried by the slides, a work table carried by the bed intermediate the slides and movable transversely of the slides, a common means for effecting rotation of the tools and movement of the slides and work table in timed sequential cyclic order to effect a milling operation, and means automatically effective at the completion of said operation to return the movable parts to a starting position.

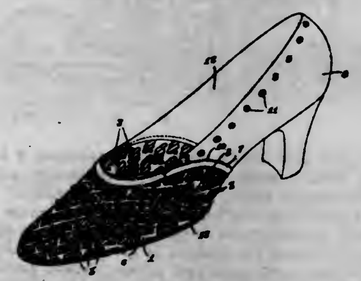
1,901,490. MILLING MACHINE. WALTER D. ARCHEA, Cincinnati, Ohio, assignor to The Cincinnati Milling Machine Company, Cincinnati, Ohio, a Corporation of Ohio. Filed May 2, 1930. Serial No. 449,181. 4 Claims. (Cl. 90—11.)

1. A milling machine having a column, a reciprocating table supported thereby, a cutter arbor journaled in the column, an overarm carried by the column and extending parallel to said arbor, a pendent adjustably mounted on the overarm for journaling the outboard end of said arbor, a work holder mounted on the table, means to exert a clamping pressure on work mounted in the holder comprising a housing attached to the pendant, a cylinder formed therein having a piston, roller means attached to the end of the piston for contacting the work, a source of fluid pressure and valve means for controlling the admission of pressure to opposite ends of the cylinder to cause movement of the roller to or from the work.

1,901,491. GLASS MACHINERY. THEODORE S. BERSON, Hamilton, Ohio, assignor, by mesne assignments, to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed July 25, 1929. Serial No. 380,925. 7 Claims. (Cl. 51—110.)

1. In a glass grinding machine having a glass supporting table, a runner rotatably supported thereabove, and supporting means for said runner comprising a unitary three-point supporting member comprising a hub, and three arms extending laterally therefrom, a plurality of pedestals upon which the ends of said arms respectively rest, said laterally extending arms being arranged as to their ends to give a stable three point support for said runner and so shaped throughout their extent that a portion of each arm lies on a given side of an axis of gravity of the runner to permit lateral removal of said runner while supported by a vertically positioned removing means.

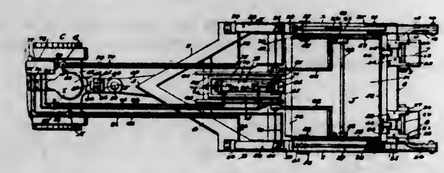
1,901,492. COMBINED RUBBER AND LEGGING. CHARLES F. BURRY, Boston, Mass. Filed Nov. 11, 1930. Serial No. 494,903. 1 Claim. (Cl. 36—7.3.)



As a new article of manufacture, a wading boot consisting of a rubber shoe having a high upper adapted to enclose the entire foot of a wearer and having hermetically secured to said upper well above the sole of the shoe a tubular leg covering composed of seamless stretchable material adapted to fit closely over the leg of the wearer and provided with an inturned upper end in which an elastic garter is loosely confined.

1,901,493. SWITCH CONTACT. AUGUSTUS JESSE BOWIE, San Francisco, Calif. Filed Nov. 20, 1929. Serial No. 408,486. 16 Claims. (Cl. 200—48.)

1. In an electric switch a plurality of independent switch poles, simultaneously operated by a common mechanism, each pole consisting of a pair of relatively movable contactors adapted to move into full engagement with each other, means for continued motion of said contactors while maintaining said full engagement, and a spring adapted to increase the pressure between said contactors during said continued motion.

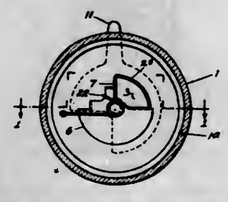


1,901,494. JEWELED SHOE AND METHOD OF MAKING SAME. CLAUDE H. DANIELS, Newton Center, Mass. Filed June 24, 1931. Serial No. 546,510. 4 Claims. (Cl. 41—10.)

1. A boot or shoe of the kind described, comprising an upper section having apertures therethrough at predetermined intervals, brilliant retaining members located in

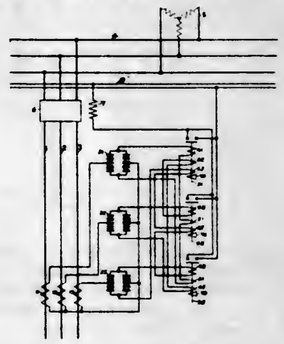
therein a sump, a filtering medium within the casing and extending above the sump, said body member having a flange portion with inlet and outlet openings therethrough into and from which oil to be filtered and filtered oil passes, said flange portion also having openings in the same face with the aforesaid openings for receiving means for attaching the filter in place.

1,901,485. TRACTOR SCOOP STRUCTURE. HARRY M. WIRT, Spokane, Wash., assignor to March Construction Co., composed of George H. March and Harry M. Wirt. Filed Aug. 25, 1931. Serial No. 559,178. 8 Claims. (Cl. 37—129.)



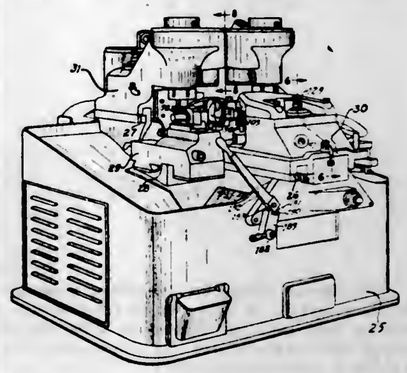
7. In a scoop structure adapted to be drawn by a tractor, a frame having side members and provided at its front end with a swivelled draft coupling adapted to support the front end of said frame and permit the latter to be tilted, a pair of supporting wheels at the rear end of said frame, a scoop disposed between and pivotally mounted on said side members to swing free from interference therewith and disposed rearwardly of said frame and relatively close to said wheels to dispose the major weight of the load on the latter, means for shifting and holding said scoop into dirt scooping, carrying, dumping, road scraping or road shaping positions, and mechanism for independently changing the relation of either or both of said wheels with respect to said frame to raise or lower the latter in horizontal planes, or tilt said frame from the horizontal and thereby alter the position of said scoop or afford clearance of the latter from the road surface, in accordance with any of the functions being performed by said scoop.

1,901,486. PURE ANHYDROUS ALUMINIUM CHLORIDE. CARL WURSTER, Ludwigshafen-on-the-Rhine, and MAX GRUBER, Mannheim, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed Feb. 10, 1931, Serial No. 514,907, and in Germany Feb. 14, 1930. 4 Claims. (Cl. 23—92.)



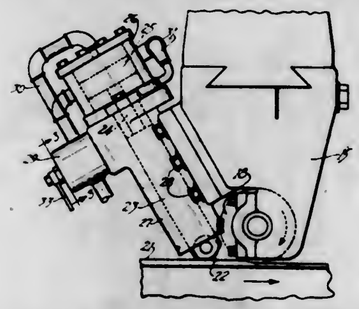
1. A process of producing pure anhydrous aluminium chloride, which comprises bringing crude aluminium chloride containing iron chloride into contact with a melt containing aluminium chloride and a chloride of a metal selected from the group consisting of alkali and alkaline earth metals, kept at a temperature at which aluminium chloride sublimes, in the presence of a reducing agent, and withdrawing the subliming aluminium chloride.

1,901,487. DISPENSING DEVICE. EGBERT ALEXANDER, Los Angeles, Calif. Filed Apr. 26, 1932. Serial No. 607,553. 6 Claims. (Cl. 221—116.)



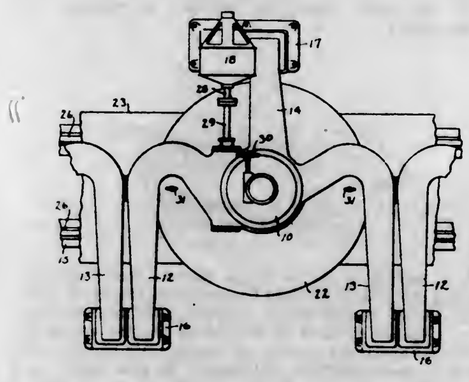
1. A dispensing device of the kind described comprising, in combination, a container, a cap member secured to said container and forming a closure therefor, said cap member having a dispensing opening, and a manually operable dispensing element rockably mounted upon said cap member to repeatedly dispense measured quantities of material from said container through said opening in the cap, said cap member having a bent plate provided with wings which form two of the side walls of the dispensing recess, the middle portion of said bent plate forming a bearing for the pivot of the manually movable parts.

1,901,488. ELECTRIC CIRCUIT PROTECTIVE SYSTEM. LINDSAY M. APPLEGATE, Seattle, Wash. Filed Apr. 5, 1930. Serial No. 441,962. 5 Claims. (Cl. 175—294.)



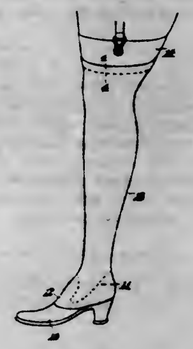
1. An electric system comprising a polyphase circuit, means for obtaining a unidirectional current proportional to each of the phase currents of said polyphase circuit, and relays each having a single magnetic circuit and a plurality of coils operatively arranged on said single magnetic circuit, the system being arranged so that the operation of said relays will be a function of the inequalities of said phase currents.

1,901,489. MACHINE TOOL. WALTER D. ARCHEA, Cincinnati, Ohio, assignor to The Cincinnati Milling Machine Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Dec. 6, 1929. Serial No. 412,243. 20 Claims. (Cl. 90—15.)



1. In a milling machine the combination of a bed, a plurality of slides carried by the bed movable toward and from one another, rotating cutter tools carried by the slides, a work table carried by the bed intermediate the slides and movable transversely of the slides, a common means for effecting rotation of the tools and movement of the slides and work table in timed sequential cyclic order to effect a milling operation, and means automatically effective at the completion of said operation to return the movable parts to a starting position.

1,901,490. MILLING MACHINE. WALTER D. ARCHEA, Cincinnati, Ohio, assignor to The Cincinnati Milling Machine Company, Cincinnati, Ohio, a Corporation of Ohio. Filed May 2, 1930. Serial No. 449,181. 4 Claims. (Cl. 90—11.)

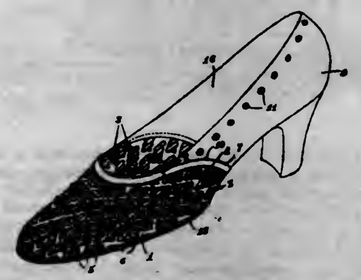


1. A milling machine having a column, a reciprocating table supported thereby, a cutter arbor journaled in the column, an overarm carried by the column and extending parallel to said arbor, a pendent adjustably mounted on the overarm for journaling the outboard end of said arbor, a work holder mounted on the table, means to exert a clamping pressure on work mounted in the holder comprising a housing attached to the pendant, a cylinder formed therein having a piston, roller means attached to the end of the piston for contacting the work, a source of fluid pressure and valve means for controlling the admission of pressure to opposite ends of the cylinder to cause movement of the roller to or from the work.

1,901,491. GLASS MACHINERY. THEODORE S. BERSON, Hamilton, Ohio, assignor, by mesne assignments, to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed July 25, 1929. Serial No. 380,925. 7 Claims. (Cl. 51—110.)

1. In a glass grinding machine having a glass supporting table, a runner rotatably supported thereabove, and supporting means for said runner comprising a unitary three-point supporting member comprising a hub, and three arms extending laterally therefrom, a plurality of pedestals upon which the ends of said arms respectively rest, said laterally extending arms being arranged as to their ends to give a stable three point support for said runner and so shaped throughout their extent that a portion of each arm lies on a given side of an axis of gravity of the runner to permit lateral removal of said runner while supported by a vertically positioned removing means.

1,901,492. COMBINED RUBBER AND LEGGING. CHARLES F. BERRY, Boston, Mass. Filed Nov. 11, 1930. Serial No. 494,903. 1 Claim. (Cl. 36—7.3.)

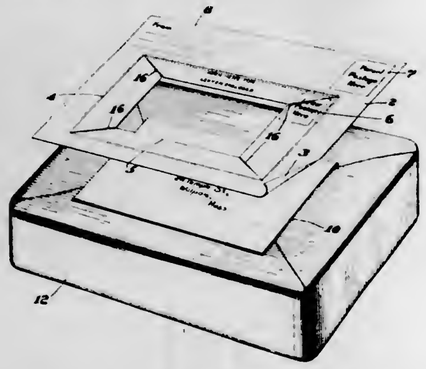


As a new article of manufacture, a wading boot consisting of a rubber shoe having a high upper adapted to enclose the entire foot of a wearer and having hermetically secured to said upper well above the sole of the shoe a tubular leg covering composed of seamless stretchable material adapted to fit closely over the leg of the wearer and provided with an inturned upper end in which an elastic garter is loosely confined.

1,901,493. SWITCH CONTACT. AUGUSTUS JESSE BOWIE, San Francisco, Calif. Filed Nov. 20, 1929. Serial No. 408,486. 16 Claims. (Cl. 200—48.)

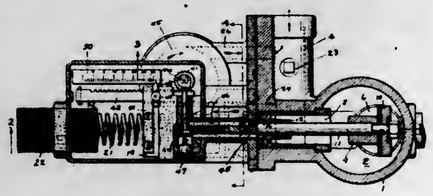
1. In an electric switch a plurality of independent switch poles, simultaneously operated by a common mechanism, each pole consisting of a pair of relatively movable contactors adapted to move into full engagement with each other, means for continued motion of said contactors while maintaining said full engagement, and a spring adapted to increase the pressure between said contactors during said continued motion.

1,901,494. JEWELED SHOE AND METHOD OF MAKING SAME. CLAUDE H. DANIELS, Newton Center, Mass. Filed June 24, 1931. Serial No. 546,510. 4 Claims. (Cl. 41—10.)



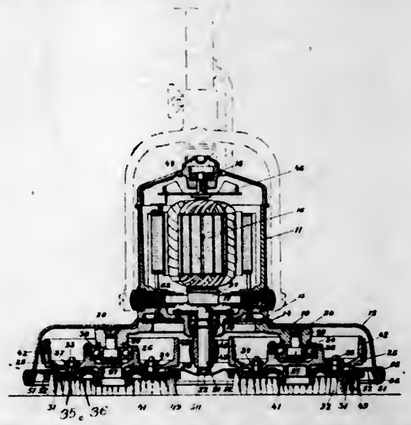
1. A boot or shoe of the kind described, comprising an upper section having apertures therethrough at predetermined intervals, brilliant retaining members located in

predetermined apertures and fixed to said upper section, brilliants fixed in said retaining members, and strips of material separate from said upper section woven through other predetermined perforations, certain of said strips constituting backing means for said brilliant retaining members.



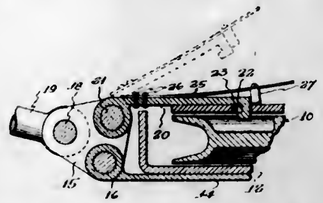
3. The improved method of manufacturing boots or shoes, which includes the steps of perforating a plurality of apertures through an upper section, positioning brilliant retaining members in predetermined apertures, securing said members to said upper section, then clamping brilliants in said retaining members, and then weaving strips of material separate from said upper section through other predetermined apertures in such a manner that certain of said strips will constitute backing means for said brilliant retaining members.

1,901,495. LABEL. LAWRENCE DAVIS, Walpole, Mass. Filed Nov. 17, 1931. Serial No. 575,538. 3 Claims. (Cl. 40—10.)



1. An article of character described comprising a package, a label adhesively secured to said package, a letter held on said package by said label, the label surrounding the letter and being adhesively united to both the margins of the letter and the adjacent surface of the package but having a window through which the address on the letter is exposed, whereby said address also serves as the address for the package.

1,901,496. SPRINKLER FLOW TIMING APPARATUS. DONALD ELDER, Berkeley, Calif. Filed Apr. 1, 1930. Serial No. 440,748. 15 Claims. (Cl. 137—144.)

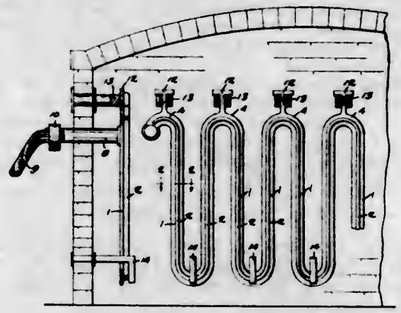


1. A water flow timing apparatus comprising a housing provided with a main water chamber having an inlet, an outlet passage and a second outlet, associated valves, one for closing each outlet, automatically operated means for opening one valve and closing the other, water operated means for reversing the position of the valves, a controlling valve for said water operated means, timing gears operated by flow of water arranged to open said controlling valve at a predetermined time interval, and rack and pinion means for changing the setting of said timing gears.

1,901,497. FLOOR POLISHER. AXEL OLOF ENGBERG and TORD ERIK DANIEL BILDE, Stockholm, Sweden, assignors to Inventia Patent-Verwertungs-Gesellschaft, Schaffhausen, Switzerland, a Corporation of Switzerland. Filed June 19, 1928, Serial No. 286,663, and in Germany Nov. 27, 1926. 7 Claims. (Cl. 15—49.)

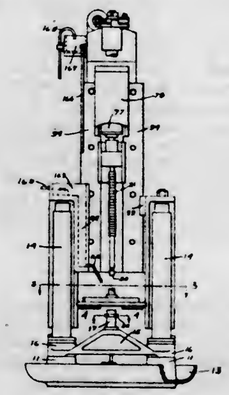
1. A machine for polishing floors comprising a motor casing, an electric motor mounted in said casing comprising a vertical shaft, a frame attached to said casing, a plurality of carrier discs rotatably mounted on said frame to rotate about axes parallel to said shaft, said carrier discs having pulley surfaces, a driving pulley mounted on the motor shaft, a belt passing in contact with the driving pulley and said pulley surfaces, said belt passing around a plurality of said discs and between another of said discs and said shaft.

1,901,498. SNATCH BLOCK. ALFRED B. ESSELTINE, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 21, 1930. Serial No. 445,949. 12 Claims. (Cl. 254—193.)



7. A snatch block having a sheave, means for permitting said snatch block to be selectively opened or closed with respect to said sheave comprising an apertured portion, a closure member having means thereon engageable with said apertured portion for holding said closure member in a closed position with respect to said sheave, and means for positively locking said closure member in a closed position with respect to said sheave comprising a yieldable member having a stop thereon adapted to engage said closure member and aperture in said apertured portion.

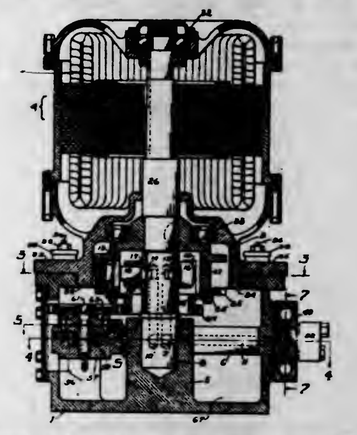
1,901,499. ELECTRIC FURNACE. FRANK A. FAHRENWALD, Chicago, Ill. Original application filed May 19, 1924, Serial No. 714,289. Divided and this application filed Mar. 31, 1930. Serial No. 440,267. 4 Claims. (Cl. 13—25.)



1. In an electric furnace, the combination with the furnace wall of an electric resistance heating element

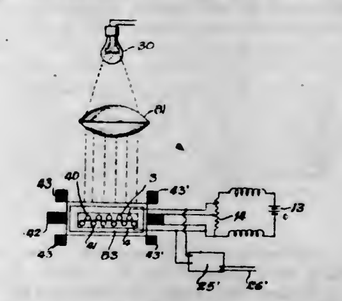
of serpentine shape cast of high temperature resistant alloy having a plurality of spaced limbs which are longitudinally ribbed on one face only and are connected at

alternate ends by curved loops, integral fingers projecting from the top of certain of said loops, and metallic elements carried by the furnace wall having recesses which receive said fingers and thereby support said heating element.



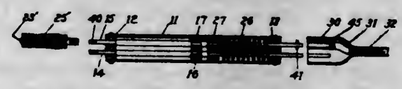
1,901,500. BROACHING MACHINE. WALTER FERRIS, Milwaukee, Wis., assignor to The Oilgear Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 18, 1929. Serial No. 414,905. 21 Claims. (Cl. 90—33.)

1. A broaching machine, comprising a stationary tool head, means for securing a broaching tool to said tool head upon one side thereof, a work support arranged upon the same side of said tool head for sustaining the pressure of the work, and power means arranged upon the same side of said tool head and alongside said broaching tool for moving said work support toward and from said tool head.



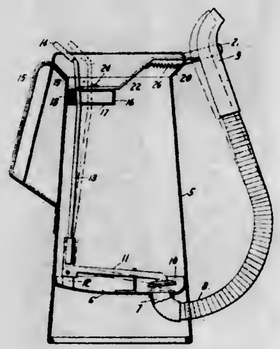
1,901,501. PUMP. WALTER FERRIS, Milwaukee, Wis., assignor to The Oilgear Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed July 9, 1931. Serial No. 549,664. 10 Claims. (Cl. 103—161.)

1. A variable displacement pump, comprising a casing, a pintle arranged within said casing and fixed in a stationary position therein, a cylinder barrel journaled upon said pintle and having pistons fitted in its cylinders, two parallel guides carried by said casing and extending transversely of said pintle upon opposite sides thereof, a sliding head closely fitted between said guides to slide transversely of said pintle and restrained by said guides from movement transversely of said guides, a driving shaft carried by said head and movable therewith, a driver connected to said shaft for rotating said cylinder barrel and reciprocating said pistons, and means for moving said



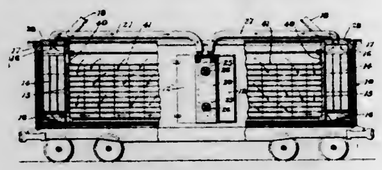
head along said guides to move the axis of said driver toward and from the axis of said pintle to thereby change pump displacement.

1,901,502. LIGHT MODULATOR AND METHOD OF CONSTRUCTING THE SAME. REGINALD A. FESSENDEN, Chestnut Hill, Mass. Original application filed Aug. 21, 1922, Serial No. 583,271. Divided and this application filed Jan. 8, 1927. Serial No. 159,940. 12 Claims. (Cl. 88—61.)



3. In the art of transmitting radiant images or vision, a method of constructing a light modulator which comprises arranging abutting one another elements having a removable coating of one half the desired thickness of the ultimately desired space between elements of the light modulator, and then removing the coating after the elements have been fixed in position.

1,901,503. ROTARY BRUSH. REGINALD A. FESSENDEN, Chestnut Hill, Mass. Filed Sept. 27, 1928. Serial No. 308,795. 1 Claim. (Cl. 15—23.)



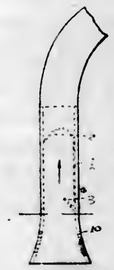
In a motor driven brush, a handle, a shaft journaled in said handle, a plate closing the brush end of said handle and providing a bearing for said shaft, said shaft provided with a shoulder on the inner side of said plate, and means including a spring for maintaining said shoulder firmly against the inner surface of said plate.

1,901,504. LIQUID DISPENSING CAN. PAUL D. FULTON, Dayton, Ohio, assignor to The Huffman Manufacturing Company, Dayton, Ohio, a Corporation of Ohio. Filed Jan. 9, 1930. Serial No. 419,605. 19 Claims. (Cl. 221—16.)

1. In a liquid dispensing can comprising a receptacle, a tiltable spout leading from the lower portion of said receptacle, and a valve to control the discharge of liquid through said spout, means arranged to be engaged by said spout when the latter is moved to an upright position to cause said valve to be closed and to retain said spout in said upright position.

1,901,505. APPARATUS FOR PRECOOLING REFRIGERATOR CARS. FRED E. GREENE, Escalon, Calif., assignor to A. B. Humphrey Company, Mayhews, Calif., a Corporation of California. Filed July 31, 1929. Serial No. 382,311. 3 Claims. (Cl. 62—24.)

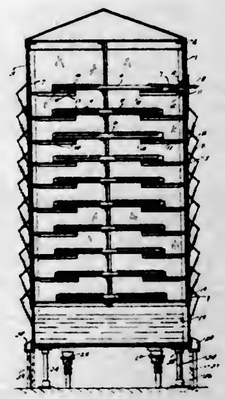
1. In combination with a refrigerator car having a side opening, ice bunkers at opposite ends of the car, said car being formed with lower air passageways between the interior of the car and the bottom of the ice bunkers and upper air passageways between the interior of the car and the top of the bunkers, means for temporarily closing the upper air passageways, an air circulating apparatus communicating with the interior of the car through the side opening and with the upper ends of the bunkers from the exterior thereof, said air circulating apparatus being capable of creating a continuous circulation of air from the interior of the car upwardly through the ice bunkers and thence into the car through the side opening.



1,901,506. WETTING AGENT. FRITZ GÜNTHER, Ludwigshafen-on-the-Rhine, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Aug. 10, 1925, Serial No. 49,447, and in Germany July 11, 1924. Renewed July 29, 1932. 5 Claims. (Cl. 252—1.)

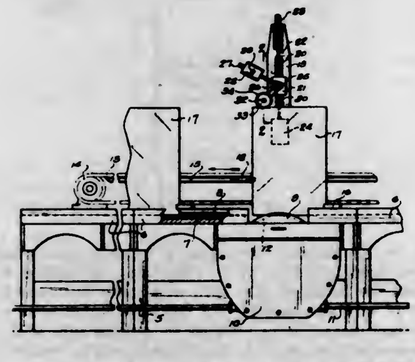
1. As a composition of matter suitable for use as a wetting agent a mixture comprising an organic liquid practically insoluble in water and a sulfonated aromatic hydrocarbon containing more than one butyl radical and an aqueous liquid.

1,901,507. MIXTURES OF SULPHONATED ALKYLATED NONDYEING AROMATIC CARBOCYCLIC COMPOUNDS AND THEIR SALTS. FRITZ GUENTHER, Ludwigshafen-on-the-Rhine, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed Aug. 4, 1931, Serial No. 555,070, and in Germany July 11, 1924. 10 Claims. (Cl. 260—159.)



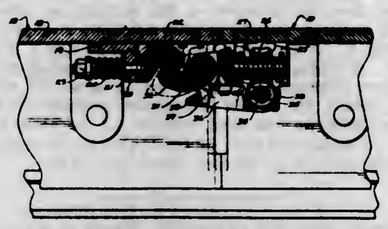
1. Sulphonic acid compositions selected from the group consisting of mixtures of sulphonic acids of a mixture of non-dyeing aromatic carbocyclic compounds, containing from 2.3 to about 4 butyl radicles per each molecular proportion of said carbocyclic compound, and salts of said sulphonic acid mixtures.

1,901,508. TELEPHONE TICKET DISTRIBUTION SYSTEM. CHARLES J. GUTBERLET, Philadelphia, Pa. Filed May 31, 1930. Serial No. 458,298. 3 Claims. (Cl. 302—2.)



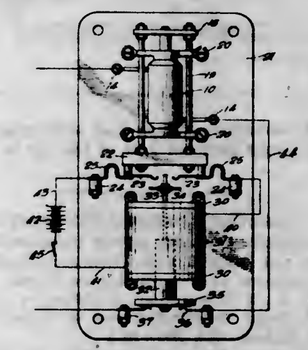
1. In a telephone ticket distribution system, wherein tickets containing memoranda are transmitted through pneumatic tubes rectangular in cross section, a ticket having a main body, a sail, and an air deflector, the sail and air deflector being hinged at the top and bottom of the body of the ticket, the sail being of sufficient width to extend across the width of the inside of the tube, and allow a portion of its end to lie against the inside of the tube opposite to that on which the body of the ticket rests and the deflector being deflectable upward under the impulse of the air current in the tube.

1,901,509. COMBINATION TRAY HEATING AND REFRIGERATING CABINET. CHARLES G. HALL, Boise, Idaho, assignor to Automatic Food Machinery Corporation, Boise, Idaho, a Corporation of Idaho. Filed Mar. 17, 1930. Serial No. 436,543. 2 Claims. (Cl. 312—176.)



2. A cabinet of the class described comprising a frame made of a plurality of ribs, side and end walls disposed about the frame, beams disposed transversely within the cabinet and in spaced relation with each other, a plurality of inwardly swingable doors secured to each of the side walls, an arm extending outwardly from each of the doors, a retracting spring secured to each of the arms and to a side wall, and a plurality of tray supporting bars secured to the beams, said bars being spaced from the doors sufficiently to allow clearance for them and being adjacent to and parallel with the doors when opened.

1,901,510. EDGING APPARATUS. HENRY J. HAMANN, Toledo, Ohio, assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed May 13, 1932. Serial No. 611,090. 8 Claims. (Cl. 51—74.)



1. In a machine for grinding an edge of a plate of glass, the combination of grinding means upon which the glass is partially supported on edge while being ground, means cooperating with the grinding means for guidingly supporting said plate of glass during grinding thereof, a roller engaging the upper edge of the glass plate for maintaining it in a vertical position and in engagement with the grinding means, and means for preventing free rotation of said roller.

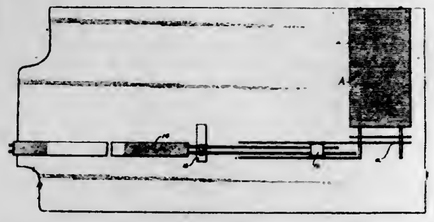
1,901,511. COUPLER FOR GLASS SUPPORTING TABLES. LE ROY L. HANDY, Toledo, Ohio, assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed June 28, 1929. Serial No. 374,550. 12 Claims. (Cl. 51—240.)

1. In the apparatus of the character described, a plurality of tables arranged end to end, a stationary hook carried at one end of each table, a movable hook carried at the adjacent end of the adjoining table and adapted for engagement with said stationary hook to hold the ends of said tables in firm abutting relation, means for moving the movable hook forwardly, a stationary tripping member engaging a projecting portion on the hook for tripping said hook during its forward travel to disengage it from said stationary hook, and spring means also engaging the projecting portion on the movable hook and normally acting to return the movable hook into engagement with the stationary hook upon the release of said movable hook from said tripping member.

1,901,512. RECLOSING CIRCUIT INTERRUPTER. FORD W. HARRIS, Los Angeles, Calif., assignor to Pacco, Inc., Los Angeles, Calif., a Corporation of California. Filed July 10, 1931. Serial No. 549,829. 11 Claims. (Cl. 175—294.)

1. In an electrically energized device, the combination of: an electrically energized element; a switch for controlling the flow of electrical energy through said element; a heat storage device having a member which moves from a primary position to a secondary position whenever said heat storage device has received a definite amount of heat; an electrically driven reset; means by which said reset operates said switch; means by which said movement of the member in said heat storage device from said primary position to said secondary position actuates said reset; and means by which said reset when actuated by said means returns said member to its primary position.

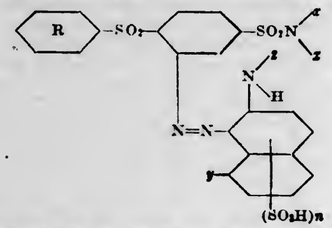
1,901,513. ROTARY JAR. FORD W. HARRIS, Los Angeles, Calif., assignor to Pacco, Inc., Los Angeles, Calif., a Corporation of California. Filed Jan. 18, 1932. Serial No. 587,280. 7 Claims. (Cl. 255—27.)



1. A rotary jar comprising: a driven member adapted to be attached to a bit; a driving member adapted to be attached to the drilling string; positive driving means by which said driving member drives said driven member; means for normally holding said driving member in positive engagement with said driven member, said driving member being disengaged from said driven member whenever there is an upward pull on the drilling string; and means by which said driving member intermittently strikes an upward blow on said driven member when the drilling string is rotated with the driving means in said disengaged position.

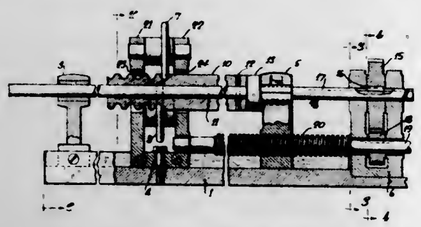
1,901,514. METHOD OF PRODUCING WIRE RODS. WILLIAM HERMAN and WILLIAM H. SOMMER, Peoria, Ill. Filed Sept. 11, 1930. Serial No. 481,144. 16 Claims. (Cl. 80—63.)

1. The method of continuously producing wire rods from a multiplicity of commercial length billets, which consists in placing the billets end to end in juxtaposed relation and while moving the billets in such relation, butt welding



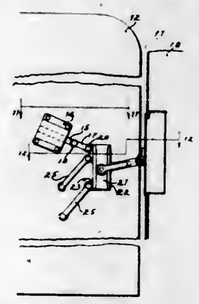
their abutting ends to produce a continuous length of bar and thereafter, by a series of operations on the bar and without interrupting the movement of said bar succes-

sively and alternately rolling and stretching said bar, whereby the cross-sectional area of the bar is reduced to rod size.



1,901,515. DIARYLSULPHONE-AZODYESTUFFS. WINFRID HENTRICH, Erlangen, ANTON OSSENBECK, Cologne-Mulheim, and ERNST TIETZE, Cologne-on-the-Rhine, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed May 19, 1931, Serial No. 538,628, and in Germany May 24, 1930. 5 Claims. (Cl. 260—92.)

1. The azodyestuffs of the probable general formula:



wherein x stands for hydrogen or an alkyl group, y stands for hydrogen or a hydroxy group, z stands for hydrogen or an alkyl group, n stands for one of the numbers one and two, and wherein the benzene nucleus R may be substituted by monovalent substituents selected from the group consisting of halogen, an alkyl-, an alkoxy-, the hydroxy- and the carboxylic acid group, being in the form of their alkali metal salts generally dark red powders, soluble in water and dyeing wool from an acid bath generally red shades of good fastness properties.

1,901,516. METHOD AND MACHINE FOR ROLLING FINS ON TUBES. ROBERT K. HOPKINS, St. George, N. Y., assignor to The M. W. Kellogg Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 14, 1929. Serial No. 407,041. 8 Claims. (Cl. 80—13.)

1. In a machine for forming integral radiating fins of substantial height upon a tube or the like, a plurality of rolls positioned about said tube for forming said fins, all of said rolls forming and operating in the same track, means for rotating said tube about its longitudinal axis, means for providing relative motion between said rolls and said tube longitudinally of the latter and simultaneously with said rotary motion, the rolling action of said rolls being imparted thereto by the movement of said tube.

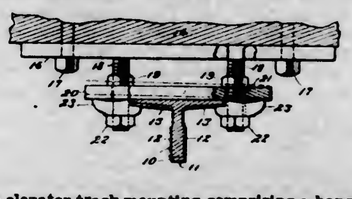
1,901,517. SWING DOOR INCLOSURE INTERLOCK. LUDWIG G. JACOBSON, Jamestown, N. Y., assignor to Dahlstrom Metallic Door Company, Jamestown, N. Y., a Corporation of New York. Filed June 13, 1929. Serial No. 370,553. 22 Claims. (Cl. 187—31.)

1. In an elevator structure, a locking mechanism for swing door inclosure units comprising extendible means within the frame of said unit, withdrawable means in the door of said unit and further means mounted upon a cab, said last means being adapted to actuate said withdrawable means through said extendable means to control opening said door.

1,901,518. CLEANING DEVICE. LEONARD W. JOHNSON, Batavia, Ill. Filed Dec. 9, 1929. Serial No. 412,692. 5 Claims. (Cl. 15—104.19.)

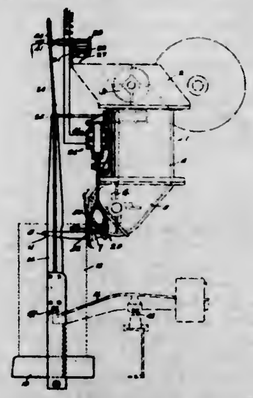
5. A scraping tool for small diameter openings, such as the guide openings for the valve stems of internal combustion engines, comprising a stem and a scraper head carried thereby, the over all diameter of the stem and the head where the latter is connected to the stem being slightly less than the diameter of the opening for which the tool is designed, thereby to give maximum strength and a working fit for the tool, the head comprising a plurality of scraper blades having their ends lying against the stem and their intermediate portions bulged outwardly from the stem, means for fixedly connecting corresponding ends of the blades to the stem, and means for confining the other corresponding ends of the blades to the stem while enabling slidable movements thereof on the stem.

1,901,519. VACUUM CLEANER. HENRY M. KEITH, Harrisburg, Ill. Filed Nov. 5, 1931. Serial No. 573,221. 1 Claim. (Cl. 15—17.)



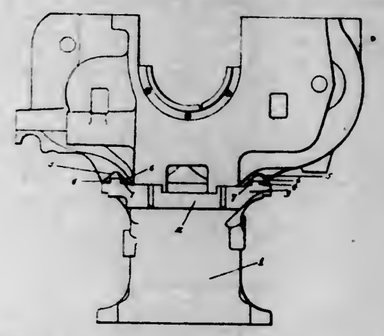
A machine of the class described comprising a carriage having a rotatable work-performing member, a drum rotatably mounted on said carriage and having a driving connection with said rotatable member, a cable wound on said drum and adapted to be unwound for rotating said drum in a direction to drive said member, a spring wound by drum-rotating in said direction for later rotating said drum in cable rewinding direction, a handle for moving said carriage forwardly and rearwardly while holding the rear end of said cable fixedly, and a foot-plate on the

rear end of said cable upon which the operator stands to hold the cable end; whereby said cable and drum will drive said rotatable member and wind said spring each



time the carriage is pushed forwardly, and the wound spring, drum and cable will assist in rearwardly returning said carriage.

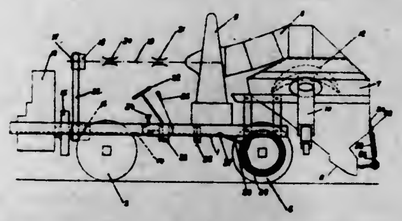
1,901,520. ELEVATOR TRACK MOUNTING. LE ROY H. KINSLING, Brooklyn, N. Y. Filed July 17, 1931. Serial No. 551,888. 3 Claims. (Cl. 187—95.)



1. An elevator track mounting comprising a hanger plate on the shaft wall, horizontally spaced threaded posts projecting inwardly from the plate, a cross bar having apertures fitting said posts, a vertical track member bearing on the inner side of the bar, threaded nuts on said posts outside of and bearing on said cross bar, and threaded nuts on said posts inside of and bearing on said track member and bar to hold them in rigid relation.

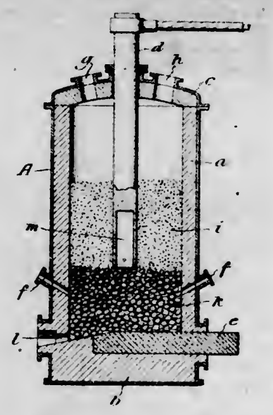
1,901,521. ELECTRICAL VALVE CONTROL FOR PACKING MACHINES. KARL H. KOLHEDE, San Andreas, Calif. Filed July 27, 1931. Serial No. 553,471. 5 Claims. (Cl. 249—60.)

1. An electrically controlled valve comprising a solenoid adapted for mounting on a packer including a discharge, said solenoid having a plunger, a valve mounted for closing the discharge and formed with an abutment plate thereon, a member connected to the plunger and having rollers bearing against the abutment plate, and means for energising the solenoid for moving the valve into closed position.



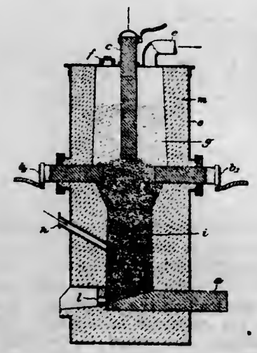
1,901,522. MACHINE TOOL CONSTRUCTION. CHARLES MEISE and THEODORE A. WETTIG, Cincinnati, Ohio, assignors to The Acme Machine Tool Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Oct. 11, 1929. Serial No. 399,045. 6 Claims. (Cl. 82—82.)

1. In the construction of a V slideway for a machine tool the steps which include machining a V piece formed with upper surface portions of hardening metal and inner body portions of non-hardening soft metal, subjecting the piece to a treatment to harden the upper surface portions, and then machining the soft metal body for the reception of attaching means.



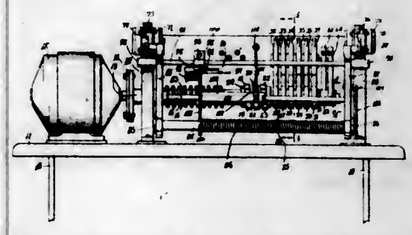
6. A bearing surface element for a machine tool comprising, in unitary relation, a bearing surface portion of hardening steel, and a portion for attaching said element to a machine tool bed, composed of non-hardening soft metal adapted to be machined after hardening of the bearing surface portion.

1,901,523. AUTOMATICALLY LOADING MACHINE FOR DISTRIBUTING SAND, GRAVEL, AND THE LIKE. EUGENE JUSTIN NESTOR MILLET, Paris, France. Filed June 6, 1930, Serial No. 459,490, and in France June 18, 1929. 6 Claims. (Cl. 94—44.)



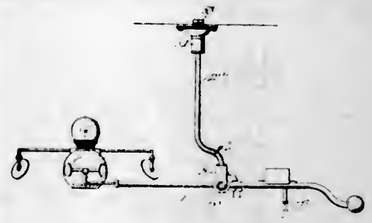
1. A machine for distributing sand, gravel or the like material comprising a motor vehicle frame, a reservoir carried thereby adapted to receive and to contain the material between the front and rear axles of the vehicle frame, a pipe for loading the material, a rotatable turret forming with the reservoir an airtight receptacle provided with bellows into which the loading pipe opens, a horizontal beam pivotally secured to the frame, a carriage slidably carried by the said beam and carrying the free end of the pipe, a fan for creating a vacuum in the reservoir and means for distributing the material from the reservoir on to the road.

1,901,524. CHLORINATING APPARATUS. WILHELM MOSCHEL, Bitterfeld, Germany, assignor, by mesne assignments, to Magnesium Development Corporation, a Corporation of Delaware. Original application filed Sept. 13, 1929, Serial No. 392,462, and in Germany Oct. 4, 1928. Divided and this application filed Dec. 2, 1930. Serial No. 499,606. 6 Claims. (Cl. 13—20.)



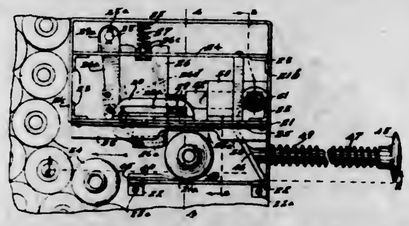
1. A chlorinating apparatus comprising a closed shaft provided with a fire-proof lining, a tapping hole in the proximity of the bottom of said shaft, at least one gas inlet in the lower part of said shaft but above said tapping hole, a layer of coarse pieces of mechanically resistant and chemically inert carbon in the bottom of said shaft extending upwards somewhat beyond said gas inlet, a feeding aperture and a gas outlet in the ceiling of said shaft, a free reaction space in the upper part of said shaft, an electrode in the bottom of said shaft and in contact with said carbon layer and at least one rod-shaped electrode vertically inserted in the ceiling of said shaft and extending through said free reaction space so as to contact with said carbon layer.

1,901,525. APPARATUS FOR PERFORMING REACTIONS BETWEEN MOLTEN SUBSTANCES AND GASES. WILHELM MOSCHEL, Bitterfeld, Germany, assignor, by mesne assignments, to Magnesium Development Corporation, a Corporation of Delaware. Filed Aug. 19, 1931, Serial No. 558,182, and in Germany Aug. 25, 1930. 5 Claims. (Cl. 13—23.)



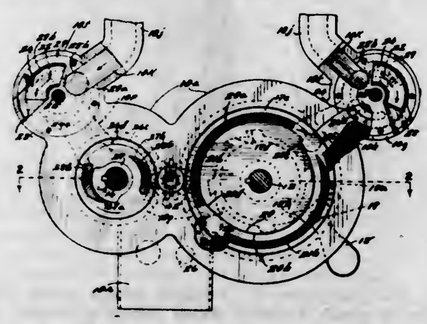
1. Apparatus for carrying out reactions between molten substances and gases comprising a closed shaft, an irrigation layer of electrically conductive material in the lower part of said shaft, an electrode in the vicinity of the bottom of said shaft contacting with said irrigation layer, an electrode extending from the ceiling into the upper part of said shaft into contact with said irrigation layer, and at least one other electrode contacting with the upper part of said irrigation layer.

1,901,526. SYNCHRONOUSLY OPERATED TIMING DEVICE. ARTHUR MUTSCHELLER, New York, N. Y., assignor to Wappler Electric Company, Inc., a Corporation of New York. Filed Aug. 5, 1930. Serial No. 473,221. 23 Claims. (Cl. 161—1.)



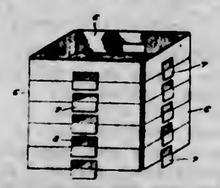
1. In a synchronously operated timing device the combination, with a synchronous motor of a revoluble shaft driven by said motor, a plurality of contact sectors carried by said revoluble shaft and insulated therefrom and from each other, said contact sectors being disposed end to end in the form of a thread, a contact brush for engaging said sectors in succession as said contact sectors are turned by the rotation of said shaft, mechanism for shifting said brush and maintaining it in engagement with said contact sectors in succession as said shaft is turned, a circuit to be timed, said circuit being normally open, and mechanism controllable by the operator for completing said circuit through said contact brush and through a predetermined number of said contact sectors as brought successfully into engagement with said contact brush.

1,901,527. UNIVERSAL JOINT AND SUPPORTING STRUCTURE FOR ILLUMINATING DEVICES. PATRICK A. NIEDLINGER, CLARENCE D. NIEDLINGER, and EDWARD M. MILLER, Chicago, Ill., assignors, by direct and mesne assignments, to Operay Laboratories, Inc., Madison, Wis., a Corporation of Wisconsin. Filed Dec. 2, 1930. Serial No. 499,552. 6 Claims. 240—52.)



5. A support for a lighting unit comprising a rod having a vertically disposed upper end portion journaled for rotation on a vertical axis in a ceiling bracket and a vertically disposed lower end portion laterally offset from said upper portion and connected thereto by an intermediate portion including an off-set curve, a bracket mounted on said lower end of said rod for rotation with respect thereto on a vertical axis, a substantially horisontal arm carried by said bracket and having a lighting unit mounted on one end thereof, whereby said lighting unit may be moved in a substantially horisontal straight-line direction by combined rotation of said rod in said ceiling bracket and said arm bracket on said lower end of said rod.

1,901,528. BOTTLE RECEIVING AND COIN DISPENSING DEVICE. HENRY OLSEN, Minneapolis, Minn. Filed Mar. 7, 1931. Serial No. 520,806. 18 Claims. (Cl. 194—4.)

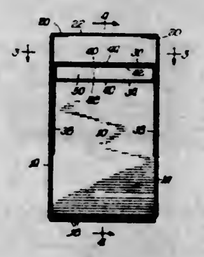


14. A mechanism adapted to be operated by a container such as a bottle having a particular contour, comprising a series of movable members adapted to be engaged by the surface of said container and be moved into a certain definite relation thereby, said members being fixed against movement with said container, and a member movable relatively to said series of members only when they are in said definite relation and engageable therewith to be stopped thereby when said members are not in said definite relation, means for moving said container into engagement with said series of members, said last mentioned member forming an actuating means.

1,901,529. COIN HANDLING MACHINE. HENRY OLSEN, Minneapolis, Minn. Filed Mar. 23, 1931. Serial No. 524,505. 18 Claims. (Cl. 194—84.)

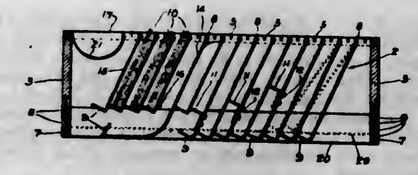
1. A coin operated device having in combination, a casing, a member freely movable in said casing and adapted to actuate a dispensing mechanism, said casing having a wall adapted to retain a coin and provided with inlet and outlet passages for said coin, a second member having a surface spaced from and parallel to said wall to define a runway for said coin, and a third member having a portion movable in said runway to engage the edge of said coin therein and move said first mentioned member thereby, said second member being means thereon for causing said coin to move toward said outlet passage.

1,901,540. SHIPPING CONTAINER. OTIS A. PELLYMOUNTER, San Francisco, Calif. Filed Mar. 16, 1931. Serial No. 523,081. 2 Claims. (Cl. 206—9.)



2. A tray for a shipping container comprising a flat body section having flanges rising from all the edges thereof to form an all-around wall and having small flaps turned downward to prevent telescoping of one tray into a lower one.

1,901,581. ELECTRODEPOSITION OF PLATINUM. ALAN RICHARD POWELL and ARTHUR WILLIAM SCOTT, London, England, assignors to Johnson-Matthey & Company Limited, London, England. Filed Jan. 22, 1932, Serial No. 588,235, and in Great Britain Mar. 12, 1931. 7 Claims. (Cl. 204—1.)

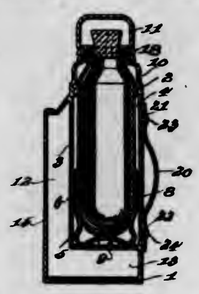


1. A process for the electrodeposition of platinum in the form of a bright plate in which the electrolyte comprises a solution containing an alkali metal platinate, a conducting salt, a stabilizing salt and an alkali metal hydroxide in an amount equivalent to less than 2.5 per cent of free sodium hydroxide.

1,901,582. FOLDING CARTON. HENRY K. POWELL and ADOLF G. BALLENBERG, Chicago, Ill., assignors to Morris Paper Mills, Chicago, Ill., a Corporation of Illinois. Filed Jan. 14, 1931. Serial No. 508,573. 5 Claims. (Cl. 229—17.)

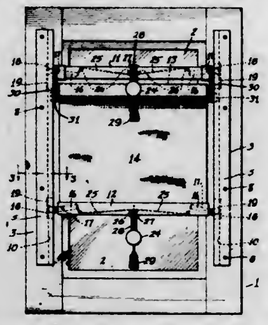
1. A folded carton including side walls, a spacer folded from one of said walls, a partition folded from said spacer, and locking wings folded from said partition, a partition spacer also folded from said partition and a lower partition folded from said partition spacer.

1,901,583. FILING RECEPTACLE. GEORGE H. PERRINE, San Francisco, Calif. Filed Oct. 11, 1930. Serial No. 488,089. 4 Claims. (Cl. 129—43.)



4. A receptacle comprising a frame having sides provided with notches at their top edges, a plurality of partitions having pivots supported in said notches for swingably supporting the partitions and strips overlying the top edges for holding the pivots in the notches.

1,901,584. COMBINATION LUNCH BOX AND BOTTLE. CLYDE S. REDFIELD, Shortsville, N. Y. Filed Jan. 23, 1932. Serial No. 588,473. 4 Claims. (Cl. 206—4.)



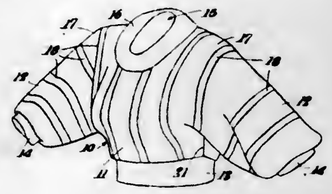
1. In a lunch box the combination of a cell on one side thereof adapted to hold a round bottle, an opening on the end of said cell, the mouth of said bottle extending through said opening and being adapted to receive a cork therein, a screw cap on the outside of the box

for closing the end of said cell, said box having a compartment at one side and at the bottom of the cell adapted to hold solid foods, an opening in the side of the box, a

door adapted to close said opening, said door extending parallel to the axis of the round bottle adapted to be held by the cell.

1,901,535. ADJUSTABLE SHADE ROLLER MOUNTING. ROBERT SAA, Auburn, Calif. Filed Mar. 2, 1932. Serial No. 596,315. 6 Claims. (Cl. 156—27.)

5. In combination, a pair of guides S-shaped in cross section, a tube extending between the guides, guide-gripping members pivotally carried by the tube, spring means for urging the members into gripping positions and manually-controlled means for moving the gripping members into released position.



1,901,536. MANUFACTURE OF TANNING SUBSTANCES. JOSEF SCHÄFER, Basel, Switzerland, assignor to the Firm of J. R. Geigy S. A., Basel, Switzerland. Filed Oct. 9, 1931, Serial No. 567,985, and in Germany Nov. 10, 1930. 5 Claims. (Cl. 260—3.)

1. A process for the manufacture of tanning substances, consisting in heating in acid solution a dihydroxydiarylsulphone with formaldehyde in presence of an aromatic sulphonic acid.

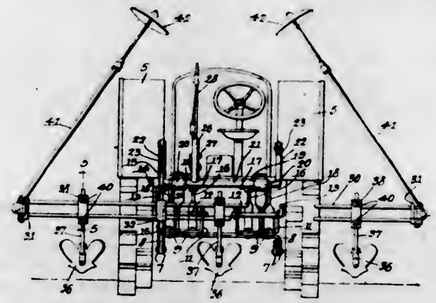
3. A process for the manufacture of tanning substances, consisting in heating in acid solution a dihydroxydiarylsulphone with formaldehyde in presence of a condensation product of an aromatic sulphonic acid with sulphur chloride.

1,901,537. SWEATER. SAMUEL SHEINDELMAN, Lawrence, N. Y. Filed Jan. 3, 1933. Serial No. 649,873. 3 Claims. (Cl. 2—90.)

1. In a knitted garment to be worn by females, a body portion having a longitudinal over-all width measuring from cuff to cuff of the arms of the female when the same are in a horizontal outstretched position, and having a vertical length substantially uniform throughout the width of the garment, the wales of the body portion running in the same horizontal direction, said garment having front and back portions and a defined neck opening, the body portion being of such width as to extend from the shoulders to below the bust of the wearer, the front and

back portions of the garment being joined together at the bottom defining sleeve portions of a width substantially equal to the width of the garment.

1,901,538. BOBBIN AND BOBBIN CLUTCHING SPINDLE. WALLACE I. STIMPSON, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Feb. 23, 1932. Serial No. 594,643. 7 Claims. (Cl. 242—46.5.)



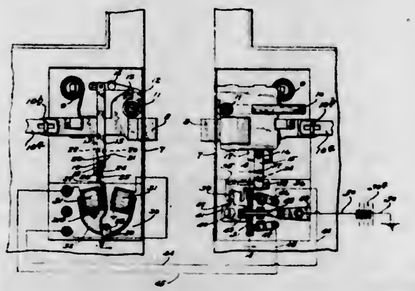
1. The combination of a rotatable spindle having a plurality of clutch segments which incline outwardly and upwardly away from the axis of the spindle, with a bobbin having a metal bushing in a bore in the butt thereof, serving to house the clutch segments, said bushing being provided with an inwardly projecting locking ledge, of less diameter than the remainder of the bushing, the ledge engaging the inclined clutch segments below the tops thereof and locking the bobbin against rising on the spindle.

6. A bobbin for use with rotatable spindles having locking members, said bobbin having a cylindrical bore in the butt thereof, and a metal bushing secured in the said bore, the said bushing being substantially cylindrical and provided, intermediate its ends, with an inwardly projecting annular flange the upper edge of which flange constitutes a locking ledge for engaging the locking members of the spindle to hold the bobbin down on the spindle.

1,901,539. AGRICULTURAL MACHINE. JOHN W. TAPP, Glendale, Ariz. Filed Sept. 12, 1931. Serial No. 562,567. 1 Claim. (Cl. 97—47.)

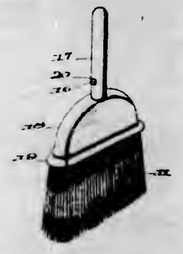
The combination with a tractor, of a shovel support comprising a frame embodying a pair of horizontal spaced bars, depending brackets and upstanding brackets, secured to the tractor frame, pivoted bars connected with the depending brackets, rods connected to the upstanding brackets, vertical bars to which the pivoted bars and rods are connected, clamps having elongated openings

to accommodate the vertical bars and embrace the horizontal bars, securing the horizontal bars to the tractor, means for securing shovels to the shovel supporting frame,



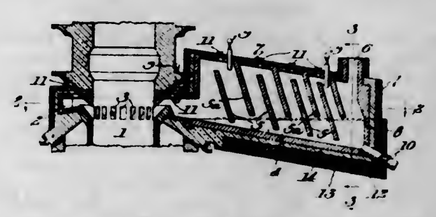
and means connected with the verical bars for moving the frame vertically to adjust the depth of operation of the shovels.

1,901,540. BUMPER. GEORGE W. VEALS, Cleveland Heights, Ohio, assignor to Eaton Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 31, 1931. Serial No. 572,419. 5 Claims. (Cl. 293—55.)



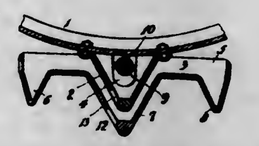
1. In a bumper end construction, a front bar having an eye at its end, a slot in the inner side of said eye, a rear bar projecting through said slot, resilient blocks engaging the interior of said eye and the end of said rear bar, a bolt and nut, washers on said bolt, said bolt and nut cooperating to clamp said blocks in position.

1,901,541. DOORLOCK ACTUATING MECHANISM. CARL J. ULRICH, Minneapolis, Minn., assignor, by direct and mesne assignments, to Kingston Products Corporation, Kokomo, Ind., a Corporation of Indiana. Filed Aug. 1, 1929. Serial No. 382,640. 12 Claims. (Cl. 70—50.)



1. A plurality of door locks having outside and inside operating handles, lock dogs operative when set to hold said outside handles against lock releasing movements, key-controlled means operative manually from the outer side of one of said locks to mechanically retract the lock dog of that lock, and electrically actuated means controlled by said key-actuated lock to automatically retract the lock dogs of the other of said locks substantially simultaneously with the lock dog with the key-actuated lock.

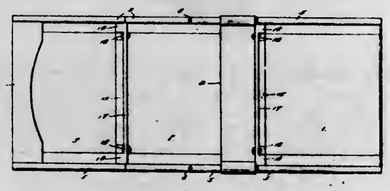
1,901,542. BRUSH. WILLIAM B. WANSOR, Locust Valley, N. Y. Filed July 18, 1931. Serial No. 551,753. 4 Claims. (Cl. 15—171.)



1. The combination of a handle, a thimble at the end of the handle, a brush head, a clamp consisting of flared jaws conforming to and engaging against the opposite sides of the brush head, and a resilient bridge connecting said jaws and yieldable prongs connected to said bridge and housed within the handle to normally retain the clamp in position in the handle, said clamp having means to engage the brush head when in position in the handle to rigidly hold said head against movement relative to the handle.

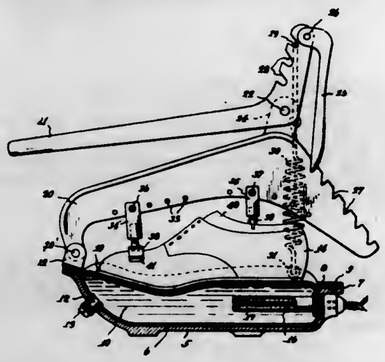
1,901,543. METALLURGICAL CONDENSER. GEORGE F. WEATON, Beaver, Pa., assignor to St. Joseph Lead Company, New York, N. Y., a Corporation of New York. Filed Feb. 26, 1932. Serial No. 595,365. 5 Claims. (Cl. 266—17.)

1. A metallurgical condenser comprising a chamber, a plurality of inclined baffles spaced from the top of said chamber and extending below the normal level of liquid metal in said chamber, and a plurality of inclined baffles alternating with said first-named baffles and extending from the top of said chamber to a level above the normal level of liquid metal in said chamber.



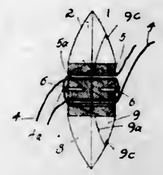
1,901,544. TRACTION WHEEL. WILLIAM MURRAY WELSFORD, Meringur, Victoria, Australia. Filed Nov. 26, 1930, Serial No. 498,474, and in Australia Dec. 9, 1929. 1 Claim. (Cl. 305—13.)

A two-part traction lug for wheels comprising a hollow, substantially V-shape plate, said V-shape plate having aligned, elongated slots in its opposite side walls, a hol-



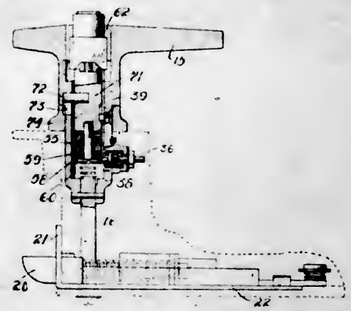
low gripping element formed with a substantially V-shape central, depending, hollow ground-engaging extension forming a pocket to receive the hollow V-shape plate, said pocket being of larger volume than the hollow V-shape plate to permit movement of the gripping element, the V-shape gripping element having hollow, depending end extensions of less depth than the central V-shape extension, a bolt connecting the side walls of the hollow gripping element and extending through the elongated slots, a roller mounted on the bolt whereby to permit the hollow gripping element to have a sliding and a pivotal movement on the V-shape plate, the side walls of the elongated slots engaging the roller in the movement of the gripping element.

1,901,545. BOAT. JOHN M. WOOD, Carrollton, Ky. Filed Sept. 9, 1931. Serial No. 561,914. 1 Claim. (Cl. 9—2.)



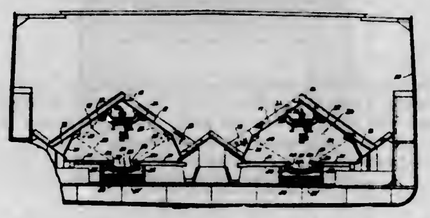
A boat comprising a plurality of sections, and means for detachably connecting the sections together in assembled relation, said means including pairs of coacting bars secured to adjacent ends of the sections, said bars comprising oppositely extending interlocking flanges, said bars further including parallel, abutting flanges, and bolts extending through the abutting flanges for positively securing the bars together.

1,901,546. SHOE BOTTOM ATTACHING APPARATUS. GEORGE HEINERICH BARGE, Brooklyn, N. Y., assignor to Barge Electric Shoe Cement Press, Inc., a Corporation of New York. Filed Nov. 20, 1931. Serial No. 576,387. 15 Claims. (Cl. 12—33.)



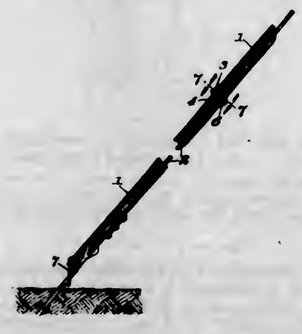
1. A shoe bottom attaching apparatus including, in combination, a base member, a flexible cushion carried by said base member, spring means for exerting pressure on a shoe positioned on the cushion, means including a hand operable lever to tension the spring pressure means, and means acted upon by said pressure means for distributing the pressure over the length of the shoe, the pressure on the entire shoe being exerted solely by the tensioned spring pressure means.

1,901,547. WHIRL-WHISTLE. JAMES HENRY BRADY, Louisville, Ky. Filed Jan. 16, 1932. Serial No. 587,033. 1 Claim. (Cl. 46—14.)



In a multi-toned whirl-whistle: a main circular compartment made up of two concaved discs whose concaved faces have been fastened together in an air-tight seam at their rims, forming a hollow, globular shell; two pairs of adjacent whistle-apertures in one of said discs made diametrically opposite each other near the rim of the disc and adapted to produce a whistling sound when the shell is rotated rapidly on its axis; a cubical block securely fastened in the central portion of said shell and bearing tightly against the inner sides thereof, the angles of said block being adapted to act as a fan to force the interior air from the central regions to the periphery zone of the hollow shell when the shell is rotated rapidly on its axis, as in normal operation; a secondary compartment within the main compartment, having one concave disc whose edges are fastened in an air-tight seam to the inner surface of the concaved disc opposite said whistle-apertures of the main compartment shell, the central part of the secondary compartment disc being cut and adapted to fit tightly about the sides of the central cubical block of the main compartment; two pairs of adjacent whistle-openings diametrically opposite each other made through the contiguous wall of the main compartment and leading directly into the secondary compartment near its periphery and adapted to produce a whistling sound of a higher pitch than the whistle-apertures of the larger main compartment when the main globular shell is rapidly rotated on its axis; and means adapted for spinning said main shell by torsion force with the twisting and untwisting of attached string-loops.

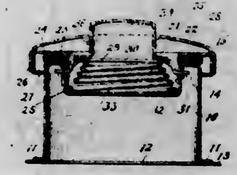
1,901,548. AUTOMOBILE DOORLOCKING SYSTEM. FAY BEAL, Kokomo, Ind., assignor to Kingston Products Corporation, Kokomo, Ind., a Corporation of Indiana. Filed Oct. 21, 1929. Serial No. 401,053. 9 Claims. (Cl. 70—50.)



1. Door locking means for simultaneously locking and unlocking several doors, comprising in combination with manual door operating mechanisms, means in each door adapted to be interposed in said mechanisms to prevent the operation thereof, a source of electrical energy, solenoids cooperating with said means to shift the same into locking or unlocking position, detent means associated with said first mentioned means, a solenoid connected in series with said shifting solenoids for releasing said detent means, a master lock, and means associated therewith adapted to momentarily complete the circuit from said source of electrical energy to all of said solenoids selectively when the master lock is correspondingly actuated.

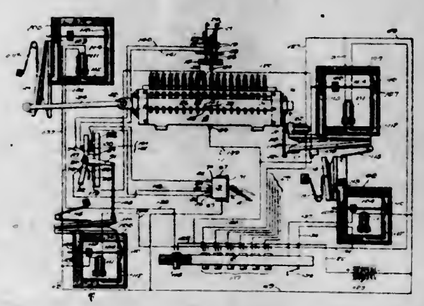
1,901,549. SELF-UNLOADING SHIP. CHARLES H. BRADLEY, University Heights, Ohio, assignor to The American Ship Building Company, Cleveland, Ohio, a Corporation of New Jersey. Filed Mar. 27, 1931. Serial No. 525,788. 14 Claims. (Cl. 214—15.)

1. In a self-unloading vessel, the combination of a cargo hold having a hopper bottom with a plurality of discharge openings and a longitudinally extending ridge, a tunnel beneath said ridge, a conveyor extending longitudinally in said tunnel, means extending near said openings for supporting material discharged therethrough in substantially a condition of repose adjacent said conveyor, a scraping device having an angularly disposed deflecting portion, and means for moving said scraping device along said tunnel for deflecting the material laterally of said supporting means onto said conveyor.



1,901,550. GUY SHIELD. FRED N. BIERCE, Cincinnati, Ohio. Filed Feb. 12, 1930. Serial No. 427,793. 1 Claim. (Cl. 189—31.5.)

A shield for guy rods and cables, comprising, an elongated channel-shaped member adapted to overlie a portion of the guy, a guy engaging clip fixed to and extending from one longitudinal end of the channel member constituting a plate having a notch at one edge inwardly providing a throat to receive the guy therethrough and clinch thereto when the clip is disposed at an acute angle to the guy.

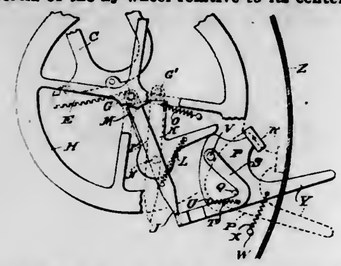


1,901,551. CLOSURE. ANTHONY H. CIPULLO, Cleveland, Ohio, assignor to Eaton Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 18, 1929. Serial No. 379,222. 5 Claims. (Cl. 220—40.)

1. A closure for a tubular member comprising a hollow closure body, a locking member in said hollow closure body and rotatable therewith, said locking member having portions adapted to engage in locking recesses provided in said tubular member for retaining the closure thereon, means in said hollow closure body for yieldingly pressing

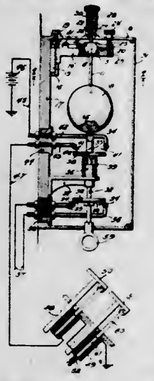
said portions into said recesses, and means accessible from the exterior of the closure body for moving said portions out of said locking recesses against the action of said yielding means.

1,901,552. COMBINATION BOX FOR ELECTRO-PNEUMATIC PIPE ORGANS. CHRISTOPHER CHARLES DARGIS, Atlantic City, N. J. Filed June 1, 1931. Serial No. 541,483. 7 Claims. (Cl. 84—345.)



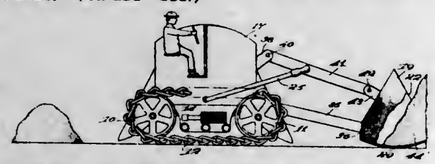
7. Stop-selector-actuating mechanism for organs comprising stop actuators manually movable to select a desired stop combination, electrical operating means for selectively moving said actuators to "on" and "off" positions, circuits for said operating means, a plurality of banks of switches, each bank containing a switch for each operating means, said switch being normally positioned to actuate the operating means and place the actuator in "off" position, means for moving said switches to the "on" position comprising a member for each actuator and common to the switches associated with said actuator in all of said banks, means for preventing operation of the switch-moving means until the associated bank has been bodily moved, means for bodily moving a selected bank, means for connecting the selected switch-operating means to a movable member to be actuated thereby, and a common means for shifting a selected bank and for supplying current to the switches of the bank, and means for controlling operation of the last-named means to determine in which of its capacities it is effective.

1,901,553. AUTOMATIC BRAKING DEVICE FOR PHONOGRAPHS AND THE LIKE. RAUL ORZÁBAL DE LA QUINTANA, Buenos Aires, Argentina. Filed Jan. 31, 1930, Serial No. 424,989, and in Argentina May 10, 1929. 6 Claims. (Cl. 192—118.)



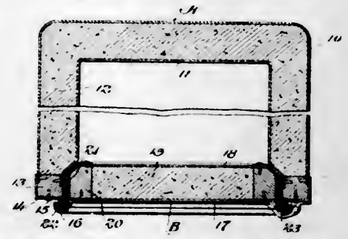
1. A braking device particularly for phonographs, comprising a rod mounted on an acoustic arm of the phonograph; a pivoted lever cooperating with said rod; a pivotally-mounted brake lever adapted to brake a turn-table of

the phonograph; and means including a fly-wheel cooperating with said pivoted lever and the brake lever whereby, due to the inertia of the fly-wheel relative to its center of rota-



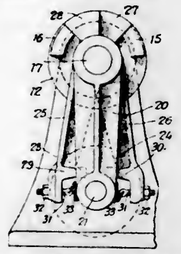
tion, the brake lever is set against the turn-table when the acoustic arm has attained a small sudden increase in its angular speed.

1,901,554. SAFETY CONTROL FOR MOTOR VEHICLES. FREDERICK P. DE WILDE, Sheboygan, Wis. Filed Oct. 11, 1929. Serial No. 398,856. 8 Claims. (Cl. 180—82.)



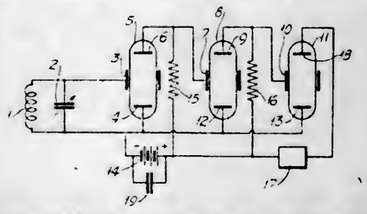
4. In a control device for motor vehicles the combination of a support for mounting on a vehicle, an element movable thereon in response to an abrupt change in vehicle movement, said element having a socket therein, a reciprocable member cooperating with said socket to yieldably retain said element in one position, said member being movable upon movement of said element from said position, and means controlled by said member for affecting the operation of the vehicle.

1,901,555. MECHANICALLY-OPERATED BUCKET. VANCE S. FIRESTONE, Freeport, Ill., assignor to Arcade Manufacturing Company, Freeport, Ill., a Corporation of Illinois. Filed Feb. 27, 1932. Serial No. 595,619. 12 Claims. (Cl. 214—131.)



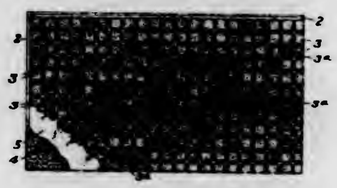
1. Material-moving apparatus comprising a support, a bucket, a member rotatable on said support, means hingedly connecting said bucket with said member eccentric of the axis about which said member rotates, a second member rotatable on said support, a link pivotally connected to said bucket and to said second-member eccentrically of the axis of rotation of the latter, and spring means cooperating with said first-named member operating to resist the movement of said first-named member during a part of the movement of the latter to one position and resisting the movement of said first-named member during a part of the movement of the latter in the opposite direction, said first-named member being movable automatically alternately into the two positions stated in the movement of the bucket toward filling position and toward dumping position, respectively by reversed movements of said rotatable member.

1,901,556. REFRIGERATOR. LIONEL J. GOTTSCHALK, New Orleans, La. Filed Sept. 17, 1929. Serial No. 393,176. 3 Claims. (Cl. 220—9.)



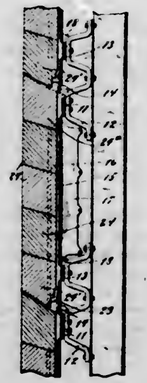
2. A refrigerator box comprising inner and outer sheathings and insulation between the sheathings, each of the sheathings and the insulation being in the form of one piece dished member, a frame extending between the sheathings in abutting relation to the insulation member, and means securing the sheathings to the frame.

1,901,557. BELT TIGHTENER. JOHN W. HOMER, Greencastle, Pa., assignor to T. B. Wood's Sons Company, Chambersburg, Pa. Filed Aug. 9, 1930. Serial No. 474,251. 10 Claims. (Cl. 64—5.)



1. A belt tightener comprising an angularly adjustable plate member, a pulley arm pivoted to the member, pivoted levers engaging opposite sides of said arm, spring means urging the levers against the arm and stop means to detain one lever when the other lever is deflected by the arm.

1,901,558. CASCADE AMPLIFIER. AUGUST HUND, West Orange, N. J., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed July 22, 1930. Serial No. 469,805. 3 Claims. (Cl. 179—171.)

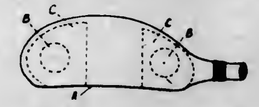


1. An amplifier system comprising, an input circuit, a plurality of photoelectric cells, each of which includes an interior anode, an interior cathode, and an exterior grid; and an output circuit, said photoelectric cells being directly connected in tandem from plate to grid.

1,901,559. SURFACE COVERING SUCH AS LINOLEUM. CHARLES F. HUMPHREYS, Lancaster, Pa., assignor to Armstrong Cork Company, Lancaster, Pa., a Corporation of Pennsylvania. Filed May 7, 1929. Serial No. 361,095. 8 Claims. (Cl. 154—49.)

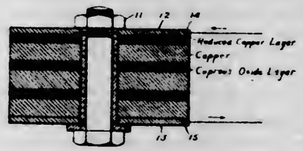
1. As a new article of manufacture, a surface covering comprising a base made up of a fabric web and a substantially continuously extending layer of linoleum mix thereover and pattern elements of linoleum mix overlying and secured to the base, the base being exposed between at least some of the pattern elements.

1,901,560. SECTIONAL FURNACE WALL. DAVID S. JACOBUS, Jersey City, N. J., assignor, by mesne assignments, to Fuller Lehigh Company, a Corporation of Delaware. Filed Jan. 18, 1925, Serial No. 2,081. Renewed Jan. 5, 1932. 15 Claims (Cl. 110—1.)



1. A furnace wall comprising a plurality of fixed vertically disposed supports, horizontal supporting members connected to said fixed supports and spaced apart vertically thereon, a group of tile supports for each horizontal supporting member and arranged side by side thereon across the wall, and tile supported on and by each of said groups to constitute an independent section of the wall, each tile support including a rectangular backing plate with each of its edges adjacent an edge of an adjacent backing plate to form a continuous backing plate for the wall.

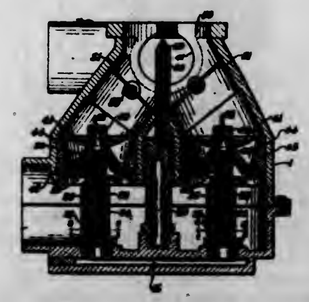
1,901,561. METHOD OF DEHYDRATING NITROCELLULOSE AND THE PRODUCT THEREOF. ARTHUR LANGMEIER, Dover, N. J., assignor to Hercules Powder Company, Wilmington, Del., a Corporation of Delaware. Filed May 24, 1927. Serial No. 193,954. 8 Claims. (Cl. 260—148.)



1. The method of treating nitrocellulose, which comprises passing amyl alcohol through a mass of damp nitrocellulose for the removal of water therefrom and removing the excess of said alcohol from the mass by mechanical means.

1,901,562. GOLF CLUB. NORMAN STEWART MAIN, Linlithgow, Scotland. Filed Dec. 26, 1928, Serial No. 328,859, and in Great Britain Dec. 30, 1927. 6 Claims. (Cl. 273—77.)

1. A golf club head comprising a heavier heel and toe portion than central portion to increase the moment of inertia of the club head about its vertical axis of rotation under impact, in combination with a striking face curved about a vertical axis.

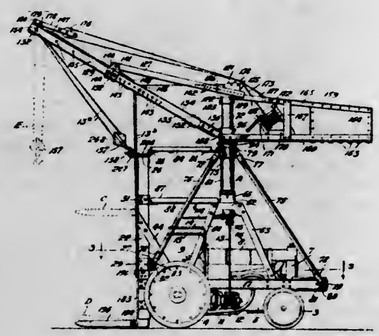


1,901,563. COPPER OXIDE RECTIFIER. GEORGE F. MARTIN, Jr., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 16, 1926. Serial No. 135,899. 29 Claims. (Cl. 175—366.)

1. The step in the method of preparing a unidirectional current-carrying device which comprises quenching a hot oxidized metal electrode in oil.

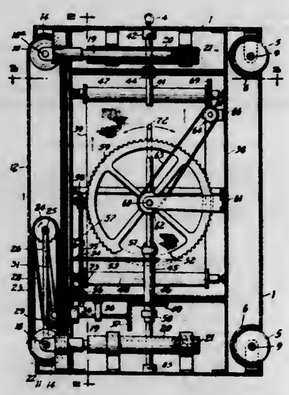
17. The combination with a contact rectifier comprising, as one element thereof, an oxide of a metal, of means for making a contact with said oxide, said means comprising a layer of reduced metal from the metal oxide on the oxide.

1,901,564. CARBURETOR. HARVEY V. MCCARTY, Canton, Ohio. Filed May 25, 1928. Serial No. 280,465. 5 Claims. (Cl. 261—44.)



1. A carburetor including a jet, a cone associated with the jet, and a reduced neck at the apex of said cone, said neck having apertures therethrough communicating between the jet and the exterior of the cone.

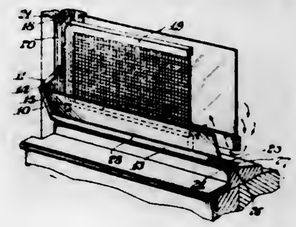
1,901,565. AMIDES OF D-GLUCONIC ACID. RICHARD PASTERNACK and CLINTON P. AMMERMAN, Brooklyn, N. Y., assignors to Charles Pfizer & Company, Brooklyn, N. Y., a Corporation of New Jersey. Filed July 19, 1930. Serial No. 469,264. 13 Claims. (Cl. 260—124.)



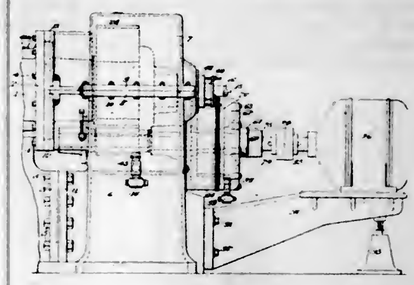
1. d-gluceno p-phenetid.

1,901,566. ARTICLE HANDLING DEVICE. OTIS F. PRESSNEY, Brooklyn, N. Y. Filed Mar. 26, 1927, Serial No. 178,690. Renewed Aug. 9, 1932. 9 Claims. (Cl. 214—95.)

1. In combination with hoisting means, a plurality of lifting devices, one of which is movable in a circle about the other, and a single flexible connection constantly articulating said hoisting means with each of the lifting devices.



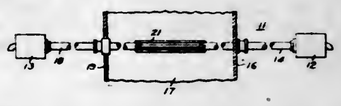
1,901,567. APPARATUS FOR SURVEYING DRILL HOLES. HENRY ROGATZ, Amarillo, Tex. Filed Oct. 17, 1929. Serial No. 400,202. 16 Claims. (Cl. 234—1.)



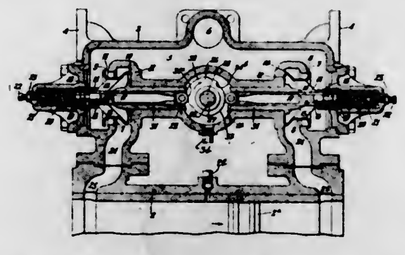
1. Apparatus for surveying drill holes comprising a swingable plumb, means to guide circularly the motion of said plumb, a longitudinally movable tape shaped substantially cylindrically about an axis which is longitudinally with respect to the length of said tape, and means for recording the position of the plumb on said recording tape.

1,901,568. WINDOW VENTILATOR. ELI J. SALTZMAN, Philadelphia, Pa. Filed Sept. 26, 1931. Serial No. 565,238. 4 Claims. (Cl. 98—99.)

1. A window ventilator comprising side members secured to side portions of the window frame, each of said side members comprising a unitary piece of wood, a bottom member extending over the lower window sash stop, and a glass plate positioned adjacent the lower portion of the lower sash by said side and bottom members, the side members having grooves for the reception of the ends of the glass plate and having integral leg portions extending upwardly from the body portions thereof along the side sash stops, the bottom member having an inclined upper surface and a lip portion along its inner edge for positioning the lower edge of the glass plate, and the lower ends of the side members being shaped complementally to the upper surfaces of the bottom member.

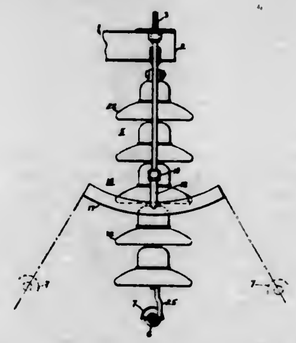


1,901,569. GEAR CASING FOR TUBING MACHINES. VERNON ROYLE, Paterson, N. J. Filed Mar. 3, 1928. Serial No. 258,891. 6 Claims. (Cl. 74—56.)



1. In a tubing machine, the combination with the cylinder, screw and driving mechanism therefor, of a housing comprising two separable sections, one section serving as a base for the machine and supporting the cylinder, screw and driving mechanism on one vertical wall thereof, said driving mechanism being housed within the section, and the other section being carried by the opposite vertical wall of the first named section for encasing the reduction gearing.

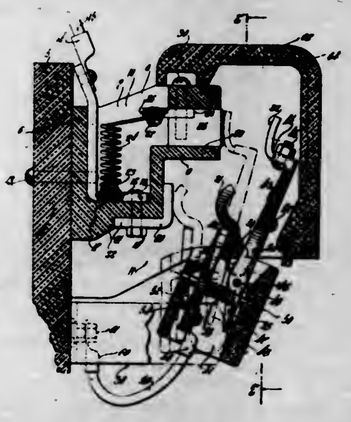
1,901,570. SMOKE INDICATOR. EDWIN H. VEDDER and ELLIS O. ERICKSON, Wilkinsburg, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 9, 1928. Serial No. 318,297. 5 Claims. (Cl. 88—14.)



1. In a smoke indicating device, in combination, a light-unit box, a tubular member secured thereto, a light-receiving-unit box, a tubular member secured thereto and coaxially aligned with said first named tubular member, the two opposing ends of the tubes being spaced apart, and means for maintaining the alignment of said tubular members while permitting smoke to pass freely between the exposed ends of the tubes, said means comprising a skeleton frame operatively rigidly engaging the opposing ends of the two tubular members.

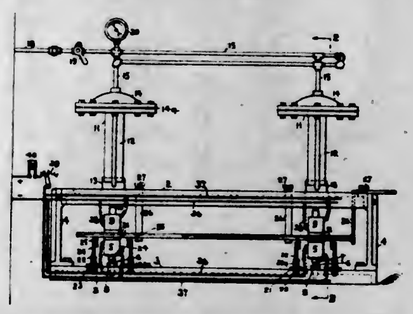
1,901,571. STEAM ENGINE. HARRY S. VINCENT, Ridgewood, N. J., assignor to Franklin Railway Supply Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 6, 1927. Serial No. 211,051. 5 Claims. (Cl. 121—142.)

1. In valve mechanism of the character described, a poppet valve, a stem therefor, and an oscillatory actuating cam engaging the stem, said cam having its engaging surface constructed with three stepped portions at respectively different distances from the cam axis, one of which portions holds the valve in full open position during a portion of the cam's oscillation, the next of which portions holds the valve partially open during the next succeeding portion of the cam's oscillation, and the third of which portions permits complete closure of the valve during the next succeeding portion of the cam's oscillation.



1,901,572. TRANSMISSION LINE DEVICE. CHARLES F. WAGNER, Swissvale, and LAWRENCE R. GOLLADAY, East Pittsburgh, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 27, 1928. Serial No. 257,268. 9 Claims. (Cl. 175—30.)

1. In combination in a high-voltage transmission-line device, a main ground support, a suspension insulator depending therefrom for supporting a line conductor, and means rigidly depending from the ground support in substantially parallel relation to the insulator including an arcuate arc-gap terminal cooperating with an element at the other end of the insulator to provide a gap of smaller break-down value than the flash-over value of the insulator and to compensate for the swing of the conductor to maintain said gap of constant length.

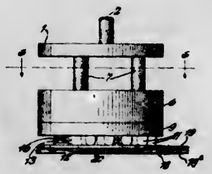


9. In a transmission-line device, a support, an insulator supported thereby, means on the insulator for supporting a line cable, a fuse of substantial length compared to the length of the insulator and disposed in series relation to a gap parallel to the insulator, and means supporting the fuse substantially entirely at a single local position thereon at the end spaced from the gap.

1,901,573. ELECTRIC SWITCH. GUSTAV O. WILMS, Milwaukee, Wis., assignor, by mesne assignments, to Allen-Bradley Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 21, 1928. Serial No. 320,866. 16 Claims. (Cl. 200—146.)

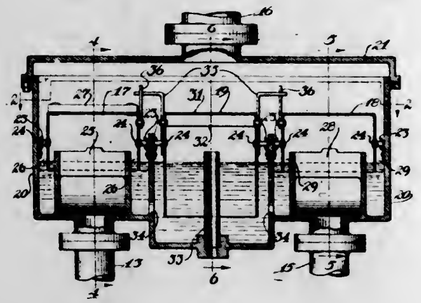
1. In an electric switch, a mounting member adapted to be connected with a support panel and having a compartment divided into separated chambers by a division wall, stationary contacts carried by the division wall and disposed on one side thereof to be within one chamber, a resistance element disposed on the other side of the division wall within the other chamber and electrically bridging the stationary contacts, and contactors substantially within the first-mentioned chamber and movable to engagement with the stationary contacts.

1,901,574. METHOD FOR MAKING LAMINATED GLASS. ARTHUR G. WORRALL, Philadelphia, Pa., assignor to Louis J. Kolb, Philadelphia, Pa., trading as Safetee Glass Company. Filed Sept. 6 1929. Serial No. 390,666. 2 Claims. (Cl. 49—81.)



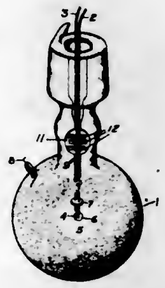
1. The herein described method which consists in assembling sheets of glass and celluloid to form a sandwich, "spot welding" the sheets of glass and celluloid to physically connect them at intervals in respect to their surfaces whereby they may be handled as a unit and thereafter subjecting the "spot welded" unit to heat and pressure and subsequent cooling to form a laminated glass structure.

1,901,575. CUTTING AND ORNAMENTING DIE. ARTHUR W. ALTVATER, St. Louis County, Mo. Filed Apr. 11, 1929. Serial No. 354,332. 5 Claims. (Cl. 69—2.)



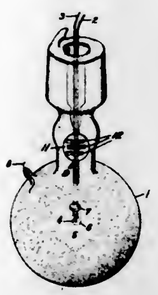
1. A die for operating on work having a portion projecting beyond the surface of the work that is toward

the die and comprising a rigid body, die elements rigid with and projecting from said body and having cutting ends, a unitary gage and stripper plate having openings therethrough for the passage of said die elements and having an edge adapted to be engaged by said projecting portion of said work to locate the work in proper position for operation of said die elements, means nor-



mally supporting said plate by said body in a relationship in which the outer surface of said plate is beyond said cutting ends of said die elements, means for permitting the discharge of fragments of the work through said body, and ornamenting devices supported by and projecting beyond said plate at a distance from said openings through which said die elements operate.

1,901,576. PREVENTION OF EVAPORATION LOSSES. HAROLD V. ATWELL, Whiting, Ind., assignor to Standard Oil Company, Chicago, Ill., a Corporation of Indiana. Filed Apr. 25, 1927. Serial No. 186,478. 14 Claims. (Cl. 220—85.)

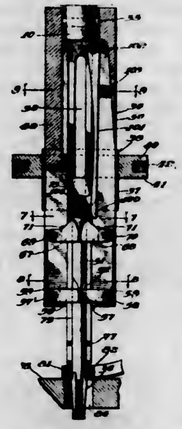


12. A storage system for volatile liquids which comprises a liquid storage tank having a vapor space therein, a vapor receiver, a conduit from said vapor space to said vapor receiver, means in said conduit for permitting and controlling the flow of gases therein in both directions, a pivoted member having its opposed sides exposed to different pressures, means for pivoting said member off its center of pressure, means for exposing one side of said member to atmospheric pressure, means for exposing the other side of said member to the pressure in said vapor space, and connections between said member and said control means whereby the flow of gas in the conduit is regulated and controlled in both directions in accordance with the difference between the pressure in the storage tank and the atmospheric pressure upon the outside of said tank.

1,901,577. PHOTO-ELECTRIC TUBE. KENNETH T. BAINBRIDGE, New York, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 4, 1928. Serial No. 244,533. 12 Claims. (Cl. 250—27.5.)

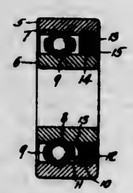
12. A light sensitive tube comprising a container, electrodes mounted in said container, one of said electrodes including a foundation material, a coating of alkali metal on the foundation material, all of said alkali metal being bound to the foundation material at the volatilising temperature of said metal by an adsorbed gas layer.

1,901,578. METHOD OF PREPARING PHOTO-ELECTRIC TUBES. KENNETH T. BAINBRIDGE, Swarthmore, Pa., assignor to General Electric Company, a Corporation of New York. Original application filed Jan. 4, 1928, Serial No. 244,533. Divided and this application filed July 8, 1932. Serial No. 621,499. 7 Claims. (Cl. 250—27.5.)



2. The method of preparing a light-sensitive coating to a metallic surface, which comprises applying a light-sensitive metal to said surface and then heating the surface in a container and at a temperature sufficiently high to remove substantially all excess light-sensitive metal from the container while said container is being evacuated.

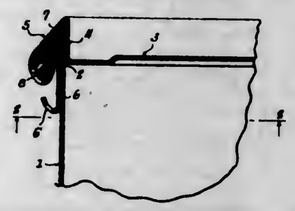
1,901,579. CHUCK FOR NUT TAPPING MACHINES. SHERMAN BARBER, Maywood, Ill. Filed July 25, 1930. Serial No. 470,681. 7 Claims. (Cl. 10—133.)



2. In combination, a chuck for a nut tapping machine which comprises, a body, means for rotating said body, a plurality of sets of openable jaws disposed in said body for holding the shank of a tap with its threaded end downwardly, means for moving a threaded nut from the upper portion of the tap along the shank of the tap

and successively opening and closing each set of jaws, said latter means comprising a plurality of bars slidably disposed within said body, a spring actuated finger pos-

tioned at one end of each of said bars, and means for moving said bars longitudinally at a differential speed with respect to said body.

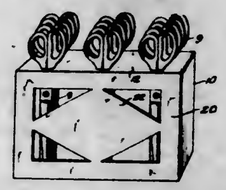


1,901,580. ANTIFRICTION BEARING. GEORGE R. BOTT, Stamford, Conn., assignor to Norma-Hoffmann Bearings Corporation, Stamford, Conn., a Corporation of New York. Filed Sept. 16, 1930. Serial No. 482,226. 3 Claims. (Cl. 308—187.)

1. In an anti-friction bearing, inner and outer bearing rings, and anti-friction bearing elements between said rings; one of said rings in axially spaced relation to one end thereof being provided in one of its circumferential faces with a shallow annular groove having radially disposed shoulders at its opposite edges, and means for sealing the space between the bearing rings at one side of said elements, said means including an annular gasket of compressible absorbent material engaged at one of its edges upon the opposed circumferential face of the other bearing ring and having its other edge disposed within said groove, and a relatively narrow split expansible and contractible metallic ring at each side of said gasket extending at one of its edges into said groove adapted to contact with the respective shoulders, said rings holding the gasket under compression and being thereby urged in relatively opposite directions into frictional binding engagement with the respective shoulders, and the other edges of said rings being radially spaced from the corresponding edge of the gasket and in clearance relation to the other bearing ring.

1,901,581. CLOSURE FOR CONTAINERS. ALFRED J. CHAMBERLAIN, Milwaukee, Wis. Filed Sept. 30, 1929. Serial No. 396,086. 6 Claims. (Cl. 220—59.)

1. The combination with a container having an outwardly extending surrounding flange at its upper end, of a closure for the container having its marginal portion formed to provide a flange to overlie the container flange and extend toward the outer edge thereof on applying the closure to the container, a gasket to be compressed between said flanges, bendable lugs connected with the closure flange and extending below the same to be bent under the container flange for locking the closure to the

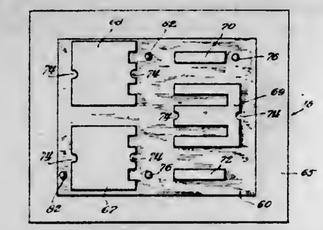


container and compressing the gasket between said flanges, and gasket retainer clips connected with the closure flange and extending into the space between said flanges for connecting the gasket to the closure and for holding the gasket at all times in position for compression between said flanges on locking the closure to the container.

1,901,582. VULCANIZATION OF RUBBER. CLYDE COLEMAN, Passaic, N. J., assignor to The Naugatuck Chemical Company, Naugatuck, Conn., a Corporation of Connecticut. Filed Sept. 5, 1931. Serial No. 561,503. 31 Claims. (Cl. 18—58.)

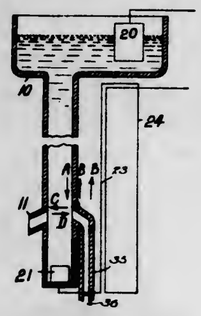
1. A process of treating rubber which comprises vulcanizing rubber in the presence of the reaction product formed by the reaction of equi-molecular proportions of a mercaptobenzothiazole, formaldehyde, and a primary aromatic amine.

1,901,583. SHIPPING AND DISPLAY CABINET FOR SHEARS. JOHN J. CONWAY, Bridgeport, Conn., assignor to The Acme Shear Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Aug. 12, 1929. Serial No. 385,443. 5 Claims. (Cl. 206—65.)



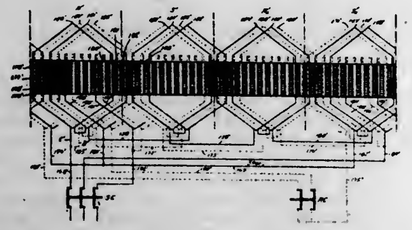
1. In a device of the character described for shipping and displaying shears, a closed cabinet open at the front, a shelf fixed in said cabinet spaced below the top wall and above the bottom wall, said top wall and shelf being provided with aligned substantially rectangular parallel spaced openings to position and display the shears with their handles in parallel planes, and short tongue means at the ends of said openings yieldable downwardly when sears are inserted in the openings to grip the edges of the shears to retain them against longitudinal movement.

1,901,584. MEANS FOR MAKING CORE LAMINÆ. JAMES C. DALEY, Chicago, Ill., assignor to Jefferson Electric Company, Chicago, Ill., a Corporation of Illinois. Filed June 16, 1930. Serial No. 461,434. 11 Claims. (Cl. 164—18.)



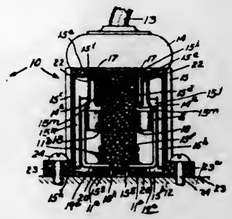
1. In combination, a die having three die openings, one being E-shaped and two being substantially square, the latter having projections, the E-shaped die having the three leg portions extending towards the other two die openings and its base opposite said two openings, the intermediate leg of said E-shaped die having a width equal

to the width of the space between the other two die openings and the outer legs of said E-shaped die opening being adjacent and directly opposite certain of said pro-



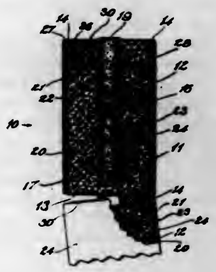
jections, and a cooperating punch having complementary punch portions movable into and out of the die openings of said die.

1,901,585. METHOD AND MEANS FOR PURIFYING MOLTEN METAL. HARCOURT C. DRAKE, Hempstead, N. Y., assignor, by mesne assignments, to Sperry Products, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Dec. 28, 1929. Serial No. 417,162. 6 Claims. (Cl. 75—225.)



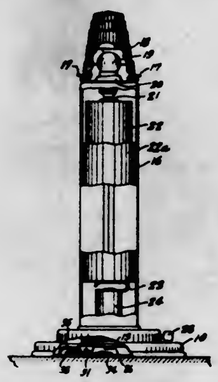
1. A method of purifying molten metal which consists in passing current therethrough along a given axis to establish an electro-magnetic field and passing current through a conductor along an axis substantially parallel to said first axis and adjacent thereto to produce attraction or repulsion of said metal.

1,901,586. DYNAMO-ELECTRIC MACHINE. RUPERT N. EARLY, Minneapolis, Minn., assignor to Electric Machinery Manufacturing Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Dec. 4, 1930. Serial No. 499,917. 8 Claims. (Cl. 172—274.)



1. The combination of an electric motor comprising a primary magnetic structure having a plurality of slots therein, a polyphase primary winding on said magnetic structure comprising a plurality of winding sections forming at least two similar polyphase circuits with the impedance of one circuit alone greater than that of both circuits in parallel, said circuits respectively comprising coils having at least one of their corresponding coil sides, disposed in separate slots in said magnetic structure, and starting means for the motor comprising means for connecting one of said circuits to a source of polyphase current and switching means for connecting the other circuit in parallel with said first circuit whereby the motor may be started on one circuit with relatively low starting current by initially connecting said first circuit alone to a source of current and thereafter connecting the second circuit in parallel with said first circuit whereby both circuits become energized by said source of current.

1,901,587. ELECTRIC CURRENT TAPPING DEVICE. REUBEN ECKSTEIN, New York, N. Y. Filed Jan. 2, 1929. Serial No. 329,720. 3 Claims. (Cl. 173—334.)



1. An electric circuit tap fitting comprising a one-piece relatively thin-walled shell structure closed at one end and open at the other, said closed end having spaced openings communicating with the interior of said structure adapted to receive terminal blades of a conventional cap plug, current carrying members fitted into said structure in register with said openings for contacting with said plug blades, a stanchion integrally formed to extend centrally through said structure, and means on the casing and stanchion for retaining the current carrying members in fitted position, said stanchion having a recessed peripheral portion adjacent one end thereof formed to serve as a strain relief adapted to engage with flexible conductor wires.

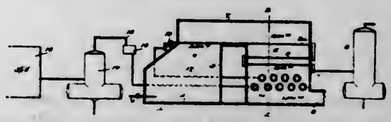
1,901,588. BATTERY. REUBEN ECKSTEIN, New York, N. Y. Filed June 26, 1930. Serial No. 463,889. 4 Claims. (Cl. 136—132.)

1. A battery of the character described, comprising a metallic tubular casing having a rim edge portion and means for insulating said portion, said means comprising an insulating tubular member receiving said casing and a flexible insulating member glued to the outside of said insulating member and having a portion folded over said rim edge portion.

1,901,589. PICK-UP CANDLE LIGHT. GILES C. FULLMER, Bridgeport, Conn., assignor to The Bridgeport Metal Goods Manufacturing Company, Bridgeport, Conn., a Corporation of Connecticut. Filed July 18, 1931. Serial No. 551,778. 11 Claims. (Cl. 240—10.64.)

1. In a portable electric light, a bulb, a battery, a contact, a switch element adapted to automatically move to engage said contact and thereby close a circuit between the battery and bulb on the light being raised off a support, a manually operable switch element, and said manually operable switch element operable to engage and move the automatic switch element from the contact and to itself engage the contact to close the circuit between the battery and bulb.

1,901,590. ART OF SILK MANUFACTURE. WILLIAM H. FURNESS, National Park, N. J., assignor, by mesne assignments, to Furness Corporation, Philadelphia, Pa., a Corporation of New Jersey. Filed Dec. 12, 1927. Serial No. 239,615. 1 Claim. (Cl. 18—54.)

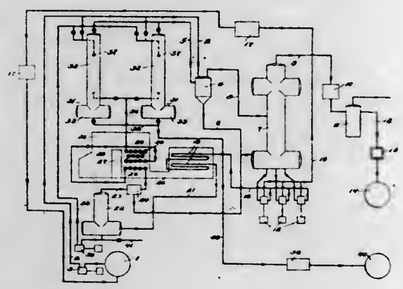


The method of preventing precipitation of copper during precipitation of suproammonium silk thread, which includes spinning the thread in a precipitating bath containing about 1% of glycerin and about 10% of caustic soda.

1,901,591. SAFETY RAZOR. CLARENCE A. GODSHALK, Ardmore, Pa. Filed Mar. 14, 1932. Serial No. 598,681. 6 Claims. (Cl. 30—12.)

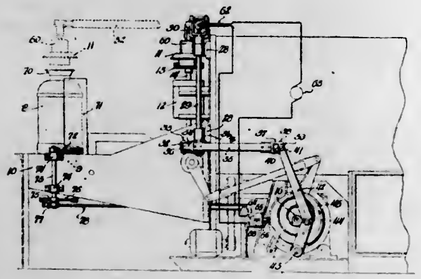
5. In a razor, the combination of a handle, a rigid blade supporting member fixedly secured to said handle and projecting laterally transverse to the axis of said handle, a cover, a pivotal connection between said cover and said blade supporting member, a blade retaining member normally resting on said blade supporting member, means to fixedly hold a razor blade in said retaining member with the cutting edge of the blade projecting forwardly therefrom, means connecting said cover and said blade retaining member and operative to slide said retaining member and the blade carried thereby forwardly on said blade supporting member to bring the cutting edge of said blade forwardly clear of and beyond the front edge of said blade supporting member when said cover is being raised and to retract said blade retaining member and said blade carried thereby to bring the cutting edge of said blade into shaving relationship with respect to the front edge of said blade supporting member when said cover is being closed.

1,901,592. METHOD FOR HEATING OIL. AUDLEY E. HARNSBERGER and CLYDE L. SMITH, Chicago, Ill., assignors to Gyro Process Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 29, 1929. Serial No. 335,834. 5 Claims. (Cl. 196—61.)



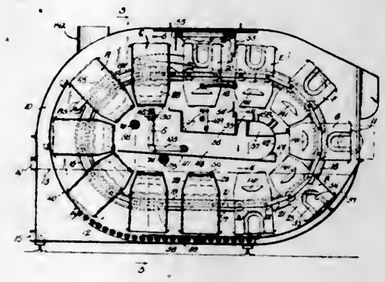
1. The method of cracking oil in the vapor phase, which consists in heating a continuously moving elongated stream of oil of restricted cross-sectional area to a temperature at which portions thereof will vaporise without molecular decomposition, passing the heated oil to an enlarged zone and therein separating said vaporized product from the portions which do not vaporise without molecular decomposition, then passing said vapors through an intermediate heating zone in an elongated stream of restricted cross-sectional area whereby the temperature of the vapors is raised sufficiently to bring the vapors to a substantially dry gaseous condition without appreciable cracking thereof, and finally passing said dry vapors in an elongated stream of restricted cross-sectional area materially less than that of the intermediate zone to raise the temperature of the dry vapors to a cracking temperature in excess of substantially 1000° F.

1,901,593. METHOD OF CONVERTING HEAVY HYDROCARBONS INTO LIGHTER HYDROCARBONS. AUDLEY E. HARNSBERGER and CLYDE L. SMITH, Chicago, Ill., assignors to Gyro Process Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 15, 1929. Serial No. 407,534. 1 Claim. (Cl. 196—60.)



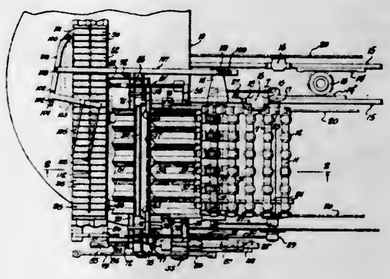
A process for converting heavy hydrocarbons into lighter hydrocarbons, which comprises continuously passing a stream of such heavy hydrocarbons through a primary heating zone wherein said heavy hydrocarbons are subjected to temperatures sufficiently high to effect vaporisation of the lighter compounds therein without material cracking, then passing such hydrocarbons into a separating zone to separate the said hydrocarbons into a vaporous fraction and a liquid fraction, continuously passing the vaporous fraction through a highly heated conversion zone wherein the vapors are heated to cracking temperatures in excess of 1000° F., continuously passing the cracked vapors from said conversion zone into a supplemental cracking zone, continuously introducing the liquid fraction obtained from said separation zone into direct contact with the cracked oil vapors present in the supplemental cracking zone, controlling the rate of flow of the liquid fraction into said supplemental cracking zone to permit the self contained heat

present in the cracked oil vapors to raise the temperature of said liquid fraction sufficiently to partially crack the same without reducing the temperature of the cracked oil vapors below 850° F., passing the oil vapors remaining at such latter temperature into a shock chilling zone



wherein said vapors are brought into contact with quantities of liquid oil to effect a substantially instantaneous reduction in temperature thereof to a non-reacting temperature not in excess of 600° F., and then fractionating the vapors present at said latter temperature.

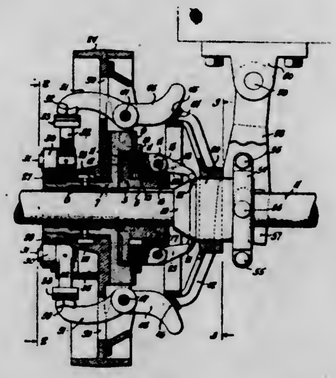
1,901,594. CAN COVERING APPARATUS. JOSEPH HAUK, Milwaukee, Wis., assignor to Hauk Manufacturing Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 23, 1930. Serial No. 446,687. 9 Claims. (Cl. 29—84.)



1. In an apparatus of the character described, the combination with the can and cover-delivery station of a can-washing machine, of cover-handling means receiving the cover from the cover-delivery station including an oscillatory arm movable in a substantially horizontal plane, a cover-holding electromagnet mounted on said arm and adapted to suspend a cover therefrom and carry the same for deposit on the can at the can-delivery station of the machine, means for energizing said electromagnet, and control switch mechanism controlled by the machine for controlling said energizing means.

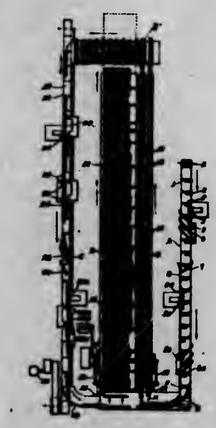
1,901,595. CAN WASHING MACHINE. JOSEPH HAUK, Shorewood, Wis., assignor to Philip C. Read, Milwaukee, Wis. Filed Dec. 13, 1930. Serial No. 502,176. 6 Claims. (Cl. 141—7.)

1. In a can washing machine, the combination of a tank adapted to contain washing fluid, a power driven conveyor for intermittently and progressively immersing and conveying cans through said tank, and means for weighting the cans with washing fluid to assist their immersion in the fluid in said tank.



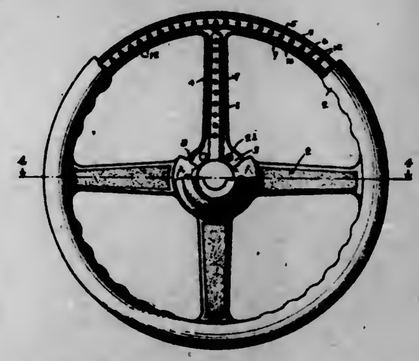
1,901,596. BOTTLE HANDLING MACHINE. JOSEPH HAUK, Shorewood, Wis., assignor to Philip C. Read, Milwaukee, Wis. Filed Oct. 10, 1931. Serial No. 568,029. 12 Claims. (Cl. 214—91.)

1. In a bottle unloading apparatus, the combination of a conveyor having bottle holding pockets arranged in rows and carrying the bottles in inverted position, articulated carriers including plungers engageable with the bottles to lift the same out of said pockets and turnable with said bottles to an inclined position, and mechanism for removing the bottles from said plungers, and turning them to upright position.



9. In a bottle washing machine, the combination with a conveyor having bottle holding pockets arranged in rows, a plurality of delivery conveyors, unloading mechanism for removing the bottles from said pockets and depositing them on one of said delivery conveyors, and mechanism coordinatively actuated by said pocketed conveyor for removing some of the bottles deposited on the first delivery conveyor from said conveyor onto another delivery conveyor.

1,901,597. CLUTCH CONTROL MECHANISM. JOSEPH HAUK, Shorewood, Wis., assignor to Philip C. Read, Milwaukee, Wis. Filed Oct. 31, 1931. Serial No. 572,262. 6 Claims. (Cl. 192—56.)

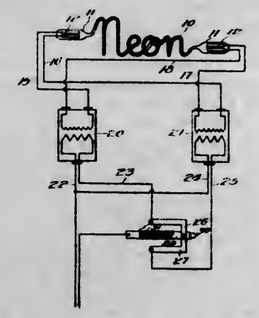


1. The combination with a drive member, a driven member, a clutch for connecting said members together, and means for operating said clutch and maintaining the drive between said members including a shiftable control member, of a power transmitting member mounted to rotate with and relative to said driven member, a locking and release cam connected to said driven member, and means on said power transmitting member operable by said cam on relative movement between said last named member and said driven member to shift said shiftable control member to release said clutch.

1,901,598. MACHINE FOR MAKING PANEL CORE STOCK FROM MILL CLIPPINGS AND THE LIKE. JOHN L. HERZOG, Saginaw, Mich., assignor to John L. Herzog Co., Saginaw, Mich., a Corporation of Michigan. Filed May 28, 1930. Serial No. 456,484. 19 Claims. (Cl. 144—2.)

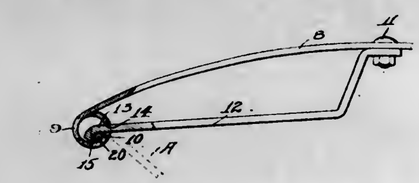
1. A horizontal conveyor having transverse flights for forwarding pieces of wood lengthwise the conveyor, a trimming saw and a hold-down arranged at one side of the conveyor, said saw adapted to trim the ends of pieces thereon, a glue spreader positioned for coating the trimmed ends, a guide bar positioned in the path of travel of the pieces and extending transversely above the conveyor, for shifting the advancing pieces to the opposite side of the conveyor, and a guide, a trimming saw, a hold-down and a glue spreader operatively arranged at the opposite side of said conveyor toward its delivery end, means for deflecting end-glued pieces of work away from the conveyor flight and for positioning them with all of their glued ends extending in the same direction, a ribbon press including a guideway, a mechanically operated pusher, means yieldingly pressing the material against the guideway at spaced intervals along the length of the guideway sufficient to produce adequate intensity of glueing pressure at the joints of the work during the forward movement of the pusher, the length of the guideway being sufficient to accommodate the travel of the glued joints until they have set sufficiently to be safely handled, means for dividing the glued ribbon emerging from the guideway into appropriate board lengths, a second conveyor having operatively associated therewith two saws, two shaper-heads, and two glue spreaders, one of each operatively arranged at each side of the conveyor, holding-down means for the work adjacent said saws and shaper heads, means for shifting the work from one side of the conveyor to the other during its forward progess, guiding devices engaged by the edge-glued boards and arranged to deflect them into position for feeding to a panel press, said panel press including a power-actuated pusher bar, a longitudinally extending bed, work-pressing pads above said bed near the pusher bar, a plurality of individual spring-pressed members distributed along the length of the bed and adapted to yieldingly press upon the work during its passage along the bed, the pressure of said pads and said spring-pressed members being adapted to maintain appropriate intensity of glueing pressure at the glued joints while they are being subjected to the forward pressure of the pusher bar.

1,901,599. STEERING WHEEL. HARRY A. HUSTED, Cleveland, Ohio, assignor to The H. A. Husted Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 11, 1927. Serial No. 167,387. 13 Claims. (Cl. 74—33.)



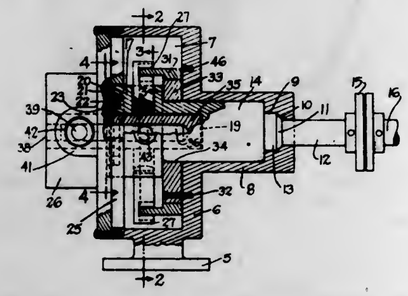
1. A steering wheel for automotive vehicles comprising a metal spider and a rim of molded composition characterized by a palm engaging portion of relatively hard rubber and a finger grip portion of the rim formed of relatively soft yielding rubber composition.

1,901,600. GAS TUBE, ELECTRODE, ETC. GEORGE S. JAMES, Battle Creek, Mich., assignor, by mesne assignments, to James Neon Double Electrode Corporation, Chicago, Ill., a Corporation of Delaware. Filed Feb. 18, 1929. Serial No. 340,776. 7 Claims. (Cl. 176—124.)



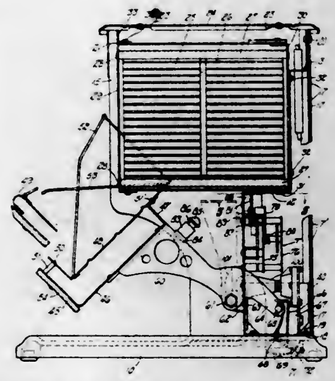
1. An apparatus of the character described including a tube, two pairs of electrodes extending into said tube,

leads connected to each of said pairs of electrodes, a pair of transformers, the high tension terminals of which are



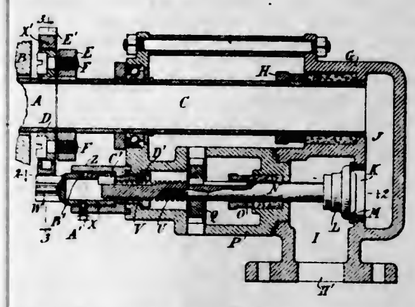
respectively connected to said leads and means for alternately energizing such transformers to alternately energize terminals of different pairs.

1,901,601. BUMPER WITH CUSHIONED ENDS. HERBERT S. JANDUS and HAROLD LEE BROOKS, Detroit, Mich., assignors to General Spring Bumper Corporation, Detroit, Mich., a Corporation of Michigan. Filed Oct. 8, 1931. Serial No. 567,620. 14 Claims. (Cl. 293—55.)



1. As an article of manufacture, a bumper construction comprising impact bar means and back bar means having wedged interconnected portions with cushioning means between the portions.

1,901,602. ROTARY PLUNGER PUMP. SVEN A. JOHNSON, Brooklyn, N. Y. Filed Dec. 31, 1930. Serial No. 505,702. 1 Claim. (Cl. 103—161.)

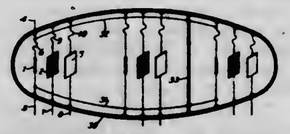


In a pump, a housing, a rotor in the housing, cooperating bevelled annular portions at one end of the rotor and housing, a sealing ring carried in one end of the rotor and engaging a wall of the housing to provide a pressure chamber, pumping means in the rotor for creating a pressure in the chamber to maintain said bevelled portions in close contact, and fluid inlet and outlets in the housing.

1,901,603. ELECTRIC TOASTER. FRED W. JUENGST and OSCAR M. ANDERSON, New Britain, Conn., assignors to Landers Frary & Clark, New Britain, Conn., a Corporation of Connecticut. Filed Feb. 11, 1932. Serial No. 592,274. 12 Claims. (Cl. 53—5.)

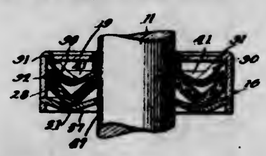
1. An electric toaster having an oven provided with a compartment open at its front and at its bottom, a toast rack having a holder open at its top and positioned within said compartment when the rack is in operative position, said rack being pivoted at a point below said oven for forward and downward swinging movement, means for latching said rack in upright operative position, and time controlled means for controlling said latching means.

1,901,604. BOILER CLEANER. FREDERICK W. LINAKER, Brooklyn, N. Y. Filed July 3, 1929. Serial No. 375,772. 6 Claims. (Cl. 122—392.)



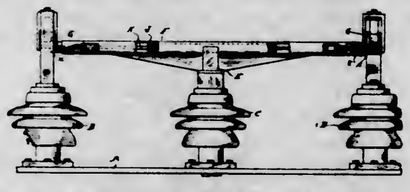
1. In a boiler cleaner, a rotary cleaner element, a steam valve, and a common means for opening the valve and rotating the cleaner element, such means operating to first open the valve, and then to rotate the cleaner in one direction, and upon reversal of said means to rotate the cleaner toward its original position with the valve still open, and during the end of the return movement of the cleaner to positively close the valve by mechanically forcing it again its seat.

1,901,605. MULTIPLE BOOSTER OR MULTIPLE VIBRATION GENERATOR. SIEGMUND LOEWE, Berlin, Germany, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 26, 1921, Serial No. 495,777, and in Germany Mar. 8, 1917. Renewed July 27, 1932. 5 Claims. (Cl. 250—27.5.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



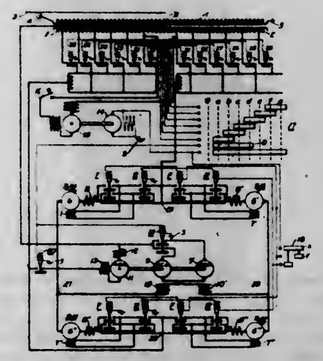
1. A vacuum device comprising a plurality of sets of electrodes, each set including a thermal electrode and

cold electrodes distinct from the electrode of the remaining sets, an evacuated container surrounding all of said electrodes and a partition separating part of said sets



from the remainder, the parts of said container on opposite sides of said partition having different degrees of vacuum.

1,901,606. OIL SEAL. CHARLES W. MARSH, Muskegon, Mich. Filed Aug. 3, 1931. Serial No. 554,841. 5 Claims. (Cl. 288—1.)



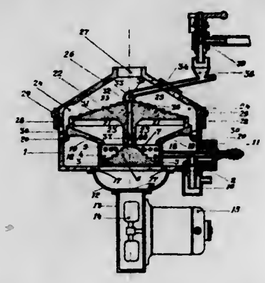
3. An oil seal comprising a metal casing formed with an aperture for passing a shaft, an annular expansion member surrounding said shaft and located in said casing, said annular expansion member being provided with a convex annular surface, a V-shaped leather packing having a pair of frusto-conical flanges joined along the line of a circle located about said shaft in said casing, said packing flanges being engaged by said expansion member on the inside of said packing adjacent its outer edges and a second expansion member engaging the annular apex of said V-shaped packing, whereby the packing is fed edgewise into engagement with the shaft, and a corrugated washer spring confined between said first expansion member and said casing for resiliently urging said expansion members together.

1,901,607. OUTDOOR SWITCH CONTACT. GEORGE A. MATTHEWS, Detroit, Mich., assignor to Westinghouse Electric & Manufacturing Company, Pittsburgh, Pa. Original application filed Jan. 18, 1929, Serial No. 333,362. Divided and this application filed May 31, 1930. Serial No. 458,862. 9 Claims. (Cl. 200—48.)

1. In a switch, a rotatably mounted rigid arm carrying a conductor pivoted on the end thereof, a yieldably mounted conductor located at a suitable point for contact against a downwardly-facing surface thereof by the conductor on the end of said arm upon rotation thereof, further rotation of said arm rotating said pivotally mounted conductor against yielding pressure of the mounting for said other conductor whereby extraneous matter is ground away and proper electrical contact established, said pivoted conductor upon said arm swinging past the vertical line through the points of contact upon said yieldably mounted conductor, whereby said yielding means tends to continue rotation of said arm, and a stop for said arm immediately beyond said vertical line whereby a locking means is provided for said conductor.

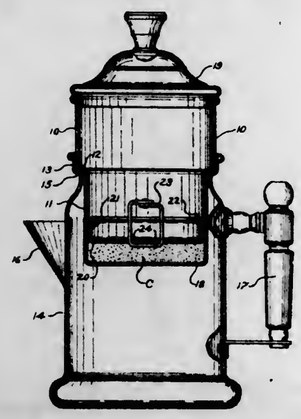
1,901,608. CONTROL SYSTEM. STANLEY G. NOTTAGE, Murrysville, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 16, 1930. Serial No. 461,273. 9 Claims. (Cl. 172—276.)

1. In combination, a series commutator motor of such design to normally operate by alternating current, a source of alternating current, a source of direct current, a manually operable controller, means responsive to operations of the controller for initially and simultaneously automatically connecting low voltages of both said sources of current to the motor, means responsive to operations of the controller for successively and simultaneously automatically increasing the voltages impressed on the motor, and means for automatically disconnecting the source of direct current from the motor when the voltage of the alternating current impressed on the motor has increased to a predetermined value.



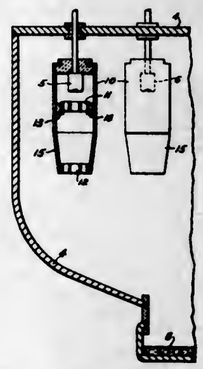
3. The method of operating a series commutator electric motor which consists in initially and simultaneously supplying the motor with direct current and alternating current to start the motor and thereafter increasing the voltages of these currents to accelerate the motor.

1,901,609. ARC INTERRUPTER. RALPH R. PITTMAN, Pine Bluff, Ark. Filed Sept. 12, 1930. Serial No. 481,437. 6 Claims. (Cl. 200—115.)



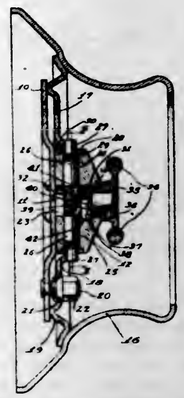
1. In an arc interrupter, the combination of a hollow tube of insulating material, a metal cap disposed over one end of said tube and forming an electrode, a metal plug rigidly secured to the tube at a considerable distance therein and entirely closing the opening of the tube, a fusible element connecting said cap with said plug, and a metal tube forming a third electrode in spaced relation to said plug within the tube.

1,901,610. BURNER FOR HEAVY OIL. DECIO PIZZI, Barcelona, Spain. Filed Dec. 4, 1929, Serial No. 411,643, and in Spain Oct. 14, 1929. 6 Claims. (Cl. 158—91.)



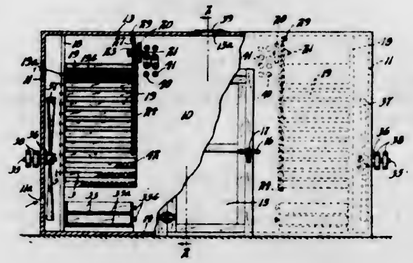
1. A burner for heavy oil, comprising in combination a cylindrical casing having a plate across one end thereof, spaced apertures in said plate, a blower mounted under said casing operable to force air through the apertures in said plate, an aperture in said casing, a removable cup shaped element having an annular channel adapted to be filled with light oil for starting up the burner and to be inserted through said last mentioned aperture into said casing supports on the inner wall of said casing, a circular partition plate resting on said supports and having a central aperture corresponding to the diameter of the wall of said cup shaped element, supports on said partition plate, a main evaporator resting on said supports, a cover resting on the edge of said casing having an aperture for the escape of the flame and a second aperture laterally to the flame escapement aperture, a fuel supply tube extending through the second aperture of said cover to the centre of said main evaporator, a vertical passage extending through said main evaporator and terminating at a short distance above the bottom of said cup-shaped element, and a tap at the outer end of said fuel supply tube to regulate the supply of fuel to said evaporator.

1,901,611. DRIP COFFEE MAKER. KIRK E. PORTER, Wooster, Ohio, assignor to The Buckeye Aluminum Company, Wooster, Ohio, a Corporation of Ohio. Filed Feb. 5, 1931. Serial No. 513,545. 3 Claims. (Cl. 53—3.)



1. A drip coffee maker including a tubular container open at its upper end and having a perforated bottom wall, the said upper end of the container constituting a water receiving compartment and the said lower end constituting a ground coffee receiving compartment, a reversible, perforated pressure plate adapted to be disposed between the water receiving compartment and the ground coffee compartment and arranged to be placed in one position to contact directly with the ground coffee, means upon the pressure plate for spacing said pressure plate above the ground coffee when placed in the reverse position, and a handle slidably located through the pressure plate and adapted to be moved to position upon either side of the pressure plate.

1,901,612. MERCURY ARC RECTIFIER. MORITZ SCHENKEL, Berlin-Charlottenburg, Germany, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 23, 1929, Serial No. 357,434, and in Germany Apr. 28, 1928. 3 Claims. (Cl. 250—27.5.)

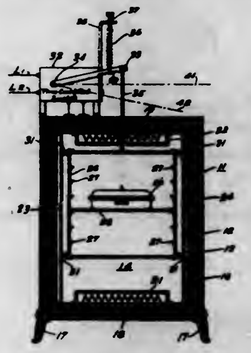


1. In a multi-anode mercury-arc rectifier, the combination, with each anode, of an insulatingly mounted conductive anode shield having an outwardly flaring lower end terminating in an open mouth, means for deionising the space within the shield closest to the anode, and a baffling grid extending across the mouth of the shield for impeding the entrance of vapor-pressure blasts.

1,901,613. SPARE WHEEL CARRIER AND LOCK. FREDERICK A. SMITH, North Chicago, Ill., assignor to Oakes Products Corporation, North Chicago, Ill., a Corporation of Michigan. Filed July 2, 1931. Serial No. 548,397. 1 Claim. (Cl. 70—90.)

In a spare wheel carrier structure, the combination of a carrier plate and a head extending forwardly therefrom, said plate forming an abutment for the inner transverse wall of a wheel hub and said head being adapted to extend through an opening in such wall, said head having a bore therethrough closed at its rear end by said plate, a cam hub journalled in the front end of said bore and supporting a cam at its rear end in said bore, latch pins extending through said head for engagement by said cam to be projected to be in front of the transverse wall of a wheel hub to thereby prevent removal of a wheel from the carrier structure, a handle on the front end of said cam hub whereby it may be turned, and lock mechanism within the front end of said cam hub operable to lock said cam hub to said head when said latch pins are in locking position, said hub and said cam and handle being an integral structure.

1,901,614. INCUBATOR. EARL H. SNOW, Sleepy Eye, Minn. Filed Feb. 24, 1930. Serial No. 430,508. 2 Claims. (Cl. 119—35.)



1. An incubator having in combination, a substantially rectangular chamber, a plurality of tiers of superposed spaced egg-containing trays along each side of said chamber leaving an open space at the central portion of said chamber, said chamber having a series of inlet openings in the side walls thereof at the lower portion of said walls and a pair of fans of comparatively large diameter between said trays and said side walls constructed and arranged to draw air in said openings and direct it between said trays, a row of pipes for containing a heating medium and a row of pipes for containing a cooling medium at each side of said chamber adjacent the top and the inner ends of said trays, said chamber having spaced outlet openings in the top thereof between said pipes at either side thereof.

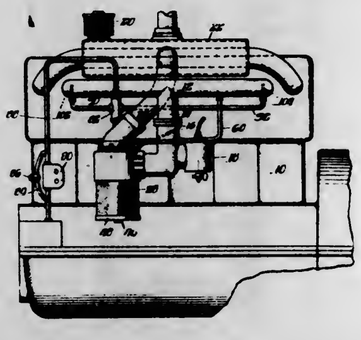
1,901,615. METHODS OF PREPARING BROM-ISATIN. CHARLES J. STROSACKER, CHESTER C. KENNEDY, and EARL L. PELTON, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed Aug. 23, 1926. Serial No. 131,114. 8 Claims. (Cl. 260—47.)

1. In a method of preparing bromisatin, the step which consists in reacting upon indigo in the presence of water with bromine in less than the theoretical molecular proportion required for the formation of dibromisatin.

1,901,616. AUTOMATIC COOKING DEVICE. VICTOR G. VAUGHAN, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 31, 1930. Serial No. 458,087. 5 Claims. (Cl. 219—35.)

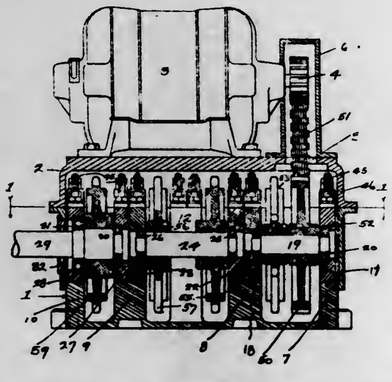
2. A cooking device including a heating element, a switch controlling the energization of the heating element, means for biasing the switch to its open position, means for closing the switch by the weight of material to be operated on by the heating element and a time device controlling the switch and effective to open the same after a period of time dependent on the initial weight of the material and independent of its final weight.

1,901,617. TIME LIMIT RELAY. PATRICK C. WARD, Homeville, Pa. Original application filed Dec. 7, 1928, Serial No. 324,543. Divided and this application filed Nov. 1, 1929. Serial No. 404,065. 7 Claims. (Cl. 200—97)



1. In a time-limit relay, in combination, a switch-actuating plunger, a coil for raising the plunger, said plunger being disposed to fall freely under the influence of the force of gravity when released by the coil, an air dash-pot being provided with a piston disposed to retard the plunger when falling under the influence of gravity, said dash-pot being provided with a rotatable cap member for regulating the flow of air into the dash-pot, and pressure actuated means disposed to permit a ready escapement of air from the dash-pot when the piston is moved upwardly, said means being closed by the force of gravity when the piston is stopped in any position.

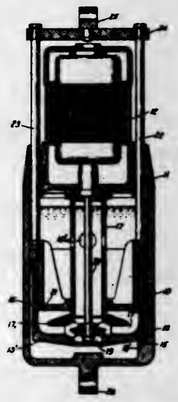
1,901,618. INTERNAL COMBUSTION ENGINE. HARRY H. WATERS and RUDOLPH F. GAGG, Clinton, Iowa, assignors to Climax Engineering Company, Chicago, Ill., a Corporation of Delaware. Filed Jan. 22, 1930. Serial No. 422,644. 10 Claims. (Cl. 123—198.)



1. That improvement in methods of carburetting fuel for internal combustion engines which comprises mixing fuel with cold air and a predetermined amount of hot

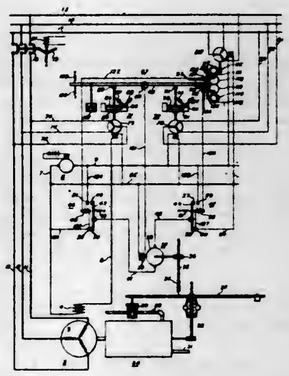
air when the engine is carrying its heaviest load, mixing the fuel with a quantity of cold air and a proportionately greater amount of hot air when the engine is carrying rela-

tively lighter loads, and supplying the mixture under relatively heavy loads with a quantity of fluid to decrease detonation.



1,901,619. SPEED REDUCTION TRANSMISSION AND ADJUSTABLE BEARINGS THEREFOR. FRANCIS C. WILLIAMS, Detroit, Mich. Filed Mar. 23, 1932. Serial No. 600,809. 8 Claims. (Cl. 74—21.)

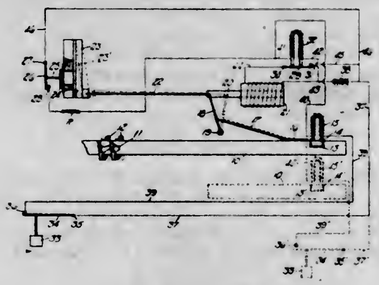
1. A device such as described comprising a housing; plural rows of pairs of bearings arranged within said housing; a separate shaft rotatably mounted in each pair of bearings in the plural rows, whereby all the separate shafts in one row of bearings will be parallel to all of the separate shafts in the other rows of bearings; means to adjust the pairs of bearings supporting each separate shaft to move said shaft parallelly relative to the shafts in the other rows; a pair of related sprockets on each of the separate shafts registering with a pair of independent sprockets adjoining separate shafts on opposite rows; a drive chain connecting each of the registering pairs of sprockets on opposite rows; a power means to drive one of the shafts; and a driven unit to be connected to one of said shafts.



1,901,620. HYDRAULIC OPERATOR. WILLIAM J. WOODS, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 30, 1930. Serial No. 485,474. 20 Claims. (Cl. 60—52.)

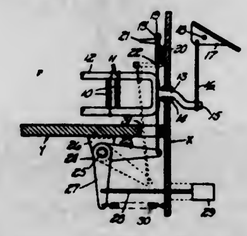
1. A hydraulic operator including a fluid casing, a piston operable in the casing, and a pump immersed in the fluid and having its inlet and outlet passages connected to create a differential in the fluid pressure on the opposite sides of the piston to move said piston, a

housing for said pump, and a fluid guide tube extending through the piston, said tube providing a fluid inlet to said pump housing.



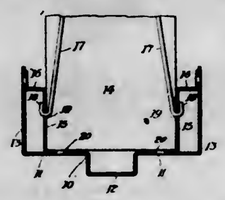
1,901,621. REGULATOR SYSTEM. JOHN H. ASHBAUGH, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 30, 1930. Serial No. 471,672. 10 Claims. (Cl. 290—4.)

1. In a speed-matching system, in combination, a dynamo-electric machine, a speed-reference means associated with the dynamo-electric machine, means for controlling the speed of the dynamo-electric machine comprising two centrifugal devices operated, respectively, in accordance with the speed-reference means and the speed of the dynamo-electric machine, means responsive to the two centrifugal devices for actuating means to operate the speed-varying means.



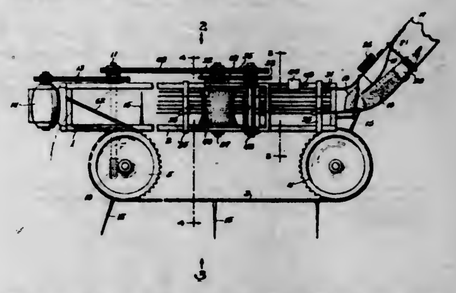
1,901,622. COMBINATION ORGAN STOP ACTION. JOHN T. AUSTIN, Hartford, Conn., assignor to The Austin Organ Company, Hartford, Conn., a Corporation of Connecticut. Filed May 7, 1932. Serial No. 609,828. 11 Claims. (Cl. 84—345.)

1. Organ stop operating mechanism comprising stop pulling means, means for actuating said stop pulling means, manually controlled means for initiating operation of said actuating means, and means for automatically



continuing the operation of said actuating means initially started by said manually controlled means after the latter has been released.

1,901,623. COMBINATION ORGAN STOP MECHANISM. JOHN T. AUSTIN, Hartford, Conn., assignor to The Austin Organ Company, Hartford, Conn., a Corporation of Connecticut. Filed May 7, 1932. Serial No. 609,829. 7 Claims. (Cl. 84—345.)

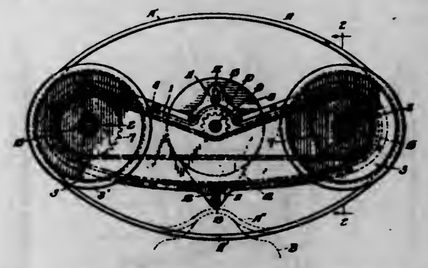


1. A mechanism for capturing a combination of organ stops comprising a plurality of rollers adapted to pull said stops, traces having adjustable cams thereon for independently engaging and moving said rollers, and common means for holding all of said rollers against movement while a trace is being drawn, whereby the cams on the drawn trace will be set in accordance with the positions of said rollers.

1,901,624. REENFORCED METAL JAMB. ISAAC A. BAUM, Chicago, Ill. Filed Apr. 7, 1930. Serial No. 442,243. 5 Claims. (Cl. 189—46.)

5. In combination with a masonry wall, a metallic frame structure, said structure comprising a metal channel-shaped jamb having substantially straight flanges adapted to embrace said wall, the side plane of the flanges adapted to lie coincident with the plane of a plaster portion of the wall, a flanged filler member rigidly secured to said jamb member and disposed in close engagement with an unplastered portion of said wall.

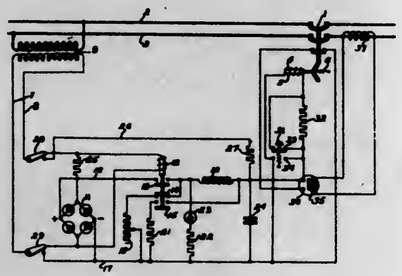
1,901,625. FISH SCALING DEVICE. CLARENCE BIRDSEYE, Gloucester, Mass., assignor, by mesne assignments, to Frosted Foods Company, Inc., Dover, Del., a Corporation of Delaware. Filed Apr. 3, 1928. Serial No. 266,935. 16 Claims. (Cl. 17—5.)



1. A machine of the character described comprising a chute for receiving fish, means for stopping a fish at a predetermined position in said chute, means for automatically engaging said fish while at said predetermined position and thereupon carrying the fish forward, and means for scaling the fish while being carried forward.

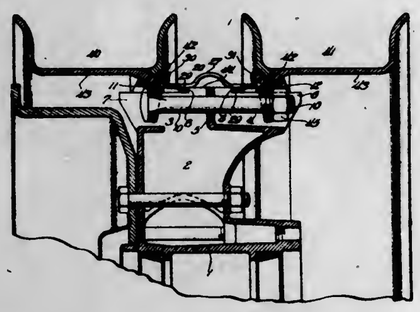
1,901,626. METHOD OF REFINING ROSIN. JOSEPH N. BORGLIN, Kenvil, N. J., assignor to Hercules Powder Company, Wilmington, Del., a Corporation of Delaware. Filed Jan. 24, 1930. Serial No. 423,273. 22 Claims. (Cl. 87—2.)

1. The method of refining rosin which includes treating rosin in solution in a solvent therefor with a solution of resorcinol in an aliphatic alcohol the rosin solvent being characterized by the fact that it is capable of immiscibility with the aliphatic alcohol, separating the rosin-solvent solution from the resorcinol-alcohol solution and recovering refined rosin from the rosin-solvent solution.



1,901,627. PORTABLE ABRADING AND POLISHING MACHINE. TRACY F. BRACKETT, Highland Park, Mich. Filed Aug. 28, 1931. Serial No. 559,993. 2 Claims. (Cl. 51—170.)

1. In a device of the class described, a housing having fixed bearings therein, shafts journaled in said bearings and disposed in spaced relation and extending beyond said housing, sprockets fast on said shafts in said housing, an endless chain directed about said sprockets, mounting means on said housing intermediate said bearings, a driving motor, a sprocket on the shaft of the motor and meshed with said chain, means adjustably securing said motor on said mounting means whereby said motor may be moved to tension said chain, said motor driving said chain to impart rotative movement to said shafts, flanged pulleys fast on the portions of said shafts extending beyond said housing, and an endless flexible belt directed about said pulleys and of greater length than required to be stretched taut around the pulleys, said belt having an abrading surface on the outer face thereof, said belt



being bowed outwardly by the centrifugal force developed during movement imparted to the belt whereby the abrading surface on the bowed portion of the belt may be engaged with and conformed to a surface to be abraded.

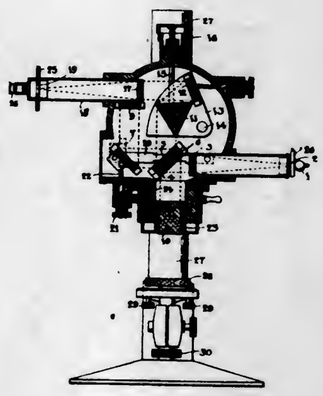
1,901,628. UNDERVOLTAGE DEVICE. MAURICE W. BRAINARD, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 25, 1929. Serial No. 380,859. 22 Claims. (Cl. 175—294.)

1. The combination with a circuit interrupter for an alternating-current circuit, of a device therefor energized from the said circuit and releasable to trip the circuit interrupter when the voltage of the circuit has decreased to a predetermined value, means in the circuit of the device to convert the alternating current to a direct current, and means for retaining the direct current for an interval above the drop-out value of the tripping device after the alternating current has decreased to a predetermined lower value.

1,901,629. DUAL WHEEL. FREDERICK W. BURGER, Niles, Mich., assignor to Clark Equipment Company, Buchanan, Mich., a Corporation of Michigan. Filed Dec. 19, 1930. Serial No. 503,433. 29 Claims. (Cl. 301—13.)

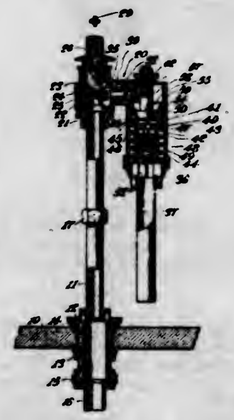
1. The combination of a felloeless wheel, a plurality of spokes in said wheel, a central disposed wall on the end of each spoke and in the plane of said wheel, a bolt projecting through each of said walls, a pair of wedges on each of said bolts, one on each side of the wall through which the bolt projects, a pair of rims having gutters against which said wedges press, and a single piece spacing ring engaging said rims and the ends of said spokes with portions on opposite sides of said walls to align the rims on said wheel.

1,901,630. METHOD OF HYDROGENATING ABIETIC ACID ESTER. ROLLIN J. BYRKIT, Jr., Marshalltown, Del., assignor to Hercules Powder Company, Wilmington, Del., a Corporation of Delaware. Filed Mar. 8, 1932. Serial No. 597,636. 28 Claims. (Cl. 260—98.)



1. The method of hydrogenating a rosin ester which includes heating an abietic acid ester under pressure in the presence of hydrogen and a metal chromite adapted to promote the addition of hydrogen to the unsaturated bonds of the rosin ester.

1,901,631. DIAPHRAGM. RICHARD W. CARLISLE, Oaklyn, N. J., and ROLAND W. NYE, Wilkinsburg, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 15, 1930. Serial No. 428,646. 8 Claims. (Cl. 181—32.)

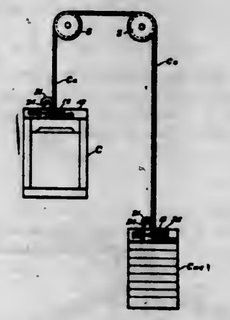


1. A sound diaphragm of molded material, at least one of the surfaces of said diaphragm being irregular and each surface of said diaphragm being covered by a layer of stiff material.

1,901,632. INTERFEROMETER. CLARK W. CHAMBERLAIN, East Lansing, Mich. Filed Sept. 5, 1929. Serial No. 390,552. 13 Claims. (Cl. 88—14.)

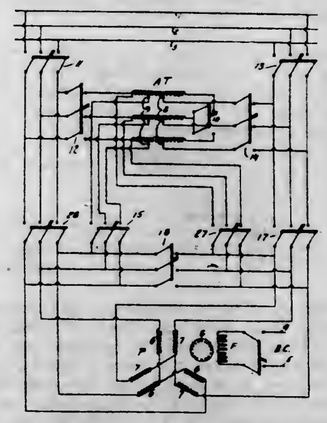
1. The method of optically measuring lengths which comprises the steps of separating a beam of white light into two interfering beams, which are ultimately reunited to form a continuous spectrum having dark bands in various numbers in definite relationship to the differences in length of the paths of such interfering beams, and adjusting the relative lengths of the paths of such interfering beams in relation to the length being measured, whereby the number of bands appearing in the spectrum indicate the length being measured.

1,901,633. BALL-COCK. HERBERT D. CLEMMONS, Sturgis, Mich., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed June 4, 1929. Serial No. 368,290. 12 Claims. (Cl. 137—104.)



1. In a ball-cock, in combination, a valve body or casing in the general shape of the letter U, said body being formed in two parts joined by a nipple and sealed together along the connecting bar of the U, a float controlled stop valve in one stem of the U, float actuated mechanism for operating said stop valve, said mechanism being disposed to leave clear the space above the other or outlet stem of the U, a throttle valve for restricting the flow of water from said stop valve, said throttle valve including a stem threaded through the cover of the body and a head disposed in the outlet portion of the body, a partition in said outlet having a conical grooved seat cooperating with said valve head, a plurality of juxtaposed oppositely directed spiral silencing passages receiving water from said throttle valve, a flow rectifying device including a series of radial plates receiving water from said spiral passages, and a refill channel opening into the body alongside said spiral passages.

1,901,634. REMOVABLE CHILL RING. DON G. DAWKINS, Huntington Park, Calif. Filed May 17, 1932. Serial No. 611,868. 2 Claims. (Cl. 113—102.)

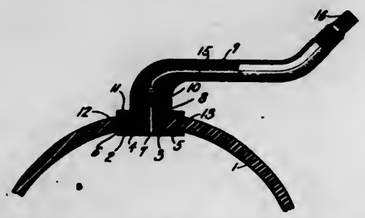


1. A removable chill ring for welding circumferential pipe joints, comprising: a ring of heat-conducting metal having an outside diameter slightly less than the inside diameter of the pipe to be welded; a rod having one end attached to and swiveled within said ring; a fulcrum adapted to fit within said pipe and to support said rod at an intermediate point, and sufficient weight in connection with said rod beyond said fulcrum to hold said ring in contact with the upper inner portion of said pipe.

1,901,635. SLACK CABLE TAKE-UP DEVICE. JAMES DUNLOP, Park Ridge, Ill., assignor to Westinghouse Electric Elevator Company, a Corporation of Illinois. Filed May 31, 1930. Serial No. 457,966. 3 Claims. (Cl. 187—1.)

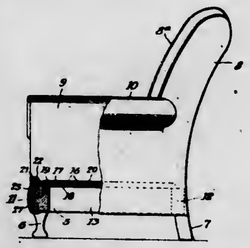
1. In a slack cable take-up device for elevators, an elevator car, a hoist cable for supporting the car, a movable pulley carried by the elevator car, a spring for biasing the pulley into deflecting relation with the tensioned hoist cable, said spring having insufficient strength to displace said cable while it is normally tensioned by the weight of the car, a pawl or latch carried with the movable pulley, stationary rack teeth cooperating with said pawl or latch to prevent movement of the pulley in a direction in opposition to the biasing spring by the tension of the cable, and a stationary idler pulley mounted to engage the hoist cable on the opposite side and above the movable pulley.

1,901,636. ELECTRIC MOTOR STARTING SYSTEM. RUPERT NUCKOLLS EARLY, Minneapolis, Minn., assignor to Electric Machinery Manufacturing Company, Minneapolis, Minn., a Corporation of Minnesota. Filed July 8, 1930. Serial No. 465,572. 14 Claims. (Cl. 172—274.)



1. The method of starting an electric motor having a primary winding comprising at least two separately energizable winding sections which comprises successively supplying increasing reduced terminal voltages alternately to the winding sections and successively supplying full terminal voltage to the winding sections.

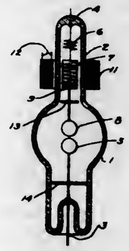
7. The combination of an electric motor having a primary winding comprising a plurality of separately energiz-



able winding sections, a source of alternating current, a voltage changing device, means for connecting said device to said source, separate means for selectively supplying voltages other than full voltage from said device to the terminals of each of said winding sections, and means for selectively supplying full voltage from said source to the terminals of each of said winding sections.

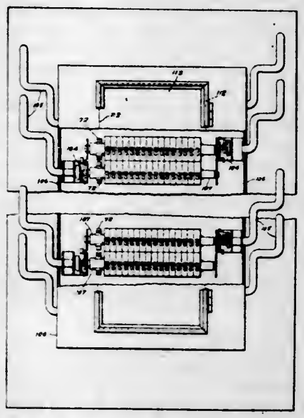
1,901,637. INTERCHANGEABLE TIRE VALVE. ERNST EGER, Detroit, Mich., assignor to Morgan & Wright, Detroit, Mich., a Corporation of Michigan. Filed Apr. 16, 1930. Serial No. 444,859. 5 Claims. (Cl. 152—12.)

1. A valve for inner tubes comprising a base portion having a flange adapted to contact with the inner wall of the inner tube and a stud portion adapted to project through and clear of the wall of the inner tube, in combination with a stem portion adapted to be attached to said base portion, said stem portion having a flange adapted to cooperate with the flange of said base portion to clamp the two portions in service position on the inner tube, the tube contacting surface of at least one of said flanges having spaced projections, each projection extending outwardly from a central passageway to near the edge of said flange or flanges for preventing rotation in service of said flange with respect to said tube in at least one direction, and a raised rib surrounding said projections for preventing fluid leakage around said valve.



1,901,638. FURNITURE. ALBERT ERNEST, Chicago, Ill. Filed Dec. 5, 1929. Serial No. 411,915. 5 Claims. (Cl. 155—184.)

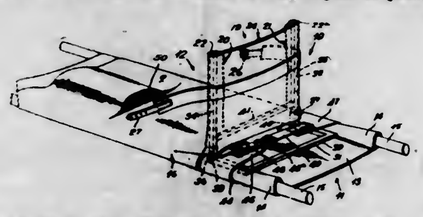
1. In furniture, in combination, a substantially horizontal underframe comprising front, end and rear rails forming a structure adapted to be supported at a predetermined height above the floor, a netting secured to the top surfaces of said rails and extending across the underframe at substantially the same height as said top surfaces and privided with a retaining roll, and a removable spring filled cushion member supported on said rails and netting and retained by said retaining roll, said cushion being of a depth substantially equal to the height of said underframe from the floor.



4. In furniture, a frame comprising spaced side and end rails, a netting spanning the space between said rails, a bottom lining secured to the top of one of said rails beneath said netting, a fabric roll blind tacked to the top of said rail and extending to said netting, and a top lining over said netting, and blind tacked, together with the inner edge of said fabric roll, adjacent to the rear edge of said rail.

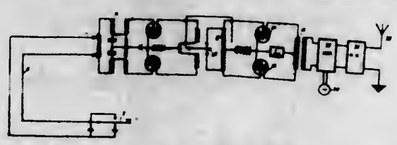
1,901,639. VACUUM CIRCUIT BREAKER. OTTO H. ESCHHOLZ, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 6, 1923, Serial No. 630,266. Renewed Aug. 11, 1932. 2 Claims. (Cl. 200—144.)

1. A circuit interrupter comprising a vacuum-tight container and a pair of separable contact members comprising one of the materials calcium, magnesium.



1,901,640. THEATER SWITCH PANEL. BERT F. FULLER, Burlingame, Calif., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Original application filed July 14, 1923, Serial No. 651,658, now Patent No. 1,760,943, dated June 3, 1930. Divided and this application filed Apr. 23, 1930. Serial No. 446,677. 9 Claims. (Cl. 175—298.)

1. Switch mechanism comprising a plurality of parallel conductors, a movable conductor extending transversely of the other conductors, a group of contact members adapted to be simultaneously engaged by the movable conductor and separate switches for selectively connecting the contact members to the parallel conductors.



1,901,641. STRETCHER. LOUIS E. GOLDBLATT, Brooklyn, N. Y. Filed June 19, 1931. Serial No. 545,444. 7 Claims. (Cl. 5—82.)

1. In combination with a stretcher comprising an elongated flexible sheet having parallel sleeves at the side edges thereof, and poles within said sleeves and extending from the outer ends thereof and forming handles for carrying the stretcher, said stretcher being adapted to support a person lying thereon, and means on said stretcher for retaining the upper portion of the body of a person carried on said stretcher in upright position, said means comprising a frame having a portion resting on said flexible sheet and between said poles, and an upright portion pivoted to said first portion and having a pair of parallel

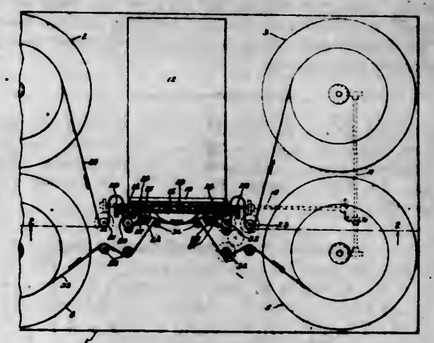
upstanding arms, a flexible sleeve disposed about said stretcher, straps extending from said sleeve disposed about said first portion of said frame for attaching said frame to said stretcher, and a flexible back-rest having sleeve portions at the ends thereof for removably receiving said arms.

1,901,642. SIGNALING. CLARENCE W. HANSELL, Port Jefferson, N. Y., assignor to Radio Corporation of America, a Corporation of Delaware. Filed Dec. 23, 1929. Serial No. 416,058. 12 Claims. (Cl. 250—8.)

1. The method of signaling which includes transmitting carrier energy modulated with signal phase displaced, low frequency energy, collecting a portion of the transmitted carrier energy, synchronising locally generated energy with the low frequency component of the collected energy by utilising even numbered multiple harmonics of the energies to be synchronised and utilising the synchronised energy and the low frequency component for translation.

1,901,643. DRILL BIT. GEORGE G. HARRINGTON, Houston, Tex., assignor to Reed Roller Bit Company, Houston, Tex., a Corporation of Texas. Filed May 8, 1928. Serial No. 275,997. 9 Claims. (Cl. 255—61.)

1. A drill bit head having a groove extending through the bottom thereof, the side walls of said groove being convergent in opposite directions from the periphery of said head toward the longitudinal axis of said head, and convergent from the bottom of said head toward the bottom of said groove.



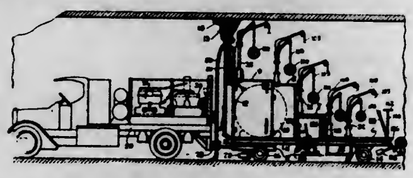
1,901,644. DUPLEX PICTURE HANGER. CLARENCE W. HARSIN, Pasadena, Calif. Filed June 22, 1932. Serial No. 618,669. 4 Claims. (Cl. 40—145.1.)

1. A device of the class described, comprising a sheet metal body having tangs struck out of the body and extending laterally from opposite sides thereof, one tang being bent on a fold line at its top and the other tang being bent on a fold line at its bottom, said fold lines being parallel, the centers of the fold lines being in verti-

cal alignment, each tang being longer than half the distance between the fold lines, and the openings formed by the struck out tangs extending from the fold lines of their own respective tangs toward the opposite fold lines.

1,901,645. FILM PRINTING MACHINE. ADOLF HEINE, Berlin-Lichtenberg, and FRIEDRICH WILHELM DUSTMANN, Berlin, Germany, assignors to General Electric Company, a Corporation of New York. Filed Oct. 30, 1930, Serial No. 492,328, and in Germany Oct. 30, 1929. 2 Claims. (Cl. 95—75.)

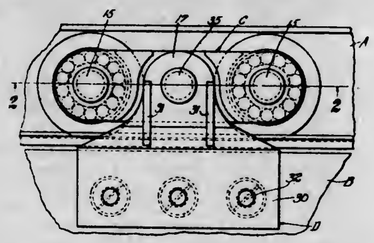
1. A film printing machine comprising a member having a convex surface having therein an exposing window means for drawing a record film and a print film over said surface, guiding means for one of said films, means for adjusting the position of said member and said guiding means laterally with respect to the other film and a motor connected to drive said films.



1,901,646. TOOTHBRUSH. HARRY W. HICKS, Brookline, Mass. Filed Apr. 8, 1931. Serial No. 527,377. 2 Claims. (Cl. 15—167.)

1. A tooth brush comprising a plurality of rows of bristles, the bristles in the central row being relatively short and of substantially uniform length from one end of the row to the other, the bristles in the outer rows being varied in length from a maximum near the middle of the brush to minima at its ends, presenting arcuate contours on the side faces of the brush to facilitate rock-

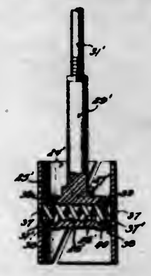
ing of the brush around the inner arcuate surface of the row of teeth in each jaw, the arrangement and trim of the bristles being such as to provide simultaneous end-bristle contact with the grinding and side surfaces of one or more teeth and portions of the gum surfaces adjacent thereto.



1,901,647. CLEANING MACHINE. WERNER T. HOWALD, EUGENE H. KLINGELFUSS, and FREDERICK P. KENNY, Brooklyn, N. Y. Filed June 22, 1929. Serial No. 372,974. 11 Claims. (Cl. 15—21.)

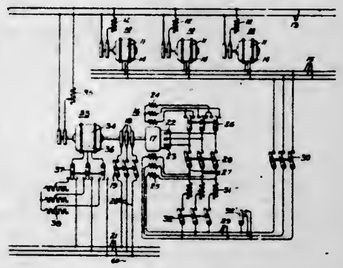
1. In a machine of the character described, a body, platforms in stepped formation on the body, surface engaging members supported on said stepped platforms and movable relatively thereto, and means for supplying a liquid to said members.

4. A machine for operating upon a ceiling surface comprising a wheeled body, a frame on the body, a frame support, means for raising and lowering the frame in the support, a plurality of ceiling engaging brushes carried by the frame, and yieldable members interposed between said frame and support.



1,901,648. DOOR HANGER. FRANK E. HOWARD, Hartford, Conn., assignor to James L. Howard & Company, Hartford, Conn., a Corporation of Connecticut. Filed Apr. 10, 1931. Serial No. 529,027. 3 Claims. (Cl. 16—98.)

1. In a door hanger, the combination of a carriage having a link provided with a centrally disposed rearwardly extending boss, said link also having a recess at its central portion and in its forward face, said boss having a through opening, there being provided a rabbet at the forward end of said opening, pins connected to the respective ends of said link and extending rearwardly therefrom, sheaves carried by said pins, an attaching plate having an ear positioned in the recess of said carriage, a pin secured to said ear and having a flange engaging the rear face of the ear and a threaded body portion extending rearwardly from the flange, said flange engaging in said rabbet and said threaded body portion extending into said boss, a bushing screwed onto the threaded portion of said pin and journalled in said boss, and means on said bushing for preventing withdrawal of the pin and bushing from the boss.



1,901,649. VALVE. ORLANDO B. HUBBS, Milwaukee, Wis. Filed Dec. 29, 1930. Serial No. 505,324. 5 Claims. (Cl. 251—78.)

2. The combination of a cylindrical valve chamber having a port in the wall thereof, a hollow cylindrical valve within said chamber for controlling said port, said valve being longitudinally split to permit expansion thereof into sealing contact with the walls of said chamber, a coil

spring fixed in said valve and extending across the same, and an operating stem mounted on said spring and flexibly connected to said valve through said spring.

1,901,650. SPEED CONTROL. JOHN I. HULL, Swampscott, Mass., assignor to General Electric Company, a Corporation of New York. Filed Jan. 7, 1931. Serial No. 507,211. 18 Claims. (Cl. 172—274.)

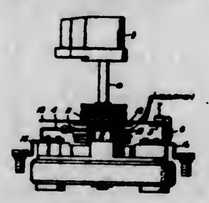
1. In combination, an alternating current motor having relatively rotatable windings, one of which constitutes its primary winding, and means connected to the primary winding for impressing on said primary winding a variable frequency voltage which has one component of a substantially constant value for overcoming the resistance drop in the primary winding and another component whose value is substantially directly proportional to the frequency for overcoming the reactive drop and the counter-electromotive force in the primary winding.

11. The method of operating an alternating current motor at variable speed with a substantially constant value of primary current in said motor at all speeds including zero speed, the said method consisting of impressing on the primary winding of said motor a variable frequency voltage which has one component of a substantially constant value to overcome the resistance drop in the primary winding and another component whose value is substantially directly proportional to the impressed frequency to overcome the reactive drop and the counter electromotive force in the primary winding.

1,901,651. NONREFILLABLE CONTAINER FOR POWDER. LEOPOLD KAHN, Mannheim, Germany, assignor to Paul Peter Muelhens, doing business as Eau de Cologne- & Parfümerie-Fabrik "Glockengasse No. 4711" Gegenüber der Pferdpost von Ferd. Mülhens, Cologne-on-the-Rhine, Germany. Filed Feb. 8, 1932, Serial No. 590,625, and in Germany Sept. 9, 1931. 1 Claim. (Cl. 132—83.)

A non-refillable face powder container comprising a receptacle hollowed out to contain powder, a cover piece around said receptacle and having an inturned top flange bordering said hollowed out part of the receptacle, a flexible

sieve resting on said inturned flange, a retaining band around said cover, an inturned flange on the upper end of said retaining band and extending over the border of the



sieve to retain the same in place during use and an inturned flange on the lower part of said retaining band and embracing the bottom of the cover piece.

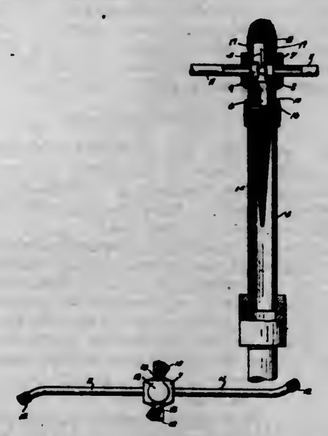
1,901,652. LIQUID PURIFICATION. ROBERT H. KEAN, Chicago, Ill., assignor to General Zeolite Co., Chicago, Ill., a Corporation of Illinois. Filed Aug. 25, 1928. Serial No. 302,011. 11 Claims. (Cl. 204—25.)

1. A process of electro-osmotically treating a liquid by causing a body of said liquid to flow between positive and negative electrodes, impressing upon said liquid an electro-motive force by means of said electrodes, separating said body of liquid being treated from said electrodes by means of diaphragms and other bodies of liquid, flowing said last mentioned bodies of liquid between and in contact with said diaphragms and said electrodes, and maintaining the surfaces of said body of liquid being treated at a substantially higher level than the surfaces of said bodies of liquid flowing between and in contact with said diaphragms and said electrodes.

1,901,653. ELECTRIC SWITCH. LESLIE A. KEMPTON, Bridgeport, Conn., assignor to General Electric Company, a Corporation of New York. Filed Aug. 28, 1931. Serial No. 559,958. 4 Claims. (Cl. 200—7.)

1. An electric switch comprising a base of insulating material, three stationary contacts secured to said base 90° apart and having contact surfaces in the same plane, a polepiece having three radial projecting arms and adapted to engage the contact surfaces of said three stationary contacts in different combinations, a fourth stationary contact secured to the base opposite one of the three stationary contacts with its contact surface in a different plane from the common plane of the three stationary contacts, an auxiliary stationary contact secured adjacent the fourth stationary contact having a resilient arm projecting over the contact surface of said fourth stationary contact, and a disc of insulating material separating said fourth and auxiliary contacts except in one position.

1,901,654. CUTTING TOOL AND PROCESS OF MAKING IT. THOMAS KEAR, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 31, 1929. Serial No. 336,551. 11 Claims. (Cl. 76—101.)



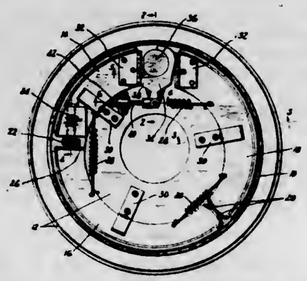
1. In combination, a tool comprising a shank portion and a cutting tip, said tip consisting largely of a carbide of metal from a group consisting of tungsten and molybdenum but containing an appreciable amount of an element of the iron group, the juxtaposed surfaces of said tip and shank being in substantially parallel planes, said tip being welded to said shank only at the exposed edge portions of said tip.

8. The method of securing a tool tip, consisting largely of a carbide of metal from a group consisting of tungsten and molybdenum but containing an appreciable amount of an element of the iron group, to a supporting shank, which comprises placing the tip on the shank so that the juxtaposed surfaces of the tip and shank are in substantially parallel planes, and locally heating the shank and tip at their contact edges to a welding temperature.

9. The method of securing a tool tip, consisting of a carbide of metal from a group consisting of tungsten and molybdenum but containing an appreciable amount of an element of the iron group, to a tool shank, which comprises providing a recess in the shank, mounting the tip in the shank so that the juxtaposed surfaces of the tip and shank are in substantially parallel planes, locally heating the adjacent edge portions of the shank and tip to a welding temperature and applying molten metal to the junction of the tip and shank.

1,901,655. LAWN SPRINKLER. JOHN H. KEYS, Dayton, Ohio. Filed Apr. 1, 1929. Serial No. 351,510. 8 Claims. (Cl. 299—69.)

6. In a rotary sprinkler, a rotary sprinkler head, a stationary trunnion upon which said head is mounted and extending through said head, an annular flange upon the



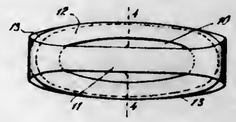
head surrounding the trunnion, and a cap member stationarily secured to the trunnion and including a dependent flange overlapping the flange upon said head within which the enclosed portion of the head is relatively revoluble.

7. A rotary sprinkler, including a rotary distributor head, reaction jet arms having nozzles carried thereby for transmitting rotary motion to the head, the reactions of the jet arms producing a torque having its axis concentric with the axis of rotation, and inclined jet nozzles carried by said head, the reactions of which produce a torque concentric with said axis but unequally opposed to the torque of said jet arms, the inclination of which to the horizontal is variable so as to change the torque of the same, and means for supplying water under pressure to the rotary head.

1,901,656. STABLE SUSPENSIONS. OSKAR KRAMER, Oppau, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed Mar. 16, 1931, Serial No. 523,201, and in Germany Mar. 29, 1930. 5 Claims. (Cl. 252—6.)

2. As new articles of manufacture stable suspensions, of which the solid phase comprises at least one material capable of forming metal carbonyl and the liquid phase comprises a liquid metal carbonyl and water.

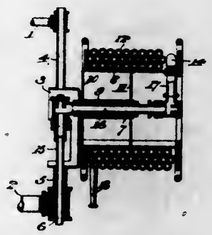
1,901,657. BRAKE. LUDGER E. LA BRIE, South Bend, Ind., assignor to Bendix Brake Company, South Bend, Ind., a Corporation of Illinois. Filed Jan. 30, 1929. Serial No. 336,129. 9 Claims. (Cl. 188—78.)



1. A brake comprising three segmental shoes arranged end to end and extending substantially a full circumference, two of the shoes having parts in disconnected thrust engagement with each other, and the third having a part adjustably mounted thereon and having disconnected thrust engagement with one of the first two shoes.

1,901,658. PROCESS OF TREATING SPINNERETS. JEAN LADRETTE, Peage de Roussillon, France, assignor to Du Pont Rayon Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 19, 1931. Serial No. 523,937. 4 Claims. (Cl. 18—54.)

1. A method of bringing a spinneret employed in the dry spinning process into proper spinning condition, either substantially immediately prior to the beginning of spinning or at any necessary time during spinning, which comprises applying to the face of the spinneret in spinning position a non-solvent for the solute in the spinning solution and wiping the face of said spinneret.

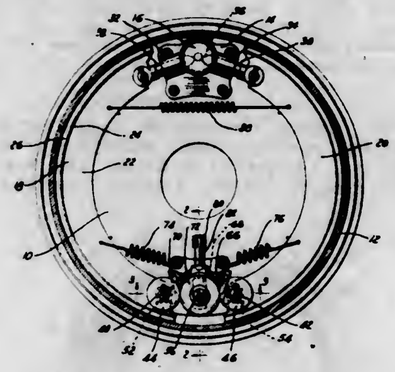


1,901,659. INSTEP PROTECTOR. FRANK A. LARACK, New York, N. Y. Filed May 11, 1931. Serial No. 536,425. 2 Claims. (Cl. 2—61.)

1. A continuous flat elastic band adapted to surround the foot comprising a widened portion arranged to overlie the instep of the foot to cover the part thereof which underlies the instep band of a low cut shoe and a single narrow portion arranged to pass under the foot, a layer

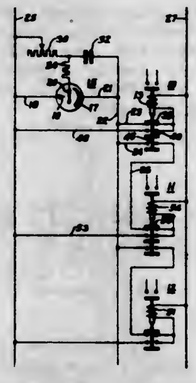
of similar material over the widened portion of the band with its edges affixed thereto, the central portion of said layer being cut away to form an elongated pocket.

1,901,660. HOSE REEL. RUDOLPH O. LUND, New York, N. Y., assignor to Croker Fire Prevention Corp., New York, N. Y., a Corporation of New York. Filed May 11, 1932. Serial No. 610,544. 12 Claims. (Cl. 299—78.)



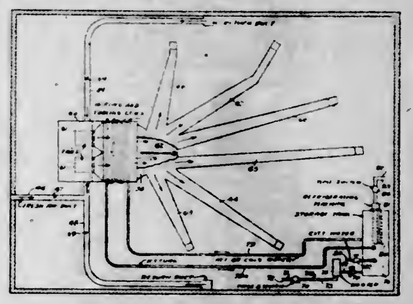
1. In a hose reel, a hose carrying drum, a support therefor including a hollow laterally disposed member on which the drum is rotatably mounted, and an independent fluid supply line extending through said laterally disposed member and connected to the hose wound on the drum.

1,901,661. REFLECTIVE DISPLAY DEVICE. WINTHROP D. MACCOURT, TOM F. WALSH, and FRANK H. RASMUSSEN, Chicago, Ill., assignors to Magill-Weinsheimer Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 2, 1931. Serial No. 527,274. 6 Claims. (Cl. 40—126.)



1. In a display device, a flat display member having illustrative material on the forward and rear faces thereof, and a reflective member positioned to the rear of said display member and adapted to reflect, to the eye of an observer, the rear face of the display member, both the direct and the reflective images being simultaneously observable by the observer, and combined spacing and supporting means adapted to maintain the display member and the reflective member in spaced relationship, and additional means for maintaining the reflective member in upright position.

1,901,662. BRAKE. JOHN P. MAHONEY, South Bend, Ind., assignor to Bendix Brake Company, South Bend, Ind., a Corporation of Illinois. Filed Apr. 27, 1931. Serial No. 533,237. 2 Claims. (Cl. 188—78.)

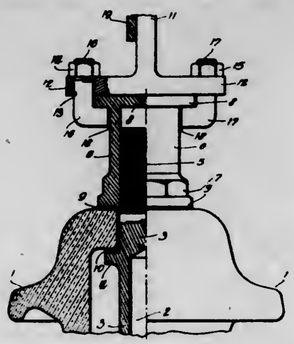


1. A brake of the type having a drum and a backing plate at the open side of the drum and shoes within the drum having an operating wedge movable between their ends radially of the drum, and having a conduit fixed at its end to the backing plate and an operating cable extending therethrough and means operated by the cable for operating said wedge.

1,901,663. CONTROL SYSTEM. WILLIAM A. MINKLER, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 17, 1931. Serial No. 530,926. 17 Claims. (Cl. 175—320.)

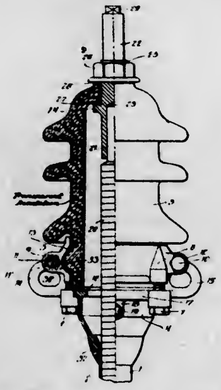
1. A control system, in combination, a supply of electrical energy for the control system, an electric-discharge device having a plurality of electrodes connected in circuit relation with the supply of electrical energy, a timing circuit associated with the electrodes to control the operation of the discharge device, a current-responsive means connected in circuit with the discharge device and controlled thereby, means operated by the current-responsive means to disconnect it from the discharge device, and a holding circuit, whereby the current-responsive means is energized independently of the discharge device.

1,901,664. COOLING COIL, STORAGE TANK, AND MEANS FOR COOLING THE WATER IN THE TANK. CLARK T. MORSE and EDWARD L. HOGAN, Detroit, Mich., assignors to American Blower Corp., Detroit, Mich., a Corporation of Delaware. Original application filed Feb. 12, 1931, Serial No. 515,368. Divided and this application filed Dec. 4, 1931. Serial No. 579,092. 3 Claims. (Cl. 62—129.)



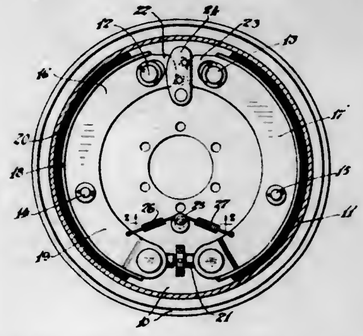
2. In combination, cooling coils, an air circulation system enclosing said coils, through which air is delivered to and from an enclosure, a storage tank for liquid, means for cooling the liquid in said storage tank, and means for modifying the temperature of the liquid in the cooling coils by the use of the storage liquid, without direct contact between the liquid in the storage tank and the cooling coils.

1,901,665. FLEXIBLE CONNECTER FOR CABLE TERMINATORS. JOSEPH RAH, Chicago, Ill., assignor to The Delta-Star Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 22, 1930. Serial No. 422,535. 1 Claim. (Cl. 173—358.)



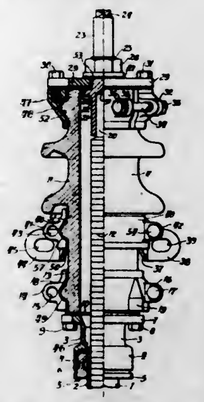
The combination with a cable terminator having a stud member extending therefrom and constituting the conducting terminus of a cable, means for establishing an electrical connection between said stud member and a bus bar, said means comprising a cooperating conducting member adapted to be secured to the stud in firm electrical engagement therewith, a flexible braided conductor secured at one end to the conducting member, and a terminal secured to the opposite end of the flexible conductor, said terminal being flat on its opposite sides, said sides constituting clamping surfaces to facilitate clamping of the terminal to a bus bar, the flexible conductor comprising the sole mechanical connection between the conducting member and the terminal thereby permitting complete freedom of movement of the terminal with respect to the conducting member within the limits of the length of the flexible conductor.

1,901,666. CABLE TERMINATOR CAP ASSEMBLY. JOSEPH RAH, Chicago, Ill., assignor to The Delta-Star Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 22, 1930. Serial No. 422,536. 1 Claim. (Cl. 173—353.)



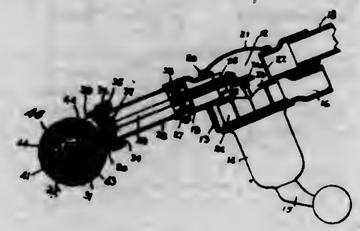
In combination, a hollow body of insulation having a top portion provided with an opening, a conducting stud provided with a peripheral flange intermediate its ends, said stud being externally threaded on one side of the flange and provided with an internal longitudinal bore on the other side of the flange for receiving the end of a cable conductor, the threaded end of the stud being projected outwardly through the opening in said top portion, a gasket on the flange, said gasket bearing against the inside of the top portion and providing a sealing closure for said opening, a conducting bushing threaded on the stud and bearing on the outside of said top portion to prevent the withdrawal of the stud through the opening, said bushing having a seating surface at its end remote from the body of insulation, a terminal member seated on said seating surface and freely movable thereon in a plane normal to the axis of the stud and having a flat contact making portion at right angles to said plane, and means for clamping the terminal member in position on said seating surface for adjustably fixing the position of the flat contact making portion of the terminal.

1,901,667. CABLE TERMINATOR. JOSEPH C. RAH, Chicago, Ill., assignor to The Delta Star Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 6, 1930. Serial No. 500,455. 4 Claims. (Cl. 173—353.)



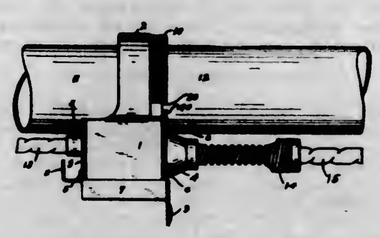
4. In a device for establishing a cable connection, a hollow insulator open at both ends and having adjacent one end but spaced therefrom an integrally formed peripheral bead merging with the body of the insulator in continuous curves free of sharp corners both above and below the bead, a split clamp surrounding the bead and of an internal curvature mating with the curvature of the bead and embracing the upper and lower continuously curved surfaces thereof whereby the clamp is permitted a limited degree of angular adjustment longitudinally of the insulator along the upper and lower continuously curved surfaces merging the bead with the body of the insulator.

1,901,668. BRAKE. HERBERT W. POEHLMAN, South Bend, Ind., assignor to Bendix Brake Company, South Bend, Ind., a Corporation of Illinois. Filed Mar. 26, 1930. Serial No. 438,964. 4 Claims. (Cl. 188—78.)



1. A brake comprising a backing plate, a drum associated therewith, braking elements positioned on the backing plate adapted to co-operate with the drum, springs for returning the braking elements to the off position and means including an eccentric connected between the springs for balancing the tension of the springs.

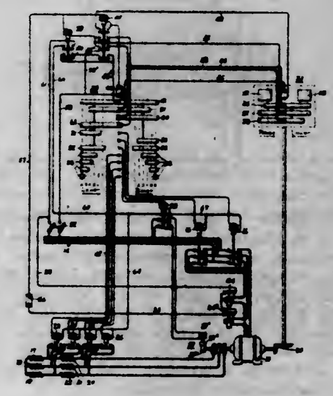
1,901,669. CABLE TERMINATOR PROVIDED WITH MEANS FOR INSULATING ENDS OF CABLE SHEATHS. JOSEPH RAH, Chicago, Ill., assignor to The Delta-Star Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 8, 1930. Serial No. 426,815. 11 Claims. (Cl. 173—353.)



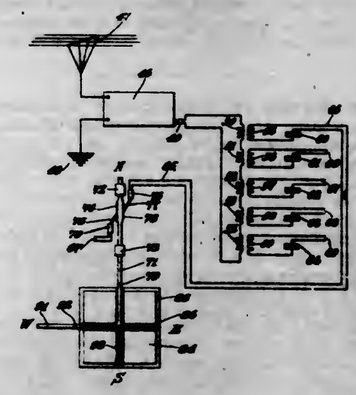
2. In a device for establishing a cable connection, a hollow insulator open at both ends and having flat seating surfaces at each end, and having adjacent said seating surfaces but spaced therefrom peripheral beads formed integrally with and merging with the body of the insulator in continuous curves free of sharp corners both above and below the beads, split clamps surrounding said beads and of an internal curvature mating with said beads whereby each clamp is permitted a limited degree of angular adjustment longitudinally of the insulator along the upper and lower continuously curved surfaces merging its bead with the body of the insulator.

1,901,670. FLOOR POLISHER. FREDERICK RIEBEL, Jr., and DEWEY M. DOW, Toledo, Ohio, assignors to Air-Way Electric Appliance Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Aug. 27, 1929. Serial No. 388,769. 8 Claims. (Cl. 15—49.)

1. In combination with a motor and handle assembly including a gear casing and a motor driven shaft projecting into said casing; a shank extending from said casing, a transmission shaft extending longitudinally through said shank and projecting into said casing, co-acting gears on said transmission shaft and motor shaft respectively, and a rotatable polishing member journalled in the end of said shank and geared to said transmission shaft for rotation around its own axis and the axis of the transmission shaft.



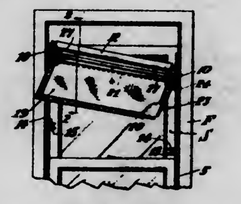
1,901,671. ELECTRIC SWITCH. FREDERICK RIEBEL, Jr., and DEWEY M. DOW, Toledo, Ohio, assignors to Air-Way Electric Appliance Corporation, Toledo, Ohio, a Corporation of Delaware. Filed June 3, 1931. Serial No. 541,784. 13 Claims. (Cl. 200—52.)



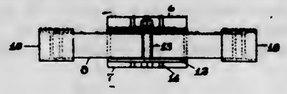
1. In combination with a handle, a supporting ring encircling said handle and thereby supported, a switch housing carried by said ring and projecting from one side of the handle, and a switch actuator ring oscillatorily mounted on said supporting ring and encircling the handle.

1,901,672. MOTOR CONTROL SYSTEM. JOSEPH A. SPITZER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 12, 1931. Serial No. 556,599. 14 Claims. (Cl. 172—239.)

1. In a motor control system, the combination with an electric motor, of control means for connecting said motor to a supply source and disconnecting said motor therefrom, means for stopping said motor at a predetermined limit of operation, means for continuing the operation of said motor beyond said limit, and means insuring the disconnection of said motor from said source prior to the operation beyond said limit.

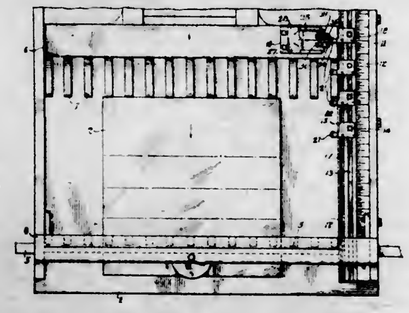


1,901,673. ELECTRICAL CONTROLLING APPARATUS. MILTON BLAKE SLEEPER, New York, N. Y., assignor, by mesne assignments, to Television Products, Inc. Filed Nov. 15, 1928. Serial No. 319,521. 7 Claims. (Cl. 178—18.)



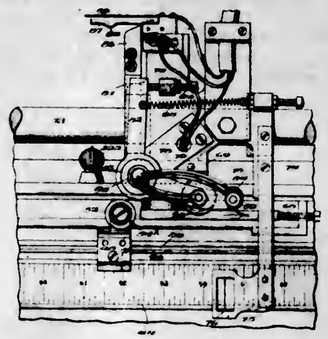
1. In combination, means for producing graphic subjects, a radiographic transmission apparatus connected thereto adapted to operate by transmitting different audio frequencies according to the movements of the producing means, means for registering the transmitted radiographic subject, and a radiographic receiving apparatus for actuating the same from the transmitting apparatus by means of the different audio frequencies received from the transmitting apparatus, the receiving apparatus comprising a filter for separating the transmitted audio frequencies, a separate audio frequency being provided for each direction of movement of the apparatus in the three dimensions in the production of the two dimensional subject transmitted.

1,901,674. ADJUSTABLE MOUNTING FOR WINDOW SHADES. NATHAN SLOBOTKIN, Brooklyn, N. Y. Filed Feb. 9, 1932. Serial No. 591,802. 3 Claims. (Cl. 156—27.)



1. In a device of the character described, a guide adapted to be attached to one side of a window frame to extend vertically thereof, a supporting bracket, manually adjustable means vertically movable along said guide, and means connecting said bracket with said manually adjustable means normally supporting the bracket in parallel relation to the guide and cooperating with the bracket and the guide to support said bracket for movement to and from a laterally inclined position out of parallel relation with the guide.

1,901,675. SIDE BEARING. FRANS JOEL SUNDHOLM, Bellevue, Pa., assignor to Pressed Steel Car Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Nov. 6, 1930. Serial No. 493,774. 10 Claims. (Cl. 105—4.)

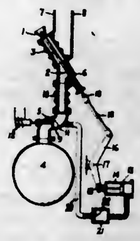


10. A side bearing for an articulated unit comprising a base member, a member common to both adjacent connecting bodies and resilient means between said members.

1,901,676. PAPER CUTTER. ARTHUR KIRKBRIDE TAYLOR, Baltimore, Md., assignor to United States Printing and Lithograph Co., Baltimore, Md., a Corporation of Ohio. Filed Dec. 23, 1929. Serial No. 416,013. 28 Claims. (Cl. 164—48.)

28. In a cutting machine, a cutter, a pusher for feeding material to the cutter, means for intermittently actuating the pusher, means for actuating the cutter, means spaced in any predetermined relation corresponding to the length of material to be cut and arranged stationarily upon the machine, and stopping means for the said pusher actuating means including coacting means movable in predetermined relation with the pusher, and responsive to said spaced means, said coacting means being adapted to overrun said spaced means when the pusher actuating means resumes operation after a cut has been made.

1,901,677. MATERIAL FORWARDING MECHANISM. ARTHUR K. TAYLOR, Baltimore, Md. Filed Dec. 8, 1930. Serial No. 500,796. 20 Claims. (Cl. 164—48.)

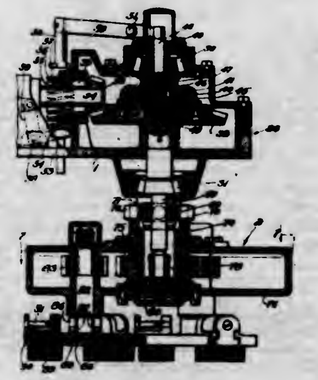


1. A sheet cutting machine including means for cutting sheet material, means for forwarding the sheet material relatively to the cutting means, means to stop said forwarding means at any predetermined point including members movable in a path proportionately to the travel of said forwarding means coacting with a stop means settable along said path at any predetermined point, said stop means coacting successively with said movable members to first slow down and then stop said forwarding means.

1,901,678. METHOD OF MAKING TEXTILE MATERIAL PERMANENTLY FLEXIBLE, WEATHERPROOF, AND FIRE RESISTANT. HARRY W. TURNER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 25, 1932. Serial No. 601,304. 1 Claim. (Cl. 91—68.)

A method for treating textile material which consists in singeing the surfaces thereof, incorporating powdered talc into the pores thereof, impregnating the material so treated with degelled linseed oil, air drying the material and again incorporating powdered talc therewith.

1,901,679. GAS BLAST CIRCUIT BREAKER. WERNER UHLEMUTH, Oberschoneweide, Germany, assignor to General Electric Company, a Corporation of New York. Filed Mar. 8, 1932, Serial No. 597,585, and in Germany Mar. 10, 1931. 5 Claims. (Cl. 200—148.)

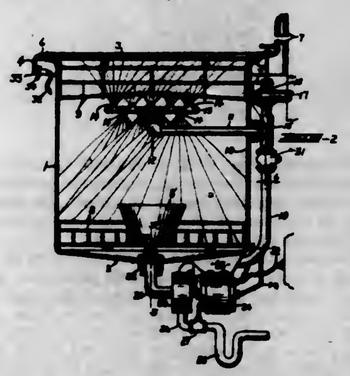


1. A gas blast circuit breaker comprising relatively movable contacts, a source of gas pressure, a valve controlling flow of gas from said source for extinguishing arcing between said contacts and for causing separation thereof, and means for completing separation of said contacts after closure of said valve.

1,901,680. BALANCED RAILROAD CROSSING GATE. GEORGE VARCHETTA, Brooklyn, N. Y. Filed Sept. 4, 1931. Serial No. 561,167. 12 Claims. (Cl. 246—293.)

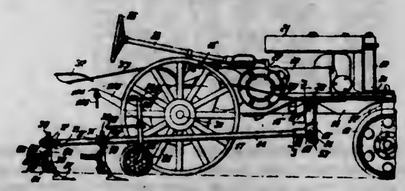
1. In automatically operated railroad crossing gates, gates at the crossing, a whistle at the crossing, gate operating mechanism positioned ahead of the crossing, whistle operating mechanism positioned ahead of the gate operating mechanism, a train, means on said train for operating said whistle operating mechanism to blow the whistle and for operating said gate operating mechanism to lower the gates and silence the whistle, locking means holding said gate operating mechanism with the gates lowered, and means releasing said locking means as the train leaves the crossing, said operating mechanism operating to raise the gates as the locking means is released.

1,901,681. FLOOR SURFACING MACHINE. JOHN J. VICHNZI, Boston, Mass. Filed Oct. 10, 1929. Serial No. 398,682. 5 Claims. (Cl. 51—177.)



1. A machine of the character described comprising a truck including a body; a motor mounted on said body; a rotatable head for operating upon the floor including a frame carrying a plurality of vertically disposed spindles journaled on said frame each of which is provided at its lower end with a floor engaging tool; means through which said motor rotates said head including a vertical shaft journaled on and supported by said truck body; a universal joint connecting the lower end of said shaft with said head so that the latter can tilt laterally in all directions relatively thereto and through which said shaft rotates said head, and gearing carried by said head for rotating said spindles on their own axes as said head is rotated, said gearing including a master gear that is concentric with respect to the axis of said head, and a universal joint connecting said master gear with said body by which said master gear is held against rotating with said head and by which one end of said body is supported.

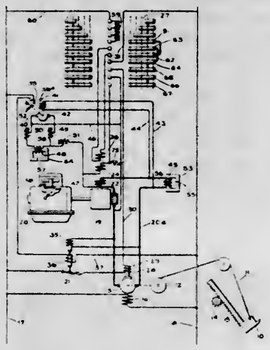
1,901,682. BOTTLE CLOSURE. ALBIN H. WARTH, Baltimore, Md., assignor to Crown Cork & Seal Company, Inc. New York, N. Y., a Corporation of New York. Filed Apr. 4, 1930. Serial No. 441,461. 8 Claims. (Cl. 215—39.)



1. A bottle closure embodying therein a metal shell, and a cushion disk formed of cork provided with a thin transparent coating of non-absorbent, acid resisting, infusible, non-oxidizing material having inherent resiliency and elasticity.

1,901,683. MECHANICAL DISHWASHER. JOHN H. WENDMAN, Marcellus, N. Y. Original application filed Mar. 29, 1927, Serial No. 179,249. Divided and this application filed Apr. 21, 1930. Serial No. 446,011. 1 Claim. (Cl. 299—69.)

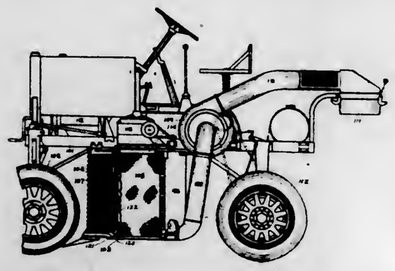
In a mechanical dishwasher, a rotatable water-receiving and distributing head provided with a series of spaced discharge nozzles in opposite sides thereof, the nozzles in one side being inclined to the plane of rotation and those in the other side being perpendicular to said plane, the nozzles of each series having their mouths elongated in parallel planes diagonal to the direction of movement of the head to produce parallel spaced fan-shaped jets, and means for introducing water in said head under pressure.



1,901,684. CULTIVATOR. CHARLES H. WHITE and FRANK T. COURT, Moline, Ill., assignors to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Mar. 9, 1929. Serial No. 345,754. 19 Claims. (Cl. 97—47.)

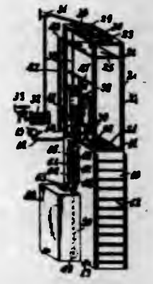
1. The combination with a tractor including front and rear wheels, of a cultivator attachment comprising a plurality of independently vertically movable rig beams sup-

porting soil working devices disposed substantially back of the position of said rear traction wheels, steerable individual supporting wheels for said rig beams, means pivotally connecting said beams with said tractor, and means operable to steer said supporting wheels to cause the rig beams to swing laterally relatively to said tractor.



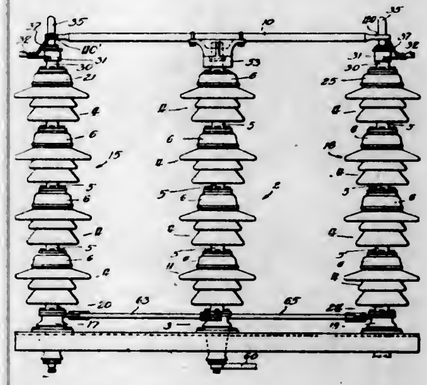
1,901,685. CONTROL SYSTEM. MAX A. WHITING, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 13, 1931. Serial No. 550,405. 19 Claims. (Cl. 172—239.)

1. The combination with a dynamo electric machine having a variable power output, means for absorbing power from said dynamo electric machine and means responsive to the rate of change of said power output for controlling said power absorbing means.



12. The combination with a generator driven by a prime mover, of a motor energized by said generator, said motor being connected to drive an overhauling load, a relay responsive to the rate of change of load on said motor, a brake for said motor, an operating coil for releasing said brake, a switch in the circuit of said coil, a coil for opening said switch controlled by said relay and a second coil for said switch energized in accordance with the motor voltage.

1,901,686. COTTON HARVESTING MACHINE. LOUIS E. WIRTH, Pittsburgh, Pa., assignor to Cotton Harvester Corporation of America, a Corporation of Delaware. Filed May 21, 1930. Serial No. 454,255. 29 Claims. (Cl. 56—14.)

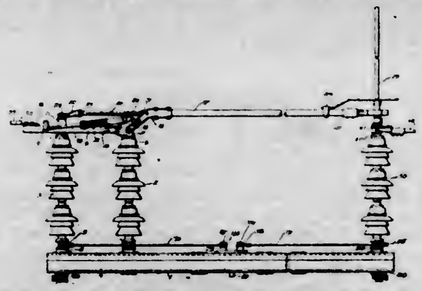


1. In a cotton harvester the combination of a revolubly mounted needle carrier, a tubular carrier supporting structure rigidly connected with said carrier and concentric with the axis of revolution thereof, driving means, and means attached to said tubular carrier supporting structure yieldingly engaging said driving means for revolving the carrier.

1,901,687. MACHINE FOR MEASURING BODY VOLUME. DOTT E. ZOOK, Chicago, Ill. Filed Apr. 25, 1931 Serial No. 532,883. 5 Claims. (Cl. 234—1.)

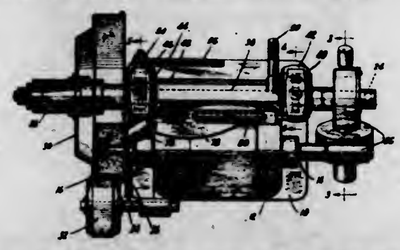
1. A machine for measuring body volume by water displacement, comprising a tank for holding a liquid, a platform for a person to stand on slidably supported over said tank, means for lowering said platform into said tank, means for compensating for the displaced water due to lowering said platform, and means for measuring and recording water displaced by a person standing on said platform as it is lowered in relation to the depth of submersion.

1,901,688. HORIZONTAL BREAK DISCONNECTING SWITCH. ALFRED ALSAKER, WELDON O. HAMPTON, and CHARLES A. KOERNER, Chicago, Ill., assignors to The Delta-Star Electric Company, Chicago, Ill., a Corporation of Illinois. Filed April 30, 1930. Serial No. 448,510. 21 Claims. (Cl. 200—48.)



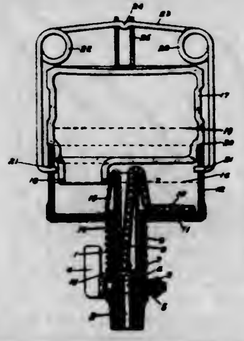
1. An electric switch including a pair of rotary insulators, a contact member mounted on one of the insulators and including contacting portions on the opposite sides of the axis of rotation of the insulator, a cooperating switch blade pivotally mounted on the other insulator about a pivot coincident with the axis of rotation of said other insulator, and having a limited amount of motion with reference thereto, and means on the blade for establishing engagement with the portions of the contact on the opposite sides of the axis of rotation of the contact.

1,901,689. SWITCH. ALFRED ALSAKER, WELDON O. HAMPTON, and CHARLES A. KOERNER, Chicago, Ill., assignors to The Delta Star Electric Company, Chicago, Ill., a Corporation of Illinois. Filed May 4, 1931. Serial No. 534,712. 18 Claims. (Cl. 200—88.)



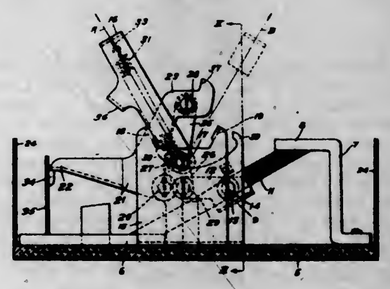
1. The method of operating a switch having a short contact and a comparatively long blade movable into and

out of engagement therewith which comprises locking the blade against operation and imparting a twisting mo-



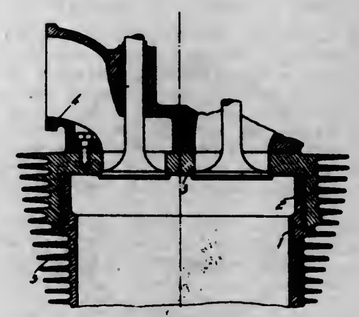
tion to the contact to break the bind between it and the blade, then locking the contact against movement and releasing the blade and swinging it away from the contact.

1,901,690. DRUM-GRINDING MACHINE. WILLIAM J. ANDREW, South Bend, Ind., assignor, by mesne assignments, to Bendix Aviation Corporation, New York, N. Y., a Corporation of Delaware. Filed Mar. 18, 1929. Serial No. 348,097. 9 Claims. (Cl. 51—105.)



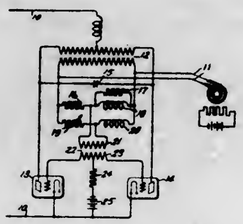
1. A machine for truing brake drums or the like comprising, in combination, a motor with a high-speed armature shaft having a tool at one end, reduction gearing at the other end of the armature shaft, and a shaft generally paralleling the armature shaft and driven at one end by said gearing and having at its other end a work support adapted to traverse the work past said tool, together with an angularly adjustable eccentric bearing for said second shaft operable to adjust the work bodily with respect to the tool.

1,901,691. WICK OILER. JESSOMS J. AULL, Cincinnati, Ohio, assignor to The Lunkenheimer Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Jan. 6, 1930. Serial No. 418,575. 4 Claims. (Cl. 184—64.)



1. In combination, a cup, a stem leading from the cup to the part to be lubricated, means on said stem extending above the bottom of the cup, a wick located in the bottom of the cup and extending over and into said means extending above the stem and the bottom of the cup, an inverted reservoir resting on and forming a closure for said cup and closed save for an open spout which communicates with said cup at a point below the top of the means extending into the cup above the stem and a spring bail for detachably locking said reservoir on said cup.

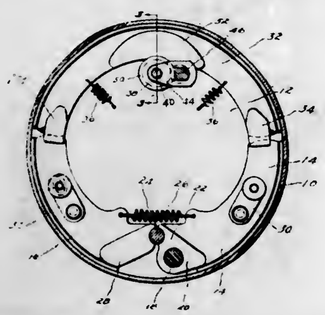
1,901,692. CIRCUIT BREAKER. HAROLD G. BAXTER, Baldwin, N. Y., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 18, 1931. Serial No. 523,477. 5 Claims. (Cl. 200—116.)



1. The combination with a circuit-breaker having a base, a movable switch member thereon, a cradle and a toggle cooperating with the switch member and the cradle for releasably retaining the switch member in closed position, of a latch member on the cradle movable toward the base when the cradle is released, and a current-responsive member cooperating with the latch member for releasably retaining it in latched position.

1,901,693. AIR-COOLED CYLINDER. ERNST BECKER, Berlin-Charlottenburg, Germany, assignor to Siemens & Halske, Aktiengesellschaft, Siemensstadt near Berlin, Germany, a Corporation of Germany. Filed Nov. 19, 1930, Serial No. 496,685, and in Germany Nov. 19, 1929. 2 Claims. (Cl. 123—171.)

1. An air cooled cylinder particularly for internal combustion engines, having a ribbed steel cylinder portion, a cylinder top of a beryllium alloy of high tensile strength and good heat conductivity, shrunk onto one end of said steel cylinder, and a light-metal cylinder head attached to said top, said top containing the engine valve seats and said head containing the gas ducts leading to and from said seats.

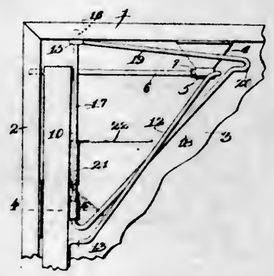


1,901,694. PHASE SHIFTING CIRCUITS. BURNICE D. BEDFORD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 27, 1930. Serial No. 478,163. 19 Claims. (Cl. 172—238.)

1. In an electrical control system including an electric valve provided with an anode, a cathode, and a control grid, a source of periodic anode potential and means for impressing upon said grid a potential variable in phase with respect to said source comprising a plurality of impedance elements serially connected across said source for producing dephased potentials, a plurality of other impedance elements one of which is variable, serially connected in parallel to said first first mentioned impedance elements for producing other dephased potentials, and a grid circuit including a potential derived from intermediate points of said parallel circuits.

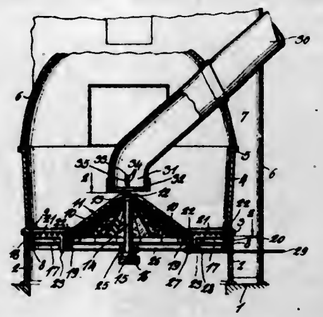
17. In combination with a source of periodic potential, apparatus for producing a potential variable in phase with respect to that of said source comprising a plurality of impedance elements serially connected across said source for producing dephased potentials, one of said elements being variable and the junction of the component potential vectors across said elements describing a predetermined locus with variations of said variable element, a plurality of other serially connected impedance elements connected in circuit with said source for producing other dephased potentials, the junction of the component potential vectors across said last mentioned elements lying within said locus, and an output circuit connected between the junction points of said series circuits.

1,901,695. BRAKE. VINCENT BENDIX, Chicago, Ill., assignor to Bendix Brake Company, South Bend, Ind., a Corporation of Illinois. Filed Jan. 19, 1928. Serial No. 247,798. 11 Claims. (Cl. 188—78.)



1. A brake comprising, in combination, an anchor, a first shoe engaging the anchor and having its friction face on one side of the anchor and having a thrust portion extending on the opposite side of the anchor, a second shoe acting on said thrust portion to apply the first shoe, and servo friction means for actuating the second shoe.

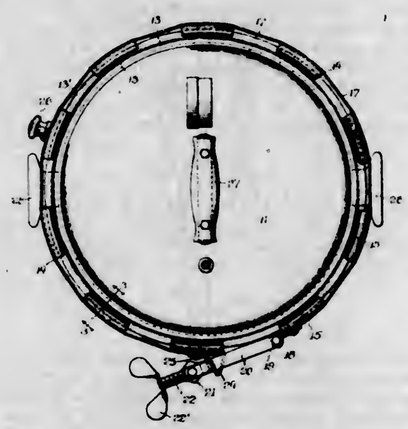
1,901,696. BRAKE BLOCK AND MEANS OF ATTACHING. ALFRED V. BODINE, Fairfield, Conn., assignor to Raybestos-Manhattan, Incorporated, Passaic, N. J., a Corporation of New Jersey. Filed Nov. 7, 1931. Serial No. 573,583. 7 Claims. (Cl. 188—234.)



1. In a brake, a shoe, a friction element of fibrous material, a metal bridge element embedded in the fibrous material and comprising a body portion and prongs projecting laterally therefrom and resting on the surface of the shoe, and a securing bolt passing through said body portion for securing the friction element to the shoe.

1,901,697. TABLE LEG SUPPORT. WILLIAM MICKEL BOENNING, Manitowoc, Wis., assignor to Ferguson Brothers Manufacturing Company, Hoboken, N. J., a Corporation of New Jersey. Filed July 11, 1930. Serial No. 467,241. 7 Claims. (Cl. 45—11.)

1. A table leg support including hingedly, mounted supporting members carried by the table, means for connecting one of said members to the table leg, each of said supporting members having inclined brace portions with an offset shoulder at the upper end of one inclined part and a U-shaped part in the other brace member adapted to cooperate with the offset shoulder for retaining said supporting members in an upright position.

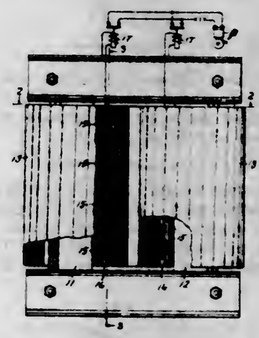


1,901,698. GRATE. OLIVER S. BOWMAN, Colorado Springs, Colo. Filed May 4, 1931. Serial No. 534,851. 3 Claims. (Cl. 126—182.)

1. A grate for a coal burning device comprising, a central conical portion having its apex at the top, said conical portion being composed of a number of sectors provided

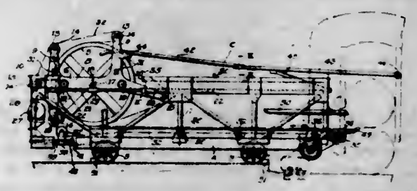
at their lower ends with projections extending in a plane perpendicular to the axis of the conical part, each projection having two radially spaced bearings, a segment of an annular grate portion rockably supported on each pair of radial bearings and means for simultaneously rocking the segmental portions.

1,901,699. COVER CLAMP FOR PRESSURE COOKING VESSELS. FRANK W. BURPEE, Wilmette, Ill., assignor to Burpee Can Sealer Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 30, 1931. Serial No. 526,202. 4 Claims. (Cl. 220—61.)



1. A cover clamp for a pressure cooking vessel, comprising a one-piece circular flexible and resilient metal band formed at uniformly spaced intervals therearound with pairs of integral inwardly directed divergent marginal flanges adapted to wedgingly embrace opposed transversely beveled annular ribs on the body and cover of the vessel, the portions of said band between said pairs of flanges being sufficient in number and length to enable said band to be sufficiently expanded to clear said ribs when applying and removing the same, and means for tightly drawing together the ends of said band around said ribs.

1,901,700. SHRUB PROTECTOR. EDWARD W. CARPENTER, Fairfield, Conn., assignor to The E. W. Carpenter Manufacturing Company, Bridgeport, Conn., a Corporation of Connecticut. Filed July 6, 1931. Serial No. 548,741. 7 Claims. (Cl. 47—23.)



1. In a shrub protector, a support, a plurality of wires each having an end anchored to said support, each of said wires including a bowed intermediate portion extending outwardly and upwardly from said support and a free end portion extending from the intermediate portion and radially and outwardly of the support.

1,901,701. TRANSFORMER FAULT DETECTOR. DAVID D. COFFIN, Camden, N. J., assignor to General Electric Company, a Corporation of New York. Filed Sept. 30, 1932. Serial No. 635,591. 4 Claims. (Cl. 175—356.)

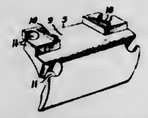
1. A transformer including a magnetic core having a winding leg, a winding surrounding said winding leg, a plurality of coils between said winding leg and said winding, each coil being disposed at one side of the winding leg with its axis at the right angle to that of the winding leg, and an instrument connected to said coils.

1,901,702. WORK HANDLING MECHANISM. MARK F. COOK and GEORGE T. BRNISCH, Niagara Falls, N. Y., assignors to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 15, 1931. Serial No. 530,818. 10 Claims. (Cl. 60—43.)

2. A sheet handling mechanism comprising a main frame, a movable carriage supported upon said frame, nuts fixedly mounted on the side frames of said carriage, horizontal lead screws threaded in to said nuts, bearings for said lead screws mounted on the main frame, a pair of gears fixedly mounted upon the lead screws in mesh with a pair of gears fixedly mounted upon a shaft rotatably supported on the main frame, and means for driving said second-named shaft to impart movement to said carriage.

8. A mechanism of the character described, comprising a main frame in combination with a movable carriage mounted for reciprocatory movement thereon, a receiving platform, a conveyor system mounted on said frame, said conveyor system being adapted to cooperate with said carriage to deliver material to said receiving platform.

1,901,703. INSULATING SPACER. HENRY L. CROWLEY, East Orange, N. J., assignor to Henry L. Crowley & Company, Inc., West Orange, N. J., a Corporation of New Jersey. Filed Apr. 9, 1931. Serial No. 528,720. 2 Claims. (Cl. 250—27.5.)



2. In an electron discharge device the combination including an electrode and a cathode and an insulator in-

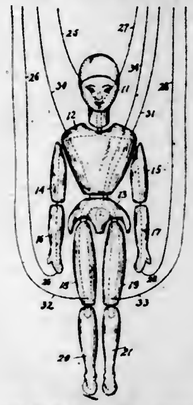
terposed therebetween and in contact therewith for holding them in spaced relation, the cathode passing through the insulator, the cathode having a different cross-sectional shape than the opening in the insulator to provide

supporting contact surfaces of limited area and the periphery of the insulator being of different shape than the cross-sectional shape of the electrode to provide supporting surfaces of limited contact.

1,901,704. METHOD OF MANUFACTURING BLADE RING STRUCTURES. WILLIAM J. DELLES, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 12, 1929. Serial No. 385,296. 5 Claims. (Cl. 29—156.8.)

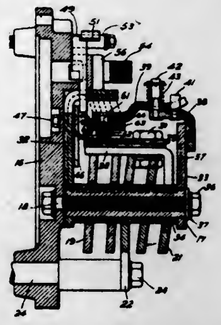
1. The method of manufacturing blade ring structures which comprises assembling partition members having thickened ends with spacers between them, the thickened ends extending beyond the spacers, casting metal around the thickened ends, and then machining the cast ends to the desired dimensions.

1,901,705. EGG TRAY. ANSON W. DE VOUT and RICHARD W. REGENSBURGER, Chicago, Ill., assignors, by mesne assignments, to Industrial Patents Corporation, Chicago, Ill., a Corporation of Delaware. Filed Feb. 24, 1931. Serial No. 517,781. 2 Claims. (Cl. 65—13.)



1. An egg cup of one piece of material that is shaped so as to provide a body portion and a bottom portion and which in any horizontal cross section is circular but which in vertical cross section gradually decreases in passing from top of the cup to the bottom portion thereof and which cup is provided with a handle composed of a flat strip of material bent back upon itself intermediate its ends to form a relative short handle projecting above the mouth or top of the cup, the outer bent back portion being slightly spaced from the upstanding portion of the handle, the lower end of the upstanding portion of the handle being secured to the outside of the body portion of the cup, the lower end of the outer bent back portion of the handle terminating near the upper edge portion of the cup, the handle being shaped so that no portion thereof in horizontal plan extends substantially beyond intersecting lines tangent to the upper exterior part of the body portion of the cup and which lines are perpendicular to each other.

1,901,706. PRODUCTION OF PULP. THOMAS LEONIDAS DUNBAR, Watertown, N. Y., assignor to Chemipulp Process, Incorporated, Watertown, N. Y., a Corporation of New York. Filed Apr. 16, 1932. Serial No. 605,696. 12 Claims. (Cl. 92—11.)

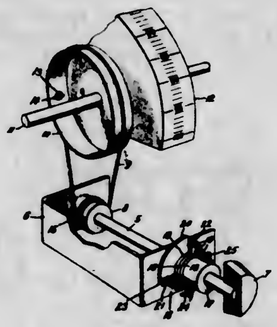


1. A process for the production of pulp which comprises soaking fibrous material in heated bisulphite liquor under a pressure of approximately 50 pounds until the extractives are substantially removed therefrom and the liquor has penetrated the chips, draining the bisulphite liquor from the fibrous material and mingling said liquor with fresh liquor for reuse, digesting the fibrous material under heat and pressure in bisulphite liquor until the lignin is substantially removed therefrom, withdrawing bisulphite liquor from the material and mingling it with fresh liquor for reuse, and cooking the fibrous material in alkaline liquor until the incrustants of the cellulose are substantially removed.

1,901,707. TOY. LOUISE M. DUNN and WINIFRED H. MILLS, Cleveland, Ohio. Filed Oct. 31, 1931. Serial No. 572,362. 1 Claim. (Cl. 46—40.)

A toy having the shape of the human body, said toy consisting of a plurality of molded sections and including a head section, an upper trunk section, a lower trunk section, arms composed of upper and lower sections, and legs composed of thigh and lower leg sections, said sections being spaced apart and freely movable in all directions relative to each other, strings embedded in said sections and extending across the spaces between the sections to flexibly secure the sections together, a plurality of strings spaced apart laterally being provided for the joints between the trunk sections, between the thigh and lower trunk sections, and at the knee joints, and providing for universal ariculation between the sections so connected but normally holding said sections in their normal relation.

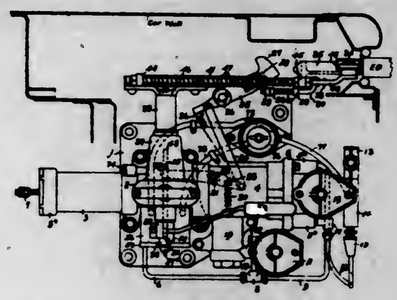
1,901,708. INVAR RELAY. WILLIAM M. ELLINGSON, Fargo, N. Dak., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 11, 1931. Serial No. 574,317. 8 Claims. (Cl. 175—336.)



1. A thermal relay including a source of magnetomotive force, a flux-carrying structure therefor including a movable armature, said structure providing two parallel related flux paths and means for manually varying the reluctance of one of said parallel related flux paths.

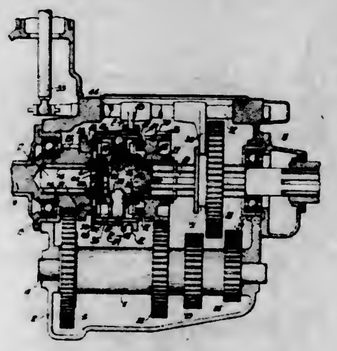
1,901,709. METHOD FOR DRIVING INTERNAL COMBUSTION ENGINES. RUDOLF ERREN, Berlin, Germany. Filed Mar. 15, 1930, Serial No. 436,252, and in Germany June 1, 1929. 3 Claims. (Cl. 123—39.)

1. A method of driving two-stroke internal combustion engines on oxyhydrogen gas, comprising the steps of keeping the valves closed during 10% of the admission stroke so as to create a rarefaction of air in the cylinder, then opening the admission valve and keeping said valve open during further 20% of the stroke, closing said valve and letting the piston move further 10% of the stroke until ignition takes place, and opening the exhaust valve near the end of said stroke.



1,901,710. STOP MEANS FOR ROTARY SHAFTS. MARK FLAHERTY, Haddon Heights, N. J., assignor to General Electric Company, a Corporation of New York. Filed Mar. 26, 1930. Serial No. 439,235. 5 Claims. (Cl. 94—7.)

1. The combination with a mechanical drive mechanism including a rotatable control shaft, a movable driven element having a desired range of movement between predetermined limits, a flexible cord arranged to connect said shaft and element for transmitting a moving force from said shaft to said element, said control shaft requiring at least 360° of rotation to carry said driven element between said limits, of a stop means for limiting the movement of said element to a desired range, said stop means being connected directly with said shaft whereby a moving force applied to said shaft and received by said stop means is prevented from being transmitted through said cord.

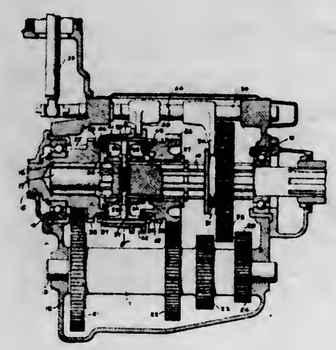


1,901,711. CLOSURE OPERATING AND LOCKING DEVICE. PARIS R. FORMAN, Rahway, N. J., assignor to National Pneumatic Company, New York, N. Y., a Corporation of West Virginia. Original application filed Oct. 22, 1930, Serial No. 490,459. Divided and this application filed July 24, 1931. Serial No. 552,902. 11 Claims. (Cl. 268—50.)

1. In a combination as described, a movable door, a motive device having an operating member for operating the door, connecting links between the operating member of the motive device and the door movable to a position when the door is closed for preventing opening of the door when pressure is applied directly thereto, means for locking the door in closed position, and manual means con-

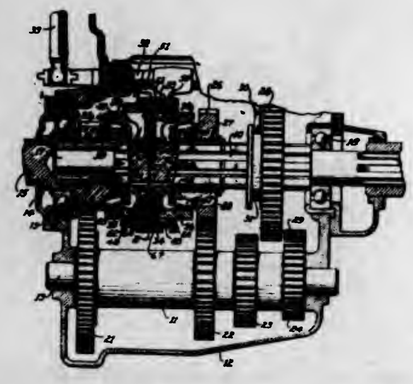
nected to said operating member and locking means for unlocking the door and moving the links sufficiently to permit the opening of the door.

1,901,712. MOTOR VEHICLE TRANSMISSION MECHANISM. JOHN M. CHRISTMAN, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 16, 1930. Serial No. 489,085. 8 Claims. (Cl. 192—53.)



1. In a motor vehicle transmission having driving and driven members, a positive clutch device having an element secured to one member and a cooperating element slidably mounted in driving relation on the other member, means connected to slide said positive clutch element, a friction clutch between said members having a sliding element, yieldable means connecting said sliding element and independent of said positive clutch sliding means to engage said friction clutch upon preliminary movement of the positive clutch element toward engaging position, and spring means associated to automatically disengage the friction clutch upon yielding of said connecting means.

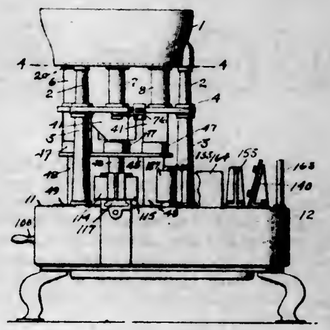
1,901,713. TRANSMISSION MECHANISM. JAMES G. VINCENT, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed July 8, 1930. Serial No. 466,418. 19 Claims. (Cl. 192—53.)



1. In a motor vehicle transmission having driving and driven members, positive clutch means slidable to con-

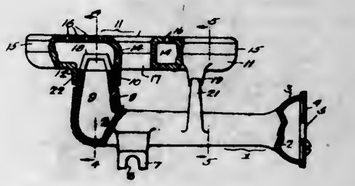
nect said members, a friction clutch between said members engageable in advance of the positive clutch means,

and radially displaceable levers operable by movement of the positive clutch means to engage the friction clutch.



1,901,714. CLUTCH MECHANISM. JESSE G. VINCENT, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 2, 1930. Serial No. 499,514. 14 Claims. (Cl. 192—47.)

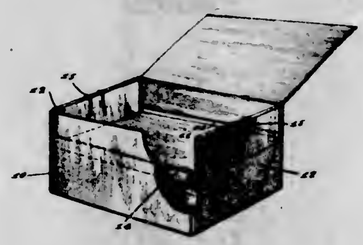
14. In a transmission having a driving and a driven member, a clutch device including a clutch element movable axially of said members, an operating member telescoping the clutch element, radially extending oscillatory levers anchored to said driven member and connecting said operating member to said clutch element, and a latch device yieldably connecting said operating member and said clutch element in clutch engaged position.



1,901,715. COIN COUNTING AND WRAPPING MACHINE. WILSON T. YOUNG, Oakmont, Pa., assignor to The Farrell Company, a Corporation of Delaware. Filed Sept. 8, 1929. Serial No. 390,073. 9 Claims. (Cl. 29—5.)

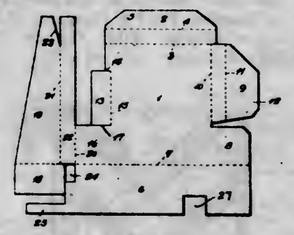
1. In a machine for counting and packaging coins and like articles, means for counting the coins, means for packaging the counted coins, driving means and means for automatically connecting the counting mechanism and the packaging mechanism alternately with the driving means so arranged that on completion of the counting operation the counting mechanism will stop and the packaging

mechanism will start to operate and upon the completion of the packaging operation the packaging mechanism will stop and the counting operation will resume operation.



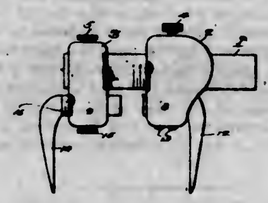
1,901,716. GAS BURNER. WILLIAM D. ANTRIM, Gloucester, N. J., assignor to Roberts & Mander Stove Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 29, 1931. Serial No. 547,731. 1 Claim. (Cl. 158—116.)

The combination in a gas burner, of a lower and an upper section, the lower section forming a mixing chamber and having an upturned neck, the end of the neck being tapered and ground, said neck having a bridge piece located above the tapered portion, the upper section forming the burner proper and having a hollow hub and hollow perforated arms communicating with the hub and also having a depending portion fitting over the ground extension of the neck, the inner surface of the projection being ground to form a gas-tight joint between the two sections; means for securing the depending portion of the upper section to the neck; and means for supporting the upper section some distance from the neck.



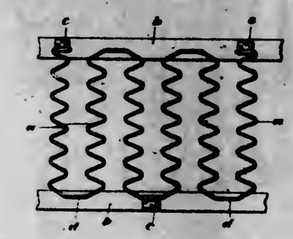
1,901,717. DISPLAY DEVICE. WILLIAM O. ALLEN, Glendale, Ky. Filed Dec. 29, 1931. Serial No. 583,756. 1 Claim. (Cl. 206—44.)

A device for the purpose indicated for serving as a false bottom in a box or carton, the same comprising a substantially inflexible flat member dimensioned according to the plan dimensions of the box in which it is to be used, and flexible sheets secured to the top and bottom faces thereof and extending beyond the ends and secured together to provide tongues or flaps for folding over the edges of the carton to be secured thereto to selectively position the false bottom at any point in the height of the carton, the sheets being extended beyond the side edges of the board



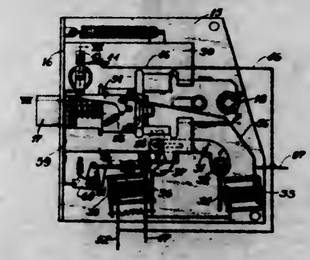
to provide long narrow flaps at the front and rear edges of the same for dust excluding contact with the front and rear walls of the box.

1,901,718. METHOD OF MAKING LATCHES FOR RAIL SWITCHES AND BLANKS FOR THE SAME. BENJAMIN R. BARNES, Jacksonville, Fla. Filed Apr. 1, 1932. Serial No. 602,541. 4 Claims. (Cl. 113—116.)



1. A blank for the fabrication of a latch stand, comprising a metallic section foldable to form one-half of the body portion of the stand and an outstanding securing lip, the section being divided vertically from the upper edge but not extending to the lower edge, said divided portions being folded relative to each other to form right-angled sections to provide an abutment.

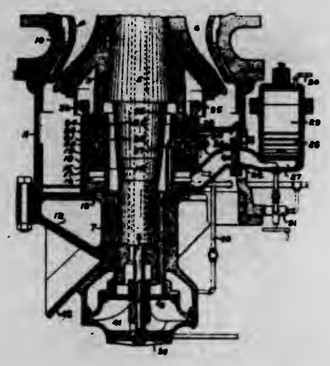
1,901,719. MEASURING DEVICE. SANTE BARONI, Philadelphia, Pa. Filed Dec. 15, 1931. Serial No. 581,247. 5 Claims. (Cl. 33—3.)



4. In a gauge for footwear, the combination with a bar having width and length scale markings grouped thereon, of movable means on said bar arranged to cooperate with each of said scales, and a movable arm carried by one of said movable means the said arm having a scale marked thereon arranged to cooperate with said movable means in conjunction with the other movable means and the other scale on said bar to determine the measurements of certain parts of footwear having a definite relation to the length and width thereof.

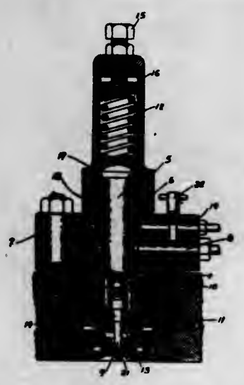
1,901,720. UPHOLSTERING SPRING. MORITZ BIENWINKEL, Ohrdruf, Germany. Filed July 10, 1930. Serial No. 467,035. 4 Claims. (Cl. 155—179.)

8. A spring device comprising a continuous spring member and a supporting frame therefor, said spring member including an arched portion having each of its opposite ends free to give under stress, and arched members anchored to the frame extending in opposite directions one from each of said ends.



1,901,721. ELECTRIC DOORLOCK. FAY BEAL, Kokomo, Ind., assignor to Klagston Products Corporation, Kokomo, Ind., a Corporation of Indiana. Filed Jan. 27, 1930. Serial No. 423,682. 4 Claims. (Cl. 70—50.)

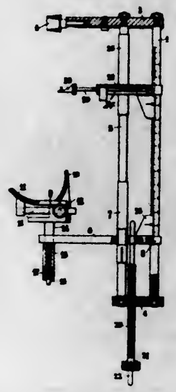
1. In combination with a plurality of door locks for an automobile, each of said locks including a latch element, an outside and an inside operating handle therefor, a source of electrical energy, interlock means adapted when set to operably disconnect said outside handles from said latches to prevent latch releasing movement thereby, means for electrically actuating said interlock means to set and released positions, a master lock, means associated with said master lock for temporarily connecting the electrically actuating means to the source of electrical energy when the master lock is actuated, means operably connecting the inside handles to the latch elements whereby each latch may be individually retracted when said outside handles are operably disconnected from said latches.



CARNEGIE LIBRARY OF ATLANTA

1,901,722. PACKING STRUCTURE. GEORGE D. BECKER, West Allis, and RAY C. NEWHOUSE, Wauwatosa, Wis., assignors to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed July 2, 1930. Serial No. 465,268. 18 Claims. (Cl. 74—109.)

1. In combination, an annular plunger having segregated, radially spaced annular packings, a rigid ring coacting with each of said packings, and means for applying equal pressures to both of said packings through said rings.



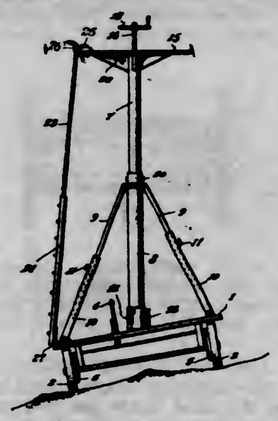
1,901,723. INTERNAL COMBUSTION ENGINE. PAUL BELYAVIN, London, England. Filed Jan. 27, 1930, Serial No. 423,823, and in Great Britain Jan. 28, 1929. 9 Claims. (Cl. 297—107.5.)

3. In an internal combustion engine, a fuel injection valve including a spring-loaded plunger arranged to be reciprocated by the rise in fuel pressure, a valve normally held closed by the plunger, and a spring operable upon the valve to open the same when the plunger is removed therefrom.

1,901,724. MEASURING APPLIANCE. NORMAN GODFREY BENNETT, London, England. Filed June 13, 1929, Serial No. 370,687, and in Great Britain July 28, 1928. 5 Claims. (Cl. 33—174.)

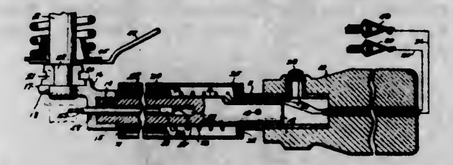
1. A device for facial measurement comprising an oblong framework, a member fixed to and extending laterally of said framework, a plastic material receiving cup swivelly mounted on the free end of said fixed member, a member mounted near the other end of the framework and longitudinally slidable thereon, means for measuring

the displacement of the slidable member relative to the cup, and a chin engaging member yieldingly mounted on the projecting end of the slidable member.



1,901,725. SCARF. WILSON L. BLAYNEY, Chicago, Ill., assignor to Marshall Field & Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 26, 1932. Serial No. 630,598. 4 Claims. (Cl. 41—17.)

4. As a new article of manufacture, scarf goods from which unit V-shaped scarf areas may be cut for sale purposes, a continuous piece of scarf material with longitudinal selvage edges, and having upon the material a series of V-shaped unit areas longitudinally extending with respect to said scarf goods, the arms of each V-shaped unit extending substantially on the bias of the material and having side border portions on each arm in mutual close relation whereby a line of cut is indicated between each of said areas.

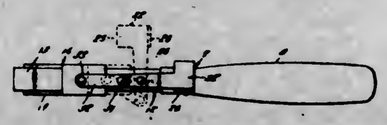


1,901,726. SCAFFOLD. CLEMENT BONNET, Menominee, Ill. Filed May 29, 1930. Serial No. 457,225. 8 Claims. (Cl. 304—9.)

1. A scaffold comprising a mast including telescoping sections, a platform carried by the upper section, an elevating screw within the mast swiveled to the upper section, a nut fixed within the lower section and engaging

the elevating screw, and means above the platform for rotating the elevating screw for raising or lowering the platform as required.

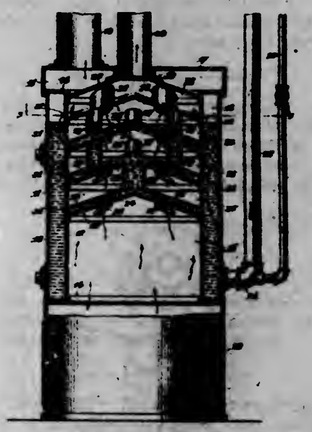
1,901,727. VALVE SPRING RETAINER TOOL. CHARLES W. BOZLAND, Maywood, Ill. Filed May 12, 1932. Serial No. 610,947. 8 Claims. (Cl. 81—3.)



1. A device as described comprising a handle, a keeper supporting member supported by the handle, means for magnetizing the member, a guide means below the member, and frictional means for maintaining the guide means in adjusted position relative to the handle.

1,901,728. FINISH REMOVER. THEODORE F. BRADLEY, Westfield, N. J., assignor to Chadeloid Chemical Company, New York, N. Y., a Corporation of West Virginia. Filed Dec. 2, 1927. Serial No. 237,342. 10 Claims. (Cl. 87—5.)

1. A finish remover containing tertiary butyl alcohol as the essential wax solvent, and wax dissolved therein.

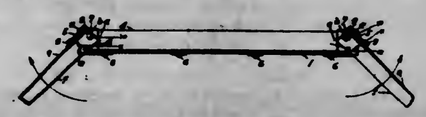


10. A finish remover containing a wax and containing a tertiary alcohol, said tertiary alcohol being present in an amount sufficient to dissolve substantially all of said wax if the two were present in a composition consisting solely of said wax and said alcohol.

1,901,729. LIFTER. JOHN F. BREWER, Ossining, N. Y., assignor of one-half to Arthur Greenfield, New York, N. Y. Filed May 14, 1932. Serial No. 611,420. 10 Claims. (Cl. 294—81.)

1. A pot lifter comprising a handled jaw member for engaging the interior of the pot, another jaw member slidable on the handled jaw member and engageable with the exterior of the pot, a laterally swingable operating lever pivoted upon one side of the handled jaw member, a link pivoted to the lever and to the other jaw member.

1,901,730. BOILER. BUFORD M. BROOKS, Dover, N. J. Filed Mar. 10, 1932. Serial No. 598,625. 6 Claims. (Cl. 122—165.)



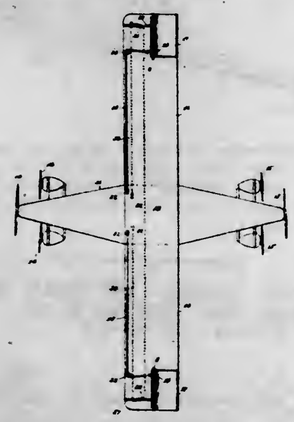
1. In a boiler, a shell, a plurality of spaced superposed walls arranged within and secured to said shell to define therewith alternate water spaces and heat spaces, water tubes secured to said walls in such manner as to establish communication between said water spaces, a water jacket having an inlet, said jacket being in direct communication with each of said water spaces, and fines secured to said wall in such manner as to establish communication between said heat spaces.

1,901,731. CYSTOSCOPE AND THE LIKE. LEO BUERGER, New York, N. Y. Filed May 9, 1932. Serial No. 610,269. 11 Claims. (Cl. 128—7.)

1. In a cystoscope having a window near one end and a telescope comprising a tube with an objective lens fixed in one end and an eye-piece in the other end, means for moving the telescope and thus the objective lens along the length of the window.

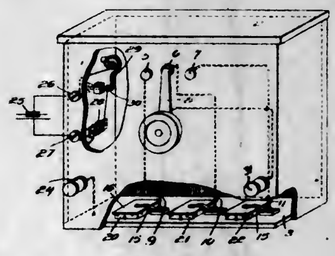
1,901,732. FOLDING GAME TABLE. EDWARD A. CLARK, Saline, Mich. Filed June 16, 1931. Serial No. 544,780. 8 Claims. (Cl. 45—11.)

2. A folding table adapted for playing parlor games, comprising a flat table top board having side bars mounted on opposite sides thereof positioned at right angles thereto, said side bars being projected beyond the board edges



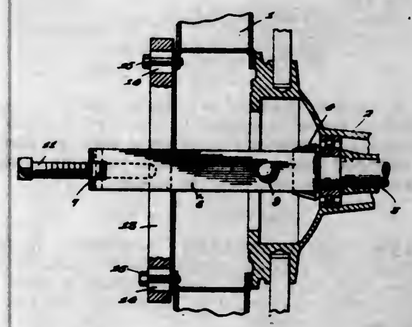
at both ends thereof, an attaching plate with slotted recesses formed therein fixedly mounted on the inner faces of said side bars at the projected ends thereof, pairs of rigidly connected support legs mounted between said side bar attaching plates, said pairs of legs having pairs of pin attaching members mounted thereon positioned to engage the respective slotted recesses of the attaching plates and capable of allowing rotation of said pairs of support legs about one set of support pins to various positions with the table top and to lock rigidly therewith when the pairs of support legs are at right angles with said table top by a lateral displacement of said leg pins within the attaching plate slots.

1,901,733. UNCURLER GUIDE FOR SEWING MACHINES. GROVER C. COOPER, Collingswood, N. J., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed May 10, 1930. Serial No. 451,418. 10 Claims. (Cl. 112—20.)



1. A fabric guiding and uncurling device for sewing machines comprising a plurality of independent uncurling members located one in rear of the other and operating in succession on the fabric sections for uncurling the edges thereof.

1,901,734. AIRCRAFT. STEPHANOS COTROUMPAS, Brooklyn, N. Y., assignor, by mesne assignments, of one-half to Charles H. Sullivan, Northport, N. Y. Filed Jan. 22, 1931, Serial No. 510,564. Renewed Nov. 18, 1932. 3 Claims. (Cl. 244—29.)

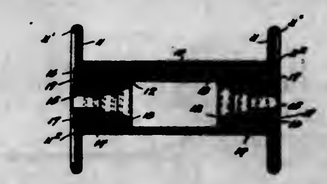


1. In an airplane, in combination, a fuselage, laterally extending wings on the fuselage approximately at the top center thereof, and rudder and stabilizer fins mounted on said wings respectively for movement to different angles of incidence, and separate control means for each of said fins to operate it to change the angle of incidence thereof.

1,901,735. PIEZO ELECTRIC CRYSTAL SYSTEM. ALFRED CROSSLEY, Washington, D. C., assignor, by mesne assignments, to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed July 15, 1925. Serial No. 43,861. 17 Claims. (Cl. 171—327.)

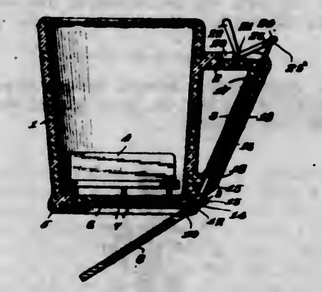
18. In a device for sustaining constant frequency oscillations in an electron to high frequency generator, the combination of a piezo electric quarts crystal capable of being set into oscillations, a hermetically sealed housing for said quarts crystal and means within said housing for heating the interior thereof over a given range of temperature for maintaining said quarts crystal at a selected temperature sufficiently high to prevent the condensation of water vapor upon the surfaces of said crystal.

1,901,736. DRIVE SHAFT AND PINION ASSEMBLY PULLER. JAMES W. CRUMPACKER, Hutchinson, Kans. Filed June 17, 1932. Serial No. 617,857. 1 Claim. (Cl. 29—85.)



A puller for removing a pinion from an assembled drive shaft comprising a head, an adjusting bolt threaded to said head, elongated arms hinged at one end to the ends of the head and having their opposite ends curved towards each other to engage a pinion by the arms extending through a differential housing, a fastener adjustably connecting said arms adjacent the curved ends thereof, and an anchoring bar having a recess to receive the adjusting bolt and provided with slots to receive fasteners of the differential housing, said bar extending between the arms.

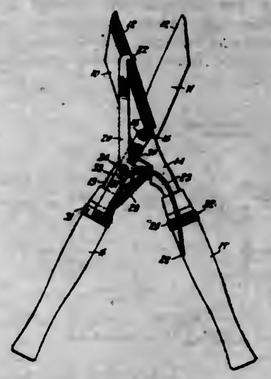
1,901,737. SPOOL. CHARLES K. DUNLAP, Hartsville, S. C., assignor to Sonoco Products Company, Hartsville, S. C., a Corporation of South Carolina. Filed May 18, 1932. Serial No. 612,111. 2 Claims. (Cl. 242—119.)



1 In a spool of the type described, in combination, a cylindrical body, plugs secured in the ends of said body, said plugs being centrally apertured, disc-like heads at the ends of said body and centered on the axis thereof, said heads being axially perforated, eyelets projecting

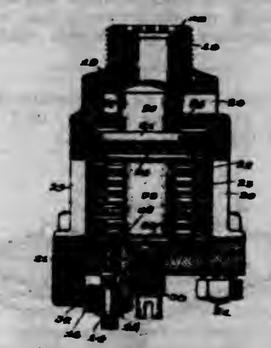
through the registering apertures of the plugs and heads respectively to secure the heads to the plugs, and a plurality of securing members disposed around each eyelet,

each such member being positioned in part in the associated plug and in part in the adjacent head, thus preventing relative rotation of the head and plug.



1,901,738. BARBER MUG. ELMER HAYNE, Batesville, Miss. Filed Feb. 26, 1932. Serial No. 595,233. 1 Claim. (Cl. 45—136.)

A shaving mug having a handle defining an upper straight portion and an outer angle portion which is provided with a bore that enters from its lower end and an upper opening that communicates with the bore, said mug having its lower portion provided with an annular rim and its bottom apertured, a flap valve received in the rim for normally contacting the bottom of the mug to close the apertures therein and said valve having a lug extension which is pivoted to the rim and which has its outer portion slotted longitudinally and transversely and which projects beyond the rim, a rod having its ends headed and aperture received through the bore and the opening in the outer end of the handle and the lower head being received in the longitudinal notch of the lug on the valve, a pin passing through said head and through the transverse aligning openings in the lug, a stop element on the rod, a coiled expansion spring in the bore of the handle contacting with the upper wall of said bore and with the stop element, and an angle lever pivotally secured in the upper element of the handle and having its lower and horizontal arm slotted and said slot receiving therethrough a pin on the upper head of the rod.

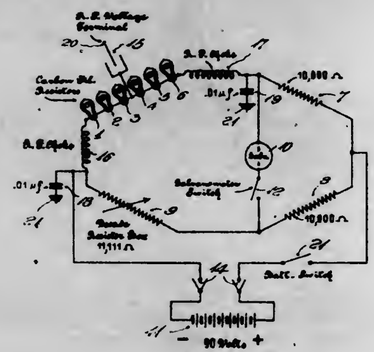


1,901,739. ATTACHMENT FOR SHEARS. KARL ESTEL, New York, N. Y. Filed Dec. 2, 1931. Serial No. 578,812. 2 Claims. (Cl. 30—11.)

1. A work holding attachment for shears including a member having a pair of angularly related arms fulcrumed at their juncture to a fixed point with reference to one of the blades between the pivotal connection of the blades and the handle of said blade, one of said arms extending beyond the pivotal connection of the blades and having a hooked work engaging terminal and a guide on the handle of the other blade cooperating with the other arm of said member to cause the first mentioned arm to move with and relative to the shear blades and spring

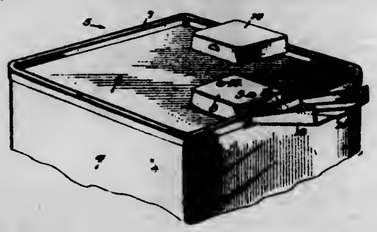
means acting upon the member to normally swing the first mentioned arm past the cutting edge of the first mentioned blade when the shears are closed.

1,901,740. BELLOWS CHECKED CYLINDER COCK. MATTHEW R. FERREY, Scranton, Pa., and CHARLES SCHAU, Jersey City, N. J., assignors to Ashco Manufacturing Company, Hoboken, N. J., a Corporation of Delaware. Filed June 28, 1931. Serial No. 546,404. 4 Claims. (Cl. 121—124.)



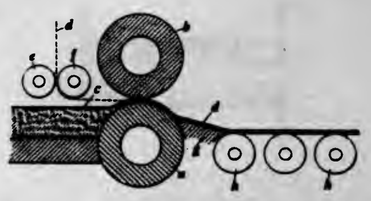
1. An improved cylinder cock, comprising a casing adapted for connection at one end to the bottom port of a locomotive cylinder, a valve mounted in said end of the casing for controlling the exhaust from the cylinder, a sealed expansible element mounted in the casing and engaging the valve, means for supplying pressure to the interior of the expansible element for normally seating the valve, positive mechanical means carried by the casing for maintaining the valve closed upon failure of the pressure, and checking means between the expansible element and said pressure supplying means and controlled by said positive mechanical means for withholding pressure from the expansible element.

1,901,741. HIGH FREQUENCY VOLTMETER. JOSEPH T. FERNEM, Jr., Washington, D. C. Filed Feb. 12, 1930. Serial No. 427,974. 10 Claims. (Cl. 175—183.)



1. A high frequency voltmeter comprising a Wheatstone bridge circuit including a multiplicity of arms, fixed resistance elements disposed in adjacent arms, a

variable resistance calibrated for indicating different voltage values disposed in another arm of said Wheatstone bridge, a thermally variable resistance disposed in the other arm of said Wheatstone bridge and having terminals for the energization thereof by radio frequency currents for correspondingly changing the resistance thereof and effecting the balance of said Wheatstone bridge circuit, radio frequency choke coils disposed



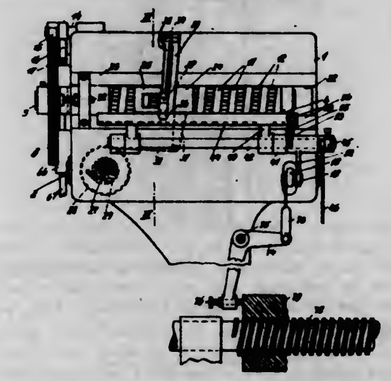
between said thermally variable resistance and the fixed and variable resistance elements in the other arms of said bridge, and a voltage source for normally energizing said Wheatstone bridge, said Wheatstone bridge circuit having an indicating device for determining the balanced or unbalanced condition of said Wheatstone bridge in accordance with the effect of radio frequency currents on said thermally variable resistance and in accordance with the adjustments on said variable resistance.

1,901,742. CONTAINER. CHAMPE GERALDINE FITZHUGH, Washington, D. C. Filed Mar. 21, 1932. Serial No. 600,287. 5 Claims. (Cl. 220—85.)

1. An end closure for a container comprising an end wall portion adapted to close the end of the container, and outstanding marginal portion adapted for securement to the edges of the container sides, a punched-out portion adjacent said outstanding marginal portion raised above the level of said end wall portion and having a pouring orifice therein, and a spout portion flexibly connected to said marginal portion adjacent the position of said punched-out portion and adapted to normally overlie said punched-up portion in a position substantially parallel with said end wall portion but to be bent to a position wherein it extends outwardly from said end wall portion at an angle thereto so as to form a pouring spout for the contents of said container pourable through said orifice in the punched-out portion, all of said portions being formed out of an integral piece of material.

1,901,743. MANUFACTURE OF WIRED GLASS. ALFRED LINDSAY FORSTER, Glasgow, Scotland, assignor to Chance Brothers and Co. Limited, West Smethwick, England. Filed Oct. 28, 1931, Serial No. 570,739, and in Great Britain Nov. 17, 1930. 1 Claim. (Cl. 49—82.)

In apparatus for use in the manufacture of wired glass, the combination of a pair of sheet forming rolls the lower one of which forms one side of a molten glass pool and has its upper surface above the level of the glass in the pool, and an adjustable wire guide situated above the pool at the entrance side of the rolls and adapted to engage the wire with the glass at an acute angle to the surface thereof immediately before the latter enters the rolls, the positioning of the wire in the glass being effected by adjusting the tension thereof.

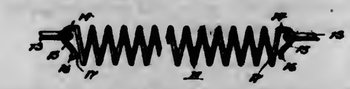


1,901,744. NUT LOCK. EDWARD GILMER GLOVER, Pineville, N. C. Filed Aug. 28, 1929. Serial No. 389,034. 1 Claim. (Cl. 151—7.)

A nut lock comprising a bolt having a threaded shank formed with a longitudinally extending groove, a nut threaded upon said shank and having its outer face formed with radiating seats, a locking washer fitted about said shank against said nut and formed on its lower face with a radial rib to fit in a seat of the nut and an integral lug extending longitudinally of its bore to seat in the groove of the bolt to secure the nut in a set relation to the bolt, a tongue extending radially from said washer, the washer being split radially intermediate the width of the tongue to provide spring arms the opposed faces of which are beveled and are smooth and straight to form a lap joint throughout their entire length, one of said arms springing outwardly and the outer corner of its beveled edge forming a tooth, and a second nut screwed upon said shank and having its inner face formed with teeth, each having a straight cut radial front face and a sloping face leading from the end of the tooth to the straight cut face of an adjacent tooth and constituting a cam surface whereby the

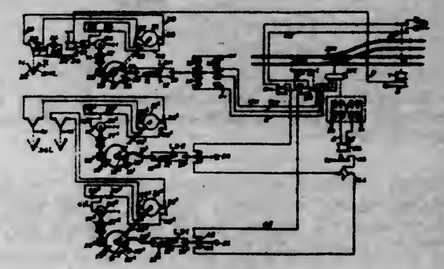
teeth of the second nut may flatten the spring arm of the washer and pass over the same into position to prevent retrograde rotation of the second nut when tightened, the side faces of the arms being parallel and said arms projecting outwardly from the nut a sufficient distance to be grasped under pressure to release the second nut.

1,901,745. ROW COUNTER FOR FLAT KNITTING MACHINES. WOLDEMAR HEINITZ, Chemnitz, Germany, assignor to Schubert & Salzer Maschinenfabrik Aktiengesellschaft, Chemnitz, Germany. Filed Nov. 14, 1931, Serial No. 575,110, and in Germany Aug. 29, 1929. 12 Claims. (Cl. 66—167.)



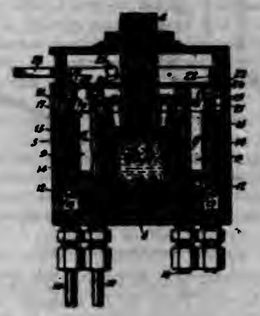
1. A row counter for flat knitting machines comprising a rotary cylinder having a helical ridge with marks corresponding to the numbers of rows being knitted, means for rotating said cylinder, a member adapted to be positively connected to the helical ridge of said cylinder so as to be shifted as the cylinder rotates, means on said member for indicating the marks on said ridge which correspond to the rows being knitted at a given relative position of said member and said cylinder, means for returning said cylinder and said member to their initial positions, means for locking said cylinder against the action of said returning means, and automatic means for releasing said locking means.

1,901,746. PROCESS FOR PREPARING CAMPHENE. CLYDE O. HENKE, South Milwaukee, Wis., and GUSTAV ETTEL, Penns Grove, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Mar. 30, 1932. Serial No. 602,102. 16 Claims. (Cl. 260—167.)



1. A process for preparing camphene which comprises reacting upon bornyl chloride in an aqueous medium with an alkaline agent in the presence of a water-soluble compound of abietene-sulfonic acid.

1,901,747. HELICAL CONNECTER. WILLIAM A. HOLT, Mebane, N. C. Filed Oct. 5, 1929. Serial No. 397,610. 2 Claims. (Cl. 5—269.)

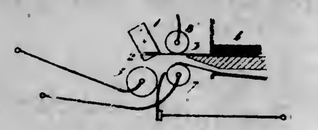


2. A connecter for bed bottoms comprising a helical spring portion, and a hook formed at each end of said portion, said hook terminating in a nose directed outwardly and away from said spring portion to form a hump on the hook, said hook and nose lying wholly within the projected diameter of the connecter.

1,901,748. INTERLOCKING SYSTEM FOR RAILROADS. WINTHROP K. HOWE, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y. Filed July 31, 1930. Serial No. 472,051. 11 Claims. (Cl. 246—135.)

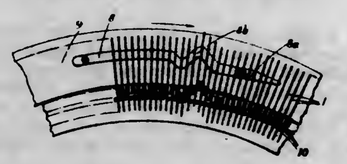
1. In a power interlocking system, the combination with a power-operated track switch and signals governing train movement over said switch, power-operated control devices for said switch and signals, mechanical interlocking between said control devices, and manually operable levers one for each control device for governing the power operation of said control devices individually.

1,901,749. VALVE CONTROLLING MEANS FOR FLUID DISTRIBUTING DEVICES. ALBERT JOHNSON, New York, N. Y. Filed Aug. 26, 1930. Serial No. 477,880. 1 Claim. (Cl. 184—82.)



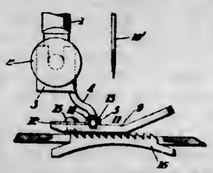
In a fluid distributing device, a reservoir having a plurality of outlets arranged in a circle, a valve for each outlet having their stems arranged in a circle with the ends disposed in a common plane, means for normally seating the valves to close the outlets and a common means adapted to act upon said stems for unseating the valves in unison to open the outlets, said means comprising a thrust ring engaging the valve stems, an annular rotatable actuator contacting with the thrust ring and having circumferentially spaced cam portions and stationary devices with which the cam portions engage for imparting movement to the thrust ring.

1,901,750. MACHINE FOR MANUFACTURING BOXES. BROR ANDERS EMIL JOHNSON, Alsten, Sweden, assignor to Aktiebolaget Gerh. Arskms Mekaniska Verkstad, Stockholm, Sweden, a Corporation of Sweden. Filed July 11, 1931, Serial No. 550,160, and in Germany Apr. 22, 1930. 8 Claims. (Cl. 93—40.)



1. In a machine for manufacturing boxes and similar articles from veneer and the like, the combination of a mandrel adapted to have the veneer wound thereon, a roller for pressing the veneer against the mandrel, a second roller and a counter roller coacting to fix a pasted

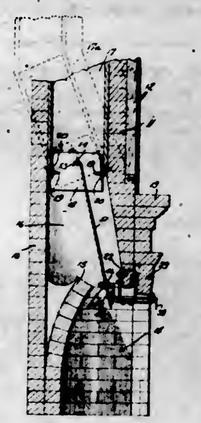
paper strip to the veneer, the strip being wound around the box for keeping the same together, and means for shifting the position of the second mentioned and coun-



ter rollers with relation to the mandrel at the end of the winding of the veneer to guide and prevent reverse bending of the latter.

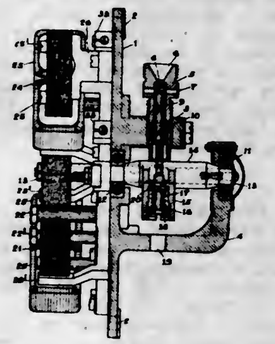
1,901,751. KNITTING MACHINE SINKER. THOMAS HENRY JONES, Woodthorpe, England. Filed Mar. 8, 1929, Serial No. 345,521, and in Great Britain Mar. 8, 1928. 4 Claims. (Cl. 66—102.)

1. In a knitting machine, reciprocally mounted bearded needles, a plurality of sinker elements arranged to be projected between said needles, needle presser devices arranged to be actuated in unison with the sinker elements, means for laying threads on the needles while they are in their upper position and the sinkers are in normal retracted position and means constructed to cause (1) said sinker elements and said presser devices to be projected from their normal retracted positions toward the needles whereby the presser devices are caused to press the beards and permit casting off of old loops during downward movement of the needles, (2) then to cause retraction of the sinker elements while the needles are down, (3) then to again project the said elements to press the new loops forward and hold the fabric clear of the needle beards during the upward movement of the needles, and finally (4) to return the sinker elements to their retracted position as the needles attain their uppermost position.



1,901,752. SEWING MACHINE PRESSER-FOOT. JOHN D. KARLE, Roselle Park, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Nov. 14, 1931. Serial No. 575,022. 5 Claims. (Cl. 112—235.)

1. A sewing machine presser-foot comprising a shank, a member depending from said shank having its lower end curved both transversely of and in the direction of the line of seam-formation, a sole-plate, and means for retaining said sole-plate on said depending member.

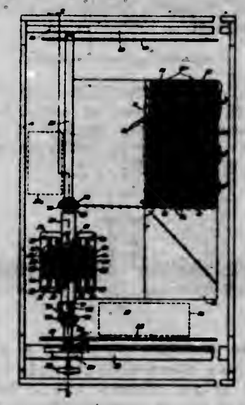


1,901,753. FIREPLACE DAMPER CONSTRUCTION. JOSEPH KOBERLING, San Francisco, Calif. Filed July 26, 1932. Serial No. 624,859. 6 Claims. (Cl. 126—238.)

1. In a fireplace damper construction, a key stone for the fireplace, a pivotally mounted damper and operating means therefor including an adjustable frame to accommodate mounting of the frame on key stones and fireplaces of different sizes, a damper operating rod rotatably supported on the frame and a link rod between the operating

rod and damper including a universal joint comprising an arm with the universal joint at the outer end of the arm and said link rod being adjustably positioned with respect to the universal joint.

1,901,754. TRAIN CONTROL SYSTEM. RICHARD C. LEAKE, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y. Filed Feb. 27, 1930. Serial No. 431,769. 8 Claims. (Cl. 137—139.)

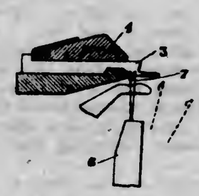


1. In a valve for automatic train control systems, in combination, a support plate, a spindle pivoted in the plate, a valve housing on the plate, a valve in the housing, a stem on the valve, biasing means for biasing the valve to open position, a cup member carried by the spindle, a separate spring pressed plunger in the cup member with one end bearing against the stem on said valve for operating the valve, and electro-magnetic structure for operating the spindle.

1,901,755. MEANS FOR USE IN NAVIGATING AND LIKE OPERATIONS. CLAUDE DE VINCHELEZ LE SUEUR, Richmond, England. Filed Dec. 9, 1930, Serial No. 501,158, and in Great Britain Jan. 8, 1930. 5 Claims. (Cl. 33—79.)

1. A navigational apparatus comprising a plotting table having thereon a "fore and aft" line and a plurality of

lines radiating from a fixed point on said "fore and aft" line and a plurality of concentric circles and intersecting parallel lines indicating distances, a plurality of indexes



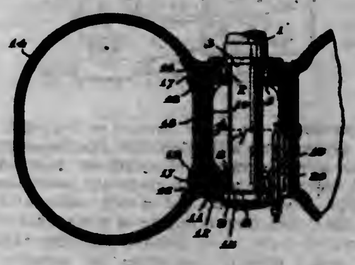
movable longitudinally and transversely of the table, and means for maintaining said indexes always in parallelism with the "fore and aft" line.

1,901,756. ALTERNATING CURRENT RECTIFYING ELEMENT. JOHN G. H. LINDSAY, Cincinnati, Ohio, assignor, by mesne assignments, to The Union Switch & Signal Company, a Corporation of Pennsylvania. Filed Apr. 22, 1927. Serial No. 185,911. 6 Claims. (Cl. 175—366.)

1. The process of making a rectifying element comprising coating the edges of a copper plate with a non-conducting material adapted to adhere thereto, coating the center of said plate with copper oxide and reducing the surface of said coating to metallic copper.

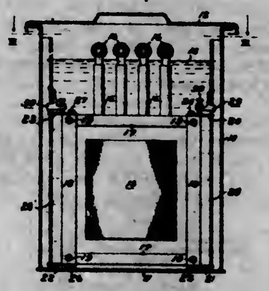
6. The process of making rectifying elements of the class described comprising the step of oxidizing one surface of a copper element at a temperature just below the melting point of copper, cooling said element substantially to room temperature, then bringing said element to a temperature below the melting point of red copper oxide but not substantially below 1050° F., and reducing the surface of said copper oxide coating to copper at said temperature.

1,901,757. PROCESS FOR MAKING FULL FASHIONED STOCKINGS. KARL RICHARD LIEBERKNECHT, Oberlungwitz, Germany, assignor to Karl Lieberknecht G. m. b. H., Oberlungwitz, Germany. Filed Aug. 22, 1931, Serial No. 558,811, and in Germany Oct. 9, 1930. 4 Claims. (Cl. 66—82.)



1. In a process for knitting a full fashioned stocking, the steps of knitting a plurality of courses to constitute part of the heel caps and simultaneously preventing press-off of the stitches on the instep needles, then moving the instep needles out of the knitting line and beyond the range of the sinkers and knocking-over bits and knitting the remainder of the heel caps.

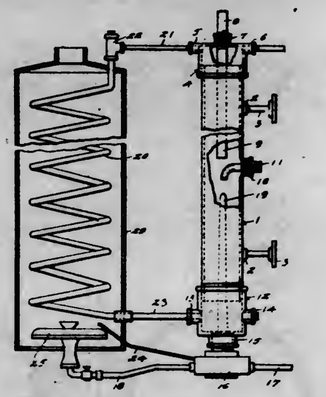
1,901,758. DOOR ELEVATING ARRANGEMENT. CARL LUTZ, Hammond, Ind., assignor to Camel Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 7, 1931. Serial No. 507,076. 11 Claims. (Cl. 16—99.)



7. In a house car in combination, a track, a door frictionally supported on said track in lowered position and means for elevating said door, said means comprising a plurality of transversely inclined rollers eccentrically connected to said door and means adapted to rock said rollers transversely to elevate said door.

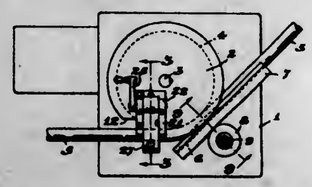
1,901,759. AIRPLANE LANDING WHEEL. ALGER G. MARANVILLE, Akron, Ohio, assignor to The General Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Jan. 18, 1930. Serial No. 421,695. 18 Claims. (Cl. 152—29.)

1. An airplane landing wheel comprising a hub, an annular tire having the form of an endless tube and having a circumferentially and transversely continuous wall at the interior thereof formed to fit on said hub, a metal reinforcing band embedded in the wall of the tire, and means forming a rigid connection between the hub and reinforcing band for positively holding the tire against circumferential movements on the hub.



1,901,760. CLAMPING DEVICE. WILLIAM ELMER MCCLINTOCK, Bellevue, Pa., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Oct. 14, 1931. Serial No. 568,695. 8 Claims. (Cl. 175—361.)

1. In combination, a casing having a side wall, a pair of stationary flanged bars arranged in parallel spaced relation within said casing and attached to said side wall,

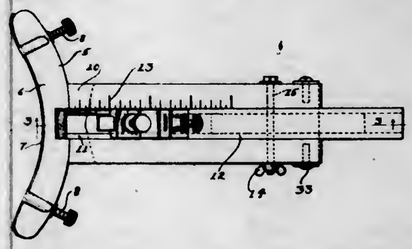


a removable device having a plurality of guide members slidably cooperating with said flanged bars, and locking means engaging said flanged bars for preventing the removal of said device from said casing.

1,901,761. HOT WATER HEATER ATTACHMENT. WILMER E. MCCORQUODALE, Orange, Tex., assignor to Mrs. Gladys McCorquodale Ready, Orange, Tex., and Dr. W. H. Bennett, Humble, Tex. Filed June 2, 1928. Serial No. 282,449. 1 Claim. (Cl. 236—20.)

An attachment for water heaters employing a coil or similar element and a heating unit associated therewith including a water casing of relatively small diameter disposed adjacent to and approximately parallel with the coil, a pipe connecting one end of said casing with the intake of the coil, a cross-over pipe of a diameter less than the interior diameter of the coil and unobstructed throughout its length directly connecting the opposite end of the water casing with the draw-off end of the coil, valve means controlling the flow of fuel to the heating element, means for discharging water into the casing intermediate the ends thereof and below the cross-over pipe and in a direction away from the end of the cross-over pipe whereby to obtain an injector effect operating in conjunction with the resistance of the small diametered cross-over pipe to maintain a circulation of water through the coil and out of the discharge end thereof when the heater is in use, and a heat sensitive element operatively connected with and controlling said valve means and disposed at a point where the water entering the casing intermediate the ends thereof will come in intimate contact with said heat sensitive element.

1,901,762. BENDING APPARATUS. FRANK H. MEYER, Warren, Ohio, assignor to The American Welding & Manufacturing Co., Trumbull, Ohio, a Corporation of Ohio. Filed Feb. 6, 1931. Serial No. 513,851. 10 Claims. (Cl. 153—40.)



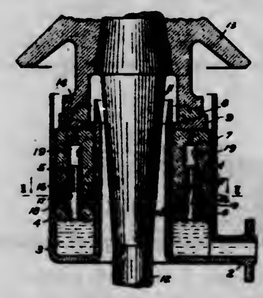
1. In a bending apparatus having a rotatable bending roll, means for clamping the article to be bent to said roll comprising a support secured to said roll and having an article engaging recess therein, an arm pivoted to said support transversely of the axis of said roll and having an article engaging recess therein, means for pivoting said arm, and means for bodily moving said arm radially of said roll to releasably clamp the article to be bent against said support.

1,901,763. INTAKE MANIFOLD. ARLINGTON MOORE, New York, N. Y., assignor, by mesne assignments, to Maxmoor Corporation, New York, N. Y., a Corporation of Delaware. Filed Nov. 19, 1927. Serial No. 234,417. 25 Claims. (Cl. 123—52.)

1. An intake manifold comprising a hollow member having an opening intermediate the ends thereof for supplying a fuel charge thereto, and including branches of unequal length having passages open at the outer ends thereof to permit of the egress of said charge from the manifold; the passages of the longer of said branches decreasing in cross-sectional area from the inner ends thereof to intermediate points thereof and increasing in cross-sectional area from said points to the outer ends thereof; and the cross-sectional area of the most constricted portions of said longer branches being substantially equal to the cross-sectional area of the shorter of said branches at the entrance thereto.

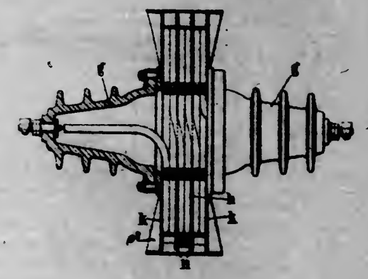
1,901,764. HAT BRIM TRIMMING TOOL. JOHN MOSCA, Brooklyn, N. Y. Filed Feb. 16, 1931. Serial No. 516,262. 2 Claims. (Cl. 223—24.)

1. In a hand tool for trimming hats, a hat crown engaging member, a hat brim engaging member, connected to and extending at right angles to said hat crown engaging member, said hat brim engaging member having a longitudinal slot and longitudinal tongues extending inwardly from the sides of said slot, a slide adjustably mounted in said slot and having grooves receiving said tongues, said slide being provided with a transverse slot intermediate its upper and lower sides, a securing element extending through said last-named slot and hat brim engaging member for securing said slide in an adjusted position, and a cutter supporting block carried by said slide.



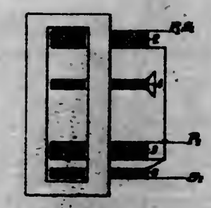
1,901,765. DRUM HEAD TIGHTENER. SIDNEY H. NEWBERRY, Philadelphia, Pa. Filed May 16, 1932. Serial No. 611,660. 5 Claims. (Cl. 84—411.)

1. In a drum head tightener, the combination with a drum body, of a drum head stretched over the drum body, a flesh hoop engaged with the drum body and about said flesh hoop and with which the drum head is engaged, a plurality of tightener hoop retainers mounted on the body circumferentially thereof at spaced intervals, said retainers having guides, drum head tightening rings or hoops engaged between the guides and the flesh hoop, the adjacent edges of said tightening rings or hoops being toothed, said teeth including substantially elongated



camming edges, and a printers' quoin connection between certain diametrically opposite camming edges of the teeth of the tightening rings or hoops, and means for adjusting said quoin connections for rotating one of the tightening rings or hoops.

1,901,766. PACKING. RAY C. NEWHOUSE, Wauwatosa, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed July 7, 1930. Serial No. 465,805. 10 Claims. (Cl. 74—109.)

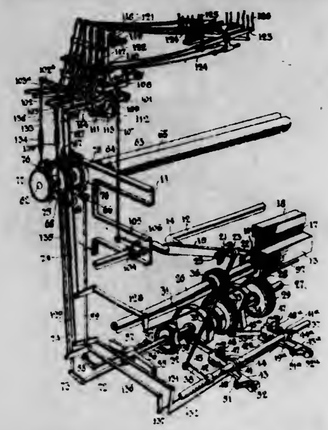


1. In combination, an annular cylindrical casing, a sleeve piston therein, provided with a recess, a compression plate carrying means received in said recess, an annular hydraulic body between the opposed walls of said cylinder, said plate carried means cooperating with said casing and with said piston and compression plate located therein to provide, when said piston is loaded, in said hydraulic body a unit pressure differing from the unit pressure acting externally on said compression plate, said plate carried means presenting transverse channels therethrough in the plane of the hydraulic body and thus permitting the flow of the hydraulic body from points first subjected to pressure by the contact of said piston therewith, due to unavoidable differences in the thickness of said hydraulic body, to provide a self-adjusting equalizing packing for effectively simultaneously sealing the opposed walls of said cylinder.

1,901,767. LIGHTNING OR SURGE ABSORBER. ERIC DOUGLAS TOBIAS NORRIS, Hollinwood, England, assignor to Ferranti Inc., New York, N. Y. Filed Oct. 19, 1929, Serial No. 400,957, and in Great Britain Dec. 6, 1928. 5 Claims. (Cl. 175—360.)

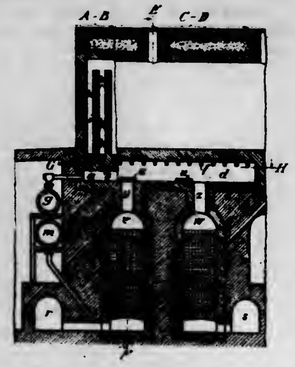
1. A lightning or surge absorber including a primary element comprising a substantially flat spiral winding for connection in series with the line subject to lightning or other electrical surges disposed between two flat metal flexible surfaces forming part of the secondary element casing for the purposes set forth.

1,901,768. REGULATION OF THE VOLTAGE OF AN ALTERNATING CURRENT CIRCUIT. ERIC DOUGLAS TOBIAS NORRIS, Hollinwood, England, assignor to Ferranti Inc., New York, N. Y. Filed Dec. 3, 1931, Serial No. 578,755, and in Great Britain Mar. 23, 1931. 2 Claims. (Cl. 171—119.)



1. An auto-transformer, one circuit of which comprises two windings electrically connected in series and possessing considerable leakage reactance, a short-circuited winding inductively associated with said windings and movable in relation thereto, the other circuit of which comprises one of said first-mentioned windings and a third winding closely associated electromagnetically with the other of said first-mentioned windings but serving to produce a voltage opposed thereto, said third coil being connected to the junction between the first-mentioned windings.

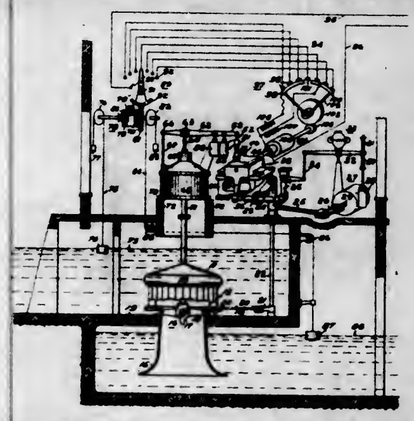
1,901,769. LOOM. SAMUEL PINKNEY PARKER, Franklinton, N. C. Filed Feb. 1, 1932. Serial No. 590,215. 18 Claims. (Cl. 139—25.)



1. The combination with a terry loom of the type in which the reed is shiftable to vary the effective range of its excursions during the beating up of the lay and in

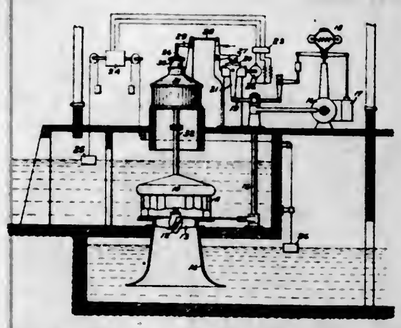
which the extent and timing of such shifting are controlled by a cam mechanism; of a second cam mechanism similar to the first-named cam mechanism but arranged

to give a different extent of shifting; and means for rendering said cam mechanisms effective selectively to control the reed.



1,901,770. GAS-FIRED FURNACE. HERMAN PETSCH, Recklinghausen, Germany, assignor to the Firm: Carl Still, Recklinghausen, Germany. Filed Dec. 17, 1926, Serial No. 155,477, and in Germany Dec. 28, 1925. 2 Claims. (Cl. 202—135.)

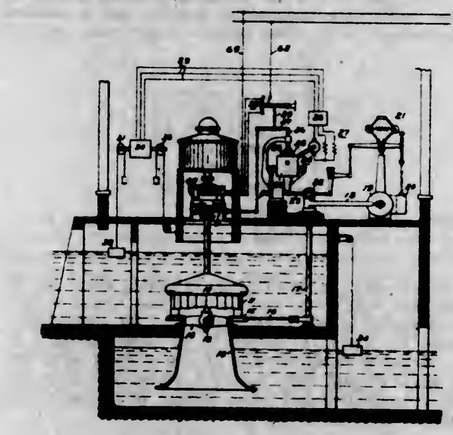
1. In a gas-fired furnace, the combustion chamber, an air regenerator communicating by means of a channel with the combustion chamber at points spaced from each other along the combustion chamber, a second regenerator, a conduit communicably connecting the second regenerator with the channel at a point between the air regenerator and the points of communication of the channel with the combustion chamber, a separate conduit communicably connecting the second regenerator with the combustion chamber, and separate means for introducing fuel gas into the combustion chamber.



1,901,771. HYDRAULIC TURBINE CONTROL SYSTEM. ARNOLD PFAU, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed July 23, 1931. Serial No. 552,639. 10 Claims. (Cl. 253—148.)

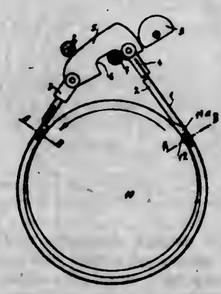
1. In combination, a hydraulic energy translating device having tiltable rotor blades and movable guide vanes, a topographic cam movable in one direction in accordance with the motion of said guide vanes, means comprising an electric motor responsive to the effective hydraulic head for moving said cam transversely of said

direction, and means responsive to the variation in altitude of said cam for controlling the tilt of said rotor blades to maintain maximum efficiency of said translating device.



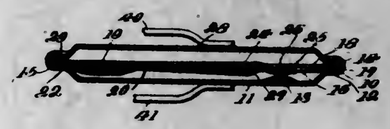
1,901,772. FLUID PRESSURE SERVO-MOTOR FOR TILTING PROPELLER BLADES. ARNOLD PFAU, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed July 23, 1931. Serial No. 552,640. 7 Claims. (Cl. 253—143.)

1. In combination, a rotatable shaft, a servo-motor cylinder member attached to said rotatable shaft for rotation therewith, an operating rod co-axial of said rotatable shaft, a piston having an orifice therethrough and dividing said cylinder member into two chambers, means including a slip ring member for maintaining oil under constant pressure in one of the chambers in said cylinder members whereby oil flows through said orifice into the other of said chambers, means for controlling the flow of oil from said other chamber to control the position of said piston relative to said cylinder, and means comprising a stationary trough for conducting oil away from said servo-motor.



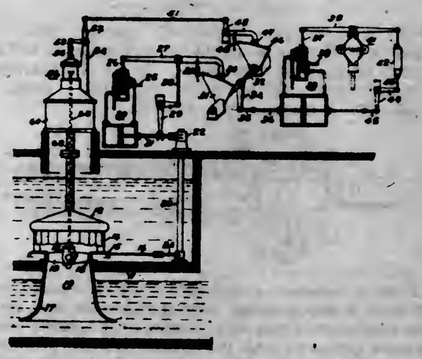
1,901,773. PROPELLER BLADE ADJUSTING SYSTEM. ARNOLD PFAU, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Aug. 22, 1931. Serial No. 558,723. 13 Claims. (Cl. 253—143.)

1. In combination, a propeller shaft, tiltable propeller blades carried by said shaft, a rod for tilting said propeller blades, means including an electric motor for operating said blade tilting rod, a control switch movable from a neutral position to control the energization and



direction of rotation of said motor, and means including a traveling nut member on said motor shaft for restoring said switch to said neutral position.

1,901,774. BRAKE BAND APPARATUS. ERICH FRIEDRICH PULS, Eisenach, Germany, assignor to the Firm Pulsgetriebe Gesellschaft mit beschrankter Haftung, Eisenach, Germany. Filed Jan. 18, 1929, Serial No. 333,863, and in Germany Jan. 27, 1928. 1 Claim. (Cl. 188—77.)

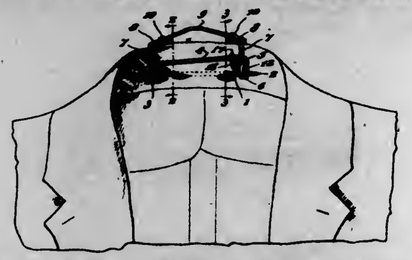


In a change speed gear, improved braking means comprising a drum having a cylindrical periphery and inclined flanges, a brake band having a lining and adapted to fit said periphery and to engage said flanges, means normally tending to urge the bands to engage the drum about its periphery, the said brake band or its lining having a gap formed near one end thereof, the said gap having a leading abrupt boundary and being so shaped that when the drum is rotated in one direction, the leading abrupt edge acts as a scraper to expel lubricant from the periphery of the drum, the other end of the band being continued slightly beyond the periphery of the drum so that it contacts tangentially therewith and so that when the drum is rotating in the opposite direction a film of the lubricant is imprisoned between the said drum and band, which film automatically raises the said band from the periphery of the drum, which band is ordinarily urged against the drum about its periphery by the said means.

1,901,775. THERMOSTATIC SWITCH UNIT. LEWIS REICHOLD, Winsted, Conn., assignor to The Fitzgerald Manufacturing Company, Winsted, Conn., a Corporation of Connecticut. Filed Oct. 19, 1931. Serial No. 569,793. 5 Claims. (Cl. 200—138.)

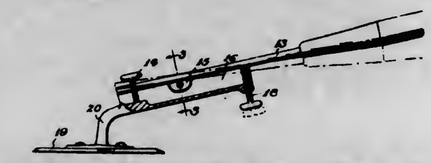
1. In a thermostatic switch unit, a cup member and a cover member, said members including a peripheral seam to hold them fixedly together, insulation in said seam for holding the said members electrically insulated and including a portion extending inwardly between said members, an intermediate element located between said members and in electrical contact with one member and held by said inwardly extending portion against electrical contact with said other member, a contact on said other member, and a thermostatically responsive device fixed to said intermediate element and including a contact for cooperating with said first contact.

1,901,776. TURBINE CONTROL SYSTEM. JOSEPH J. RING, Wauwatosa, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Apr. 7, 1932. Serial No. 603,732. 16 Claims. (Cl. 253—148.)



1. In combination, a hydraulic energy translating device having tiltable rotor blades and movable guide vanes, a servo-motor for tilting said rotor blades, a second servo-motor for moving said guide vanes, a cam for controlling the actuation of said rotor blade tilting servo-motor, another cam for controlling the actuation of said guide vane moving servo-motor, and means responsive to the speed of said translating device for controlling the actuation of said cams.

1,901,777. GARMENT HANGER. ROSE J. RINK, Staples, Minn. Filed June 20, 1932. Serial No. 618,225. 2 Claims. (Cl. 2—271.)



1. A garment hanger comprising a garment-engaging member having a piercing portion and a keeper portion

to retain the piercing portion in engagement with a garment, a keeper hook depending from the keeper portion, a brace forming a connection between the keeper

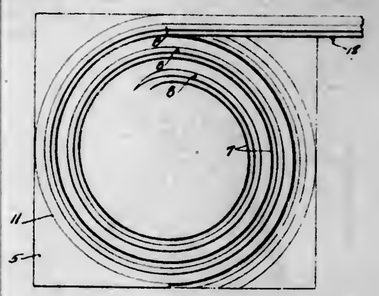
hook and keeper portion, hanger loops engaged with the garment-engaging member, and a strap attached to and extending between the loops.

1,901,778. HOE. HIRAM P. SCHLAG, Fortuna, Calif. Filed Sept. 27, 1930. Serial No. 484,867. 4 Claims. (Cl. 306—11.)

1. A hoe including a handle shank, a rod carried by the handle shank, a yoke adjustably connected with the rod, a blade connected with the yoke, a shank connecting the blade with the yoke, and means carried by the yoke and cooperating with the rod for adjusting said yoke with respect to said rod.

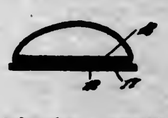
1,901,779. POWER HAMMER. LEWIS SKEEL and FRANK P. MILLER, Meadville, Pa., assignors to McCrosky Tool Corporation, Meadville, Pa., a Corporation of Pennsylvania. Filed Sept. 19, 1928. Serial No. 306,955. 6 Claims. (Cl. 125—34.)

1. In a hammer, a cylinder, a driven element in the cylinder, a reciprocating driving piston in said cylinder and serving to alternately compress and rarify the air between the same and the driven element whereby the reciprocation of the driving piston is imparted to the driven element, said cylinder being provided with means spaced from the driving piston and uncovered by the driven element only upon reaching the forward portion of the forward stroke of the driving piston and as a preliminary to the rear stroke of the driving piston by which the supply of air between the driving piston and said driven element is replenished during a short portion only of the strokes of the driving piston and the driven element.



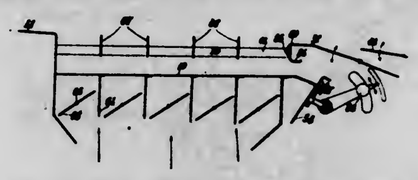
1,901,780. WEATHER STRIP. MYRON O. SLEEPER, Hanson, Mass., assignor to George A. Clapp, Brookline, Mass., and CARL F. WOODS, Winchester, Mass., receivers of E. H. Clapp Rubber Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 12, 1931. Serial No. 568,405. 1 Claim. (Cl. 296—44.5.)

In combination with a window frame member having a longitudinal, inwardly projecting abutment, a cushion-ing weather strip for the top of a sliding window pane, comprising a tubular, four-sided cushion strip of resilient material having its rear wall engaging the under surface of the frame and one side wall engaging said abutment, the rear wall having an integral, laterally projecting flange providing a longitudinal channel, and a molding strip fastened to the under surface of the frame and hav-



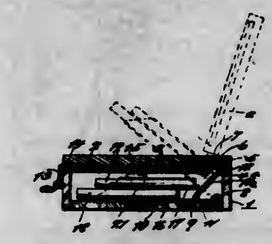
ing a rearwardly directed flange extending along the opposite side wall of the cushion strip and having its free edge engaging in said channel to clamp the cushion strip against the frame, the bottom of the frame having a recess extending longitudinally of the cushion strip and the flange of said strip having a rearwardly projecting portion received in said recess thereby to prevent lateral displacement of the strip.

1,901,781. PROCESS OF MAKING SHOE WELTING. MYRON O. SLEEPER, Hanson, Mass., assignor to George A. Clapp, Brookline, Mass., and CARL F. WOODS, Winchester, Mass., receivers of E. H. Clapp Rubber Company, Boston, Mass., a Corporation of Massachusetts. Filed July 13, 1932. Serial No. 622,226. 5 Claims. (Cl. 12—146.)



1. A method of making composite welting which consists in uniting blanks of rubber and leather in superposed relation, forming a spiral line in the surface of the resulting sheet thereby to define welting coils of substantially uniform width, and cutting along said line to produce, a continuous strip of welting.

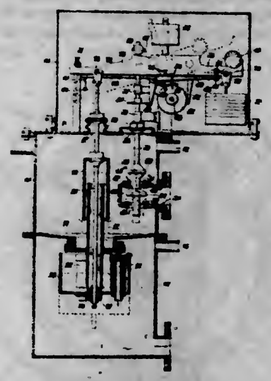
1,901,782. SHOE AND METHOD OF MAKING SAME. MAURICE C. SMITH, JR., and EUGENE C. HEILHECKER, Bristol, R. I.; said Heilhecker assignor to said Smith. Filed July 19, 1932. Serial No. 623,312. 6 Claims. (Cl. 12—142.)



6. The method of forming a cemented shoe which consists in bringing together the fabric surface of an insole and the fabric surface of a vulcanized rubber outsole with lasted edges of a fabric upper between them and cementing the said fabric surfaces together.

1,901,783. APPARATUS FOR THE PNEUMATIC SEPARATION OF MATERIALS OF DIFFERENT DENSITIES. PAUL SOULARY, Bruay-en-Artois, France. Filed Feb. 19, 1931, Serial No. 517,091, and in France Feb. 26, 1930. 2 Claims. (Cl. 209—466.)

1. In a box for an apparatus for pneumatically sorting materials of different densities and of the kind described, transverse partitions arranged in the box and the lower edge of which is at a certain level above the bottom of the said box for retaining a layer of non-sorted materials, a fixed sill at the end located on the down side of the box for providing an outlet of definite height above the bottom of the box, a transverse damper arranged on the down side of the said bottom, means for adjusting the height of the upper edge of the said damper above the said bottom, a damper movable in front of the said sill, a wall above the said sill for forming an extension of the said damper and movable with the latter for constituting an adjustable weir for the materials of the lowest density, an adjustable damper arranged above the down side portion of the said wall.



1,901,784. CIGARETTE BOX AND DISPLAY. EDWARD SUBE, Philadelphia, Pa. Filed Apr. 5, 1930. Serial No. 441,941. 3 Claims. (Cl. 206—41.)

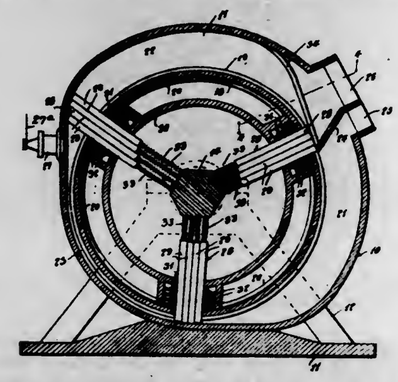
1. In a cigarette box and display, the combination with a base section having a ledge at its rear portion provided with notches, of a lid having lugs hingedly mounted in the notches, latching means for the lid, and a spring tensioned cigarette container hingedly mounted in base section at its rear, whereby upon releasing the latching means, the container moves to an inclined position and throws the lid open, and separately attached means carried by the container and sliding against the lid, thereby preventing the lid from marring the tips of the cigarettes.

1,901,785. APPARATUS COMPRISING SIPHONS. NORMAN SWINDIN, Acton, London, England. Filed June 24, 1930, Serial No. 463,517, and in Great Britain Jan. 6, 1930. 16 Claims. (Cl. 73—28.)

1. A siphon meter comprising a measuring chamber, a down flow pipe extending into the lower portion of said chamber, a bucket associated with the lower end of said pipe to form a liquid seal therefor and adapted to be lowered by the weight of a predetermined quantity of liquid therein, a siphon mounted in the bucket for emptying the bucket, a bell enclosing the upper end of the down flow pipe to form a siphon, an operative connection between the bucket and bell whereby the bell is raised and lowered with the bucket, a fulcrumed lever, said operative connection having an extension connected to one arm of said lever, a counterweight carried by the other arm of said lever, a closure for the measuring chamber and a tube open to atmosphere extending into the upper portion of said measuring chamber, the arrangement being such that

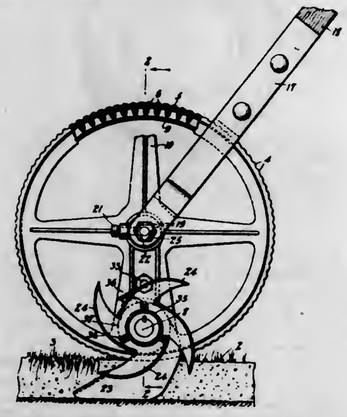
the end of the tube within the chamber is adapted to be closed by the liquid rising in the chamber, whereby the quantity of liquid necessary to provide the required head in the chamber may be determined with accuracy.

1,901,786. COVER FOR USE IN TESTING VEHICLE WHEELS FOR MISALIGNMENT. GEORGE H. TABER, Binghamton, N. Y. Filed Feb. 9, 1931. Serial No. 514,405. 4 Claims. (Cl. 33—203.)



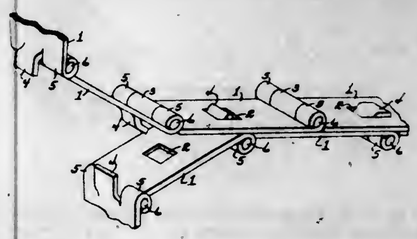
4. A cover for use in the testing of a pneumatic vehicle wheel as to alignment or misalignment, which cover comprises a band of non-yielding material adapted to be mounted on the periphery of the vehicle tire and constructed so as to be held in place on the tread portion of the casing of the tire when applied to the tire in a manner such that the casing presses outwardly against the band and also in a manner such that the band transmits correctly the action of the wheel to which the band is applied, the outer portion of the band being relatively uniform whereby when said outer portion of the band moves in engagement with the proper member of a testing machine during the rotation of the wheel there is communicated to said member of the testing machine the correct plane of the wheel movement or motion relative to the wheel axis.

1,901,787. INTERNAL COMBUSTION ROTARY MOTOR. HERBERT A. WHITE, Belton, Tex. Filed May 21, 1931. Serial No. 539,046. 3 Claims. (Cl. 123—16.)



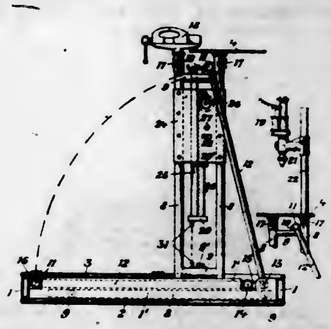
2. A rotary engine having a stator, a rotor operable therein, said parts providing therebetween a combustion chamber and a compression chamber and a restricted space between them, a partition between said chambers,

an exhaust port in communication with the combustion chamber, a series of pistons carried by the rotor and movable radially thereof through contact with the stator wall, firing means for the combustion chamber, means to cause retraction of the vanes to enable exhaust of spent gases, said rotor having inner and outer peripheral walls, the inner wall enclosing an oil reservoir, walls con-



necting the inner and outer peripheral walls and forming chambers about the pistons, packing means arranged in said chambers about the vanes to prevent undue escape of lubricant, and expansive spring means in said chambers abutting the walls therein and abutting said packing means, said packing means comprising metallic bars engaging the vanes.

1,901,788. LAWN TRIMMER. JAMES M. WILLIS, Scotia, N. Y. Filed Dec. 14, 1932. Serial No. 647,271. 4 Claims. (Cl. 56—255.)



1. A lawn trimmer comprising a ground wheel, a covering plate projecting into the ground wheel, a handle, means for rigidly securing the covering plate to the handle, means for rotatably mounting said wheel to rotate around said covering plate, said ground wheel having an internal gear, a pinion meshing with said gear, said covering plate having an apertured enlargement adjacent said pinion, a shaft extending through said enlargement, means for rigidly securing said shaft to said pinion, a stationary shearing blade rigidly clamped to said enlargement and a rotating shearing blade having a plurality of shearing extensions rigidly secured to said shaft and positioned to coact with the stationary shearing blade to produce a shearing action as the ground wheel and associated parts are moved along.

1,901,789. ROD. CALVIN H. WIMBERLEY, New Braunfels, Tex. Filed Oct. 19, 1931. Serial No. 569,765. 3 Claims. (Cl. 59—78.)

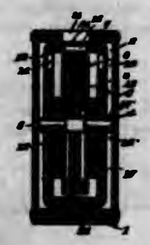
1. A device comprising a pair of opposed chains including links, each provided with an opening, cooperating hinge barrels formed with the links, means passing through the cooperating hinge barrels to hingedly secure the links together, and tongues formed with the links and being arranged in the openings of opposed links of the chains to secure the latter in contacting engagement with each other to provide a rigid rod.

1,901,790. PORTABLE WORK BENCH. GERHARD WOLFRAM, Dessau, Germany. Filed Apr. 4, 1931, Serial No. 527,817, and in Germany Apr. 11, 1930. 5 Claims. (Cl. 29—1.)

1. A portable work bench comprising a smooth sided and shallow box-like base member to be placed on a horisontal surface; and a plurality of pillars and struts adapted to be secured to the base member when in use to form the work bench and which are collapsible so that the pillars and struts may be placed in the base member when the bench is knocked down for transport or when not in use and said base member acting as a platform for an operator of the work bench.

5. A portable work bench comprising a shallow rectangular base frame having side walls and a central rib, a collapsible frame for supporting bench equipment, means for securing said frame to the central rib of the base frame, means hinged to said base frame near an end thereof for bracing the equipment supporting frame when it is erected, said brace means and equipment frame being capable of being lowered into the base frame, a bottom for the base frame, and a top cover for the base frame capable of forming a platform for an operator working at the erected bench, said base frame with its bottom and top cover forming a shallow smooth-sided box into which the equipment frame, brace means and any desired equipment can be completely enclosed in their collapsed and disassembled condition.

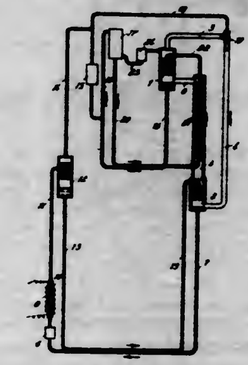
1,901,791. MEANS FOR REMOVING DUST SUCH AS FROM PLANT FIRED BY PULVERULENT FUEL. WILLIAM ARMSTRONG WOODESON, Gateshead-on-Tyne, England, assignor to Clarke Chapman & Company, Limited, Gateshead-on-Tyne, England. Filed Oct. 17, 1930, Serial No. 489,466, and in Great Britain Apr. 1, 1930. 14 Claims. (Cl. 302—15.)



1. In a dust removing apparatus, an ejector comprising a housing having a passage therein receiving dust laden air and a passage therein receiving water under pressure, a venturi in said water passageway, the air passageway provided with a tubular extending portion having an end of a diameter less than the smallest diameter of said venturi extending into said venturi a distance sufficient to assure that the dust laden air is discharged into the water passageway at a point beyond the greatest constriction of the venturi, for the purpose described.

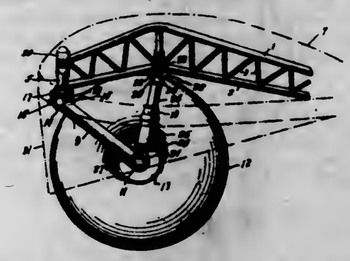
1,901,792. BITUMINOUS AND LIKE COMPOSITIONS. GEORG ZIMMERMANN, Mannheim-Rheinau, Germany, assignor to Prodorite S. A., Geneva, Switzerland. Filed Aug. 2, 1926, Serial No. 126,737, and in Germany Aug. 6, 1925. 1 Claim. (Cl. 106—32.)

A composition of matter of great toughness and high tensile strength comprising a mixture of a hard brittle pitch which retains its hardness substantially unchanged by temperatures up to 40 degrees C. under a Brinell hardness test, with ten to fifteen percent of asbestos fibres, and mineral dust.



1,901,793. ANGLE DETECTOR. WILLIAM D. ALLEN, Evansville, Ind. Filed Aug. 3, 1931. Serial No. 554,887. 5 Claims. (Cl. 32—216.)

1. An angle detector comprising a body having an opening, a scale bearing member fixed to the body within the opening, a mounting having a hair line and movably secured in the opening of the body and forming a closure for the scale bearing member and having sight openings, and a weight for said mounting.

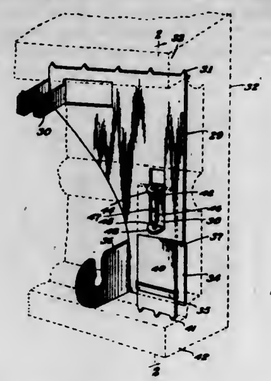


1,901,794. ABSORPTION REFRIGERATING MACHINE. EDMUND ALTENKIRCH, Neuenhagen, near Berlin, Germany, assignor to Siemens-Schuckertwerke Aktiengesellschaft, Berlin-Siemensstadt, Germany, a Corporation of Germany. Filed Jan. 18, 1929, Serial No. 333,376, and in Germany Jan. 26, 1928. 9 Claims. (Cl. 62—119.5.)

1. In an absorption refrigerating machine, consisting of a boiler, a reabsorber, an evaporator and an absorber, containing an absorption solution and a working medium partly gaseous and partly in a condensed fluid phase, and furthermore containing an inert gas admixed with the gaseous working medium in the evaporator and the absorber, connecting pipes between the absorber and the evaporator, which permit circulation of the mixture of working medium and inert gas, a connecting pipe between the reabsorber and the evaporator for conveying the absorp-

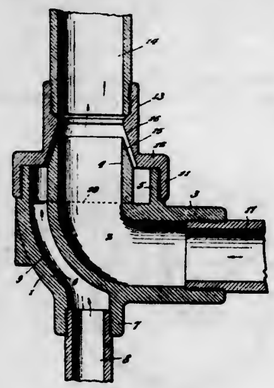
tion solution enriched in the reabsorber into the evaporator for the purpose of liberating gaseous working medium from the solution into the admixed inert gas, means for cooling said enriched solution to a temperature lower than that prevailing in the reabsorber during operation and means for effecting a heat interchange between the said rich absorption solution and the mixture of gaseous working medium and inert gas flowing from the absorber into the evaporator.

1,901,795. AIRPLANE LANDING GEAR. GIUSEPPE M. BELLANCA, New Castle, Del. Filed Aug. 10, 1931. Serial No. 556,254. 10 Claims. (Cl. 244—2.)



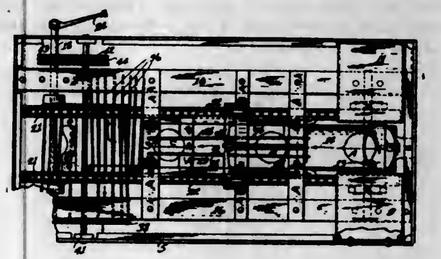
4. In an airplane landing gear, a wing rib, a pair of struts pivoted at one end to the rib, the other ends of the struts being pivotally connected, and being associated with a journal for receiving the axle of a landing wheel, and one of the struts being an oleo strut.

1,901,796. CURTAIN AND SHADE FIXTURE. MIKE BELL, Kansas City, Kans. Filed Aug. 17, 1931. Serial No. 557,634. 1 Claim. (Cl. 156—94.)



A combination drapery and curtain bracket, comprising a plate which has an offset portion at one of its edges and from one of its ends, and the transverse shoulder afforded by said offset portion having a rectangular opening therethrough, a strap arranged transversely of the offset portion and having angle ends secured to the plate, said plate adjacent to the shoulder being provided with a longitudinally arranged elongated slot, an ear projecting from the plate at the end of the slot next to the shoulder, a second and smaller plate guided through the opening in

the shoulder and through the strap of the first named plate, said smaller plate having an offset ear that freely passes through the elongated slot in the first named plate

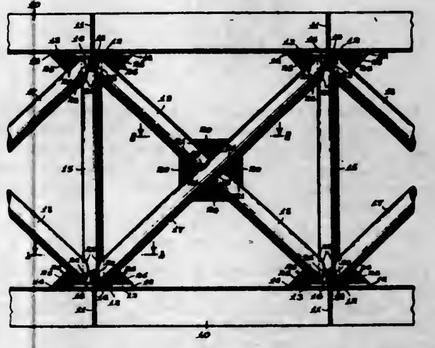


and adjustable means between and connected to the ears of the respective plates for longitudinally adjusting the plates with respect to each other.

1,901,797. EJECTOR. RUSSELL BLACK, Huntington, W. Va., assignor to Commercial Patents Development Company, Huntington, W. Va., a Corporation of West Virginia. Filed Sept. 15, 1931. Serial No. 562,966. 1 Claim. (Cl. 103—263.)

An ejector comprising a body member having a side arm to receive a water inlet pipe and provided with a nipple on its under side to receive a steam inlet pipe, the body being further formed with a concentric nozzle in the upper side through which the indrawn water may flow, the body having an L-shaped bore extending through the side arm and through the nozzle, the upper end of the nozzle being exteriorly tapered downwardly along straight lines, the body having a steam passage rising from the nipple on the bottom of the body and terminating at the base of the nozzle exteriorly thereof, the body having an annular outer wall exteriorly threaded and disposed concentric with the nozzle to form an annular steam passage at the base of the nozzle, and a cap member threaded on to said annular outer wall and closing the upper open end of said annular steam passage, said cap having a collar rising therefrom in alignment with the nozzle to receive an outlet pipe, the inner circumference of said collar being downwardly tapered along straight lines to present a tapered surface concentric and parallel with the tapered end of the nozzle.

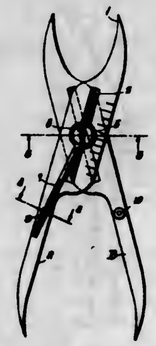
1,901,798. NUT HULLING MACHINE. FRANK BOOMER, Berkeley, Calif. Filed Jan. 5, 1932. Serial No. 584,851. 2 Claims. (Cl. 146—10.)



1. In a device of the character described, a conveyor mechanism including spaced chains, a plurality of pusher plates connected to said chain and extending therebetween, a trough positioned between said chains, means for feeding nuts to said trough, guide wires positioned adjacent one end of said trough, whereby nuts engaged by said pusher plates will be moved from said trough onto said guide wires, a plurality of hulling fingers radially arranged with respect to the path of movement of said nut, said fingers having pointed extremities for engaging the hulls on the nuts as they pass said fingers.

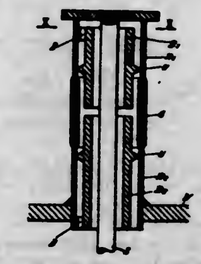
1,901,799. PRESERVATIVE COMPOSITION. JAMES H. BROOKS and JACOB GOLDSTONE, Portland, Oreg., assignors of one-fourth to Fred W. Taplin and one-fourth to Donald Richards, Portland, Oreg. Filed July 23, 1929. Serial No. 380,453. 2 Claims. (Cl. 134—1.5.)

2. A combined ink repellant and preservative for printing press blankets comprising a liquid body for coating the blanket in a film like form, said body consisting of five pounds of a coloring substance, six-tenths of a pound of beeswax, eight gallons of long China wood oil varnish, three-quarters of a gallon of a drier, two gallons of pure gum spirits of turpentine and one and one-quarter gallons of mineral turpentine, said body possessing the characteristics of uniting with and preserving the blanket when applied to the latter without destroying or injuring the elasticity, pliability or resiliency of the blanket, and said body possessing pliable, elastic, flexible, soft, smooth, nonporous ink-repellant, and impervious characteristics.



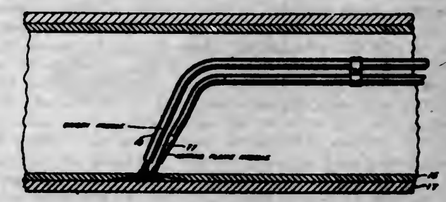
1,901,800. WELDED CONSTRUCTION. FRANCIS S. BUSBEY, Brooklyn, N. Y. Filed Nov. 21, 1930. Serial No. 497,328. 3 Claims. (Cl. 189—37.)

3. A structure having the combination of upper and lower structural elements having flanges arranged at an angle with respect to each other and in the same plane,



plates for said upper and lower structural elements and each plate being laid against the related flanges, vertical tubular posts whose opposite ends are in contact with upper and lower plates respectively and welded thereto, and tubular braces welded together and arranged between said posts and welded to said posts.

1,901,801. PROPORTIONAL DIVIDER. CHARLES CATTANEO, South Norwalk, Conn. Filed Apr. 1, 1929. Serial No. 351,739. 1 Claim. (Cl. 33—150.)

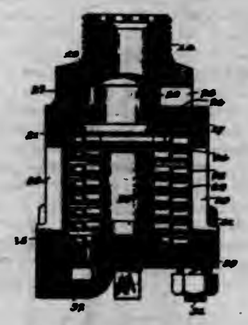


A pair of dividers comprising leg members each having a longitudinal slot, a headed bolt extending through the slots, the diameter of the bolt being equal to the transverse breadth of the slots, a nut threaded to the bolt, eye bolts extending through the members, rods slidable in the eye bolts and having apertured ends to receive said headed bolt and nuts threaded upon the eye bolts to lock said bolts against rotation relative to the members and to clamp the rods against the surfaces of the leg members.

1,901,802. LEADING-IN DEVICE FOR METALLIC VACUUM-DISCHARGE CONTAINERS. WALTER DÄLLENBACH, Zurich, Switzerland. Filed Mar. 18, 1929, Serial No. 347,965, and in Germany Apr. 2, 1928. 2 Claims. (Cl. 250—27.5.)

1. In a vacuum discharge vessel of metal containing a rarefied fluid, the combination of a leading-in conductor, an insulator sealing said leading-in conductor in said vessel, and conducting parts covering that portion of the surface of said insulator adjoining the vacuum, said conducting parts being slightly spaced from the insulator, one conducting part being electrically connected with said leading-in conductor, the other conducting part being electrically connected with said vessel, these conducting parts being separated by a narrow gap in which the drop in potential between said vessel and said leading-in conductor is concentrated, said gap being located from the points of contact of said insulator and the conducting parts in the vacuum at a distance forming a multiple of its width, and fused electrically conductive connections holding said conducting parts in position.

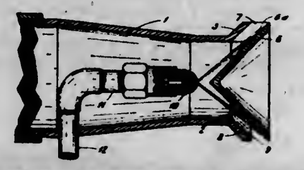
1,901,803. METHOD OF DECARBONIZING OIL REFINING APPARATUS. WILLIAM T. DAVIS, Huntington Park, Calif. Filed July 1, 1930. Serial No. 465,942. 3 Claims. (Cl. 196—69.)



1. Method of decarbonising the interior of an oil refining apparatus which comprises heating the coke-like residue to such a temperature that it will burn in an atmosphere containing more oxygen than normal and supplying an atmosphere rich in oxygen to the vicinity of said heated residue, said atmosphere being supplied at a high velocity and in such a manner that it detaches pieces of unburned coke from the walls of the apparatus.

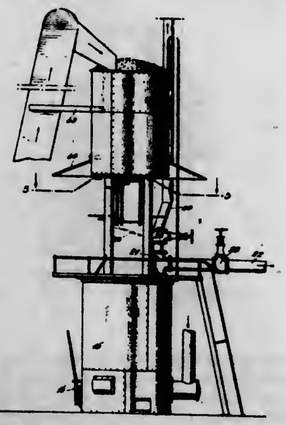
1,901,804. PROCESS FOR REMOVING CARBON FROM TUBES. WILLIAM T. DAVIS, Southgate, and CHARLES E. RHEIN, San Francisco, Calif., assignors to The Linde Air Products Company, a Corporation of Ohio. Filed Dec. 12, 1930. Serial No. 501,962. 3 Claims. (Cl. 196—69.)

3. Method of burning combustible deposits from the interior of a tube which comprises igniting said deposit, delivering a gas richer in oxygen than air obliquely against said deposit and delivering compressed air axially of the tube and in the same direction with respect to the length of the tube as the oxygen containing gas.



1,901,805. BELLOWS OPERATED SAFETY CYLINDER COCK. MATTHEW R. FINLEY, Scranton, Pa., and CHARLES STERN, Jersey City, N. J. Filed Apr. 8, 1930. Serial No. 444,489. 3 Claims. (Cl. 121—134.)

1. An improved cylinder cock, comprising a casing having a reduced threaded neck for engagement in the bottom port of a locomotive cylinder and provided with a downwardly facing seat at the base of said neck and an enlarged exhaust chamber beneath said seat and opening horizontally through the side of the casing, said casing be-

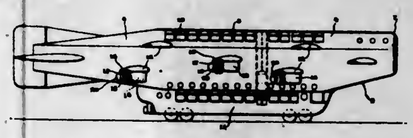


ing hollow at its lower end to provide a cylinder and with a top wall between the cylinder and said enlarged exhaust chamber, said casing having slots in its sides for venting the cylinder, a valve slidably fitted through said top wall in axial alignment with the seat and having an enlarged base disc freely movable in the cylinder, a bellows closed at its upper end located in the cylinder against the under side of said disc and having a base ring at its lower end overlapping the lower end of the casing, a cap plate secured against the lower end of the casing for closing the cylinder and engaging said base ring of the bellows for binding the ring between the casing and the cap plate to seal the bellows thereagainst and anchor the bellows in the cylinder, said cap plate having at one side an air supply port leading to the interior of the bellows for supplying pressure thereto to expand the bellows and raise said valve to its seat, and a cap stop screw threaded through said cap plate and extending upwardly into the bellows for limiting the contraction thereof and adapted to be adjusted for engagement against the upper end of the bellows to maintain the valve to its seat.

1,901,806. ATOMIZER. THOMAS J. FULTON, Fresno, Calif., assignor to Food Machinery Corporation, San Jose, Calif., a Corporation of Delaware. Filed June 22, 1932. Serial No. 618,735. 7 Claims. (Cl. 299—140.)

1. An atomizing nozzle comprising an air conducting casing having a discharge port, a deflecting baffle disposed centrally of said port and having divergent sides extending from an apex directed inwardly of the casing, said divergent baffle sides being spaced from the casing whereby to provide for the passage of air therebetween, a liquid atomiser nozzle disposed within the casing adjacent the apex of the baffle for discharging atomised liquid against the baffle sides, and conduits connected with the liquid atomiser nozzle and casing for supplying liquid and air respectively thereto under pressure.

1,901,807. GAS PRODUCER. ALBERT LEET GALUSHA, Caldwell, N. J. Filed Dec. 27, 1927. Serial No. 242,751. 9 Claims. (Cl. 48—86.)

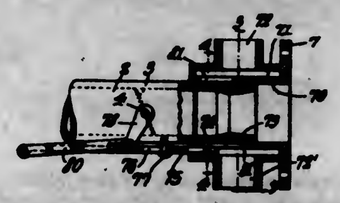


3. In combination with a gas producer, a feed bin over said producer and spaced therefrom, normally filled feed chutes extending directly therefrom through the head of the producer and opening to the interior of the latter substantially below the head of the producer to provide a gas accumulating space between the head of the producer and the top of the fuel bed maintained by the solid stream fuel feed through the feed chutes.

1,901,808. WASTE RECEPTACLE. SAMUEL HAMMER, Brooklyn, N. Y. Filed Sept. 3, 1932. Serial No. 631,645. 11 Claims. (Cl. 220—32.)

1. A receptacle, a cover therefor, means connecting the cover with the receptacle including a hinge member connected at one of its ends to the cover, and means for mounting said member at its other end upon the receptacle body interiorly thereof and within the area enclosed by said cover, said member lying in close parallel relation to a wall of the receptacle body and intermediate of its ends having bearing contact upon a vertical wall of the receptacle when the cover is in open position to sustain said cover out of contact with the receptacle wall and in laterally spaced relation to the open top of the receptacle.

1,901,809. AIRSHIP. OWEN A. HAVILL, New York, N. Y., assignor to Hans O. Schundler, New York, N. Y. Filed Feb. 4, 1930. Serial No. 425,886. 1 Claim. (Cl. 244—6.)



A lighter than air aircraft comprising an elongated bag of polygonal cross section throughout substantially its entire length and having a plane unobstructed platform along its top extending from the end of its nose toward the trailing end of the bag and forming an aeroplane runway, airfoils extending from opposite sides of the bag, the airfoils being arranged in series at each side of the bag, the airfoils of each series being arranged one behind the other and in staggered formation, gondolas carried by the airfoils, engines housed by the gondolas, propellers driven by the engines and arranged beneath and protected by the airfoils, a main rudder for the bag, and auxiliary rudders positioned rearwardly of the propellers.

1,901,810. AIR CONTROLLING MEANS FOR CARBURETORS. WILLIAM A. HEIDE, Detroit, Mich. Original application filed Apr. 25, 1928, Serial No. 272,739. Divided and this application filed June 10, 1929. Serial No. 369,814. 2 Claims. (Cl. 48—180.)

1. In a carburetor a tubular member having a passage for the flow of gas of a rich mixture, a counterbore in

one end of the member, a butterfly valve spaced from the counterbore, a Venturi tube slidable in the counterbore, inlet ports in the counterbore circumferentially disposed and longitudinally spaced from one end of the counterbore, lever and link connections between the butterfly valve and the Venturi tube whereby both are adjusted

simultaneously, said Venturi tube being movable outwardly of the counterbore to admit air to the counterbore between the butterfly valve and the Venturi tube, for thinning the said rich mixture, and a hot air chamber surrounding a portion of the tubular member adjacent the air inlet ports.

1,901,811. MEASURING AND DISPENSING DEVICE FOR CONTAINERS. CHARLES HOCHSTATTER, Ozone Park, N. Y. Filed Apr. 11, 1932. Serial No. 604,621. 9 Claims. (Cl. 221—98.)

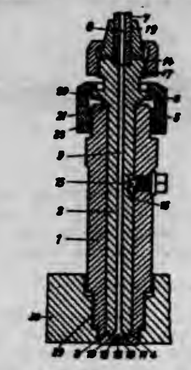
1. In a measuring dispenser for granular substances including a dispensing tube, a terminal member at the inlet end of said tube and angularly related blades at the outer end of the terminal member, said blades being disposed in planes coinciding with the axis of the terminal member.

1,901,812. DISHWASHING TOOL AND SPRAY. HELEN THOMAS HUEY, Stonehurst, Pa. Filed Mar. 14, 1931. Serial No. 522,692. 1 Claim. (Cl. 15—128.)

In a dish washing tool and spray, the combination with a hollow handle, of a tube fitting telescopically through the handle and provided with a head at one end to enter one end of a rubber supply hose, which also fits partially into the rear end of the handle, the interior of the handle at its other end having a tapered portion constituting a socket and provided with exterior diametrically opposite longitudinal grooves merging into notches at their rear ends, a brush provided with opposite spring arms engaging said grooves and having their terminals fitting the notches, a sleeve fitting the exterior of the forward end of the handle and provided with bayonet connections with the handle and said sleeve adapted to be partially rotated to override the spring arms of the brush to hold them in the grooves and their terminals in the notches, said sleeve having an end wall adjacent the extremity of the handle, said end wall having a notch, a spray nozzle provided with a broad flat perforated spray face, flatwise toward the brush, said nozzle merging into a tubular shank fitting

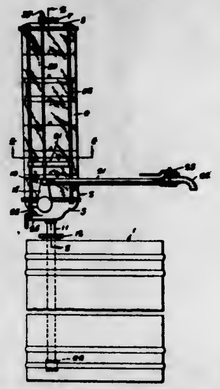
within the socket of the handle and provided with a longitudinal exterior rib to engage the notch of said end wall of the sleeve, thereby holding the flat face of the nozzle flatwise in register with the brush.

1,901,813. OIL WELL TESTING DEVICE. MONROCA O. JOHNSTON, Glendale, Calif., assignor of one-third to Gilson M. Jones and one-third to Francis C. Van Deinse, Los Angeles, Calif. Filed Sept. 7, 1932. Serial No. 632,048. 1 Claim. (Cl. 166—1.)



In a well testing device provided with a packer, adapted to be used in a well cavity, a valve housing rigidly attached above the packer, a valve comprising a piston head and an elongated sleeve having a central passageway therethrough mounted to slide in the housing, open ports cut through the elongated sleeve to connect with the central passageway, a packing carried in said housing to encase the lower portion of the elongated sleeve, and mask said ports when the piston head is moved downwardly, a compression gland secured to said housing whereby to compress the packing and permit movement of the elongated sleeve, the said gland having a recess cut therein to register with the ports when the piston head is moved upwardly, a perforated plate secured to the top of the gland whereby to permit communication between the recess and the well cavity and allow movement of the sleeve therethrough, and means for engaging the perforated plate and said elongated sleeve to return the piston head to raised position.

1,901,814. FUEL INJECTION DEVICE FOR INTERNAL COMBUSTION ENGINES. HUGO JUNKERS, Dessau, Germany. Filed Jan. 14, 1932, Serial No. 586,862, and in Germany Jan. 17, 1931. 10 Claims. (Cl. 299—107.6.)

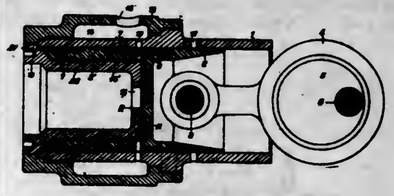


1. A solid-injection fuel admitting device for internal combustion engines comprising a casing, a needle with a

fuel passage inserted in said casing, co-acting seating faces on said needle and said casing, means anchored on one of said members for exerting thrust on the other

member so as to apply their seating faces onto each other, and means for limiting the relative movement of the free ends of said members under the action of the thrust.

1,901,815. OIL AND LIQUID DISPENSING DEVICE. HENRY M. KEITH, Harrisburg, Ill. Filed Feb. 23, 1932. Serial No. 594,627. 3 Claims. (Cl. 221—100.)

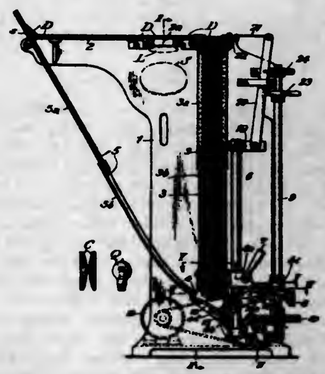


1. A liquid dispensing device comprising a visible measuring receptacle, means connecting said receptacle to a liquid supply, means for admitting air pressure to either the liquid supply or the receptacle, and a dispensing means for said receptacle and capable of actuating the means for admitting air pressure to the liquid supply or the receptacle.

1,901,816. ABSORPTION OF OXIDES OF NITROGEN. EMIL LÜSCHER, Basel, Switzerland, assignor to the Firm Lonza Elektrizitätswerke und Chemische Fabriken Aktiengesellschaft, Basel, Switzerland. Filed Aug. 30, 1930, Serial No. 479,095, and in Switzerland Sept. 13, 1929. 6 Claims. (Cl. 23—157.)

6. The process for the absorption of oxides of nitrogen from gases, such as may be obtained in known manner by burning ammonia in oxygen-rich gases, which comprises successively subjecting said gases to the action of nitric acid of such concentration that substantial elimination of the moisture content of the gases takes place, then to the action of nitric acid of relatively increased concentration whereby oxidation of the lower nitrogen oxides to a higher state of oxidation takes place, and finally to the action of nitric acid of still higher concentration whereby absorption of the higher nitrogen oxides takes place.

1,901,817. COMPRESSOR. GEORG NEIDL, Berlin, Germany. Filed Oct. 8, 1931, Serial No. 567,681, and in Germany Dec. 5, 1930. 3 Claims. (Cl. 230—190.)



1. In a reciprocating pump having a cylinder, a piston mounted to slide in said cylinder, and inlet and delivery ports adapted to be controlled by said piston; a member on said piston adapted to move in a chamber which permanently communicates with the compression and expansion space of the cylinder through a passage whose free sectional area is small as compared with the piston surface.

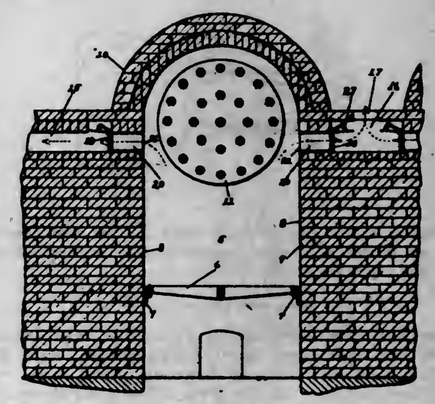
1,901,818. PRINTING PRESS ROLLER. LUTHER C. OKERSERO, Elk City, Okla. Filed June 23, 1931. Serial No. 546,371. 1 Claim. (Cl. 91—67.8.)

A printing press roller comprising a plurality of cylindrical metallic sections removably mounted on a printing press shaft, composition material covering the sections, some of said sections having bevelled ends and the other sections each having one end bevelled and the other end straight, said sections arranged on the shaft with the bevelled ends in engagement and with the sections having straight ends located on the shaft with the straight ends next to the ends of the shaft, and collars detachably secured to the shaft and having straight sides to engage the straight ends of the last named sections and having their opposite faces bevelled to engage the bevelled ends of the sections when the sections having the straight ends are removed from the shaft.

1,901,819. PROJECTOR COMPRISING AUTOMATIC PICTURE CHANGING MEANS. ALFRED OSCHWALD, Zurich, Switzerland. Filed Sept. 17, 1932, Serial No. 633,667, and in Germany Sept. 24, 1931. 12 Claims. (Cl. 88—28.)

1. In a projector comprising automatic picture changing means, in combination, a frame, a gate for the projecting light rays carried by said frame, a supply shaft for receiving a number of pictures in superimposed relationship connected to said frame, a feed device associated with one end of said supply shaft for feeding the uppermost pictures of the stack in said supply shaft towards said gate, means for gravitatively returning the exposed pictures towards the other end of said supply shaft, a passageway leading from said supply shaft to said picture returning means and across the gate for receiving the pictures delivered by said feed device in a closed up row, a resetting device for reconveying the returning pictures into said supply shaft, and means for actuating said feed device and said resetting device in timed relationship for positively maintaining a continuous circulation of all the pictures inserted in the projector.

1,901,820. SOLDER FITTINGS AND METHOD OF SOLDERING. ARTHUR L. PARKER, Cleveland, Ohio. Filed Dec. 22, 1931. Serial No. 582,594. 8 Claims. (Cl. 113—112.)



1. A solder fitting for metal tubes including a sleeve adapted to receive the end of the tube, said sleeve in the region of the tube end being dimensioned so as to provide a uniform clearance space only sufficient to permit the free insertion of the tube in said sleeve, said sleeve at the inner end of the clearance space being tapered inwardly and dimensioned so that the end of the tube contacting with said tapered portion will be frictionally gripped and held centered in said sleeve, the inner surface of said sleeve having applied thereto a viscous solder bonding mixture which adheres to the wall of the sleeve and contains sufficient solder and flux for effecting a solder bond when heat is applied to the fitting.

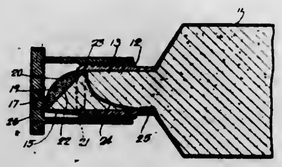
7. The method of attaching solder fittings to tubes comprising forming a sleeve fitting adapted to receive the end of the tube which is to be attached thereto and dimensioning said sleeve fitting so as to provide a uniform clearance space only sufficient to permit the free insertion of the tube in said sleeve, and a tapered surface at the inner end of the clearance space which is so dimensioned as to grip and center the tube in the clearance space in said sleeve, applying to the inner surface of the sleeve of the fitting a viscous adhering coating containing solder and flux, subsequently inserting the tube into said sleeve into gripping contact with said tapered surface, and applying heat sufficient to melt the solder and bond the tube to the fitting.

1,901,821. FURNACE CONSTRUCTION. FIRMIN PROVINCIAL, Woonsocket, R. I. Filed Dec. 16, 1930. Serial No. 502,818. 1 Claim. (Cl. 110—173.)

In a brick work furnace having a combustion chamber, a metal housing placed in a side wall of the chamber with its inner end in communication with the upper part of the chamber and said wall having a passage therein leading from the outer end of the housing to the atmosphere, said passage having an enlarged portion in its top wall located adjacent the outer end of the housing, a gravity door hingedly connected at its upper edge with the upper part of the housing at the outer end of the housing and moving into the enlarged part of the passage upon opening movement of the door, an arm connected with the top part of the outer end of the housing and extending outwardly and upwardly therefrom and located in the enlarged part

of the passage and a spring depending from the outer end of the arm and engaged by the door when the same is swung upwardly.

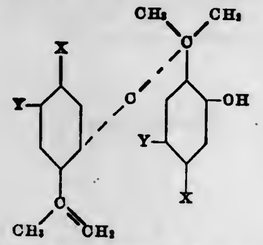
1,901,822. FOUNTAIN BRUSH. GEORGE REISINGER, Rochester, N. Y. Filed Sept. 28, 1931. Serial No. 565,515. 6 Claims. (Cl. 15—186.)



1. In a fountain brush the combination of a hollow handle, a brush removably attached to the inner end of said handle, said hollow handle having a valve opening in the inner end thereof leading into said brush and a filler opening to one side of said valve opening adapted to be held closed by said brush, a valve in said valve opening, a flexible closure at the outer end of said hollow handle and a valve stem rigidly attached to said flexible closure with one end thereof and attached to said valve with the other end thereof to normally hold said valve in a closed position to simultaneously open said valve and extrude a portion of the contents of the handle under pressure thru said valve opening on the depression of said flexible closure.

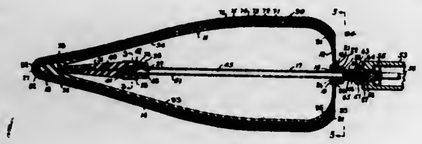
1,901,823. COLLAPSIBLE TUBE CLOSURE. MALCOLM BOURNE ROBINSON, Woodbridge, Conn. Filed Apr. 11, 1931. Serial No. 604,548. 4 Claims. (Cl. 221—60.)

1. In combination with a collapsible tube having a discharge orifice, a closure member pivotally mounted within said discharge orifice, the inner face of the end wall of said closure member being flat while the outer face of the same is curved on an arc struck from the axis of



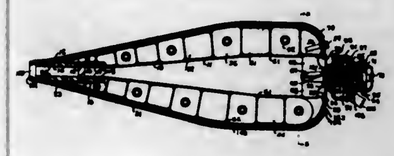
its pivot, the radius of the curved face being equal to the width of the orifice and a spring acting upon said closure member to hold the same in sealing engagement with the

walls of said discharge orifice with the flat face disposed at an acute angle with respect to the longitudinal axis of said discharge orifice.



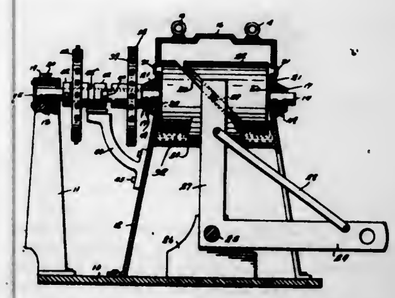
1,901,824. PRODUCTION OF PHENOLIC COMPOUNDS. WALTER SCHOELLER, Berlin-Charlottenburg, HANS JORDAN, Berlin-Steglitz, and REINHARD CLEBC, Berlin, Germany, assignors to the Firm Schering-Kahlbaum Aktiengesellschaft. Filed Feb. 23, 1928, Serial No. 256,480, and in Germany Mar. 11, 1927. 8 Claims. (Cl. 260—154.)

1. The method of decomposing condensation products obtained by acting with acetone on a cresol of the group consisting of m- or p-cresol in the presence of hydrochloric acid gas at a temperature slightly above room temperature and which have the formula:



wherein, in both nuclei, when X is H, Y may be CH_3 or, when X is CH_3, Y may be H, comprising heating such products in the vapor phase at a temperature of about 300° C.

1,901,825. APPLICATOR FOR TREATING SURFACES. CARL F. SEIBERT, Hamilton, and ELMER J. SEIBERT, Cincinnati, Ohio. Filed June 12, 1929. Serial No. 370,192. 12 Claims. (Cl. 15—97.)

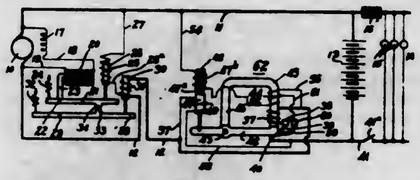


1. In a device of the character described, the combination of a cushion bag, a drive-shaft for rotating said bag, said drive-shaft extending into said bag from one end of said bag, a resilient shank connected with the other end of said bag and extending axially in said bag, and a drive connection in said bag between said drive-shaft and said resilient shank.

1,901,826. APPLICATOR FOR TREATING SURFACES. CARL F. SEIBERT, Hamilton, and ELMER J. SEIBERT, Cincinnati, Ohio. Filed June 24, 1929. Serial No. 373,901. 20 Claims. (Cl. 15—103.)

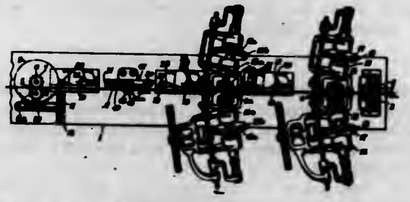
1. In an applicator of the character described, the combination of a rotatable tube, a flexible cover about said tube having connections at its ends with said tube, and a pneumatic cushion member between said tube and said flexible cover.

1,901,827. PUMPING UNIT. ROBERT H. STOKES and JAMES B. STOKES, Lufkin, Tex. Filed June 6, 1931. Serial No. 542,604. 1 Claim. (Cl. 74—14.)



A well pumping unit of the character described comprising a base, a standard mounted on the base, a shaft rotatably mounted on the standard, a drum secured to said shaft, said drum having a cam groove therein, a pitman shaft, a pitman mounted at one end on said pitman shaft and having the opposite end disposed beyond one edge of the base, an oscillatable arm mounted on said pitman shaft and adapted to oscillate with said pitman shaft, an inwardly extending pin carried by said arm and extending into said cam groove whereby to oscillate said arm upon rotation of said drum, a casing disposed about said drum, wipers carried by the casing and engaging each end of the drum, the casing having outwardly directed lubricating channels receiving a lubricant from the wipers to lubricate the shaft, a driven wheel mounted on said shaft outwardly of said casing, a power takeoff member rotatable on said shaft, coacting clutch elements carried by said driven wheel and said power takeoff member, a drive shaft rotatably carried by said standard, a drive wheel mounted on said drive shaft, a flexible member engaging said drive wheel and said driven wheel, and braking means carried by said drive shaft whereby to stop rotation of said driven shaft upon declutching thereof.

1,901,828. ELECTRICAL SYSTEM OF DISTRIBUTION. WILLEM C. BROEKHUYSEN, New Haven, Conn., assignor to The Safety Car Heating & Lighting Company, a Corporation of New Jersey. Filed Feb. 14, 1925. Serial No. 9,144. 19 Claims. (Cl. 171—314.)



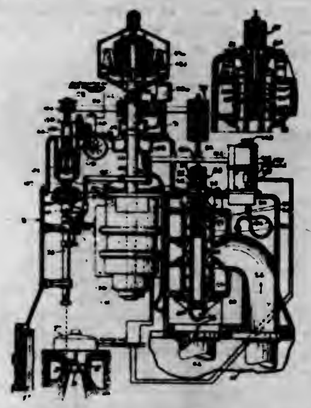
1. In apparatus of the character described, in combination, a generator, a storage battery, a pivoted member substantially balanced mechanically and having its center of mass substantially coincident with its axis and adapted upon movement in one direction to connect said generator to said battery, and two electromagnetic means exerting

opposed tractive efforts upon said member, one tending to move said member in circuit-closing direction and the other tending to oppose such movement, said two electromagnetic

means being arranged to permit the said one to preponderate over the said other substantially when the generator voltage equals the battery voltage.

1,901,829. METAL ALIGNING DEVICE. HENRY J. GAISMAN, New York, N. Y., assignor, by mesne assignments, to Gillette Safety Razor Company, Boston, Mass., a Corporation of Delaware. Filed Jan. 18, 1928. Serial No. 247,528. 18 Claims. (Cl. 51—112.)

1. Means for aligning a strip of metal while traveling comprising means to propel the strip, a movable support to engage edges of the strip to support and align it as fed by said means, means guiding said support to travel in the direction of the strip, means additional to said movable support cooperative with the strip to cause said support to be propelled by and with the strip in one direction, means to move the support in another direction, and means to cause the support to engage and release the edges of the strip.

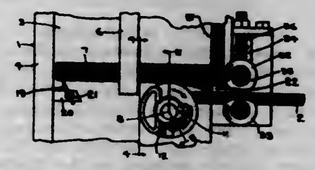


1,901,830. BLADE CLIP. HENRY J. GAISMAN, New York, N. Y., assignor, by mesne assignments, to Gillette Safety Razor Company, Boston, Mass., a Corporation of Delaware. Original application filed Nov. 26, 1928, Serial No. 321,798. Divided and this application filed Mar. 30, 1931. Serial No. 526,351. 5 Claims. (Cl. 206—16.)

1. A clip for a stack of double-edged razor blades having spaced sides to receive the blades therebetween with their edges opposing and spaced from said sides, connecting means between said sides, and fingers on said sides extending inwardly toward one another, said connecting means being provided with means to engage a blade to keep the blade edges out of contact with said sides.

1,901,831. GOVERNOR. SAMUEL LOGAN KERR, Philadelphia, Pa., assignor to I. P. Morris & De La Vergne, Incorporated, a Corporation of Delaware. Filed Aug. 22, 1928. Serial No. 301,874. 36 Claims. (Cl. 290—40.)

1. In a governor for controlling a prime mover having power control mechanism, a speed responsive device having provision for being driven in synchronism with said prime mover, means adapted to be responsive to said synchronized relation and means controlled thereby adapted automatically upon failure of said synchronized driving relation to effect closure of said control mechanism below speed no load position and thereafter to open the same to speed no load position.

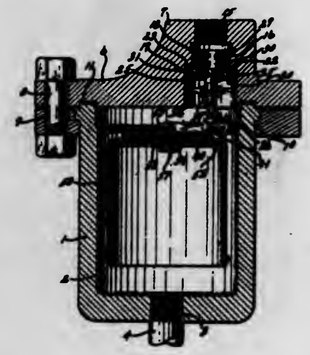


14. In a governor, the combination comprising a speed responsive device, a control valve, means for operatively connecting said device and valve, including a floating lever and an associated mechanism, and means for adjusting the normal space relation between said mechanism and lever comprising a rotatable screw having threaded engagement with a non-rotatable nut carried by said lever, a fixed support, a motor secured thereon, and a slidable connection between said motor and screw.

21. In a governor, the combination comprising a speed responsive device, a control valve, and means for actuating said valve comprising a lever, and a cam movable on an axis angularly disposed to the axis of said lever for effecting adjustment thereof.

30. In a governor, the combination comprising a base of relatively large vertical extent and in plan view being substantially fan shaped, a speed responsive device supported by said base, a fluid distributing valve and passages disposed in the large end of said base, means for controlling said distributing valve by said speed responsive device and other mechanism disposed in the smaller end of said base, including a synchronous motor for driving said device.

35. In a governor, the combination comprising a base having a fluid distributing valve and passage arrangement therein, governor operating mechanism therefor, an emergency control valve, and a throw-over valve adapted to render said governor or emergency valve alternatively operable, including an operating throw-over handle adapted when the throw-over valve is in one position to extend outwardly through an opening in said base to provide a visible indicator, and when said throw-over valve is in another position said handle is within said base.



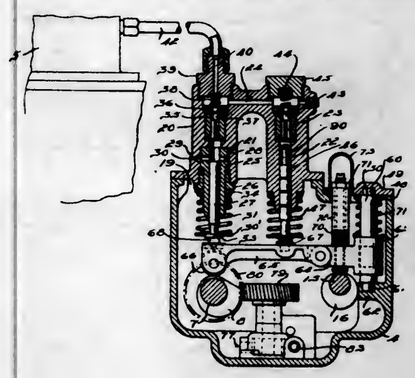
1,901,832. STARTER MECHANISM FOR FEEDING BLANKS OR THE LIKE. MICHAEL J. MILMOE, Chicago, Ill., assignor to F. B. Redington Co., Chicago, Ill., a Corporation of Illinois. Filed Mar. 10, 1930. Serial No. 434,616. 18 Claims. (Cl. 271—41.)

1. Feeding mechanism comprising a magazine for receiving blanks, a needle upon which a portion of the

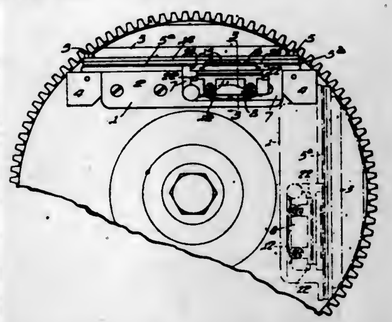
blanks rest, a starting roll, a shaft upon which said starting roll is mounted, yielding connection between said shaft and starting roll for driving the latter, and a friction surface on a portion only of the cylindrical surface of said starting roll, said connection between said shaft and starting roll being such as to permit said roll to be retarded when said portion which has a high coefficient of friction engages one of said blanks.

1,901,833. STEAM TRAP. LESLIE P. STRONG, Cleveland, Ohio, assignor to The Clark Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 28, 1931. Serial No. 553,508. 7 Claims. (Cl. 137—103.)

1. A steam trap, comprising a chambered casing having an inlet and an outlet, a valve for controlling said outlet, an inverted bucket in the chamber of said casing, operating means for said valve connected thereto and also having a lost motion connection with said bucket, said bucket being provided with a vent opening, and valve means carried by said operating means for controlling said bucket vent opening.



1,901,834. WICK. PAUL BARGER, Greenfield, Mass. Filed Mar. 12, 1932. Serial No. 598,499. 8 Claims. (Cl. 67—69.)

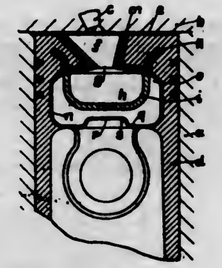


3. A wick for a hydrocarbon burner, said wick comprising a rectangular thin flexible body of absorbent noncombustible material and a plurality of separated and independent metallic clips secured thereto and extending beyond and free of an edge of said rectangular body.

1,901,835. FUEL FEED MECHANISM. HORACE T. THOMAS, Lansing, Mich., assignor to Reo Motor Car Company, a Corporation of Michigan. Filed Nov. 22, 1930. Serial No. 497,346. 5 Claims. (Cl. 103—41.)

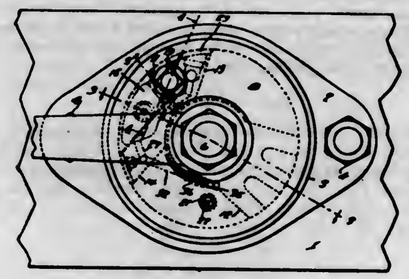
1. In a high pressure fuel pump, a housing having a fuel pump and a valve for controlling the volume of the pump discharge, a cam shaft rotatable in the housing, a fulcrum block slidably mounted in the housing, a cam lever for opening the valve pivoted in the block and riding on the cam shaft, a central shaft having an eccentric, an adjusting screw threaded through the block and a spring pressing on the block to hold the end of the screw in contact with the eccentric so that general adjustment of the pump may be accomplished by rocking the central shaft and differential adjustment by changing the setting of the screw.

1,901,836. TYPOGRAPHICAL MOLD. RANSOM H. TURNER, Auburndale, N. Y., assignor to Intertype Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Aug. 6, 1931. Serial No. 555,575. 9 Claims. (Cl. 199—55.)



1. A typographical mold comprising opposed members spaced apart to form a casting cavity, and means to extend longitudinally in said cavity and divide it into a plurality of compartments of a width at least as great as the width of the space between the mold members, said compartments having means of communication connecting them exteriorly of one of the faces thereof which define the thickness of the slug cast therein, and said dividing means being retractable from said cavity.

1,901,837. PLATE SURFACE. CLINTON BATSHOLTS, Hoosick Falls, N. Y., assignor to Specialty Insulation Manufacturing Company, Inc., Hoosick Falls, N. Y., a Corporation of New York. Filed July 18, 1929. Serial No. 379,192. 3 Claims. (Cl. 65—15.)

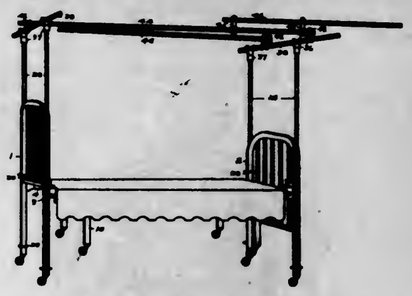


3. A dish comprising a body of synthetic organic molded material, inherently stiff and constituting the body of the dish, and a surfacing plate of glass, held directly by the body material; said body material being molded into a concholdal surface of mutual contact, of glass and material at the edge of the glass, whereby the glass plate is secured on the face of the body.

1,901,838. PISTON FOR INTERNAL COMBUSTION ENGINES. OTTMAR BAUR, Stuttgart, Germany, assignor to Acro Aktiengesellschaft, Kussnacht-on-Rigi, Switzerland. Filed Mar. 1, 1929, Serial No. 343,725, and in Germany July 13, 1928. 2 Claims. (Cl. 123—193.)

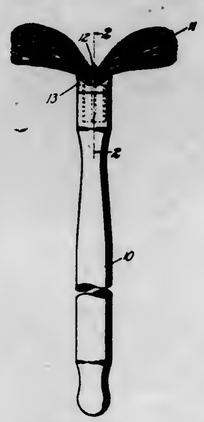
1. A piston of an internal combustion engine comprising cylindrical side walls, a perforated end wall adapted to form one bounding surface of the cylinder chamber of the internal combustion engine, a shell cast at its edges only in the perforated end wall of said piston to form a pocket with said perforation and a guard shell cast at its edges only with the edges of said first mentioned shell in said perforated end wall of said piston, and an extension of said guard shell adapted to closely follow the inner surface of said cylindrical wall of said piston.

1,901,839. SHOCK ABSORBER. EUGENE L. BESCHER, East Cleveland, Ohio, assignor to The Gabriel Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 4, 1930. Serial No. 486,892. 5 Claims. (Cl. 188—89.)



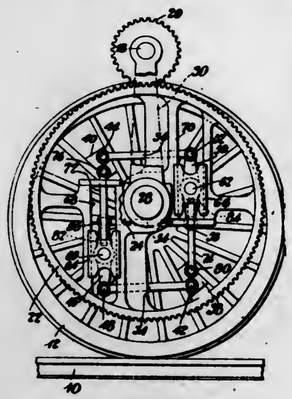
1. A shock absorber comprising in combination a liquid containing chamber, a piston in said chamber, a partition in said chamber toward and from which the said piston is moved, said partition being provided with a chamber intermediate the sides thereof, means including a metering port in said partition for permitting the flow of liquid from one end of the first mentioned chamber through said partition and through the chamber in said partition to the opposite end of the first mentioned chamber, a slide valve movable across the said port, there being ports communicating with said second chamber and subjecting the opposite ends of the slide valve to the pressure of the liquid therein, and a thermostat located in the second chamber and connected with said valve.

1,901,840. REVERSIBLE TUFT PILE CARPET OR RUG. WELLESLEY B. COOPER and ERNEST T. PHOENIX, Amsterdam, N. Y., assignors to Bigelow-Sanford Carpet Co., Inc., Thompsonville, Conn., a Corporation of Massachusetts. Filed Mar. 28, 1932. Serial No. 601,560. 4 Claims. (Cl. 139—401.)



1. A carpet or rug including a ground fabric having a tuft pile surface and a cushion or padding back permanently secured to the ground fabric and comprising soft padding weft shots laid side by side in contacting relation and concealing the threads of the overlying ground fabric to form a tread surface, smaller hard twisted weft shots extending along with the padding weft shots, pile forming tufts looped about top surface anchoring weft shots and having their loops resting upon the padding weft shots, and binder warps arranged to bind the padding weft shots and pile forming tufts to the ground fabric so that the carpet or rug has a top pile tread surface and a back padding tread surface and is reversible for use of either uppermost.

1,901,841. HOSPITAL BED. JOE J. ETTINGER, Warsaw, Ind., assignor to Zimmer Manufacturing Company, Warsaw, Ind. Original application filed Aug. 2, 1928, Serial No. 296,950, now Patent No. 1,823,890, dated Sept. 22, 1931. Divided and this application filed Nov. 1, 1930. Serial No. 492,650. 1 Claim. (Cl. 128—84.)

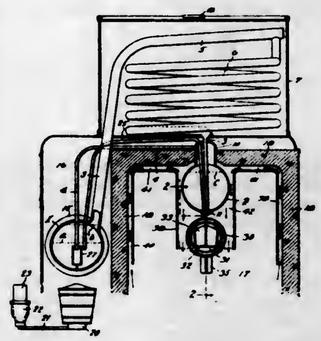


An overhead suspension and extension frame for hospital beds including a set of four corner posts each adapted to be connected to a respective leg of a bed, yokes on top of said posts, cross-bars each resting in the yokes of a pair of the posts at a respective end of the bed, means to secure said cross-bars in said yokes, swivel members slidably mounted on and extending upwardly from said cross-bars and having their upper portions constituting yokes, means to secure said swivel members in adjusted position on the cross-bars, a longitudinal bar resting in swivel yokes on respective cross-bars, means to secure the longitudinal bar in said swivel yokes, other yokes slidably mounted on the longitudinal bar and extending upwardly therefrom, means to secure the last mentioned yokes in adjusted position on the longitudinal bar, an extension bar resting in the last mentioned yokes and projecting beyond the end of the longitudinal bar to support a pulley, and means to secure the extension bar in said yokes.

1,901,842. MOP. HAROLD L. FIRTION, Warehouse Point, Conn., assignor to The Montgomery Company, Windsor Locks, Conn., a Corporation of Connecticut. Filed Oct. 25, 1930. Serial No. 491,122. 2 Claims. (Cl. 15—228.)

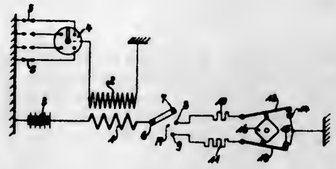
1. In a mop, a handle having an annular groove at one end, a head applied to the grooved end of the handle, and a resilient staple having its arms outwardly divergent, the over all distance between the arms adjacent their free ends being greater than the outside diameter of the groove, whereby said arms will bind against the outer wall of said groove when the staple is driven home in the groove, said annular groove facilitating assembly of the handle and staple without particular angular adjustment of the handle relative to the staple.

1,901,843. COUPLING DEVICE. PHILIP C. GORDON, New York, N. Y., assignor to Doherty Research Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 29, 1927. Serial No. 216,128. 10 Claims. (Cl. 64—27.)



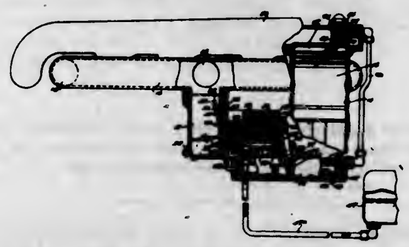
1. The combination of a rotary driving member, a rotary driven member, and a coupling intermediate said members, said coupling including a pair of rods pivotally connected directly to one of said members, levers pivotally connected to said rods and pivoting on the other of said members, means for transferring stresses from one of said levers to the other, and means for shifting the pivot points of said levers with respect to said other member with changes in eccentricity between the axes of said members.

1,901,844. TREATING THIOCYANATES. CHRISTIAN J. HANSEN, Essen-on-the-Ruhr, Germany, assignor, by mesne assignments, to The Koppers Company of Delaware, Pittsburgh, Pa., a Corporation of Delaware. Filed Aug. 9, 1928, Serial No. 298,617, and in Germany Apr. 14, 1928. 8 Claims. (Cl. 23—119.)



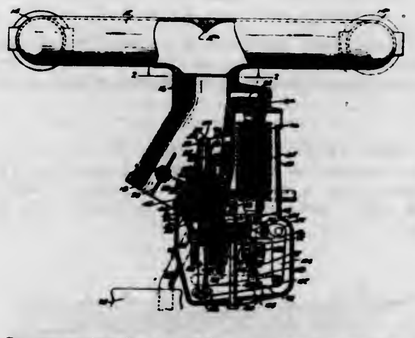
1. The method of decomposing thiocyanates and of producing ammonium compounds therefrom, comprising heating an aqueous solution of thiocyanates in the presence of a compound containing the radical SO_2 and maintaining the reaction mixture at an elevated temperature until substantially all the thiocyanates are decomposed.

1,901,845. THERMAL SHIELD FOR THE FREEZING SPACE OF REFRIGERATION APPARATUS. DAVID F. KEITH, Cleveland Heights, Ohio, assignor to Perfection Stove Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 27, 1929. Serial No. 358,441. 10 Claims. (Cl. 62—95.)



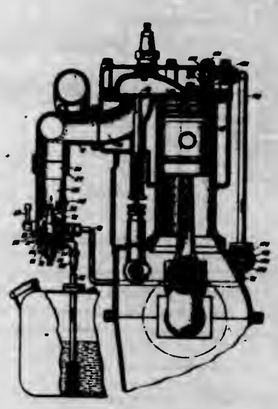
1. In refrigeration apparatus, in combination with a structure enclosing a refrigeration compartment, a cooling unit situated within said compartment, a holder for a substance whose temperature is to be reduced to or maintained at a substantially given value by heat interchange with said unit, a double wall receptacle spaced from the cooling unit and whose inner wall encloses said holder, and a liquid in the space between the inner and outer walls of the receptacle whose freezing point is below the said given temperature value and above the lowest temperature of the cooling unit.

1,901,846. IGNITION DEVICE FOR AIRCRAFT ENGINES. ERICH KLAIBER, Stuttgart, Germany, assignor to Robert Bosch Aktiengesellschaft, Stuttgart, Germany. Filed July 13, 1931, Serial No. 550,535, and in Germany Oct. 7, 1930. Renewed July 19, 1932. 11 Claims. (Cl. 123—148.)



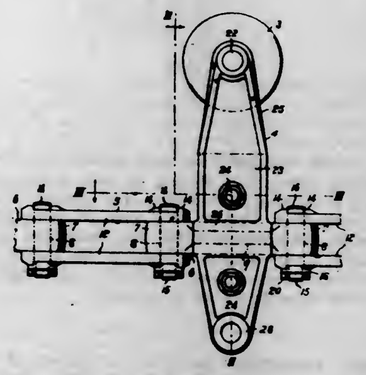
1. An ignition devce for aircraft engines comprising a battery, an induction coil connected to said battery, a make and break device set in the retarded ignition position, a second make and break device set in the advanced ignition position, a change-over switch, connected to said ignition coil, a resistance connected in series between said first make and break device and one pole of the switch and a second resistance of less ohmic resistance connected in series between said second make and break device and the other pole of the switch.

1,901,847. SUPPLYING AND MIXING CHARGES FOR INTERNAL COMBUSTION ENGINES. ARLINGTON MOORE, New York, N. Y., assignor, by mesne assignments, to Maxmoor Corporation, New York, N. Y., a Corporation of Delaware. Filed May 24, 1928. Serial No. 280,205. 54 Claims. (Cl. 123—119.)



1. In an internal combustion engine, an intake manifold, a mixing chamber in open communication therewtih, a throttle valved air inlet to said mixing chamber, a fuel conduit having a discharge orifice in said mixing chamber, a conduit for cylinder gases varying in pressure with the control of the air leading to said mixing chamber, and terminating in inductive relation to said discharge orifice, the inductive effects of the cylinder gases varying directly with the variation in the air flow and substantially in inverse relation to the variations in intake depression to vary the fuel flow in inverse relation to the variations thereof induced by intake depression and means actuated by variations in the pressure drop in the mixing chamber coextensively with the variations in air supply resulting from the control thereof for metering fuel through the fuel conduit in inverse relation to the amount of pressure drop acting thereon.

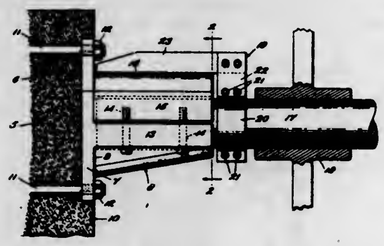
1,901,848. CHARGE FORMING APPARATUS FOR INTERNAL COMBUSTION ENGINES. ARLINGTON MOORE, New York, N. Y., assignor, by mesne assignments, to Maxmoor Corporation, New York, N. Y., a Corporation of Delaware. Filed Sept. 5, 1928. Serial No. 304,040. 21 Claims. (Cl. 123—131.)



1. In apparatus for supplying and mixing charges for internal combustion engines, an intake conduit, an air throttle therein, a fuel nozzle beyond the air throttle, means for discharging gaseous fluid in injective and disruptive relation to the fuel nozzle outlet, a fuel valve, means for operating the fuel valve comprising an elastic air bellows subjected to the differential between atmospheric and intake pressures, means for limiting the bellows movement within its elastic limits, and spring means for opposing bellows movement due to said pressure differential, whereby to render the bellows responsive within the limits of movement thereof to pressure differences that in the absence of said spring means would cause the bellows to exceed its elastic limits.

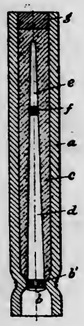
1,901,849. FUELING INTERNAL COMBUSTION ENGINES. ARLINGTON MOORE, New York, N. Y., assignor, by mesne assignmens, to Maxmoor Corporation, New York, N. Y., a Corporation of Delaware. Filed Nov. 7, 1928. Serial No. 317,750. 46 Claims. (Cl. 123—131.)

1. The method of fueling an internal combustion engine which comprises controlling fuel delivery directly with and by variation in intake pressure, and throughout the load range of the engine, restraining the action of intake pressure variation from causing such direct fuel variation beyond the range of fuel requirements.



1,901,850. TROLLEY CONVEYER. SAMUEL SHAFER, Jr., Milwaukee, Wis., assignor to Chain Belt Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed July 16, 1931. Serial No. 551,243. 2 Claims. (Cl. 198—177.)

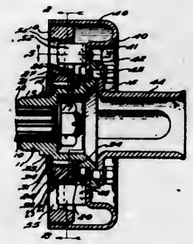
2. In a trolley conveyer, the combination of a power chain formed of articulated links, certain of which are of single piece construction, the mid-portions of which are of reduced size as compared with the ends to form central waist portions, and a supporting trolley adapted to run on



an overhead track, including a frame formed of parts adapted to closely embrace the said waist portion of the one piece links, and means to hold together the trolley frame pieces.

1,901,851. SCRAPER FOR SHAFT BEARINGS. ROBERT T. STEINDORF, Milwaukee, Wis., assignor to Chain Belt Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 2, 1931. Serial No. 572,694. 9 Claims. (Cl. 308—37.)

1. In a settling tank for sewage and the like having a wall, a bearing bracket secured to said wall, provided with an extension projecting into said tank which is subject to the deposit of solids thereon; a shaft journalled in said bracket; and means carried by said shaft for removing any solids which may deposit on said bracket.



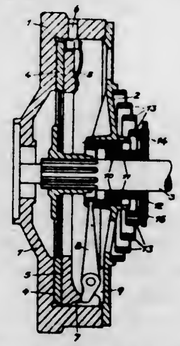
1,901,852. ROCKET. HERMANN STOLFA and RUDOLF ZWERINA, Vienna, Austria. Filed July 23, 1931, Serial No. 552,654, and in Austria July 28, 1930. 9 Claims. (Cl. 102—23.)

1. A rocket comprising an outer casing and a body of combustible composition divided to form a plurality of chambers of varying cross-sections, the successive burning of the composition forming each chamber being effective to maintain the pressure within the combustion space in approximate proportionate relation to the gradually increasing combustion surface, whereby an increase in the energy yield from the rocket is obtained.

1,901,853. VIBRATION DAMPER. ARCHIBALD A. WARNER, Dearborn, Mich. Filed May 7, 1931. Serial No. 535,667. 5 Claims. (Cl. 74—6.)

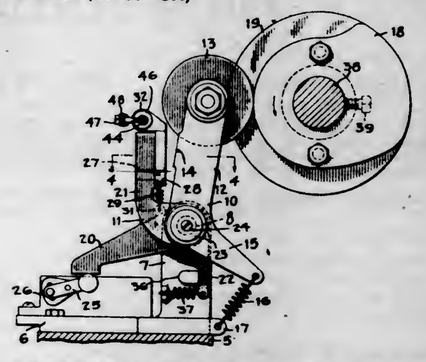
1. A vibration damper comprising a driven hub member, an inertia member rotatably mounted on and in concentric relation to the hub member, a disc member secured to the hub member, rollers between the inertia member and one of the other members, and a spring connecting the inertia member to the disc member, said rollers being disposed in slots formed in the inertia member and hub member for positively limiting their rotary movement relatively, said rollers contacting with both members to provide a metallic bearing contact between them.

1,901,854. WHIPSTOCK. JAMES S. ABERCROMBIE, Houston, Tex. Original application filed May 17, 1928, Serial No. 278,414. Divided and this application filed Sept. 10, 1932. Serial No. 632,582. 4 Claims. (Cl. 255—1.)



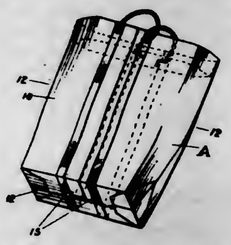
1. A whipstock, comprising an elongated body having a cutter deflecting upper face, and having a vertical course therethrough adapted for communication with a string of pipe.

1,901,855. AERIAL BANNER. MARK S. DU PONT, Darby, Pa., assignor to Kellett Autogiro Corporation, Philadelphia, Pa., a Corporation of Delaware. Filed Oct. 10, 1932. Serial No. 637,114. 10 Claims. (Cl. 40—127.)



4. An aerial banner including a plurality of generally parallel stringers extending longitudinally of the banner, a plurality of spacer bars suitably spaced with respect to each other and extending generally transversely of said stringers and secured thereto at their points of intersection;—there being a spacer bar along the leading edge of said banner and another spacer bar near the trailing edge thereof, a tow line adapted to be attached to an aircraft, a bridle intermediate said tow line and said leading spacer bar, said bridle including an upper and a lower line extending generally from the upper and lower ends, respectively, of said leading spacer bar, to a common juncture with said tow line for transmitting the towing forces to the uppermost and lowermost stringers, respectively, said upper bridle line being inclined upwardly with respect to said stringers when the bridle is taut, and said juncture being above the line of the upper stringer and a diagonal tension member operatively interconnecting the upper bridle line with the lower end of an intermediate spacer bar, and a plurality of symbols formed of webbing, mounted upon the said stringer.

1,901,856. ADJUSTABLE DISK CLUTCH. MAX GOLDSCHMIDT, Frankfort-on-the-Main, Germany, assignor, by direct and mesne assignments, to the Firm Fichtel & Sachs A. G., Schweinfort-on-the-Main, Germany and Mecano Gesellschaft mit beschrankter Haftung, Frankfort-on-the-Main, Germany. Filed July 7, 1930, Serial No. 466,232, and in Great Britain Apr. 30, 1930. 1 Claim. (Cl. 192—110.)



An adjustable disk clutch, comprising a fly wheel disk, a clutch disk, a pressure ring, a cover for the fly wheel disk having a hub portion, pressure levers pivoted to the inner surface of the cover and adapted to act upon the clutch disk through the pressure ring and thereby move the clutch disk against the fly wheel disk and close the clutch, a sliding sleeve consisting of two parts, one of which engages the pressure levers, and is slidably and non-rotatably connected with the hub of the cover while the other part is provided with a flange positioned exteriorly of the cover, a clutch spring arranged between the outer face of the cover and the flange of the other part of the sliding sleeve for acting upon the pressure levers collectively through the two parts of the sliding sleeve, screw threads on the two parts of the sliding sleeve enabling the two parts to be axially adjusted relatively to one another by rotating the part engaged by the clutch spring, and cooperative engaging means on the clutch spring and the flanged part of the sliding sleeve engaged thereby for hindering relative rotation of these two members.

1,901,857. KNITTING MACHINERY. ROBERT REINER, New York, N. Y. Filed May 6, 1931. Serial No. 535,457. 5 Claims. (Cl. 66—89.)

1. A flat knitting machine having in combination, a cam shaft, a switch for controlling the speed of said machine, a cam roller lever, a lever mounted adjacent said cam roller lever, an abutment member carried by said lever, and means for moving said abutment member in the path of said cam roller lever so that a cam on said cam shaft will cause said lever to operate said switch.

1,901,858. BAG AND METHOD OF MAKING THE SAME. HOWARD L. FISCHER, St. Paul, Minn., assignor to Walter H. Deubener, St. Paul, Minn. Filed Feb. 18, 1926. Serial No. 89,085. 8 Claims. (Cl. 93—35.

1. The method of making bags consisting in passing the material adapted to make the bag into position to be cut and folded and in attaching reinforcing means to the material as it passes into said position, folding said reinforced material and cutting the folded material.

Patents Nos. 1,901,859 to 1,902,808

THE

OFFICIAL GAZETTE

OF THE

United States Patent Office

Vol. 428—No. 3 TUESDAY, MARCH 21, 1933 Price—$16 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $16.00 per annum, including annual index, $18.25; single numbers, 35 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Adverse Decisions in Interference

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,785,787, C. L. Rayfield, Thermostatically operated device, decided February 20, 1933, claims 1, 2, 3, 4, and 5.

Pat. 1,790,240, Ernest Lionne, Shoe stiffener, decided February 28, 1933, claims 9 and 11.

Notice

Relative to Payment of Fees

Receipt is acknowledged of your letter of ———— containing a check on ———— for $————.

The Patent Office is accepting this check and conditionally entering the fee as paid with the understanding that if the check is not honored and you do not immediately make the payment good otherwise, the date of payment on the applicant's file will be canceled.

If the check is in payment of the final fee, the entry will be made on the file and the issue deferred until it is seen whether the check is honored. If the check is not honored and not made good immediately, the entry of payment in the file will be canceled and the application may thereby become "forfeited."

To avoid complications, particularly if it is necessary for the patent to issue by a certain date, you are advised to make your future remittances to this office by money order, express money order, or money telegraphed to the Patent Office.

THOMAS E. ROBERTSON,
Commissioner of Patents.

U. S. Court of Customs and Patent Appeals

MONDAY, MARCH 6, 1933.

It is ordered that time for the deposit of fee for printing transcript, not due prior to March 1, 1933, be extended for thirty days without application therefor.

It is further ordered that time for filing briefs will be extended on special application therefor, during the present emergency, or until otherwise ordered by the court, in all cases where briefs were not due prior to March 1, 1933.

Attest:

ARTHUR B. SHELTON,
Clerk.

U. S. Court of Customs and Patent Appeals

Rules—Amendment

TUESDAY, MARCH 7, 1933.

The following amendment to the rules of the United States Court of Customs and Patent Appeals is hereby adopted, effective March 7, 1933:

Add a new paragraph to Rule I as follows:

4. The office of said clerk shall be open for the transaction of business on every day except Sundays and legal holidays from 9.00 o'clock a. m. to 4.30 o'clock p. m., except on Saturdays, when it shall be open from 9.00 o'clock a. m. to 1.00 o'clock p. m.

NOTE.—In connection with the above rule, arrangements have been made whereby parties or attorneys desiring to file papers when the office of the clerk may be closed, may deliver the same at the office of the Captain of the Guard, at the main entrance of the Internal Revenue Building on Constitution Avenue, where they will be retained and delivered to the clerk, and filed as of the date of their receipt in the said office of the Captain of the Guard.

Attest:

ARTHUR B. SHELTON,
Clerk.

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

In re Raleigh

No. 3,013. Decided December 27, 1932

Patentability—Thermostatic Wafers.

Claims for a thermostatic wafer and claims for the method of making such wafers *Held* unpatentable over the prior art.

Appeal from the Patent Office. Affirmed.

Mr. Albert G. McCaleb, Mr. Elwood Hansmann, Mr. Robert H. Wendt, and *Mr. James H. Littlehales* for Raleigh.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

Graham, *P. J.:*

Application has been made in the United States Patent Office for a patent on improvements in thermostatic wafers, such as are ordinarily used in the control of automobile radiator shutters.

Claims 13, 14, 15, 16, 19, 20, and 21 were finally rejected by the Board of Appeals, and appellant has brought the matter here for review. These claims were rejected on the following references: Sonneborn, 1,158,576, Nov. 2, 1915; Lowell, 1,420,718, June 27, 1922; Post, 1,542,088, June 16, 1925.

Claims 13 and 20 seem to be fairly illustrative of the claims as regards the matters here in issue, and are as follows:

13. A thermostatic wafer comprising a pair of flexible metal members of substantially cup shape, one of said members having a curled flange with outwardly and inwardly extending portions, and the other of said members having a curled flange embracing said first mentioned curled flange and terminating between said outwardly and inwardly extending portions.

20. The method of making a thermal cell which consists in forming a circular side member provided with an annular offset shoulder and a peripheral flange extending away from said offset shoulder to encircle the flange of the second side member hereinafter mentioned, forming a second side member provided with an annular offset shoulder and a peripheral flange turned back from said last mentioned offset shoulder to lie within and parallel with the flange of the first side member when the side members are nested together, nesting the said side members one within the other with said shoulders in contact, simultaneously curling the nested flanges into interlocked engagement, then squeezing said curled flanges by pressure applied outside the chamber defined by the side members, filling said chamber with a fluid having a high coefficient of thermal expansion and sealing said chamber.

Appellant's device consists of a thermostatic cell in the shape of a round, flattened disk, suitable for containing some thermal fluid and made of some suitable metal. The device and its method of construction is thus described by appellant in his specification:

In constructing the wafer shown in the drawings, I first form the circular parts indicated at A and B, these parts being conveniently formed by a drawing operation in a punch press. It will be noted that the part A is conformed to provide a circular side wall A—1, an annular offset A—2, an annular shoulder A—3, and an annular flange A—4, the shoulder A—3 occupying a plane substantially parallel to the plane of wall A—1 and flange A—4 being disposed at right angles to said wall. Wall A—1 is preferably provided with an annular indentation A—5 to facilitate its flexure. I have found that the bend where the side wall A—1 merges into the offset A—2 should be appreciably rounded as indicated at A—6, because an abrupt angle at this point would be very apt to cause early fatigue of the metal. The bend where offset A—2 merges into shoulder A—3 should also be slightly rounded, although the elimination of an abrupt angle at this point is perhaps not quite so essential as is the elimination of such an abrupt angle between the side wall A—1 and the offset A—2.

Part B is conformed to provide the circular side wall B—1, the annular offset B—2, the annular shoulder B—3, and the annular flange B—4 which is turned back from the shoulder B—3 at right angles to the plane of the side wall B—1. Side wall B—1 is provided with the annular indentation B—5 to facilitate its flexure, and the bend B—6 where the side wall B—1 merges into the offset B—2 is definitely rounded as and for the same reason that the metal of the part A is rounded at A—6. The bend where offset B—2 merges into shoulder B—3 is also slightly rounded as illustrated.

The annular flange B—4 is of such external diameter that the wafer part B may be nested very snugly within the wafer part A with the shoulders A—3 and B—3 contacting to define the fluid chamber C.

With the parts B and A nested one within the other as illustrated in Fig. 3, the nested annular flanges A—4 and B—4 are simultaneously curled into interlocking engagement as illustrated in Fig. 4, this curling operation preferably being accomplished in a punch press by means of suitable dies, which need not be here illustrated. The inter-curled flanges are then tightly squeezed together along their entire circumference by force applied externally of the chamber C and at right angles to the normal planes of the side walls A—1 and B—1, this squeezing operation being preferably, but not necessarily, accomplished in a punch press.

The Lowell reference patent is upon thermostatic cells used in steam traps. This cell is of the same general type as that of applicant here, and a round portion of each side of the cell next the center is depressed. Post also shows a thermostatic cell used in steam traps, of similar construction, but with three annular areas of depression in the sides of the cell. Each of these is a device patent, with no method claims. Each shows the two sides of the cell joined by a rolled or folded joint. The only apparent difference between these joints and the one disclosed by appellant herein, is in the fact that the references show but one refolding of the margins of the sides, instead of the two shown by appellant.

The Board has held that this feature is supplied by Sonneborn. Sonneborn shows a metal radiator formed of two pieces of material, joined together at their outer extremities by flanges or extensions of said sides rolled or folded into seams having substantially the same degree of folding or rolling as shown by appellant's completed device. Sonneborn's patent is for a method of seaming. In his claims he recites, as in claim 1, his method:

1. The method of seaming sheet metal hollow articles, which consists in applying to each other two dished body sections with projecting edge portions, one of said sections being larger than the other but having its body portion of lesser width, and then rolling up the projecting edge portions of the two sections to form a several-walled seam and thereby drawing the body portion of the larger section outwardly to substantially the dimension of the body portion of the smaller section.

It is argued first, by appellant, that Sonneborn's patent is not in an analogous art. We are not able to agree with this contention. Both the appellant and Sonneborn are engaged in the art of making fluid tight seams in metal of the same general character. As stated in *In re Schneider*, 18 C. C. P. A. (Patents) 1114, 47 F.(2d) 970, 410 O. G. 3, the test is:

• • • Is the patentable conception in Reich in an art so remote and nonanalogous to the concept in applicant's art as to require invention to make the necessary substitution?

It is our opinion that no invention is involved in utilizing Schneider's seam and method in constructing appellant's thermostatic cell.

These conclusions as to analogous arts are in harmony with our former decisions on this subject. *In re Molyneaux*, 17 C. C. P. A. (Patents) 573, 35 F.(2d) 68, 388 O. G. 785; *In re Bennett*, 17 C. C. P. A. (Patents) 1113, 40 F.(2d) 755, 398 O. G. 708; *In re Voorhees*, 17 C. C. P. A. (Patents) 1162, 40 F.(2d) 773, 399 O. G. 7; *In re Metzger*, 18 C. C. P. A. (Patents) 808, 45 F.(2d) 918, 404 O. G. 3.

It is vigorously insisted by appellant that the method disclosed by Sonneborn will result in an entirely different joint than if made by appellant's method, for this reason: That Sonneborn shows his flanges to be pressed into angular shapes, instead of rounded or curved shapes, as shown by appellant; that because of said angles, the seam, when folded, will develop lines of weakness at the points of coincidence of the lines of said angles; that this is avoided by appellant's curves and his method of *curling*.

This distinction is not apparent to us. In his article claims, appellant must rely upon his finished product. This finished product is the result not only of *curling*, but of pressing in a stamp press, which, it would appear, would develop similar lines of weakness in appellant's seam. In any event, the seams, when completed, seem to be substantially the same in Sonneborn and applicant.

Special reference is made to rejected claim 19, in which the metal joint is described as made by thus engaging the flanges of the members:

> * * * the flange of one member being enclosed within the flange of the other, and both flanges extending *outward, inward and outward again* to form a gas tight joint * * * (Italics ours.)

It is said that in Sonneborn but one flange extends outward the second time. This feature, both tribunals of the Patent Office agree, is not inventive over Sonneborn, in view of the finished condition of the said joints. The appellant, in his specification, states that the preferred form of his said joint is finished by the application of solder thereto. In view of this fact, and in further view of the suggestions made by the Board of Appeals on this point, we are of opinion nothing inventive over Sonneborn is shown by appellant in this feature.

As to the method, there does not appear to be any substantial difference between the *rolling* of Sonneborn and the *curling* of appellant.

The decision of the Board of Appeals is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

IN RE BARSKY

No. 3,036. Decided December 27, 1932

PATENTABILITY—REFRIGERATING SYSTEMS.

Claims for a refrigerating system of the absorption type *Held* unpatentable over the prior art.

APPEAL from the Patent Office. Affirmed.

Mr. H. C. Bierman, Mr. Ellis S. Middleton, and *Mr. Ivan P. Taskof* for Barsky.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

HATFIELD, *J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the decision of the Primary Examiner denying all of the claims, 19 to 23, inclusive, in appellant's application for a patent for an alleged invention relating to improvements in a refrigerating system of the absorption type.

Claims 20 and 21 are illustrative. They read:

> 20. In a system of refrigeration comprising a chamber for an absorbent and absorbed refrigerant and means for vaporising, condensing, expanding and absorbing said refrigerant, the improvement which includes the application of methylamine as refrigerant and air as cooling medium.
>
> 21. A system of refrigeration which consists in vaporising liquid methylamine in proximity to a substance to be cooled, conducting said gas away from the substance to be cooled, then subjecting the gas to the cooling action of air to liquefy the same, collecting the liquid methylamine and repeating the cycle of operations.

The references are: Amundsen (French), 594,433, June 20, 1925; Herdman et al., 1,233,056, July 10, 1917.

Appellant's application discloses and claims the use of methylamine as a refrigerant, calcium chloride or other suitable substance as an absorbent, and air as a condensing medium in a refrigerating system of the absorption type.

The French patent to Amundsen relates to a refrigerating apparatus of the absorption type. The patentee disclosed the use of methylamine as a refrigerant, calcium chloride as an absorbent, and water as a condensing medium.

The patent to Herdman et al. relates to an absorption refrigerating system, and discloses the use of ammonia as a refrigerant and air as the condensing medium.

The record contains an affidavit of the applicant. It appears therefrom that, although the use of air as a condensing medium in absorption refrigerating systems in "large installations where plenty of space is available for a multiplicity of cooling pipes" was considered possible in the art, it had been considered impossible to use air as a condensing medium in such refrigerating systems of the household type, due to the fact that "the refrigerator is placed in a confined position, with very little circulation of air and the cooling pipes are small, closely spaced and usually enclosed in the refrigerator," and that it was universally believed that air could not be used as the condensing medium, regardless of the *refrigerant* used where the "machine was for household use or other confined space." Applicant was of opinion, therefore, that the use of methylamine as a refrigerant and air as the condensing medium in such systems of refrigeration of the household type involved invention.

The Primary Examiner stated that it was admittedly recognized that air was not customarily used as a condensing medium in connection with ammonia as a refrigerant due to the high pressure that would develop within the system. He stated, however, that the patent to Herdman et al. disclosed such a system. He further stated that, as it was well known that methylamine developed a lower pressure than ammonia and other refrigerants, it would be obvious to one skilled in the art to use air as a condensing medium, in combination with methylamine as a refrigerant.

In affirming the decision of the Primary Examiner, the Board of Appeals held that the use of air, instead of water, as a condensing medium, in combination with methylamine as a refrigerant was merely a matter of choice and did not involve invention.

It is contended by counsel for appellant that the patent to Herdman et al. is not a valid reference, because the apparatus disclosed therein is inoperative.

The Board of Appeals disposed of this contention by stating that, although the Herdman et al. apparatus might have some defects, they were not such as to render it inoperative.

Counsel for appellant has, with considerable elaborateness, discussed the reasons why he thinks that the particular apparatus disclosed in the patent to Herdman et al. is inoperative. He does not argue, however, that the defects in it could not be corrected by the exercise of ordinary mechanical skill. If it could be so corrected, assuming that certain defects do, in fact, exist, the patent is, nevertheless, a valid reference. *Pickering et al.* v. *McCullough et al.*, 104 U. S. 310, 21 O. G. 73; *Robbins* v. *Steinhart*, 19 C. C. P. A. (Patents) 1069, 57 F.(2d) 378, 421 O. G. 229.

The question of the patentability of the alleged invention may be disposed of without much discussion.

In his affidavit appellant asserted that the use of air as a condensing medium in absorption refrigerating systems in "large installations where plenty of space is available for a multiplicity of cooling pipes" was considered possible in the art prior, it must be assumed, to the filing of his application. He asserted, however, that it had been considered impossible to use air as a condensing medium in such refrigerating systems of the *household type*. Stated differently, appellant claims that, although it would not amount to invention to use air as a condensing medium in combination with any known refrigerant, for example, ammonia or methylamine, in large installations, no one had deemed it possible to use that combination in small compact refrigerators of the household type.

Assuming, for the purposes of this case, that appellant, an authority upon the subject, is right, it, nevertheless, may be observed that the appealed claims relate broadly to the use of air as a condensing medium in combination with methylamine as a refrigerant, and are not limited to refrigerating systems of the small compact household type. Nor may such limitations be read into them. Accordingly, the question of whether invention would be involved in successfully using air as a condensing medium in combination with methylamine as a refrigerant in small compact absorption refrigerators of the household type is not before us for consideration.

Appellant has broadly claimed the use of air as a condensing medium in combination with methylamine as a refrigerant in absorption refrigerating systems. In view of the references of record, we must hold that the tribunals of the Patent Office reached the right conclusion, and that the claims are devoid of patentability.

It is contended by counsel for appellant that the decision of the Board of Appeals, in the case at bar, should be reversed on the authority of the decision of this court in the case of *In re Weisblad*, 19 C. C. P. A. (Patents) 1175, 58 F.(2d) 418, 422 O. G. 309, because, it is argued, the court there held that the substitution of air cooling for water cooling in refrigerating systems of the absorption type, "where novelty, usefulness, and a distinct advancement in the art is admitted," involved invention.

That is not a correct statement of the holding of the court in that case.

The court there held that, considering the novelty and usefulness of the apparatus involved and the distinct advancement it made in the art, *in connection with the references of record*, the claims were patentable.

The issues in each case must be disposed of in accordance with the facts presented by the record.

For the reasons hereinbefore stated, the decision of the Board of Appeals is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

IN RE MATZNER

No. 3,047. Decided December 27, 1932

PATENTABILITY—RADIO RECEIVING SETS.

Certain claims for a radio receiving set *Held* patentable over the prior art.

APPEAL from the Patent Office. Modified.

Mr. Clyde A. Norton and *Mr. William S. Hodges* for Matzner.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

LENROOT, *J.*:

This is an appeal from a decision of the Board of Appeals of the United States Patent Office, affirming a decision of the Examiner, rejecting claims 1 to 3, inclusive, and 5 to 19, inclusive, of appellant's application, filed January 14, 1930, which application was for a reissue of Letters Patent No. 1,674,606. Claim 4 was also rejected by the Examiner but was allowed by the Board.

Claims 2, 14, and 15 are illustrative of the claims in issue and read as follows:

> 2. A dial for radio receiving sets including an electrical indicator adapted to be rendered active only when the dial is set to tune in a station, a normally open circuit in which said indicator is arranged, and circuit closing means carried by the dial, said circuit closing means including a plurality of contact members carried by the dial and disposed in circuit closing position only when the dial is set to tune in a station.
>
> 14. The combination with a radio receiver having a signal selector, of an indicator arranged to carry station identifying indicia in station indicating position, a lamp positioned so as to render said station identifying indicia more easily visible, a circuit for energizing said lamp, said circuit comprising a make and break contactor for controlling the illumination of said lamp, and means movable with said signal selector to effect closure of said circuit when said selector is set to receive signals from a previously chosen transmitting station.

15. The combination with a radio receiver having a signal selector, of a lamp and circuit controlling means for causing said lamp to give a light signal when said selector is set to receive signals from any one of a previously selected group of stations, a portion of said means being selectively positionable to provide said signal at each setting of said selector at which one of said group of stations is received.

In the statement of the examiner no references were cited, but attention was called to letters of the examiner appearing in the record, citing the nineteen patents and one publication listed above and relied upon by the examiner in rejecting the claims.

The Board of Appeals in its decision cited no references, but in its statement the board said:

• • • We shall not list the numerous references of record in the case but we believe, after a consideration of the various communications and appellant's brief that we understand in substance the issue, and we shall therefore undertake to discuss it in broad terms.

We do not here deem it necessary to discuss the large number of references in the record for the reason that we do not find that any of them anticipate or suggest the alleged invention, involved in the claims here in issue, upon which appellant relies for patentability.

The claimed invention relates to radio receivers and consists, in addition to the controlling means in such receivers, of a means for giving an electrical indication when the dial controlling the movable member of the condenser is in position to tune the receiver for a particular station. Appellant discloses a radio provided with an electrical indicator in the form of a lamp, a normally open circuit for supplying current to said lamp, and contacts for closing that circuit to light the lamp only when the dial has been rotated to those positions at which the set is tuned to receive various broadcasting stations, the lamp at such times serving both as an indicator of tuned position and also to illuminate a transparent dial displaying station letters or other indicia. Another feature disclosed by appellant is means whereby the operator, at his option, may place said circuit closing means in operating condition so as to light said lamp only when the dial has been rotated to predetermined tuning positions.

We agree with the Board of Appeals and the Examiner that the claims are entirely too numerous, and also that many of them are not sufficiently definite to properly distinguish appellant's alleged invention from the prior art disclosed in the references. It is our opinion that claims 2, 7, 11, 12, 14, 15, and 17 fully embrace the subject matter of appellant's application, and we think all of the other claims either fail to claim distinctly the alleged invention or constitute mere duplications of one or another of those above indicated.

With respect to said claims 2, 7, 11, 12, 14, 15, and 17, we have carefully examined all of the large number of references cited, and we do not find that either singly or in combination do they disclose or suggest the invention embodied in said claims. The gist of appellant's invention is the combination and provision of means for quickly securing station adjustments in a radio receiver without the necessity of closely watching the dial. Appellant conceived the use of a stop light which would flash to the operator a stop signal when the proper adjustment for stations had been reached, and further providing a means whereby said stop signal might be limited so as to flash only when the receiver was in proper adjustment to tune any one of a number of predetermined stations.

The Board of Appeals held that such a signal involved utility and, when accomplished by the use of contact pins upon the dial, was patentable because, as the Board found, such contact pins were not shown in any of the references. On this theory the Board allowed claim 4, which reads as follows:

4. A radio dial including a stationary housing, a dial rotatable in the housing, a signal lamp in the housing arranged under a window therein, a normally open lamp controlling circuit, and circuit closing means carried by the dial comprising contact pins selectively positioned on the dial in accordance with the dial settings necessary to tune in broadcasting stations.

We are of the opinion that the references do not show or suggest the useful result secured by appellant, either by the use of contact pins or in any other manner, and we therefore hold that appellant should not be restricted to the use of contact pins, but that he is entitled to a broader protection irrespective of whether the lamp circuit is closed by means of contact pins.

With respect to certain of the claims the Board of Appeals held that they were limited to having the lamp light only when the dial is rotated to tune a single station and at no other setting of the dial, and that a structure so limited would not embody anything patentable over the prior art. In discussing this point the Board referred to claim 1 and said:

• • • As previously stated, in our opinion the use of a single signal would not be patentable nor do we consider that merely including a plurality of contacts broadly, properly defines invention over the prior art; in claim 1, for instance, reference is made to a plurality of circuit closing means but only one station is specifically set forth in the claim. The use of the other circuit closer is therefore not defined. • • •

Said claim 1 included the following language:

1. A dial for radio receiving sets including a single electrical indicator adapted to be rendered active *only when the dial is set to tune in a station*, • • • (Italics ours.)

Claim 2, hereinbefore quoted, includes similar language limiting the closing of the lamp circuit to the time "only when the dial is set to tune in a station." We think that the Board has given too narrow a construction to the last quoted language; having in mind that in any tuned position a radio receiver is capable of picking up but one station, or is limited to stations on the tuned frequency, we believe the language of the claims should be interpreted to mean that circuit closure is effected *whenever* the set is tuned to receive a station, and inasmuch as the set is so tuned whenever it is adjusted to any one of the many broadcast frequencies, the language of the claims is not limited to the setting of the receiver for a single station, but contemplates any setting of the receiver which tunes it to a broadcast frequency. At *any* tuned frequency, the dial is set to tune in a station, as called for by the claims, and we believe the claims should be so construed on this point.

It is our opinion that claims 2, 7, 11, 12, 14, 15, and 17 will give to appellant the protection to which he is entitled by his invention, and that said claims should be allowed.

The decision of the Board of Appeals is affirmed as to claims 1, 3, 5, 6, 8, 9, 10, 13, 16, 18, and 19, and reversed as to claims 2, 7, 11, 12, 14, 15, and 17.

Modified.

Notice

Removal of Foreign Patent Offices

BUDAPEST, *January 23, 1933.*

SIR: I am directed by the President of the Royal Hungarian Patent Court to inform you that the postal address of the Royal Hungarian Patent Court will change the 1st of February, 1933, to

Budapest 5.
Postafiók 123. Hungary.

I am, sir, your obedient servant,

REICHÓRDA,
Chief Clerk.

COMMONWEALTH OF AUSTRALIA
MELBOURNE, C. 1, *22nd December, 1932.*
DEPARTMENT OF PATENTS, PATENT OFFICE.
581–585 Bourke Street.

REMOVAL OF PATENT OFFICE, TRADE-MARKS, DESIGNS AND COPYRIGHT OFFICES FROM MELBOURNE TO CANBERRA, F. C. T.

The COMMISSIONER OF PATENTS,
Patent Office, Washington, U. S. A.

SIR: I have to advise you that the Patent Office, Trade Marks, Designs, and Copyright Offices of the Commonwealth of Australia will be removed from Melbourne, Victoria, to Canberra, Federal Capital Territory (F. C. T.), early in 1933.

I should be glad therefore if you would arrange after receipt of this notification to despatch all matter which is sent through the post to—

Commissioner of Patents,
Commonwealth Patent Office,
Canberra, F. C. T.,
Australia.

All matter which is forwarded other than through the post should be similarly addressed.

Immediately I am in a position to do so, I shall notify you of the actual date of the establishment of the offices mentioned in Canberra.

In the meantime it would be appreciated if you publicly announce the intended transfer in your OFFICIAL GAZETTE.

B. WALLACH,
Commissioner of Patents.

TRADE-MARKS

OFFICIAL GAZETTE, MARCH 21, 1933
[VOL. 428. No. 3]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

"PIGRA"

For Ladies' Hand Bags.
Claims use since Mar. 22, 1932.

CLASS 4

Abrasive, Detergent, and Polishing Materials

Ser. No. 332,779. MCEWEN, DENBY & HART-BRIGGS LIMITED, Sunbury-on-Thames, England. Filed Dec. 5, 1932.

COROLON

For Abrasive Preparations in Solid and/or Powdered Form for Polishing and Grinding.
Claims use since Nov. 7, 1930.

Ser. No. 333,895. SEARS, ROEBUCK AND CO., Chicago, Ill. Filed Jan. 13, 1933.

CRAFTSMAN

For Sharpening Stones and Grinding Wheels.
Claims use since May 9, 1931.

Ser. No. 334,421. DRUGGISTS' SUPPLY CORPORATION, New York, N. Y. Filed Jan. 27, 1933.

Hostess

For Soap.
Claims use since June 28, 1932.

Ser. No. 334,512. WESCO PRODUCTS, INC., Buffalo, N. Y. Filed Jan. 31, 1933.

NU-NESS

For Composition Used in Dry Cleaning of Garments, Hats, Draperies, and Other Fabrics.
Claims use since Dec. 10, 1932.

Ser. No. 334,659. BERNARD WILMSEN, doing business as B. Wilmsen, Philadelphia, Pa. Filed Feb. 4, 1933.

SKRAM

For Metal Sponges for Scouring Pots, Pans, Glassware, China, Aluminum, Copper, Earthenware, Ovens, Etc.
Claims use since Jan. 31, 1933.

Ser. No. 334,829. ANDREW C. CAMPBELL, INC., Bridgeport, Conn. Filed Feb. 10, 1933.

HUDORDISC

For Abrasive Wheels.
Claims use since Jan. 16, 1933.

CLASS 6

Chemicals, Medicines, and Pharmaceutical Preparations

Ser. No. 326,247. AUSTRALIAN ESSENTIAL OILS LIMITED, Sydney, Australia. Filed Apr. 16, 1932.

TI-TROL

For Antiseptic Oil.
Claims use since Jan. 3, 1929.

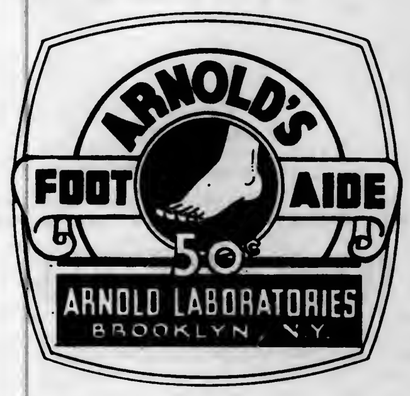
Ser. No. 326,368. HOME SANITATION COMPANY, INC., doing business as Sani-Moth, Inc., Waterloo, Iowa. Filed Apr. 22, 1932.

Sani-Moth

For Para-Dichlorobenzene Sanitation Crystals.
Claims use since Apr. 11, 1932.

Ser. No. 328,068. MOUNTAIN VARNISH & COLOR WORKS, INC., doing business as M. V. C. Laboratories, Toledo, Ohio. Filed June 17, 1932.

KLENALE



For Pharmaceutical or Toilet Preparation Used as a Protecting Coating for the Skin Around Finger Nails.
Claims use since Apr. 2, 1932.

Ser. No. 330,115. LUIS & ENRIQUE LEMOS, Buenos Aires, Argentina. Filed Sept. 3, 1932.

For Vaccines, Serums, and Ferments for the Treatment of Human Maladies.
Claims use since Apr. 28, 1927.

Ser. No. 330,670. LILLIAN SEIDON, doing business as Arnold Laboratories, Brooklyn, N. Y. Filed Sept. 26, 1932.

The words "50¢" and "Brooklyn, N. Y.," and "Foot Aide" are disclaimed apart from the mark as shown in the drawing.
For An Ointment to Relieve Foot Ailments in General.
Claims use since Sept. 15, 1931.

Ser. No. 330,891. MAX FACTOR & CO., Los Angeles, Calif. Filed Oct. 3, 1932.

TELEVISION

For Theatrical Make-Up and Cosmetics—Namely, Powder Foundation Cream; Make-Up Foundation, a Face Cream Used as a Powder Base; Grease Paints; Colors to Line the Face for Theatrical and Expressive Effects; Liquid Body Make-Up, Face Powders, Cold Creams, Lip Sticks, Liquid Make-Up Remover, Nose Putty, Moist Rouge, Dry Rouge, Brilliantine Liquid and Paste; Skin Freshener, a Cooling Face Lotion; Blackhead Cream, Shampoo, Perfumes, Deodorants, Hair Tonics, Eau de Cologne, Toilet Water; Bleach Mask, a Face Bleach Cream, Restorative Cream, a Cream to Remove Crowsfeet and Line Wrinkles; Circulation Cream, a Cream to Stimulate Circulation About the Face; Liquefying Cream, a Quick Melting Face Cream; Body Powder, Cleansing Cream, Lemon Cream, Skin and Tissue Cream, Make-Up Blender, a Lotion in Colors for Arms, Neck, and Shoulders to Make the Respective Parts to Harmonize with Color of the Face; Hand Lotion, Lip Pomades; Eye Shadows, a Colored Soft Cream to Shadow the Eyelids; Eyebrow Pencils, Eyelash Make-Up, a Mascaro Form of Cosmetic Applied the Same as Regular Mascaro; Mascaro, Astringent, Honeysuckle Cream, a Lotion with Astringent Value, Also Used as a Powder Base; Lip Rouge, Liquid Make-Up.
Claims use since July, 1930.

Ser. No. 329,353. THE PARKER PEN COMPANY, Janesville, Wis. Filed Aug. 5, 1932.

PENGRAVER

PROPERTY
OF
THE PARKER PEN CO

All words in the drawing other than "Pengraver" are disclaimed per se.
For Engraving Machines and Parts Therefor.
Claims use since July 7, 1932.

Ser. No. 333,586. H. L. G. COMPANY, Kalamazoo, Mich. Filed Jan. 8, 1933.

VELVET

For Mechanical Water Softeners.
Claims use since Aug. 15, 1932.

Ser. No. 333,838. POWERMOR UTILITIES CORPORATION, New York, N. Y. Filed Jan. 11, 1933.

CRYSTACLEANER

The word "Cleaner" appearing on the drawing is disclaimed apart from the other features shown thereon.
For Spark Plug Cleaning Machine for Removing Carbon from the Electrode End Thereof.
Claims use since January, 1932.

Ser. No. 334,445. NORTHWEST BITUMINOUS CORPORATION, Des Moines, Iowa. Filed Jan. 28, 1933.

ROTOMIX

For Road Grading Machines and Attachments Therefor.
Claims use since Dec. 28, 1932.

Ser. No. 334,517. ATLAS HARDWARE CORPORATION, New York, N. Y. Filed Feb. 1, 1933.

ATCO

For Pipe Taps.
Claims use since Nov. 19, 1932.

Ser. No. 334,547. POTTER & JOHNSTON MACHINE COMPANY, Pawtucket, R. I. Filed Feb. 1, 1933.

CARBU-TROLER

For Carburetters and Gas Engine Control Devices.
Claims use since Nov. 11, 1932.

CLASS 24

Laundry Appliances and Machines

Ser. No. 334,606. HORTON MANUFACTURING COMPANY, Fort Wayne, Ind. Filed Feb. 3, 1933.

"Perfect"

No claim is made herein to the word "Perfect" apart from the mark shown in the drawing.
For Laundry Washing Machines.
Claims use since May 24, 1927.

Ser. No. 334,786. THE AMERICAN LAUNDRY MACHINERY COMPANY, Cincinnati, Ohio. Filed Feb. 9, 1933.

DRYTEX

For Drying Machines for Removing Moisture or Cleaning Fluids from Fabrics, Clothing, and the Like.
Claims use since Dec. 31, 1932.

CLASS 25

Locks and Safes

Ser. No. 334,448. SAV-A-CALL LOCK CO., INC., New York, N. Y. Filed Jan. 28, 1933.

SAV-A-CALL

For Locks.
Claims use since October, 1932.

CLASS 26

Measuring and Scientific Appliances

Ser. No. 321,599. KEYSTONE VIEW COMPANY, Meadville, Pa. Filed Nov. 30, 1931.

TRUCOLOR PROCESS

The exclusive right to the words "Trucolor Process" is disclaimed.
For Lantern Slides.
Claims use since Sept. 4, 1931.

Ser. No. 332,844. ADAM HILGER, LIMITED, London, England. Filed Dec. 7, 1932.

DEKKOR

For Optical Gauging or Measuring Instruments, Optical Projection Comparators, Interferometers, Interferoscopes, and Optical Physico-Structure Analysers.
Claims use since Sept. 25, 1931.

Ser. No. 334,033. DOHERTY RESEARCH COMPANY, New York, N. Y. Filed Jan. 16, 1933.

CASAM

For Gas Analyzing Apparatus, Particularly Adapted for Analyzing Exhaust Gases Formed in Combustion.
Claims use since November, 1930.

CLASS 27

Horological Instruments

Ser. No. 324,155. DEUTSCH & MARKS, New York, N. Y. Filed Feb. 15, 1932.

du-mark

For Watches.
Claims use since June 25, 1931.

Ser. No. 331,766. WESTERN CLOCK COMPANY, Peru, Ill. Filed Oct. 31, 1932.

TWO VOICED

For Clocks.
Claims use since Oct. 26, 1932.

CLASS 33

Glassware

Ser. No. 334,069. OWENS-ILLINOIS PACIFIC COAST COMPANY, San Francisco, Calif. Filed Jan. 18, 1933.

ELECTRONEAL

For Glass Bottles, Glass Jars, and Glass Containers.
Claims use since Oct. 1, 1926.

CLASS 34

Heating, Lighting, and Ventilating Apparatus, Not Including Electrical Apparatus

Ser. No. 319,726. KRUSE & DEWENTER COMPANY, Indianapolis, Ind. Filed Oct. 5, 1931.

MONARCH

For Wood and Coal Hot Air Furnaces for Heating Buildings, and Parts Thereof.
Claims use since January, 1884.

Ser. No. 329,673. THE CLEVELAND HEATER COMPANY, Cleveland, Ohio. Filed Aug. 19, 1932.

Tankotrol

For Gas Water Heaters and Their Structural Parts.
Claims use since June, 1932.

Ser. No. 334,795. GENERAL FIRE EXTINGUISHER COMPANY, Providence, R. I. Filed Feb. 9, 1933.

HUMITHERM

For Air Conditioning Systems.
Claims use since Nov. 21, 1932.

CLASS 35

Belting, Hose, Machinery Packing, and Non-metallic Tires

Ser. No. 333,861. MICHELIN TIRE COMPANY, Milltown, N. J. Filed Jan. 12, 1933.

No claim is made to the word "Tire" appearing in the drawing.
For Pneumatic Tires for Automobiles.
Claims use since 1907.

Ser. No. 333,928. THE EDWARD VALVE AND MANUFACTURING CO., East Chicago, Ind. Filed Jan. 14, 1933.

EValpak

For Packing for Rods Subjected to Fluid Pressure—Namely, for Valve Operating Stems, Stuffing Boxes, Expansion Joints, Piston Rods, and Operating Rods.
Claims use since Dec. 19, 1932.

Ser. No. 334,411. SOUTHERN FRICTION FABRIC COMPANY, Charlotte, N. C. Filed Jan. 27, 1933.

SOUTHERN

For Brake Lining.
Claims use since Jan. 15, 1932.

Ser. No. 334,478. UNION ASBESTOS & RUBBER COMPANY, Chicago, Ill. Filed Jan. 30, 1933.

BLOC-TEX

For Brake Lining of the Flexible Molded Type Having a Fabric Base.
Claims use since Sept. 30, 1932.

CLASS 37

Paper and Stationery

Ser. No. 333,036. INLANDER-SEMINOLE PAPER COMPANY, Chicago, Ill. Filed Dec. 13, 1932.

GUARD YOUR HEALTH

The picture shown is fanciful. Registration of the words "Guard Your Health" is not claimed apart from the remainder of the mark.

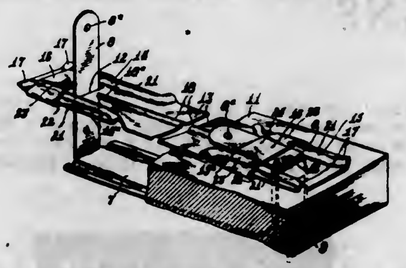
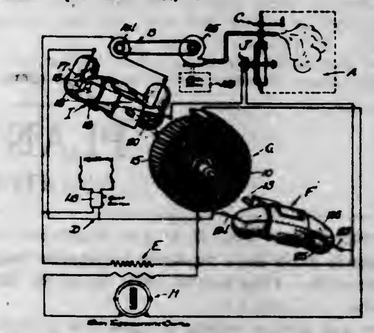
REISSUES



MARCH 21, 1933

18,769. STREET LAMP CABLE SECURING DEVICE. OTTO ANKLAM, Minneapolis, Minn. Original No. 1,871,023, dated Aug. 9, 1932, Serial No. 590,148, filed Feb. 1, 1932. Application for reissue filed Dec. 17, 1932. Serial No. 647,794. 11 Claims. (Cl. 240—68.)



9. A street lamp cable anchoring device comprising a housing having front and side walls and an open back and within which housing the lower end of a cable may be received, said housing having a small passage through said side walls for the cable, means for securing the lower end of the cable within said housing and means for releasably connecting said housing to a post in such manner that the post will close the open back of said housing.

18,770. FASTENER. DANIEL A. BRENNAN, Chicago, Ill. Original No. 1,771,728, dated July 29, 1930, Serial No. 357,825, filed Apr. 24, 1929, and in Canada Mar. 19, 1929. Application for reissue filed May 23, 1932. Serial No. 613,126. 30 Claims. (Cl. 24—153.)

1. A paper fastener having, in combination, a base formed with two tongues, one at each end, said tongues being less in width than said base and each of said tongues having a small projection struck outwardly adjacent its free end, a keeper substantially coextensive in width with said base, and having spaced transverse perforations for said tongues to pass through, companion tracks, spaced to receive said tongues therebetween, arranged in pairs extending inwardly from the ends and stopping short of the medial portion of said keeper, all of the ends of said tracks curving outwardly to provide positive stops, the outer ends of said tracks gradually increasing in height toward the outer ends, guides formed along the longitudinal edges of the keeper co-extensive with said tracks and elevated from the plane of the bottom of the keeper, a longitudinal rib struck up therein, but of less height than said companion tracks, tapering downwardly at both ends toward and adjacent said apertures, two locks one slidably mounted over each pair of tracks, and having its ends bent under said guides, said locks being arranged to bend the tongues downwardly into the space between the tracks while being slid inwardly, said locks also being flared inwardly and upwardly, said flares diverging from the longitudinal axis to provide tongue aligning means, and said locks also having upturned portions on the outer edges overlying each track to facilitate their wedging to the outer ends of the tracks.

18,771. TEMPERATURE CONTROL APPARATUS. LOUIS A. M. PHELAN, Chicago, Ill., and CLIFFORD HOTCHKISS, Minneapolis, Minn., assignors, by mesne assignments, to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a Corporation of Delaware. Original No. 1,764,344, dated June 17, 1930, Serial No. 615,530, filed Jan. 29, 1923. Application for reissue filed Jan. 27, 1932. Serial No. 589,288. 27 Claims. (Cl. 158—28.)

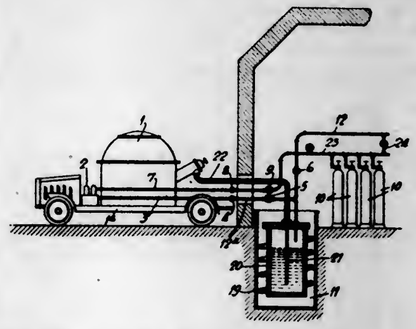
26. In a burner control system, a room thermostat circuit, a burner motor started in response to closure of said circuit and stopped in response to opening thereof, an igniter and means for interposing a delay between successive motor energizations.

18,772. SHINGLE. NORMAN P. HARSHBERGER, Scarsdale, N. Y., assignor to Bakelite Building Products Company, Inc., New York, N. Y., a Corporation of Delaware. Original No. 1,718,933, dated June 25, 1929, Serial No. 63,608, filed Oct. 20, 1925. Application for reissue filed June 25, 1931. Serial No. 546,877. 9 Claims. (Cl. 108—7.)

1. A shingle having a lug extending from the corner of one edge thereof, and a slit extending part way between said lug and the body of the shingle on the side of the lug most remote from the edge, and a second slit in the said edge near the opposite end of the shingle and adapted to coact with the lug on an adjacent shingle, and a raised portion on the shingle immediately at one side of said second slit.

18,773. CABLE CONNECTER. GEORGE C. THOMAS, Jr., Elizabeth, N. J., assignor to The Thomas & Betts Co., Elizabeth, N. J., a Corporation of New Jersey. Original No. 1,833,956, dated Dec. 1, 1931, Serial No. 336,052, filed Jan. 30, 1929. Application for reissue filed Dec. 22, 1932. Serial No. 648,491. 6 Claims. (Cl. 247—1.)

4. A connecter comprising a connecter member adapted to receive a cable to be clamped therein, a clamp car-



ried by the connecter member including, parallel plates disposed parallel to and upon either side of the axis of the cable to be clamped within the connecter, a cable clamping foot formed upon the end of each parallel

plate and directed inwardly from the plates, and operating means carried by the connecter member and engaging the clamp to force the clamp into the connecter member and clamp the cable therein.

18,774. TRANSFERRING LIQUEFIED GASES. CHRISTIAN WILHELM PAUL HEYLANDT, Berlin-Britz, Germany, assignor to Fliiga Aktiengesellschaft, St. Moritz, Switzerland, a Corporation of Switzerland. Original No. 1,786,159, dated Dec. 23, 1930, Serial No. 338,653, filed Feb. 9, 1929, and in Germany Feb. 16, 1928. Application for reissue filed Apr. 23, 1932. Serial No. 607,208. 11 Claims. (Cl. 62—1.)

1. The method of supplying a low boiling point gas at predetermined pressure, which comprises charging a transport container with a charge of liquefied gas where it is maintained at relatively low pressure when transported, thereafter transferring liquefied gas from said container to a second vessel, vaporizing the transferred

liquefied gas to cause the same to generate gas at a relatively high pressure by self-compression, and discharging said compressed gas to a consuming device at the desired pressure.

PLANT PATENTS

GRANTED MARCH 21, 1933

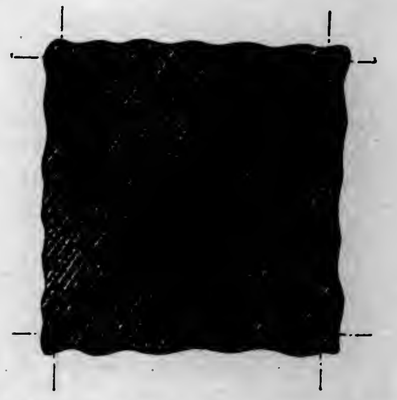
57. APPLE TREE. JOHN H. DICKEY, Wenatchee, Wash., assignor to Stark Bro's Nurseries & Orchards Company, Louisiana, Mo. Filed May 23, 1932. Serial No. 613,053. 1 Claim. (Cl. 47—1.)

A new and distinct variety of apple tree as described, characterized by the early coloring brilliant red of its fruit before ripening, as herein shown.

58. CHRYSANTHEMUM. ALEXANDER CUMMING, Jr., Bristol, Conn., assignor to Bristol Nurseries, Inc., Bristol, Conn. Filed Nov. 17, 1932. Serial No. 643,105. 1 Claim. (Cl. 47—1.)

The variety of perennial chrysanthemum as shown and described, characterized particularly by its profusion of single flowers of a "nopal red" to "ox blood red" color, and by its distinctive foliage.

DESIGNS

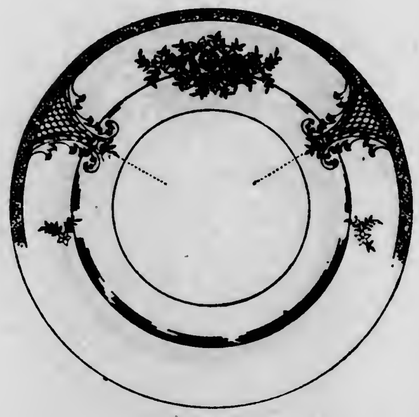


MARCH 21, 1933

89,479. COFFEE DISPENSER. JOHN W. BELL, Chicago, Ill. Filed Oct. 22, 1932. Serial No. 45,502. Term of patent 7 years.

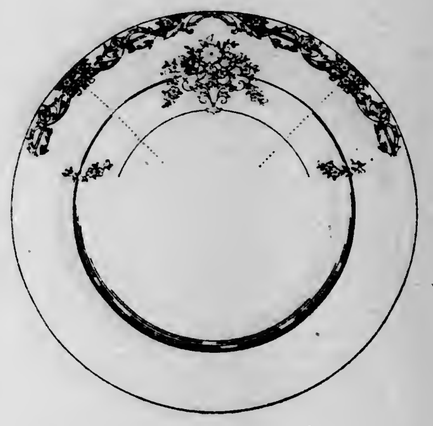
The ornamental design for a coffee dispenser, as shown and described.

89,480. TEXTILE FABRIC OR SIMILAR ARTICLE. MICHEL BRODSKY, Paris, France, assignor to William Willhelm Co., Inc., New York, N. Y. Filed Nov. 19, 1932. Serial No. 46,066. Term of patent 3½ years.



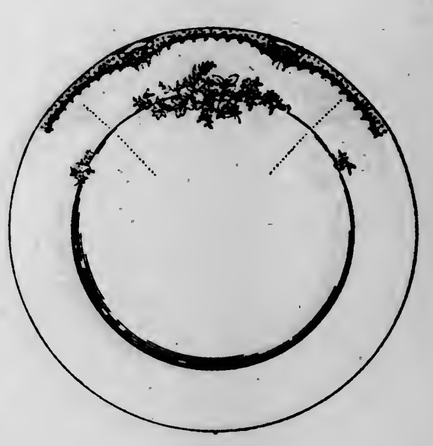
The ornamental design for a textile fabric or similar article as shown and described.

89,481. SHEET OF PAPER. RALEIGH B. BURRAIRD, Washington, D. C. Filed Feb. 28, 1931. Serial No. 38,876. Term of patent 3½ years.



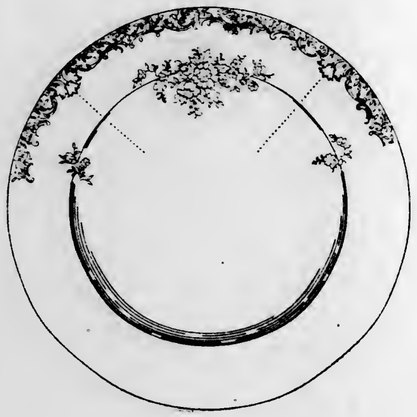
The ornamental design for a sheet of paper substantially as shown.

89,482. PLATE OR SIMILAR ARTICLE. YUKIO BUMA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Nov. 26, 1932. Serial No. 46,163. Term of patent 7 years.



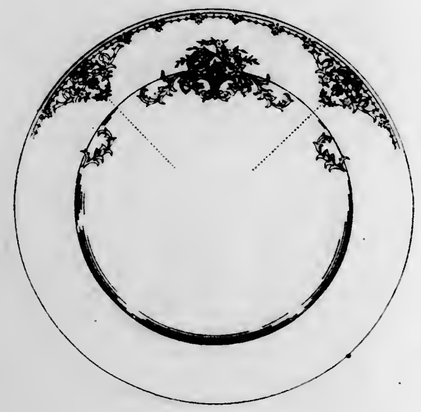
The ornamental design for a plate or similar article, as shown and described.

89,483. PLATE OR SIMILAR ARTICLE. YUKIO BUMA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Nov. 26, 1932. Serial No. 46,164. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown and described.

89,484. PLATE OR SIMILAR ARTICLE. YUKIO BUMA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Nov. 26, 1932. Serial No. 46,165. Term of patent 7 years.

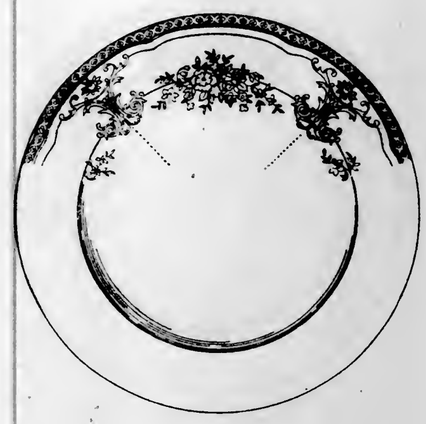


The ornamental design for a plate or similar article, as shown and described.

89,485. PLATE OR SIMILAR ARTICLE. YUKIO BUMA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Nov. 26, 1932. Serial No. 46,166. Term of patent 7 years.

The ornamental design for a plate or similar article, as shown and described.

89,486. PLATE OR SIMILAR ARTICLE. YUKIO BUMA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Nov. 26, 1932. Serial No. 46,167. Term of patent 7 years.

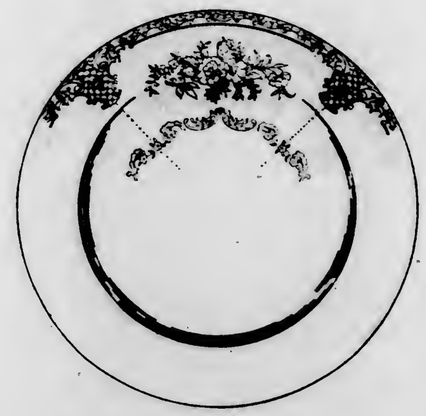


The ornamental design for a plate or similar article, as shown and described.

89,487. PLATE OR SIMILAR ARTICLE. YUKIO BUMA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Nov. 26, 1932. Serial No. 46,168. Term of patent 7 years.

The ornamental design for a plate or similar article, as shown and described.

89,488. PLATE OR SIMILAR ARTICLE. YUKIO BUMA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Nov. 26, 1932. Serial No. 46,169. Term of patent 7 years.

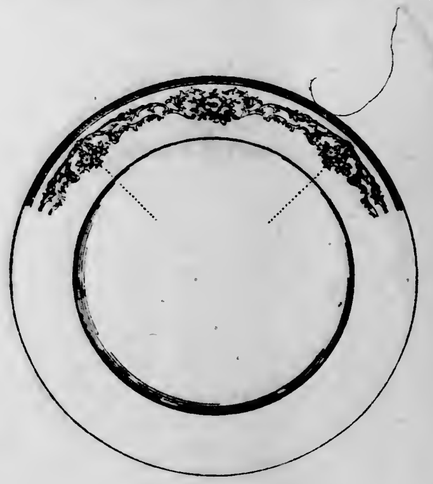


The ornamental design for a plate or similar article, as shown and described.

89,489. COFFEEPOT OR SIMILAR ARTICLE. YUKIO BUMA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Nov. 26, 1932. Serial No. 46,170. Term of patent 7 years.

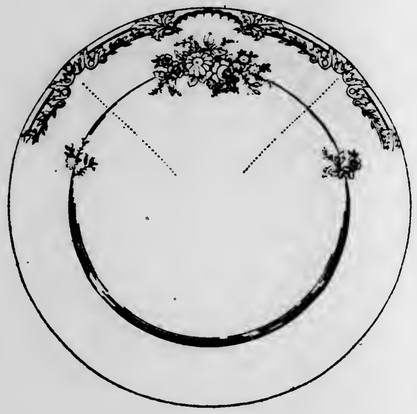
The ornamental design for a coffee pot or similar article, as shown.

89,490. PLATE OR SIMILAR ARTICLE. YUKIO BUMA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Nov. 26, 1932. Serial No. 46,171. Term of patent 7 years.



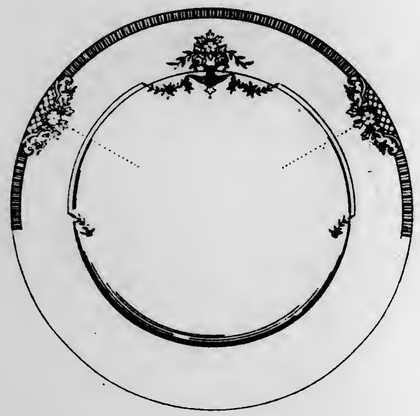
The ornamental design for a plate or similar article, as shown and described.

89,491. PLATE OR SIMILAR ARTICLE. YUKIO BUMA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Nov. 26, 1932. Serial No. 46,172. Term of patent 7 years.



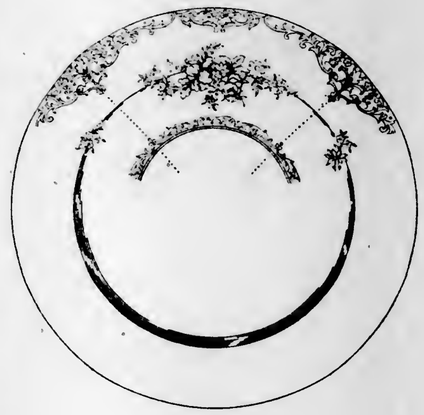
The ornamental design for a plate or similar article, as shown and described.

89,492. PLATE OR SIMILAR ARTICLE. YUKIO BUMA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Nov. 26, 1932. Serial No. 46,173. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown and described.

89,493. PLATE OR SIMILAR ARTICLE. YUKIO BUMA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Nov. 26, 1932. Serial No. 46,174. Term of patent 7 years.

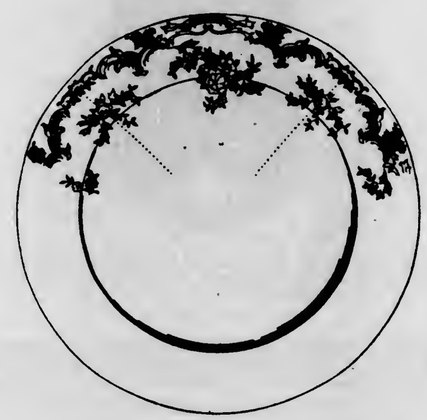


The ornamental design for a plate or similar article, as shown and described.

89,494. PLATE OR SIMILAR ARTICLE. YUKIO BUMA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Nov. 26. 1932. Serial No. 46,175. Term of patent 7 years.

The ornamental design for a plate or similar article, as shown and described.

89,495. PLATE OR SIMILAR ARTICLE. YUKIO BUMA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Nov. 26, 1932. Serial No. 46,176. Term of patent 7 years.

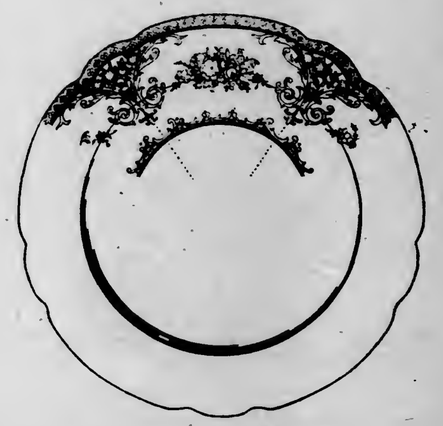


The ornamental design for a plate or similar article, as shown and described.

89,496. PLATE OR SIMILAR ARTICLE. YUKIO BUMA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Nov. 26, 1932. Serial No. 46,177. Term of patent 7 years.

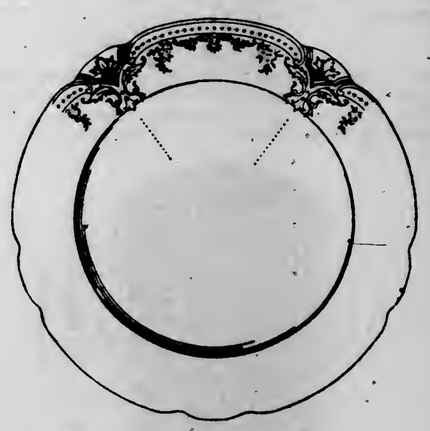
The ornamental design for a plate or similar article, as shown and described.

89,497. PLATE OR SIMILAR ARTICLE. YUKIO BUMA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Nov. 26, 1932. Serial No. 46,178. Term of patent 7 years.



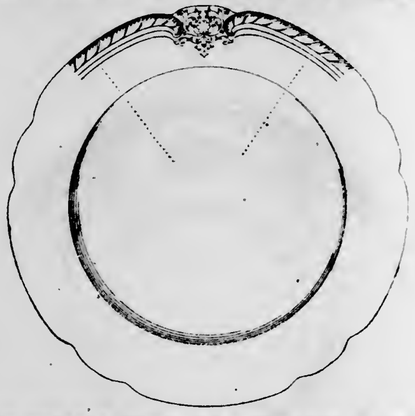
The ornamental design for a plate or similar article, as shown and described.

89,498. PLATE OR SIMILAR ARTICLE. YUKIO BUMA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Nov. 26, 1932. Serial No. 46,179. Term of patent 7 years.



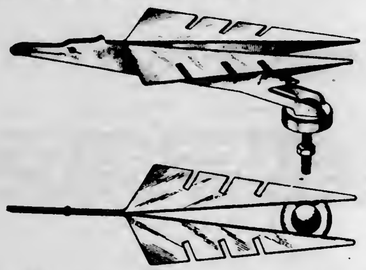
The ornamental design for a plate or similar article, as shown and described.

89,499. PLATE OR SIMILAR ARTICLE. YUKIO BUMA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Nov. 26, 1932. Serial No. 46,180. Term of patent 7 years.



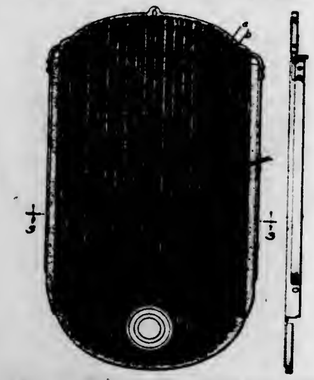
The ornamental design for a plate or similar article, as shown and described.

89,500. PLATE OR SIMILAR ARTICLE. YUKIO BUMA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Nov. 26, 1932. Serial No. 46,182. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown and described.

89,501. PLATE OR SIMILAR ARTICLE. YUKIO BUMA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Nov. 26, 1932. Serial No. 46,183. Term of patent 7 years.

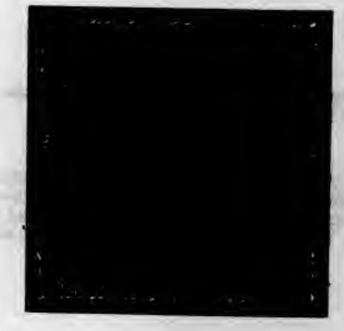


The ornamental design for a plate or similar article, as shown and described.

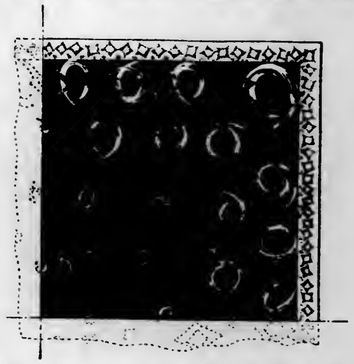
89,502. RADIATOR CAP ORNAMENT. WILLARD F. CLARK, Chicago, Ill. Filed Dec. 30, 1932. Serial No. 46,666. Term of patent 3½ years.

The ornamental design for a radiator cap ornament substantially as shown.

89,503. RADIATOR SHUTTER. KINGSTON FORBES, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Nov. 4, 1931. Serial No. 41,626. Term of patent 3½ years.

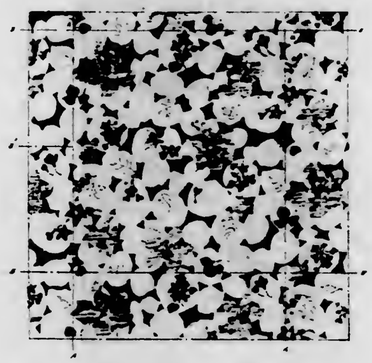


89,503—Continued.



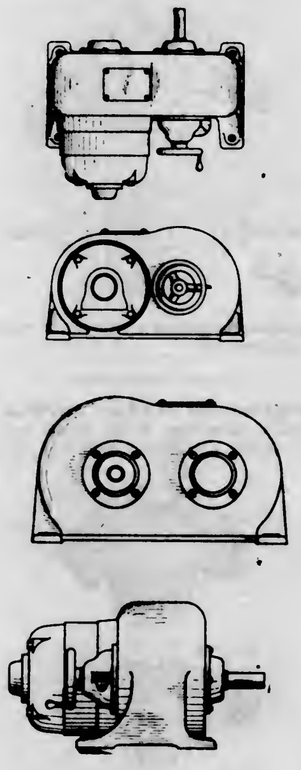
The ornamental design for a radiator shutter substantially as shown and described.

89,504. TEXTILE FABRIC OR SIMILAR ARTICLE. JOSEPH M. GOTTESMAN, Paris, France, assignor to William Willheim Co., Inc., New York, N. Y. Filed Dec. 1, 1932. Serial No. 46,221. Term of patent 3½ years.



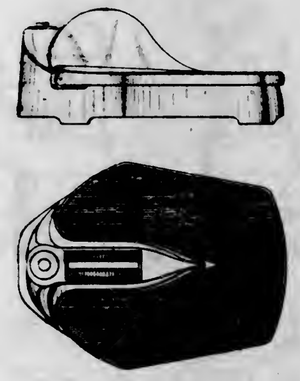
The ornamental design for a textile fabric or similar article as shown.

89,505. TEXTILE FABRIC OR SIMILAR ARTICLE. MACLYN GUHL, Forest Hills, N. Y., assignor to William Willheim Co., Inc., New York, N. Y. Filed Feb. 13, 1933. Serial No. 47,193. Term of patent 3½ years.



The ornamental design for a textile fabric or similar article as shown and described.

89,506. TEXTILE FABRIC OR SIMILAR ARTICLE OF MANUFACTURE. ALFRED J. HEINKE, Towaco, N. J., assignor to H. R. Mallinson & Co. Inc., New York, N. Y., a Corporation of Delaware. Filed Nov. 3, 1932. Serial No. 45,725. Term of patent 3½ years.



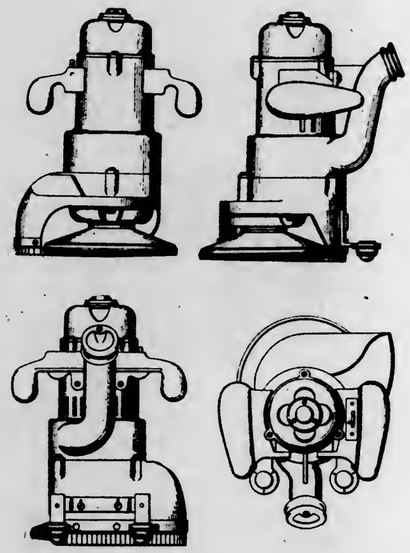
The ornamental design for a textile fabric or similar article of manufacture substantially as shown and described.

89,507. FRAME FOR A POWER UNIT. DON HEYER, Los Angeles, Calif. Filed Oct. 28, 1932. Serial No. 45,611. Term of patent 7 years.

The ornamental design for a frame for a power unit, substantially as shown.

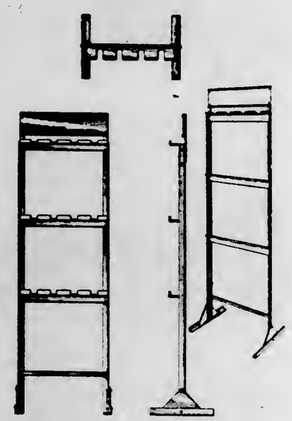
89,508. SCALE. HENRIK HOYER, New York, N. Y., assignor to The Jacobs Bros. Co., Inc., Brooklyn, N. Y., a Corporation of New York. Filed Jan. 21, 1933. Serial No. 46,930. Term of patent 7 years.

The ornamental design for a scale, as shown.



89,509. COMBINED BRIDGE BID INDICATOR AND CONTAINER. EARL JACOBS, Brooklyn, N. Y. Filed Dec. 23, 1932. Serial No. 46,573. Term of patent 14 years.

The ornamental design for a combined bridge bid indicator and container substantially as shown and described.



89,510. [WITHDRAWN.]

89,511. ROTARY DISK EDGING MACHINE. HARRY L. MYERS, Toledo, Ohio, assignor to The American Floor Surfacing Machine Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 3, 1933. Serial No. 46,684. Term of patent 14 years.

The ornamental design for a rotary disk edging machine as shown.

89,512. UPRIGHT DISPLAY RACK. WARREN M. SAMPLE, Muncie, Ind. Filed May 26, 1932. Serial No. 43,906. Term of patent 3½ years.

The ornamental design for an upright display rack, as shown.

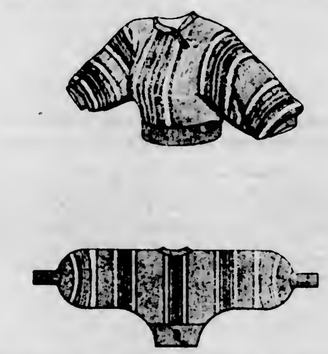
89,513. TEXTILE FABRIC OR SIMILAR ARTICLE. JACK SCHWEIZER, New York, N. Y., assignor to William Willheim Co., Inc., New York, N. Y. Filed Nov. 12, 1932. Serial No. 45,915. Term of patent 3½ years.

The ornamental design for a textile fabric or similar article as shown and described.

89,514. SWEATER OR SIMILAR ARTICLE. SAMUEL SHEINDELMAN, Lawrence, N. Y. Filed Jan. 24, 1933. Serial No. 46,952. Term of patent 3½ years.

The ornamental design for a sweater or similar article as shown and described.

89,515. SWEATER OR SIMILAR ARTICLE. SAMUEL SHEINDELMAN, Lawrence, N. Y. Filed Jan. 24, 1933. Serial No. 46,953. Term of patent 3½ years.



The ornamental design for a sweater or similar article as shown and described.

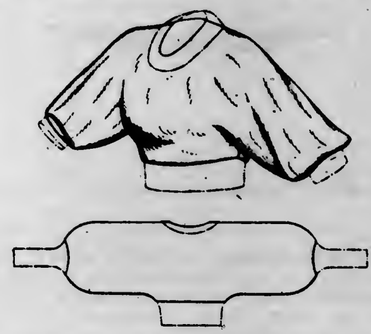
89,516. SWEATER OR SIMILAR ARTICLE. SAMUEL SHEINDELMAN, Lawrence, N. Y. Filed Jan. 24, 1933. Serial No. 46,954. Term of patent 3½ years.

The ornamental design for a sweater or similar article as shown and described.

89,517. SWEATER OR SIMILAR ARTICLE. SAMUEL SHEINDELMAN, Lawrence, N. Y. Filed Jan. 24, 1933. Serial No. 46,955. Term of patent 3½ years.

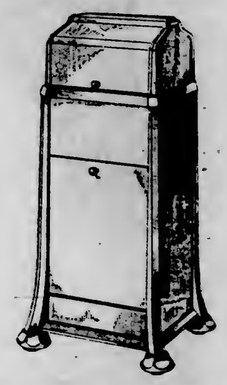
The ornamental design for a sweater or similar article as shown and described.

89,518. SWEATER OR SIMILAR ARTICLE. SAMUEL SHEINDELMAN, Lawrence, N. Y. Filed Jan. 24, 1933. Serial No. 46,956. Term of patent 3½ years.



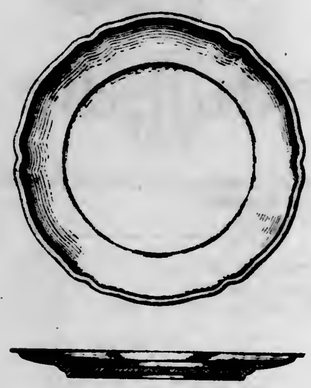
The ornamental design for a sweater or similar article as shown and described.

89,519. SWEATER OR SIMILAR ARTICLE. SAMUEL SHEINDELMAN, Lawrence, N. Y. Filed Jan. 24, 1933. Serial No. 46,957. Term of patent 3½ years.



The ornamental design for a sweater or similar article as shown and described.

89,520. SWEATER OR SIMILAR ARTICLE. SAMUEL SHEINDELMAN, Lawrence, N. Y. Filed Jan. 26, 1933. Serial No. 46,999. Term of patent 3½ years.

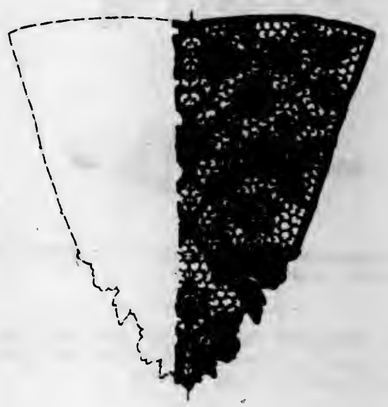


The ornamental design for a sweater or similar article as shown.

89,521. DICTATING MACHINE CABINET. BRUNO M. SMITH, West Orange, SAM G. LANGLEY, Maplewood, and GUSTAV F. BRAUN, Elizabeth, N. J., assignors to Thomas A. Edison, Incorporated, West Orange, N. J., a Corporation of New Jersey. Filed Jan. 26, 1933. Serial No. 47,005. Term of patent 14 years.

The ornamental design for a dictating machine cabinet, substantially as shown.

89,522. PLATE OR SIMILAR ARTICLE. GEORGE WEBB, New York, N. Y., assignor to The Rosenthal China Corporation, New York, N. Y., a Corporation of New York. Filed July 19, 1932. Serial No. 44,381. Term of patent 7 years.

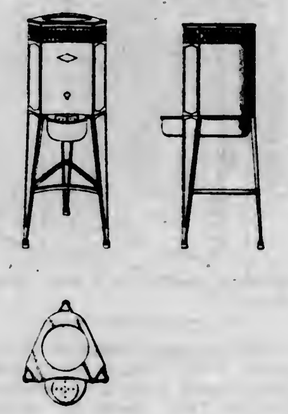


The ornamental design for a plate or similar article as shown.

89,523. EMBROIDERED TEXTILE FABRIC TRIMMING. EMIL G. ZULLIG, Bergenfield, N. J., assignor to Samuel Ellen, New York, N. Y. Filed Jan. 26, 1933. Serial No. 46,995. Term of patent 3½ years.

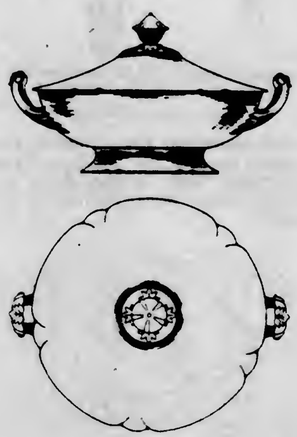
The ornamental design for an embroidered textile fabric trimming substantially as shown and described.

89,524. EMBROIDERED TEXTILE FABRIC TRIMMING. EMIL G. ZULLIG, Bergenfield, N. J., assignor to Samuel Ellen, New York, N. Y. Filed Jan. 26, 1933. Serial No. 46,996. Term of patent 3½ years.



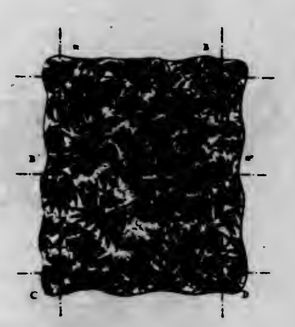
The ornamental design for an embroidered textile fabric trimming substantially as shown and described.

89,525. PITCHER OR SIMILAR ARTICLE. CURTIS B. ILGENFRITZ, York, Pa., assignor to United States Glass Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 12, 1933. Serial No. 46,810. Term of patent 7 years.



The ornamental design for a pitcher or similar article, substantially as shown.

89,526. STAND FOR BOTTLED WATER OR THE LIKE. MAX ALEX, Alhambra, Calif., assignor to York Water Corporation, Ltd., a Corporation of Nevada. Filed Jan. 16, 1933. Serial No. 46,856. Term of patent 14 years.

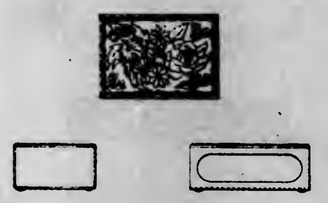


The ornamental design for a stand for bottled water or the like, as shown.

89,527. CASSEROLE OR SIMILAR ARTICLE. CHARLES KAISER, Great Neck, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Nov. 26, 1932. Serial No. 46,159. Term of patent 7 years.

The ornamental design for a casserole or similar article as shown.

89,528. TEXTILE FABRIC OR SIMILAR ARTICLE. ALEXANDER KOMUT, New York, N. Y., assignor to William Willheim Co., Inc., New York, N. Y. Filed Dec. 19, 1932. Serial No. 46,499. Term of patent 3½ years.

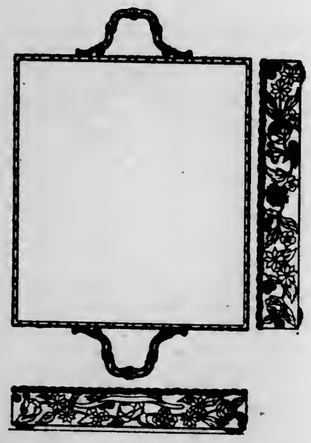


The ornamental design for a textile fabric or similar article as shown and described.

89,529. CREAM PITCHER OR ANALOGOUS ARTICLE. HARRY NEGBAUR, New York, N. Y., assignor to H. Negbaur & Co., Inc., a Corporation of New York. Filed Jan. 21, 1933. Serial No. 46,923. Term of patent 3½ years.

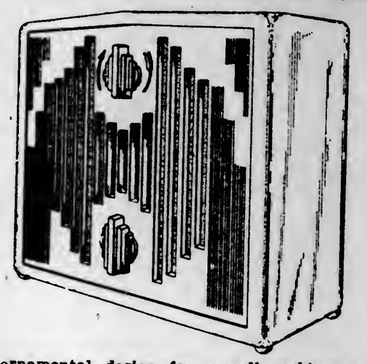
The ornamental design for a cream pitcher or analogous article as shown.

89,530. MATCH BOX HOLDER OR ARTICLE OF ANALOGOUS NATURE. HARRY NEGBAUR, New York, N. Y., assignor to H. Negbaur & Co., Inc., a Corporation of New York. Filed Jan. 21, 1933. Serial No. 46,924. Term of patent 3½ years.



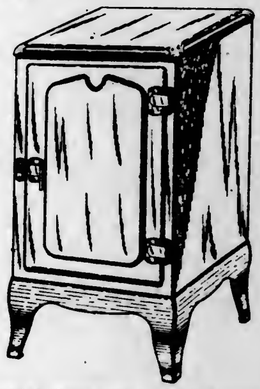
The ornamental design for a match box holder or article of analogous nature as shown.

89,531. SUGAR BOWL OR ARTICLE OF ANALOGOUS NATURE. HARRY NEGBAUR, New York, N. Y., assignor to H. Negbaur & Co., Inc., a Corporation of New York. Filed Jan. 21, 1933. Serial No. 46,925. Term of patent 3½ years.



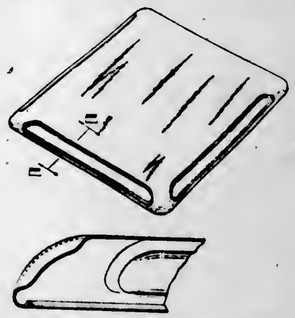
The ornamental design for a sugar bowl or article of analogous nature as shown.

89,532. SMOKER'S TRAY OR ARTICLE OF ANALOGOUS NATURE. HARRY NEGBAUR, New York, N. Y., assignor to H. Negbaur & Co., Inc., a Corporation of New York. Filed Jan. 21, 1933. Serial No. 46,926. Term of patent 3½ years.



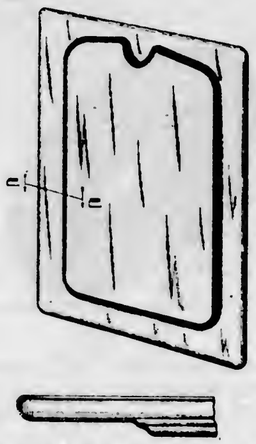
The ornamental design for a smoker's tray or article of analogous nature as shown.

89,533. RADIOCABINET. GEORGE W. OEHLSEN, Jr., Chicago, Ill., assignor to Stewart-Warner Corporation, Chicago, Ill., a Corporation of Virginia. Filed Dec. 30, 1932. Serial No. 46,669. Term of patent 7 years.



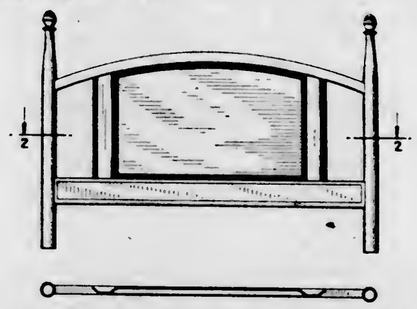
The ornamental design for a radio cabinet substantially as shown.

89,534. REFRIGERATOR CABINET. JOHN R. REPLOGLE, Detroit, Mich., assignor to Copeland Products, Inc., Mount Clemens, Mich., a Corporation of Michigan. Filed June 24, 1932. Serial No. 44,184. Term of patent 7 years.



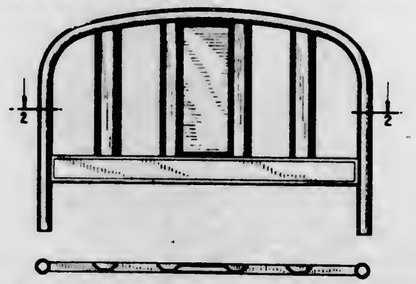
The ornamental design for a refrigerator cabinet, as shown.

89,535. REFRIGERATOR TOP. JOHN R. REPLOGLE, Detroit, Mich., assignor to Copeland Products, Inc., Mount Clemens, Mich., a Corporation of Michigan. Filed June 24, 1932. Serial No. 44,185. Term of patent 7 years.



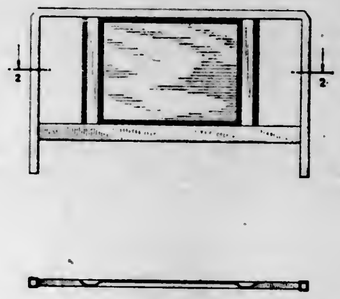
The ornamental design for a refrigerator top, as shown.

89,536. REFRIGERATOR DOOR. JOHN R. REPLOGLE, Detroit, Mich., assignor to Copeland Products, Inc., Mount Clemens, Mich., a Corporation of Michigan. Filed June 24, 1932. Serial No. 44,186. Term of patent 7 years.



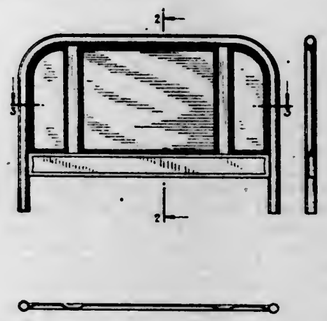
The ornamental design for a refrigerator door as shown.

89,537. FOOTBOARD FOR A BEDSTEAD OR SIMILAR ARTICLE. HARRY RODSTEIN and ISIDORE NATHANSON, Brooklyn, N. Y. Filed Dec. 8, 1932. Serial No. 46,332. Term of patent 7 years.



The ornamental design for a footboard for a bedstead or similar article, as shown.

89,538. FOOTBOARD FOR A BEDSTEAD OR SIMILAR ARTICLE. HARRY RODSTEIN and ISIDORE NATHANSON, Brooklyn, N. Y. Filed Dec. 8, 1932. Serial No. 46,333. Term of patent 7 years.

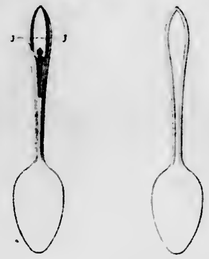


The ornamental design for a footboard for a bedstead or similar article, as shown.

89,539. FOOTBOARD FOR A BEDSTEAD OR SIMILAR ARTICLE. HARRY RODSTEIN and ISIDORE NATHANSON, Brooklyn, N. Y. Filed Dec. 8, 1932. Serial No. 46,334. Term of patent 7 years.

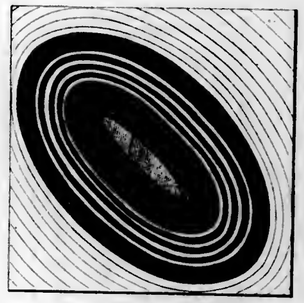
The ornamental design for a footboard for a bedstead or similar article, as shown.

89,540. FOOTBOARD FOR A BEDSTEAD OR SIMILAR ARTICLE. HARRY RODSTEIN and ISIDORE NATHANSON, Brooklyn, N. Y. Filed Dec. 8, 1932. Serial No. 46,335. Term of patent 7 years.



The ornamental design for a footboard for a bedstead or similar article, as shown.

89,541. SHOE. CLARENCE H. STEMMONS, Kansas City, Mo. Filed Jan. 9, 1933. Serial No. 46,778. Term of patent 3½ years.



The ornamental design for a shoe as shown.

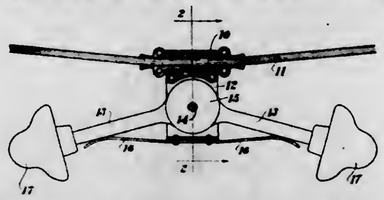
89,542. SPOON OR SIMILAR ARTICLE. WILLIAM S. WARREN, Meriden, Conn., assignor to R. Wallace & Sons Manufacturing Company, Wallingford, Conn., a Corporation. Filed Jan. 17, 1933. Serial No. 46,867. Term of patent 14 years.

The ornamental design for a spoon or similar article as shown.

89,543. TEXTILE FABRIC OR SIMILAR ARTICLE. WILLIAM WILLHEIM, New York, N. Y. Filed Sept. 17, 1932. Serial No. 44,911. Term of patent 3½ years.

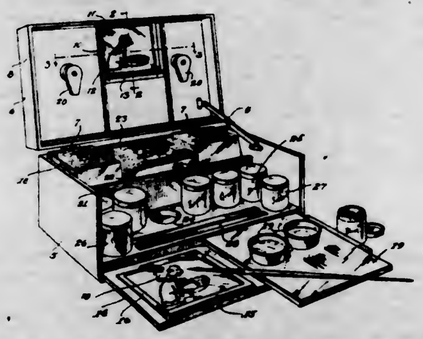
The ornamental design for a textile fabric or similar article as shown and described.

PATENTS



GRANTED MARCH 21, 1933

1,901,859. LIFE PRESERVER SUIT. MAURICE ANDERSON, Mason City, Iowa. Filed Mar. 21, 1932. Serial No. 600,265. 8 Claims. (Cl. 9—20.)

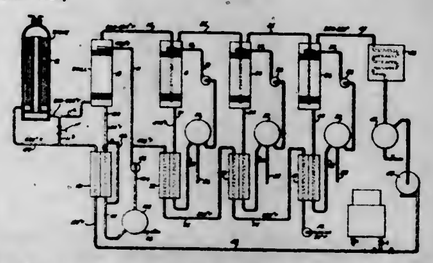


1. A life preserver suit, comprising a flexible body portion, a helmet interfitting in the upper end of the body portion, said body portion and helmet having walls composed of laminated layers including a layer of "Cellophane."

1,901,860. TRANSMISSION LINE. ARTHUR O. AUSTIN, near Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Original application filed Apr. 2, 1928, Serial No. 266,584, Patent No. 1,773,659, dated Aug. 19, 1930. Divided and this application filed July 18, 1930. Serial No. 468,970. 10 Claims. (Cl. 178—18.)

7. The combination with a transmission line, of weighted spring-supported arms having frictional engagement with each other arranged to be moved by vibration of said line to absorb energy of vibration of said line.

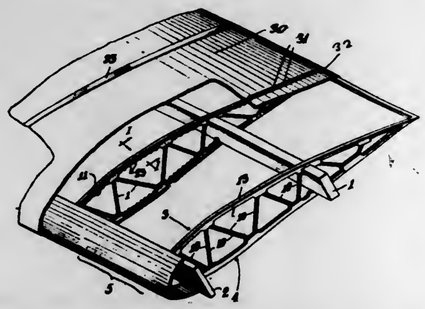
1,901,861. ARTIST'S KIT. IDA S. BAKER, Indianapolis, Ind. Filed Feb. 20, 1932. Serial No. 594,341. 10 Claims. (Cl. 41—4.)



10. In an artist's kit, a cabinet, top and front members hinged to said cabinet, a rack on said cabinet to accommodate artist's supplies, said top comprising an easel and having an opening therein, a rack adjacent to said opening, means on said front to receive and hold artist's materials, a palette and means on said top to hold said palette over said opening.

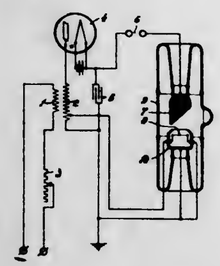
1,901,862. PNEUMATIC TIRE. FELIX FRIDTJOV ANDERSEN, Oslo, Norway. Filed Nov. 16, 1932. Serial No. 642,826, and in Sweden May 30, 1931. 2 Claims. (Cl. 152—10.)

1. A pneumatic tire including two halves, each of which has a straight intermediate portion and end portions lying to one side of the plane of the straight intermediate portion, said halves being assembled with their intermediate straight portions parallel to form an annular air chamber having an inner closed end and an opening between the outer ends of the halves, and an annular member fitting between said halves, said annular member having an outer tread portion extending outwardly between and beyond the open outer ends of said halves and forming an air-tight fit therewith, said member also having an inner piston-portion making an air-tight fit with the straight parallel sides of said halves whereby the chamber formed by said halves is divided by said piston portion into an inner annular compression chamber and an outer vacuum chamber.



1,901,863. METHOD FOR DISTILLING MINERAL OILS. EDWIN W. BEARDSLEY and DRUS M. EVANS, Texas City, Tex., assignors to Petroleum Conversion Corporation, New York, N. Y., a Corporation of Delaware. Filed Nov. 6, 1928. Serial No. 317,548. 5 Claims. (Cl. 196—88.)

1. In the process of distilling oils containing a lubricating oil traction, the steps which consist in maintaining a quantity of said oil undergoing distillation in a cham-

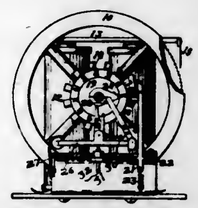


ber, heating up an inert, substantially non-condensible heat-carrier gas to above a predetermined distillation temperature, mingling said gas with the oil undergoing distillation in a distillation zone, said gas containing sufficient heat-units to accomplish the vaporizing of the desired components of the oil but insufficient to crack same, withdrawing the produced vapor together with the gas from said chamber and subjecting such mixture to condensing conditions, controlling the temperature in the distillation chamber by withdrawing a regulated quantity of the oil undergoing distillation therein, cooling same by heat interchange with a relatively cold gas which is to be used in said heating step in which its temperature is raised to above the distillation temperature and reintroducing at least a portion of the cooled oil back into the distillation chamber to control the temperature therein.

1,901,864. AEROPLANE WING CONSTRUCTION. GIUSEPPE M. BELLANCA, Wilmington, Del. Filed June 30, 1931. Serial No. 547,882. 8 Claims. (Cl. 244—31.)

1. In an aeroplane wing structure of the type including a fabric airfoil surface carried by wood ribs, which ribs contain strips and stiffening members of greater depth than said strips secured to the sides of said strips, thereby forming built up channel beam ribs defining the upper and lower surfaces of said wing, a fabric tape extending longitudinally of a rib, embracing the outer surface and sides of said rib, and secured to the said rib.

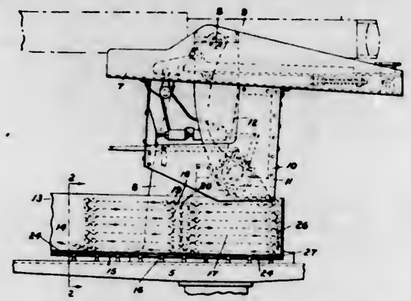
1,901,865. X-RAY INSTALLATION. ALBERT BOUWERS, Eindhoven, Netherlands, assignor to N. V. Philips' Gloeilampenfabrieken, Eindhoven, Netherlands, a Limited Liability Company. Filed Feb. 25, 1928, Serial No. 257,044, and in the Netherlands Mar. 26, 1927. 4 Claims. (Cl. 250—84.)



1. An X-ray installation for making short X-ray exposures, comprising a storage condenser, means for charging said condenser, an X-ray tube connected across said condenser, and a discharge circuit for causing an abrupt excitation of the X-ray tube, the said discharge circuit including a spark gap connected in series with the X-ray tube and the condenser, the said condenser instantaneously discharging across the spark gap and X-ray tube immediately after the charge of the condenser exceeds the break down voltage of the spark gap.

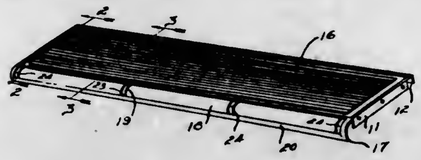
1,901,866. TOOTHBRUSH. HAMILTON V. BRYAN, U. S. Navy. Filed Oct. 28, 1931. Serial No. 571,613. 1 Claim. (Cl. 15—167.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

A tooth brush, comprising a bristle holding portion in one flat plane, bristles extending therefrom at right angles thereto, and a relatively wide handle portion in a flat plane in parallelism with said bristles, said handle portion being at least substantially as wide as the bristle holding portion, the entire plane of the handle portion being at an oblique angle axially, vertically and horizontally to the entire plane of the bristle holding portion whereby the handle portion serves to hold the bristle holding portion with substantial rigidity during use.



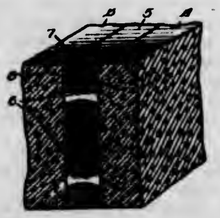
1,901,867. SELECTIVE SYSTEM. HENRY BURTON, Gardena, Calif. Filed Jan. 25, 1929. Serial No. 335,041. 14 Claims. (Cl. 179—30.)

1. A signal system comprising in combination a plurality of stations to be signalled, transmission means including a circuit common to said stations, means for impressing upon said common circuit a special current of pulsation character to form code signals, signal means associated with said stations normally disconnected from the common circuit adapted to be actuated by said special current therein when connected therewith, selector mechanism associated with each signal means permanently connected to the common circuit responsive only to said special current therein, adapted to connect its associated signal means to the common circuit in response to a predetermined number of applications of said special current at a predetermined time after cessation thereof to automatically return to its normal state and disconnect its signal means from the common circuit at another predetermined time after cessation of the special current therein.



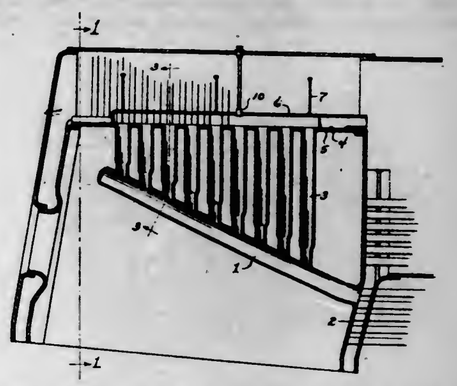
1,901,868. METHOD AND MEANS FOR SUPPLYING CARTRIDGE BELTS TO A FEED MECHANISM. AUGUST DABRASKY, Washington, D. C. Filed Sept. 15, 1930. Serial No. 482,009. 8 Claims. (Cl. 89—33.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

7. In combination, a container having a common entrance and exit, a flexible element carrying the contents of the container and folded upon itself with the upper end portion turned over to extend across the folds and a removable closure for the container.



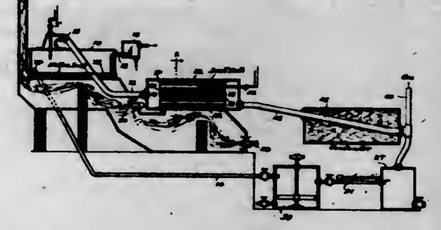
8. A method of presenting a series of ammunition belts to a gun feed mechanism which consists in folding each belt upon itself with one end turned over across the folds and attaching the turned over end of one belt to the folded end of an adjoining belt.

1,901,869. RUNNING BOARD TRIM AND SECURING MEANS. TOM I. DUFFY, Flint, Mich., assignor, by mesne assignments, to Young Motor Trunk Company, Flint, Mich., a Corporation of Michigan. Filed Oct. 13, 1930. Serial No. 488,240. 10 Claims. (Cl. 280—163.)



1. In a running board assembly: a plate having a rounded nosing element at an edge thereof; and a longitudinally extending trim element rounded similarly to, and provided with means for its retention in engagement with said nosing element,—said last-mentioned means comprising clips and one of said elements being provided with openings for the reception of said clips.

1,901,870. EXPANSION JOINT. ALBERT C. FISCHER, Chicago, Ill., assignor to The Philip Carey Manufacturing Company, a Corporation of Ohio. Filed Aug. 21, 1926, Serial No. 130,683. Renewed May 9, 1932. 7 Claims. (Cl. 94—18.)

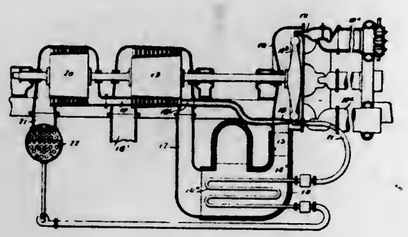


1. A rubber-like expansion joint having perforations in the thickness thereof, said perforations being deformable upon the application of pressure to the joint, and cooperating with the material of the joint as a cushioning means for compensating for expansion and contraction in the concrete construction in which the joint is installed.

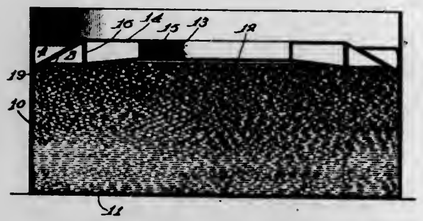
1,901,871. CIRCULATING SYSTEM. JORDAN A. GROSOFF, Harbin, China. Filed May 31, 1930. Serial No. 458,155. 2 Claims. (Cl. 122—68.)

1. In combination with a locomotive boiler having a fire box, a crown sheet and a throat sheet, a casing having its sides and rear end closed, and its forward end opened and extending longitudinally of said crown sheet above the same and terminating adjacent the forward end thereof, and a thermic siphon comprising a diagonally disposed tubular portion connected at its lower end to said throat sheet, and having a plurality of vertically arranged tubes extending from said tubular portion and arranged to open into said casing.

1,901,872. METHOD FOR TREATING TAR AND LIKE OILS. WILLIAM HIGBURG and PETER C. REILLY, Indianapolis, Ind.; said Higburg assignor to said Reilly. Filed Jan. 12, 1926. Serial No. 80,792. 7 Claims. (Cl. 196—50.)



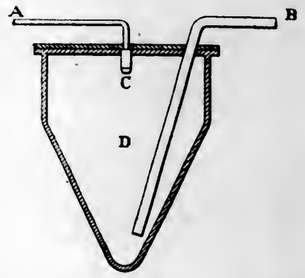
2. A process of lowering the sulphonation residue of water gas tar distillates containing a substantial amount of sulphonation residue, which comprises vaporising a volatile portion of the same and thereafter superheating such vaporised portion sufficiently to convert a large part of said unsulphonatable constituents into sulphonatable constituents and gases, condensing the product thus produced and mixing the same with the distillation residue of the first step.



1,901,873. MULTISTAGE CONSTANT VOLUME EXPLOSION PROCESS AND APPARATUS. HANS HOLZWARTH, Dusseldorf, Germany, assignor to Holzwarth Gas Turbine Co., San Francisco, Calif., a Corporation of Delaware. Filed Aug. 17, 1926. Serial No. 129,738. 10 Claims. (Cl. 60—49.)

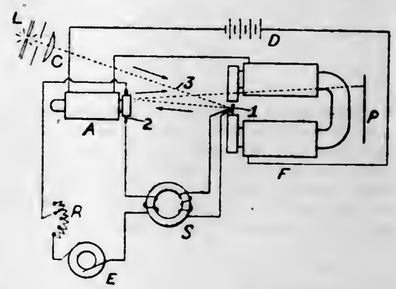
1. A multistage explosion gas turbine comprising a plurality of explosion chambers into which charges of fuel and air are intermittently fed and exploded and from which the explosion gases are discharged at high velocity in intermittent puffs, a turbine against which the high

velocity gases are charged and in which the kinetic energy of the gases is converted into mechanical energy, the gases exhausting from such turbine in puffs at comparatively low velocity, an exhaust chamber arranged to receive the gases exhausting from said turbine and of sufficient size to equalize the pressure of the exhaust puffs of gas, and a low pressure stage driven by the gases discharged by said pressure equalizer exhaust chamber, said equalizer chamber charging said exhaust gases at substantially uniform pressure to the low pressure stage.



1,901,874. FLOATING ROOF AND SEALING MEANS THEREFOR. GEORGE T. HORTON, Chicago, Ill., assignor to Chicago Bridge & Iron Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 14, 1931. Serial No. 508,744. 2 Claims. (Cl. 220—26.)

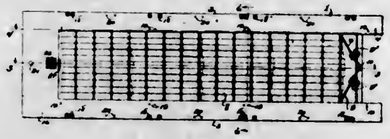
1. A floating roof and means for sealing the space between the wall of a cylindrical tank and the periphery of said roof, said means including an outer ring of radially movable members with beveled inner surfaces and an inner ring with an outer cooperating beveled surface, one of said rings being made buoyant and adapted to float on liquid in the tank, the buoyancy of said ring and the weight of the other ring urging the beveled surfaces of the two rings into sliding contact, the inner surface of the inner ring and the outer peripheral surface of the floating roof being provided with co-operating beveled surfaces, said beveled surfaces being oppositely inclined from the cooperating beveled surfaces of the rings.



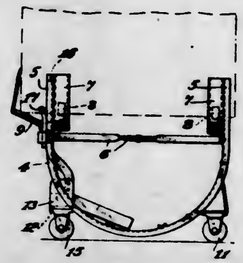
1,901,875. EVAPORATION OF NITRIC ACID. WILLIAM E. KIRST, Woodbury, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Nov. 14, 1928. Serial No. 319,250. 8 Claims. (Cl. 23—160.)

1. The process of vaporising nitric acid, which comprises bringing the acid into contact with a dry surface of chromium steel maintained at a temperature substantially above the boiling point of the acid, and collecting the vapors of acid.

8. The process of vaporizing nitric acid, which comprises bringing the acid into contact with a surface of chromium steel maintained at a temperature between 250° F. and 1650° F., and collecting approximately 99% of the nitric acid free from decomposition.



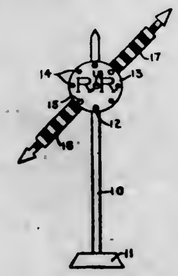
1,901,876. METHOD AND APPARATUS FOR PHOTOGRAPHING MAGNETIC CURVES. HENRY LEHDE, Forks, N. Y. Filed Sept. 5, 1928. Serial No. 304,010. 9 Claims. (Cl. 234—5.5.)



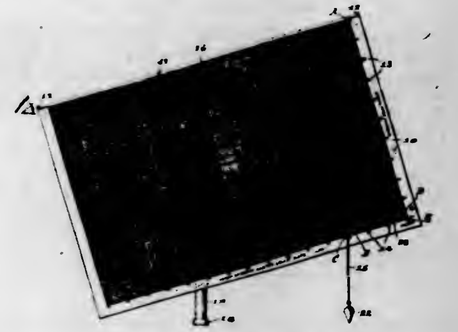
1. An instrument for recording a magnetic curve of a magnetized element comprising an ammeter responsive to the magnetizing force applied to the magnetized element, a highly damped ballistic galvanometer responsive to the flux induced in said magnetized element by said magnetizing force, and means responsive to the combined action of said elements for directing a beam of light to traverse a surface.

1,901,877. LOG CARRYING BARGE. WILLIAM J. MOLONEY, Seattle, Wash. Filed Nov. 5, 1931. Serial No. 573,189. 1 Claim. (Cl. 114—73.)

A log carrier comprising a hull having one end opened and its opposite end permanently closed and provided with a log cargo chamber communicative with the opened end of said hull, a plurality of compartments arranged at the sides and under the cargo chamber within said hull, outwardly swinging gates for opening and closing the opened end of the hull to permit logs to be floated into and out of said chamber, and means to admit and exhaust water to said compartments for causing partial submerging of the hull in the water and floating thereof to its normal draft so that logs may be floated into and out of the chamber without the use of hoisting means, and valves in said gates whereby water may be admitted to the cargo chamber for aiding in submerging the hull and to equalize the water pressure on both sides of the gates and to drain water from the cargo chamber after the raising of said hull.

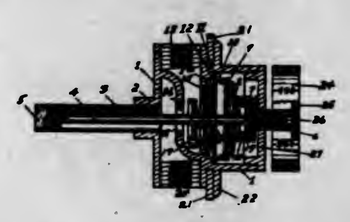


1,901,878. PORTABLE STAND AND TILTER FOR BARRELS AND THE LIKE. LADISLAS W. SCHWENK, Flushing, N. Y. Filed Sept. 14, 1929. Serial No. 392,626. 2 Claims. (Cl. 280—49.)



1. A loading, transporting, tilting and unloading apparatus comprising a pair of rigidly connected rockers having barrel rests at each end in combination with a rigid bracket fixed at one end to the rockers and having floor rollers thereon, pivoted frame located at the opposite end of the rockers and having floor rollers thereon, and formed with a latching arm and a rigidly attached foot lever with a roller on the floor end and the other end free to be depressed by the foot and weight of the operator, a stop for the foot lever arm to hold it and the pivoted roller frame, the roller bracket in normal position and a latch engaging the latch arm.

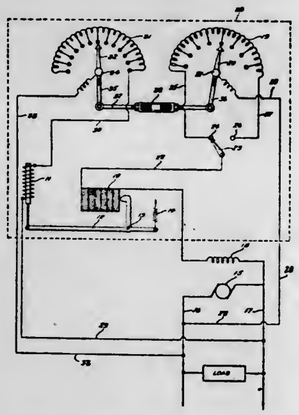
1,901,879. RAILROAD CROSSING SIGN. ROBERT P. SCHIFFMANN, Chicago, Ill. Filed Nov. 11, 1931. Serial No. 574,281. 2 Claims. (Cl. 40—145.)



1. A railroad sign comprising a support, a plate fixed to said support, an arm rotatably mounted between said plate and support, and means for fastening said arm to said plate at adjustable angles.

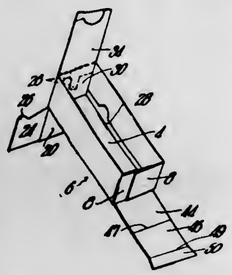
1,901,880. DEVICE FOR DETERMINING ALTITUDES AND TRIGONOMETRIC FUNCTIONS THEREOF. CARL N. SHUSTER, West Orange, N. J., assignor to Lafayette Instruments, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 17, 1930. Serial No. 482,594. 1 Claim. (Cl. 33—71.)

A device for determining altitudes and the trigonometric functions thereof, comprising a chart board having on its face transverse and longitudinal intersecting lines with corresponding consecutively increasing indexes along the transverse and longitudinal marginal portions of the chart board with reference to the forward end thereof, said chart board also having concentric spaced arcuate lines intersecting the longitudinal and transverse lines and with their radii struck from a common center at the forward upper portion of the chart board, front and rear sights carried upon the upper edge of the chart board at the forward and rear corners thereof for determining the angular position of the chart board in a vertical plane with respect to the height of an object, scaled supporting means pivotally connected to the chart board for supporting the same and determining the height of the chart board from the horizontal supporting surface of the device, and a plumb line secured to the upper forward corner of the chart board and suspended across the face of said board for intersecting the transverse, longitudinal and concentric lines of the chart board when the latter is tilted when aligned with an object whereby to indicate on said chart board distances, height and trigonometric sines of triangles formed between the lines of the chart board and the plumb line.



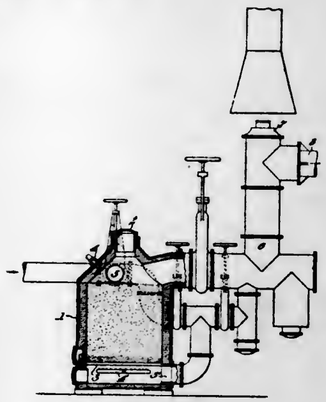
1,901,881. THERMOSTAT. SIDNEY P. VAUGHN, U. S. Navy, Ackerman, Miss., assignor to Grayson Heat Control, Inc., Lynwood, Calif., a Corporation of California. Filed Dec. 1, 1930. Serial No. 499,243. 23 Claims. (Cl. 236—48.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

1. In a thermostat, the combination of a thermal responsive element arranged to have movement in event of temperature variation, an adjustment member operated thereby, means arranged to amplify any movement of said adjustable member, a valve or other element arranged to be actuated by said amplification means,



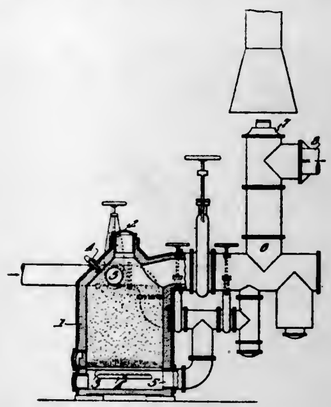
means to limit the movement of said valve or other element, and yielding means intermediate said adjustment member and said valve or other element which will permit movement of said adjustment member after said valve or other element has been actuated by said adjustment member to its limit.

1,901,882. SYSTEM AND APPARATUS FOR ELECTRIC REGULATION. LOUIS H. VON OHLSEN, New Haven, Conn., assignor to The Safety Car Heating & Lighting Company, a Corporation of New Jersey. Filed Mar. 20, 1930. Serial No. 437,429. 12 Claims. (Cl. 171—229.)



1. In an electrical system, in combination, a source of current, a carbon pile for regulating a function of the output of said source, a coil responsive to a function of the output of said source for controlling said carbon pile, a variable resistance in series with said carbon pile for changing the range of action of said pile, a variable resistance in series with said coil for changing the standard of operation thereof, means for conjointly varying said variable resistances, and means connecting one of said resistances in its circuit whereby its action in its circuit may be reversed.

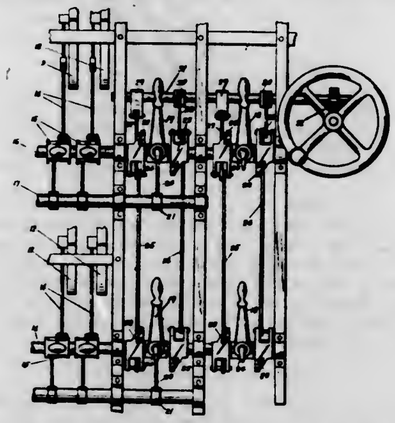
1,901,883. CARTON. EARL B. WHITEHEAD, Norwich, Conn., assignor to Atlantic Carton Corporation, Norwich, Conn., a Corporation of Connecticut. Filed Dec. 8, 1930. Serial No. 499,660. 2 Claims. (Cl. 206—44.)



1. A carton comprising in combination, a bottom, sides and ends, said sides comprising inner and outer plies, said bottom having slots located adjacent the respective sides, the inner plies having notches formed in the free edges thereof in alignment with the respective slots, an easel forming flap extending downwardly from the rear end of the bottom, bendable easel forming tabs extending from the sides of said flap, ears formed on the tabs for disposition through the respective slots whereby the carton is supported in a display position, said ears being receivable in the respective notches in the inner plies of the side walls for disposition in the same plane with the inner plies.

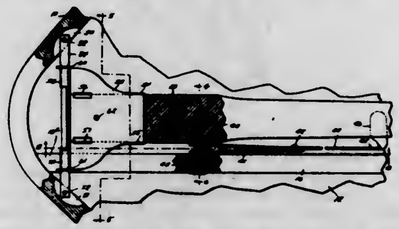
1,901,884. PROCESS FOR THE PRODUCTION OF HYDROGEN-NITROGEN GAS MIXTURES. JAMES A. YUNKER, Louisville, Ky., assignor to Natural Gas Hydrogen Corporation, New York, N. Y., a Corporation of Delaware. Filed Aug. 13, 1927. Serial No. 212,774. 5 Claims. (Cl. 23—7.)

1. Process for the production of hydrogen-nitrogen gas mixtures which comprises contacting a natural gas hydrocarbon and an oxygen-nitrogen mixture with coke heated to a temperature of at least 1200° C. and mixing the resulting gases.



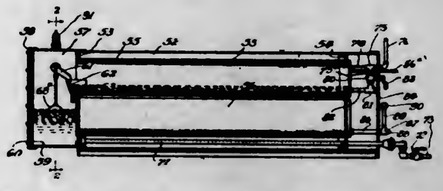
1,901,885. PROCESS FOR THE MANUFACTURE OF INDUSTRIAL HYDROGEN. JAMES A. YUNKER, Louisville, Ky., assignor to Natural Gas Hydrogen Corporation, New York, N. Y., a Corporation of Delaware. Filed July 8, 1930. Serial No. 466,560. 5 Claims. (Cl. 23—212.)

1. Process for the production of hydrogen which comprises blasting an ignited bed of coke with an oxygen containing gas to a temperature of at least about 1200° C., purging the bed of coke with steam and passing a hydrocarbon containing gas through the bed of coke in the direction opposite to that of the steam.



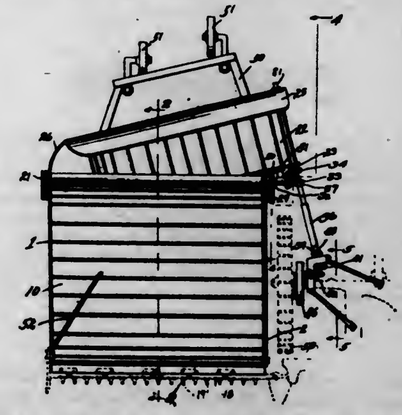
5. Process for the direct production of carbon black and a gas mixture containing as high as 95% of hydrogen and substantially less than 1.75% of methane which comprises the series of steps (1) blasting an ignited bed of coke with air to a temperature above about 1200° C., (2) purging the bed with steam, and (3) passing a hydrocarbon in gaseous form through the bed until its temperature falls to about 1200° C., continuously repeating said series of steps with an occasional substitution of steam for hydrocarbon in step (3), separating and collecting carbon black from the resulting gases and separately collecting the gases resulting from step (3).

1,901,886. LIGHTING CONTROL APPARATUS. FREDERICK B. ADAM, St. Louis, Mo. Filed Apr. 26, 1929. Serial No. 358,281. 15 Claims. (Cl. 175—312.)



1. In a lighting control system, a bank of dimmers, disposed in substantially parallel rows, with the dimmer axes of each row in substantial alignment, means, including rotatable elements extending along each dimmer row, for operatively associating any selected number of said dimmers into groups, and means coacting with said associating means, for simultaneously operating the groups of dimmers, in opposite directions, irrespective of whether any of said groups includes dimmers within the same, or in different rows.

1,901,887. FOLDING TABLE. CLETUS N. ALLERDING, Metropolis, Ill. Filed Mar. 5, 1930. Serial No. 433,275. 10 Claims. (Cl. 45—11.)

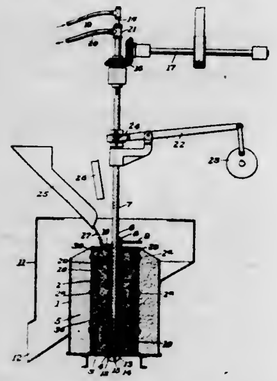


1. A folding brace for a folding table leg including a strip having an opening near one end thereof and a stop means near the other end, a second strip pivoted to said first strip at a point halfway between said opening and said stop means, an opening in said second strip spaced from said pivot a distance equal to one-half the distance between said first opening and said stop means, a headed pin extending through said last opening for attachment to a table member, and a headed pin having a concavity in the head thereof extending through said first opening for attachment to a cooperating table member.

1,901,888. HUMIDIFYING APPARATUS. FRANK A. ANETSBERGER and WILLIAM ANETSBERGER, Chicago, Ill. Filed June 28, 1928. Serial No. 289,060. 6 Claims. (Cl. 299—87.)

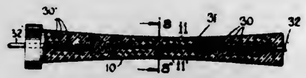
6. Apparatus of the class described comprising a casing, headers in said casing supporting a plurality of water holding tubes, said tubes being closed at one end, a well secured to said casing in communication with the open ends of said tubes, a water inlet conduit for delivering water to said upper tube, a member over the lower portion of the open end of said tube to retain water therein, an adjusable overflow tube in said member for permitting water to flow from said tube into said well, a valve fitting connecting said inlet conduit to a source of water supply, said valve having a float arm passing through said inlet conduit into said well for controlling the level of water in said well and lower tubes, and a removable closure member for one wall of said well providing access to the latter and to the tubes and float arm.

1,901,889. WINDROWING MACHINE. LAURIE C. BADGLEY, Boise, Idaho, assignor of one-half to Robert C. Chattin, Boise, Idaho. Filed Mar. 20, 1930. Serial No. 437,326. 8 Claims. (Cl. 56—183.)



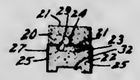
1. In a device of the character described, the combination with means for cutting a forage crop, of an endless apron having transverse bars providing a conveyor for carrying the cut material rearwardly of the cutting means, a roller lying parallel with the discharge end of the apron and providing a means for carrying the material from the apron to beyond the discharge end of the apron and a second endless apron positioned below and at an angle to the roller at the discharged end of the first apron for discharging the cut material in the form of a windrow.

1,901,890. CEMENTITIOUS COMPOSITION. GEORGE E. BARNHART, New Brighton, and HARRY E. PFAFF, Warren, Pa., assignors to James M. Guthrie and William B. Wharton, trustees, Pittsburgh, Pa. Filed May 2, 1928. Serial No. 274,672. 7 Claims. (Cl. 106—27.)



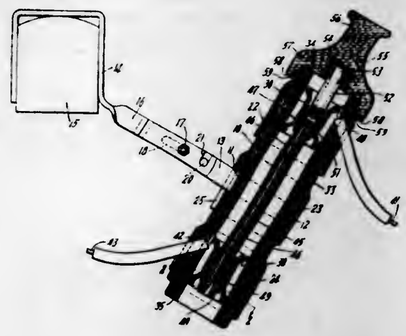
1. A glaze forming and waterproofing composition for cementitious material comprising a sulphate of an alkali metal, aluminum sulphate, and magnesium sulphate.

1,901,891. TREATMENT OF SLAG. TRACY BARTHOLOMEW, Pittsburgh, Pa. Filed June 4, 1929. Serial No. 368,358. 12 Claims. (Cl. 49—77.5.)



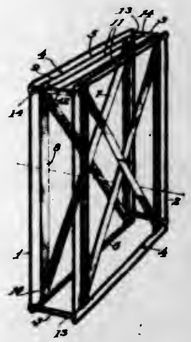
1. The process of treating molten slag containing a gas in supersaturated solution, which comprises agitating the slag to release the contained gas to form a foam, and retaining at least a part of the gas during the setting of the slag to form a foam-like cellular structure.

1,901,892. HAIR CURLER. GEORGE EDWARD BJORKMAN, Djursholm, Sweden, and JOHN GELOSO, New York, N. Y. Filed Dec. 7, 1929. Serial No. 412,325. 3 Claims. (Cl. 219—24.)



1. A curler comprising a shell formed of a phenolic condensation product, and having imbedded therein a ribboned resistance element, the ends of said resistance element being undulations therefor to introduce a higher resistivity at the ends thereof to an electrical current than the center thereof, whereby to produce a heat effect varying in intensity along the length of said resistance element, the shell being so formed with respect to the resistance therein contained as to cause the distribution of an even heating effect to hair wound thereon.

1,901,893. ELECTRICAL PROTECTOR DEVICE. GEORGE H. BRODIE, Riverside, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 30, 1930. Serial No. 492,198. 7 Claims. (Cl. 175—30.)

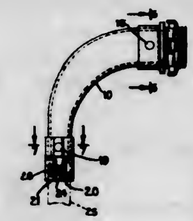


1. In an electrical protector device, a block having a groove therein defining an arcing surface, insulating material disposed upon said block around and within a portion of said groove, and a block having a plain surface spaced from said insulating material.

1,901,894. FUSE CUT-OUT. EDMUND BURKE, Portland, Me., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Sept. 25, 1930. Serial No. 484,286. 3 Claims. (Cl. 200—127.)

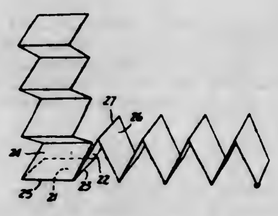
1. In a line fuse cut-out, a casing including a section of waterproofed fiber tube, a lining element secured within said tube, the ends of the lining element being spaced inwardly from the ends of said tube, a pair of radially expansible metal contact rings each having a radial flange resting against one end of said lining element, and means for holding said flanges in place against the respective ends of said liner element.

1,901,895. PACKING FRAME FOR AUTOMOBILE TRUNKS AND SUITCASES. SARAH E. CHENEY, Los Angeles, Calif. Filed Feb. 15, 1930. Serial No. 428,744. Renewed June 25, 1932. 8 Claims. (Cl. 190—41.)



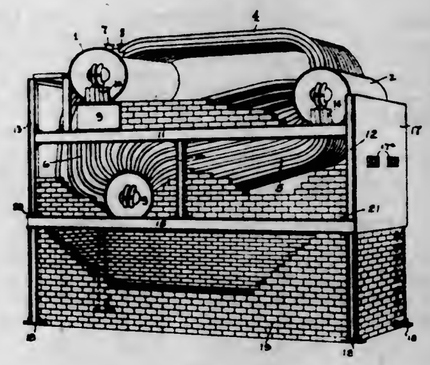
1. A device for holding garments in a suit case or trunk, having a box form skeleton frame removable bodily from the trunk, said frame having a pair of oppositely disposed presser frames, said presser frames having oppositely disposed end bars, and having tension members connecting the end bars so that the tension members of one presser frame cooperate with the tension members of the opposite presser frame to exert pressure upon the garments on opposite sides and hold the garments immovable between the same.

1,901,896. GLASS DRAWING APPARATUS. HENRY F. CLARK, New Kensington, Pa., assignor to American Window Glass Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 19, 1930. Serial No. 453,556. 7 Claims. (Cl. 49—17.)



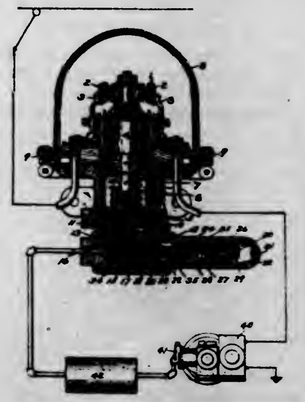
7. In combination with a floater for glass drawing, a plurality of posts for depressing the floater, depressing means for equally and simultaneously adjusting the several posts in a vertically extending direction, and means for individually adjusting at least one of said posts comprising a block slidable relatively to the post, and means for adjusting the position of the block relative to the post, the aforesaid depressing means being connected to the block.

1,901,897. ELBOW FITTING FOR ELECTRICAL SYSTEMS. MARTIN M. CLAYTON, Baden, Pa., assignor to National Electric Products Corporation, New York, N. Y., a Corporation of Delaware. Filed Mar. 11, 1931. Serial No. 521,751. 6 Claims. (Cl. 247—31.)



1. A fitting for an electrical wiring system for connecting oval shaped ducts to a part having a round opening therein, said fitting comprising an elbow which gradually changes throughout its bent length from an oval section at one end to a round section at the other, and has a cross-sectional area throughout at least as great as the area of said oval section at one end.

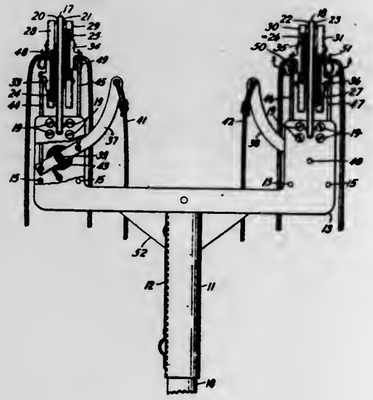
1,901,898. SOUND TRANSLATING DEVICE. HARRY R. CLARKE, Newark, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 12, 1930. Serial No. 443,721. 5 Claims. (Cl. 179—180.)



2. A damping element for vibrating devices comprising two interwoven sets of thin leaves hinged at alternate edges, the hinges of the two sets being at right angles to one another.

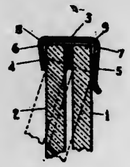
1,901,899. WATER TUBE BOILER. LAWRENCE E. CONNELLY, Cleveland Heights, Ohio, assignor, by mesne assignments, to Foster Wheeler Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 1, 1929. Serial No. 382,788. 2 Claims. (Cl. 122—302.)

1. In a water tube boiler and frame support assembled unit, the combination of a lower frame, the latter including a pair of longitudinally extending base beams, an upper frame including side beams supported on said lower frame, a water and steam drum supported on said upper frame adjacent the rear end thereof, a water drum supported on said upper frame adjacent the front end thereof, said drums connected by steam and water conduits, and a mud drum connected to said first-named drums by means of conduits and supported thereby, said mud drum positioned above the base plane of said lower frame.



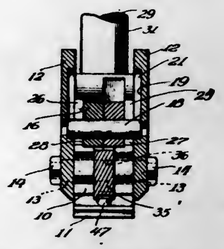
1,901,900. FLUID PRESSURE REGULATOR. GASTON DAUX, Sevran, France, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed July 24, 1930, Serial No. 470,295, and in France Jan. 10, 1930. 7 Claims. (Cl. 121—38.)

1. In a motor control, the combination with a pump, of a motor for operating said pump, a device for controlling the operation of said motor, a cylinder, a piston in said cylinder for actuating said device, a spring, valve mechanism subject to pump pressure and the pressure of said spring for admitting fluid under pressure to and for releasing fluid under pressure from said cylinder, a housing operative to adjust the pressure of said spring, a spring in said housing, means in said housing subject to a predetermined pump pressure and the opposing pressure of



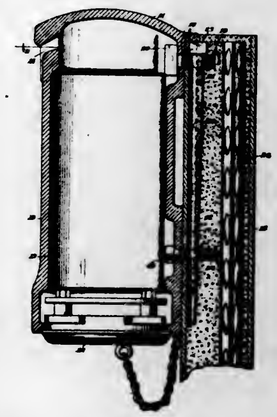
the last mentioned spring for controlling the operation of said valve mechanism to admit fluid under pressure to said cylinder, and means carried by said housing for adjusting the pressure of the last mentioned spring.

1,901,901. TESTING OF ELECTRICAL CONTACTS. JOHN B. DIXON, Red Bank, and EDWARD M. HONAN, West Orange, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 21, 1928. Serial No. 320,785. 9 Claims. (Cl. 175—183.)



1. A device for testing joints in a transmission line comprising a handle, a supporting member adapted to span the joint under test, a contact arm comprising a plurality of contact members mounted on each end of said supporting member and mechanically operated means associated with said contact members for causing relative movement between said contact members and said line for insuring contact therebetween whereby the resistance of the line between said members may be determined.

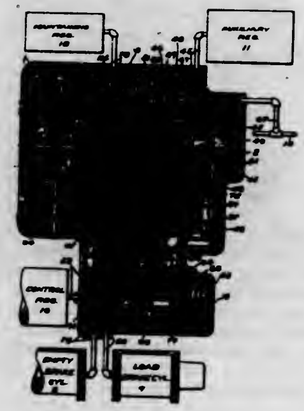
1,901,902. METAL BINDING. ERNEST E. DRAPER, Scarsdale, N. Y., assignor to The Perser Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 29, 1930. Serial No. 439,892. 2 Claims. (Cl. 40—154.)



1. The combination with glass plates to be bound together, of bars of metal channels for opposite edges one pair being longer than the edges of the plates to which they are applied, the shorter pair being longer than the edges of the plates to which they are applied thereby spacing the bottom of said channels from the edges of the plates, said channels having one wide and one narrow side wall, the space intermediate said walls at the top of the narrow wall being less than the thickness of the plates, the face of the channels being wider than the thickness of the plates, whereby said channels are spaced from the corners of the edges of said plates and from the edges thereof when in position.

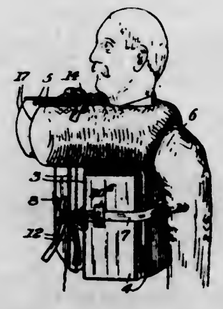
1,901,903. SEALING TOOL. RUSSELL T. EDWARDS, Chicago, Ill., assignor to Signode Steel Strapping Company, Chicago, Ill., a Corporation of Delaware. Filed July 19, 1930. Serial No. 469,125. 6 Claims. (Cl. 81—9.1.)

1. In a tool of the class described, in combination, cooperating work engaging jaws, plates on the sides of said tool having opposed guide grooves therein, bolts pivotally securing said jaws to said plates, actuating elements for said jaws, arms on said jaws, pivot pins securing said arms to said actuating elements, a hinge pin securing said actuating elements to each other and extending into the guide grooves in said plates, said pivot pins being at all times confined in place by engagement at their ends with said plates, a pressure block disposed between said jaws and rigidly fixed to said plates, and two parallel work engaging ribs on said pressure block extending entirely across the face thereof, and a third rib, together with the parallel ribs, constituting an H-shaped formation.



1,901,904. SAFE. WILLIAM EHRLICH, Chicago, Ill. Filed Aug. 18, 1926. Serial No. 129,888. 8 Claims. (Cl. 109—1.)

1. The combination with a receptacle, of an anchorage member to which said receptacle is secured, means for attaching said receptacle to said anchorage member, and integral flanges on the receptacle overlapping the edges of the contacting surfaces between said receptacle and anchorage member.



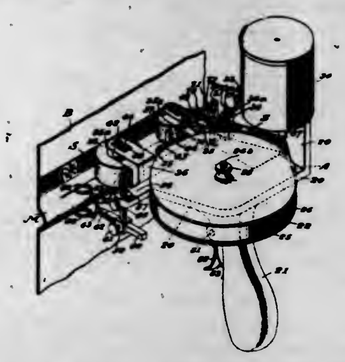
1,901,905. FLUID PRESSURE BRAKE. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Mar. 12, 1929. Serial No. 346,296. 17 Claims. (Cl. 303—74.)

1. In a fluid pressure brake, the combination with a brake cylinder, a valve means operative to supply fluid under pressure to the brake cylinder in effecting an emergency application of the brakes, a triple valve device operative to emergency position and then to emergency lap position in effecting a service application of

the brakes, and means controlled by said triple valve device for preventing the operation of said valve means to supply fluid under pressure to the brake cylinder when said triple valve device is in emergency position in effecting a service application of the brakes.

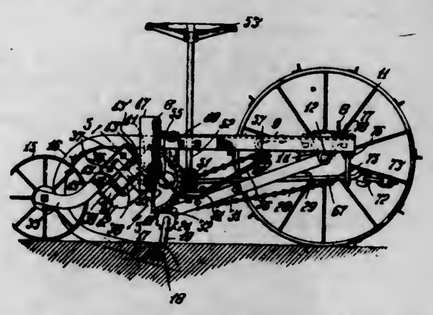
1,901,906. LIFE PRESERVER. JOHN A. FARMER, Lancaster, and HENRY A. FICHTER, Pittsburgh, Pa., assignors to Armstrong Cork Company, Lancaster, Pa., a Corporation of Pennsylvania. Filed Sept. 10, 1929. Serial No. 391,548. 10 Claims. (Cl. 9—17.)

1. A life preserver comprising a jacket-like garment, buoyant portions adapted to lie in front of the shoulders of the wearer and projecting beyond the front of the garment proper, and tie means spaced from the front ends of such buoyant portions, said tie means lying at the top of the buoyant portions and centrally thereof.



1,901,907. CHECK PROTECTOR. WILLIAM C. HIBBING, Newark, N. J., assignor to J. E. Mergott Company, Newark, N. J., a Corporation of Delaware. Filed Mar. 13, 1931. Serial No. 522,227. 1 Claim. (Cl. 101—3.)

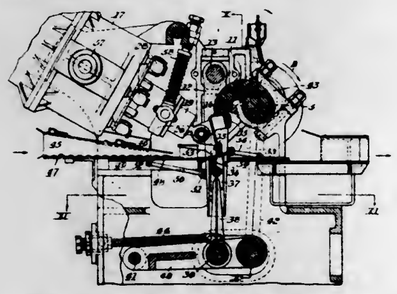
A check protector for comprising a pair of hingedly connected plates, one of said plates being provided with struck-up projections, the other plate being provided with aligned apertures adapted to receive said projections and being further provided with a marginal reinforcing flange on the outer face thereof having a longitudinal guard offset adjacent to and in alignment with said apertures to receive the tips of said projections after they have passed



through said apertures, when the plates are pressed together, the plates being further provided with marginal recesses to facilitate separation of the plates.

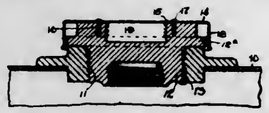
1,901,908. BODY STRIPING. ERNESTO J. HOYOS, Boston, Mass., assignor to Hudson Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed May 18, 1928. Serial No. 278,810. 9 Claims. (Cl. 41—22.)

1. The process of applying a stripe or band design to a painted body which consists in forming a strip of thin cellulose derivative with a predetermined color stripe or design, treating said strip and pressing it against the body to weld the strip and body paint leaving the design or stripe visible on the body.



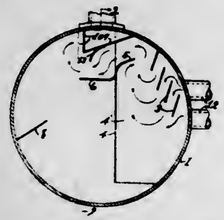
1,901,909. AGRICULTURAL IMPLEMENT. CHRISTIAN E. JOHNSON, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Oct. 12, 1928. Serial No. 312,001. 29 Claims. (Cl. 97—42.)

1. In a rotary rod weeder, the combination of a frame, a pair of supporting wheels disposed adjacent to the sides of said frame, a transversely extending rotary rod supported by said frame and adapted to penetrate the ground, means for driving said rotary rod, a wheel mount-



ing member supported on said frame for fore and aft swinging movement for raising and lowering said frame, a castor wheel swivelled on said mounting member for lateral swinging movement, the castering characteristic of said wheel increasing with the raising of said frame, a worm wheel sector operatively connected with said mounting member, a worm meshing with said sector, means for revolving said worm, and means for adjusting said worm relatively to said worm sector.

1,901,910. SHEAR. LANE JOHNSON, Ingram, and JOHN A. SMITMANS, Pittsburgh, Pa., assignors to United Engineering & Foundry Company, a Corporation of Pennsylvania. Filed Nov. 9, 1928. Serial No. 318,264. 21 Claims. (Cl. 164—49.)



1. In a flying shear, a blade carrier, a power means for moving said carrier in a direction opposite to the direction of feed, a piston having a piston rod pivotally connected to said carrier, and spring means cooperating with said piston for moving the carrier in the direction of the feed.

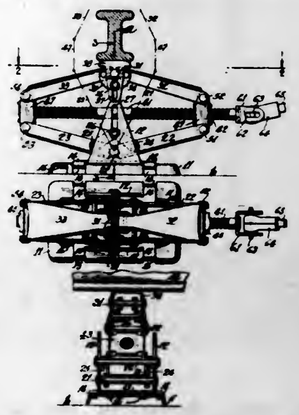
1,901,911. CONTAINER SEALING DEVICE. ISAAC THEODORE KAHN, Cleveland Heights, Ohio. Filed Sept. 17, 1930. Serial No. 482,470. 4 Claims. (Cl. 220—39.)

1. A metal container having a relatively small outlet, metallic closure-means therefor, a sheet-metal sealing member superposable over and encompassing said closure-means and of a shape to be destroyed on applying a removing-wrench to the closure-means, and securing means for said sealing member drivable therethrough into the metal beneath.

1,901,912. STEAM DRUM BAFFLE. HOWARD J. KERR, Westfield, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Aug. 23, 1928. Serial No. 301,456. 11 Claims. (Cl. 122—491.)

2. In a steam and water drum, a plurality of spaced inclined plates near the steam inlet to said drum, and a vertically disposed plate on the other side of said plates from the steam inlet, the upper edge of said plate extending towards the steam inlet.

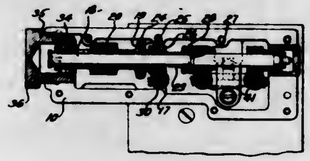
1,901,913. FLAT AND FILLER FOR EGG HOLDING CASES. FERDINAND KRONENBERGER, Brooklyn, N. Y. Filed Apr. 18, 1929, Serial No. 356,016. Renewed Aug. 5, 1932. 2 Claims. (Cl. 217—27.)



1. In combination an egg flat formed of sheet material and comprising rows of successive inverted egg holders, the holders being bounded by transverse rows of intersecting channels each of wavy formation, and a filler unit for coaction therewith, each unit comprising transversely extending filler pieces each piece having its top and bottom edges of wavy formation corresponding with the formation of one of said channels whereby endwise movement of the piece is resisted.

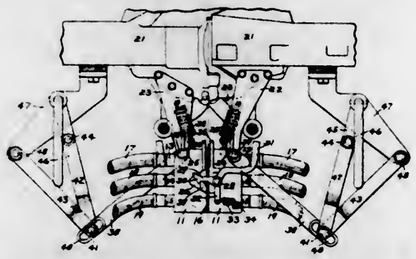
1,901,914. MANUFACTURE OF MALEIC ACID. JOHN W. LIVINGSTON, Kirkwood, Mo., assignor to Monsanto Chemical Works, St. Louis, Mo., a Corporation of Missouri. Filed May 8, 1931. Serial No. 536,085. 8 Claims. (Cl. 202—52.)

1. The method of refining maleic acid, which consists in evaporating an aqueous solution thereof below atmospheric pressure whereby maleic acid in solid phase is produced while avoiding complete solidification of the charge, continuing the evaporation at a relatively lower degree of vacuum until substantially all of the water is evolved while maintaining a liquid phase in the still and, finally, increasing the degree of vacuum and distilling the acid product.



1,901,915. LIFTING JACK. MATTHEW H. LOUGHRIDGE, Bogota, N. J. Filed June 23, 1930. Serial No. 463,110. 4 Claims. (Cl. 254—126.)

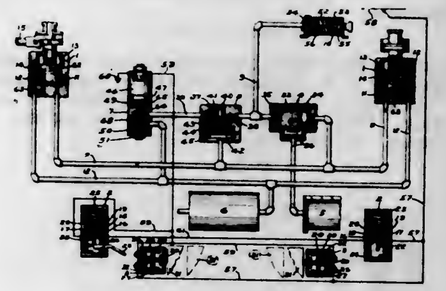
1. In a lazy-jack type of lifting jack, the combination, two pairs of opposed channel shaped, pivoted arms, a pair of vertical links, spaced connections on said links connecting the outer ends of said opposed arms through the sides of the channels, each link comprising a punching from sheet stock having its outer ends turned over at a right angle to the body of the stock parallel with the sides of said channels to form the connections, a nut



abutting on each body substantially midway between said connections and clamped in place by said stock and a right and left screw engaging said nuts to raise and lower said arms.

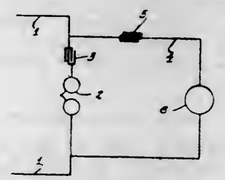
1,901,916. POWER TRANSMISSION DEVICE. CLARENCE E. MCCOY, Western Springs, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 15, 1930. Serial No. 420,852. 3 Claims. (Cl. 74—29.)

1. In a constant torque clutch, a driving shaft, a friction disk keyed thereto for driving purposes, a friction disk driven by the driving friction disk, a spiral gear secured to the driven friction disk, the spiral gear and the driven friction disk being slidably mounted on the driving shaft, a shaft to be driven, a spiral gear splined to the shaft to be driven and meshing with the aforementioned slidable spiral gear and tending to thrust it and the driven friction disk away from the driving disk, and a resilient member opposing this thrusting action to maintain the driving and driven disks in engagement.



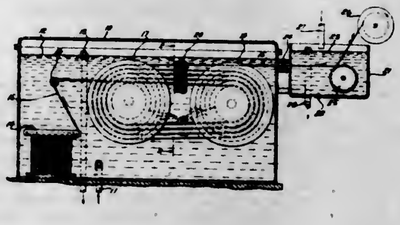
1,901,917. TRAIN PIPE COUPLING. JOSEPH C. MCCUNE, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Mar. 25, 1929. Serial No. 349,540. 17 Claims. (Cl. 285—58.)

1. The combination with a car coupler, of a train pipe coupling movably mounted relatively to the car coupler and spaced from a counterpart coupling when the car coupler is coupled to a counterpart car coupler, and manually operated means for positively moving the train pipe coupling to couple the same with a counterpart coupling after the car couplers are coupled.



1,901,918. SAFETY CAR EQUIPMENT. JOSEPH C. MCCUNE, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Apr. 21, 1930. Serial No. 445,859. 8 Claims. (Cl. 303—6.1.)

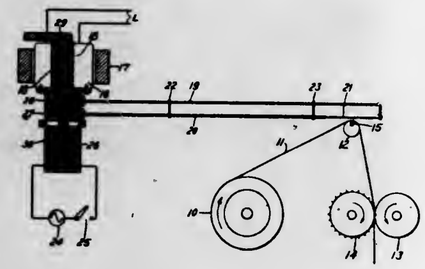
1. In a safety car control equipment, the combination with a brake cylinder, of a safety control pipe through which fluid under pressure is adapted to be supplied to and released from the brake cylinder to apply and release the brakes, a straight air pipe through which fluid under pressure is adapted to be supplied to and released from the brake cylinder to apply and release the brakes, means subject to fluid under pressure supplied through one of said pipes for closing communication from the brake cylinder to the other of said pipes, and a valve operative by



fluid under pressure supplied through said straight air pipe for preventing the flow of fluid through said safety control pipe to said means.

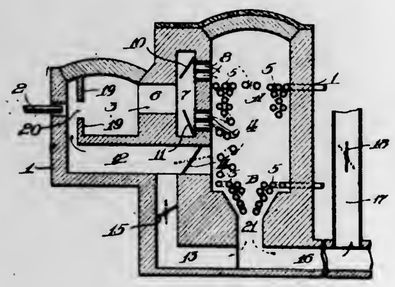
1,901,919. ART OF TELEPHONY SIGNALING. CLARENCE A. MCKEE, Bronx, N. Y., assignor, by mesne assignments, to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 21, 1929. Serial No. 372,586. 1 Claim. (Cl. 179—84.)

In a telephone signaling system, the combination of an alternating current ringing circuit, a condenser and an audible signaling device included in series in said circuit, and a circuit connected to the ringing circuit and shunting said condenser and audible signaling device, said shunt circuit including a condenser and a visual signaling device.



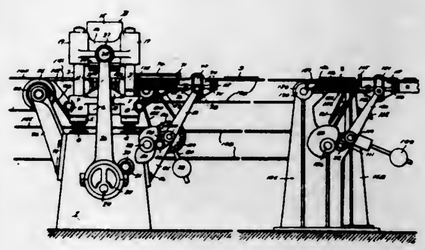
1,901,920. METHOD OF AND APPARATUS FOR DRAWING WIRE. SAMUEL MCMULLAN, Downers Grove, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 1, 1930. Serial No. 417,841. 3 Claims. (Cl. 205—16.)

1. A device of the type described, comprising a treating tank containing a heated fluid, means disposed in the fluid in said tank for rotatably supporting a reel of



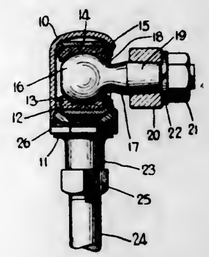
wire, a die disposed in the fluid in said tank, a cooling means associated with said treating tank, and means whereby the wire may be drawn from said reel through said die while within the fluid in said treating tank and into said cooling means before exposing the wire to the atmosphere.

1,901,921. ELECTRICAL METER. WINTHROP J. MEANS, Brooklyn, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed May 24, 1930. Serial No. 455,272. 6 Claims. (Cl. 234—1.5.)



1. The method of recording electrical variations which consists in transmitting a strip of heat sensitive material over a guide member having a longitudinal slot so that a narrow section of said material becomes progressively exposed over the slot and applying heat steadily to the exposed narrow section to cause a permanent impression upon said material.

1,901,922. FURNACE. LEV A. MEKLER, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Oct. 22, 1927. Serial No. 228,016. 8 Claims. (Cl. 122—356.)

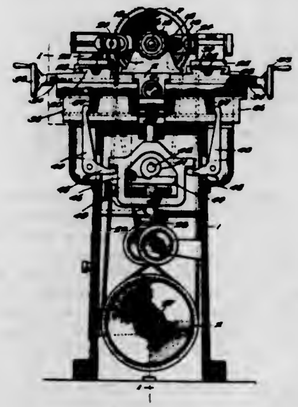


1. A furnace comprising in combination, a heat generating zone, a heating zone communicating therewith through which material to be heated is passed, means for introducing and controlling the introduction of the heated gases generated in the heat generating zone into said heating zone comprising separated valve controlled flues communicating with said heating zone at separated points, means for recirculating regulated portions of the gases from the heating zone to the heat generating zone, and means for controlling such recirculation comprising a plurality of recirculating flues independently controlled communicating with said heating zone at separated points.

1,901,928. APPARATUS FOR MANUFACTURING CERAMIC ARTICLES. HILMAR MUELLER, Trenton, N. J., assignor to The Mueller Machine Company, Trenton, N. J., a Corporation of New Jersey. Filed May 5, 1931. Serial No. 535,253. 27 Claims. (Cl. 25—105.)

1. In a machine of the character described, the combination of a support for material to be cut, a cutter movable through the material to a position beyond the material-sustaining surface of the support, and means for removing the cut material from the support while the cutter is in the aforesaid position.

1,901,924. FLEXIBLE JOINT. JOHN M. NALLE, Fairfield, Conn., assignor to American Chain Company, Inc., a Corporation of New York. Filed Mar. 28, 1929. Serial No. 350,480. 8 Claims. (Cl. 287—90.)

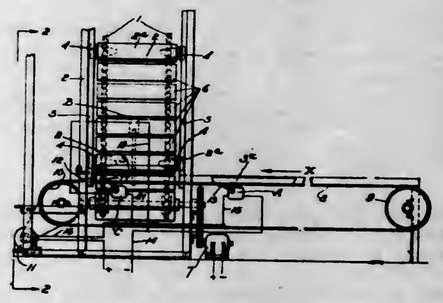


1. A flexible joint, comprising a casing closed at one end and open at the other and having an aperture at one side thereof, a plug adapted to close the open end of the casing, the plug and the closed end of the casing providing a pair of opposed seats, a pair of bearing members seated in said seats, and a drag member consisting of a head journaled between the bearing members and a shank projecting through said aperture, the aperture being too small to pass the head but being so disposed with relation to the open end of the casing that the drag member may be introduced through said open end and the shank passed through the aperture from the inside of the casing.

1,901,925. PROCESS FOR REMOVING CHLORINE FROM ZINC SULPHATE SOLUTIONS. WILLIAM J. O'BRIEN, Cleveland, Ohio, and JOSEPH E. DRAPEAU, Jr., New York, N. Y., assignors to The Glidden Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 6, 1931. Serial No. 535,570. 1 Claim. (Cl. 23—125.)

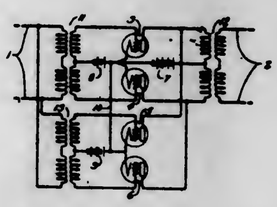
The process of removing chlorine from a zinc sulphate solution consisting in heating said zinc sulphate solution to a temperature ranging from 140° to 200° Fahrenheit, adding sulphuric acid in sufficient quantity to bring the acidity of the zinc sulphate solution within a range of .3% to 1.5%, adding sufficient copper sulphate to combine with the chlorine present and adding sufficient copper powder to convert the chlorine in the presence of the copper sulphate into insoluble cuprous chloride which is removed by filtration.

1,901,926. HOB GRINDING MACHINE. CARL G. OLSON, Chicago, Ill., assignor to Illinois Tool Works, Chicago, Ill., a Corporation of Illinois. Filed Feb. 16, 1928. Serial No. 254,776. 24 Claims. (Cl. 51—95.)



1. In material working apparatus of the class described having a lead screw for actuating a work support and means for rotating the screw, threaded means for receiving the lead screw, and means for superimposing a compensating movement upon the lead screw during the rotation thereof within the threaded means.

1,901,927. LOCK WASHER. CARL G. OLSON, Chicago, Ill., assignor to Shakeproof Lock Washer Company, Chicago, Ill., a Corporation of Delaware. Filed Sept. 10, 1930. Serial No. 480,860. 4 Claims. (Cl. 151—35.)

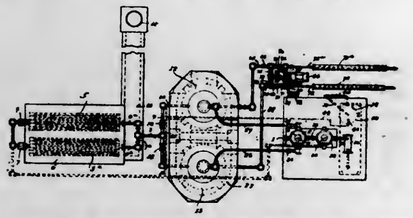


1. A lock washer construction including a pair of juxtapositioned lock washer sections, each of said sections including an annular body portion and a plurality of work engaging prongs spaced along and extending from one margin thereof, the prongs of one washer section adapted to be positioned within the spaces between the prongs of the other section, said prongs being warped out of the bounding planes of their respective body portions so as to present work engaging teeth on opposite sides of the combined lock washer sections.

1,901,928. AUTOMATIC SPACER. SAMUEL OLSON, Oak Park, Ill., assignor to Samuel Olson & Company, Inc., Chicago, Ill., a Corporation of Illinois. Filed May 18, 1931. Serial No. 538,031. 6 Claims. (Cl. 198—21.)

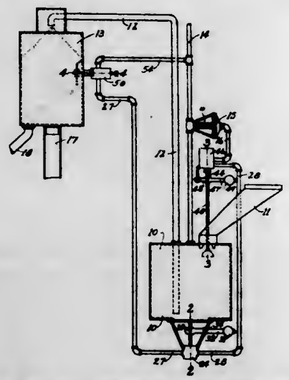
1. The combination of two conveyors, one arranged to feed load units to the other, a motor connected for driving the feeding conveyor, and two circuits-in-parallel in which said motor is energized, and normally closed switches-in-parallel controlling said parallel circuits respectively, the other conveyor being driven independently of said motor and having permanently associated therewith as part thereof and disposed at regular intervals in its longitudinal extent, switch-operating means cooperating with one of said switches-in-parallel arranged for encountering and passing said switches in the movement of said other independently driven conveyor, for interrupting one of said circuits-in-parallel while said switch-operating means is passing said last mentioned switch, the other switch-in-parallel having its operable member positioned for encounter and operation by a load carried by the feeding conveyor arriving at said other switch concurrently with said passing of said last mentioned switch-operating means, whereby said concurrent arrival causes the motor to be interrupted until said switch-passing movement is completed.

1,901,929. VOLTAGE LIMITING SYSTEM. EUGENE PETERSON, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 6, 1930. Serial No. 433,567. 9 Claims. (Cl. 250—6.)



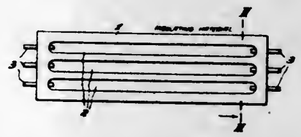
1. The method of limiting the voltage impressed on an outgoing circuit from an incoming circuit comprising impressing voltages between said two circuits through a normal transmission path including a space discharge device, impressing on the output circuit of said device opposing voltages only at such instants of time as the voltages in the incoming circuit exceed the normal maximum, and controlling the magnitude of the opposing voltage to limit the voltages impressed on the outgoing circuit to substantially constant maximum value.

1,901,930. DISTRIBUTING BINDER OVER FIBROUS MATERIALS. ERNEST J. PIPER, Lancaster, Pa., DILLON F. SMITH, Pensacola, Fla., and CLARENCE C. VOGT, Lancaster, Pa., assignors to Armstrong Cork Company, Lancaster, Pa., a Corporation of Pennsylvania. Continuation of application Serial No. 236,359, filed Nov. 28, 1927. This application filed Aug. 2, 1930. Serial No. 472,752. 6 Claims. (Cl. 92—21.)



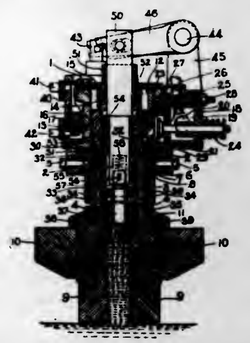
1. The process of distributing binding material in liquid form through a fibrous material, which comprises forming a fluid suspension of the fibrous material and a binding material and a solvent therefor, in a suspending liquid in which the binder and the solvent are substantially non-soluble, and stirring the suspension to distribute the liquid solution of the binder on the fibers.

1,901,931. PROCESS AND APPARATUS FOR TREATING OIL. ROBERT T. POLLOCK, Cambridge, Mass., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 22, 1920. Serial No. 411,913. 10 Claims. (Cl. 196—58.)



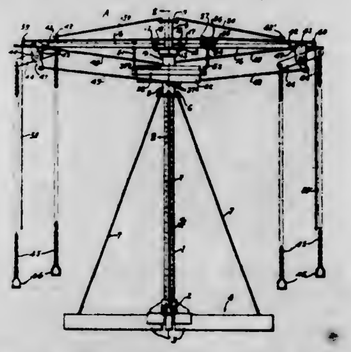
1. A continuous process for the treating of heavy oils, consisting in feeding the oil in a constricted stream through a heating zone, directing the heated oil to one of a plurality of enlarged expansion tanks outside of the heating zone, permitting the cracking reaction to take place in said expansion tank and when an excessive amount of carbon has collected therein, diverting a portion of the residuum from said expansion tank and uncondensible gas, to a second expansion tank to bring the same to approximately operating temperature and pressure, then cutting the tank, having the excessive collection of carbon, out of the system and thereafter vaporizing the oil in the second expansion tank, dephlegmating, condensing and collecting continuously the generated oil vapors and maintaining a regulated pressure during operation.

1,901,932. AIR CURRENT CONVEYER. JAMES BENTON SCHAUB, Wilmette, Ill. Filed Sept. 18, 1930. Serial No. 482,740. 10 Claims. (Cl. 302—17.)



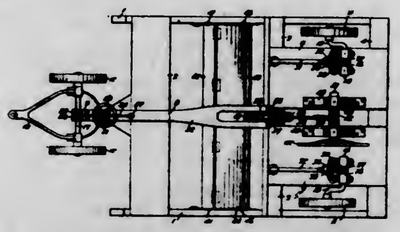
1. In a conveyer of the class described, a forwarding chamber having a discharge conduit and a compressed air supply conduit connected thereto, an inlet for filling the forwarding chamber, a valve for said inlet, that has an actuating means a piston operating in a pressure chamber, a valve having a pressure chamber control, intercepting said compressed air supply conduit, a three-way valve operatively connected to a flexible segment of wall of forwarding chamber, and a compressed air supply conduit intercepted by said three-way valve and connected to the pressure chambers of the aforesaid valves.

1,901,933. MICROPHONE. HELMUT SELL, Berlin-Siemensstadt, Germany, assignor to Siemens & Halske, Aktiengesellschaft, Siemensstadt near Berlin, Germany, a Corporation of Germany. Filed Apr. 6, 1929, Serial No. 353,211, and in Germany Apr. 7, 1928. 7 Claims. (Cl. 179—127.)



4. A microphone of the character described, comprising a body of insulating material having a plurality of narrow and shallow troughs provided in its surface, each trough having a length at least five times its width, said troughs being filled with granular conductive material, and each being arranged to conduct the microphone current lengthwise through the material only, and a thin foil diaphragm pasted on said insulating body closely adjacent to the trough rims and closing said troughs individually, whereby the individual diaphragm portions are adapted to oscillate above their respective troughs, said diaphragm portions contacting with the granulated material in their respective troughs, the oscillating parts of said diaphragm having a ribbon-like shape similar to that of said troughs, said diaphragm being sufficiently narrow to raise the natural frequency of the transverse oscillations above the normal musical tone frequency range.

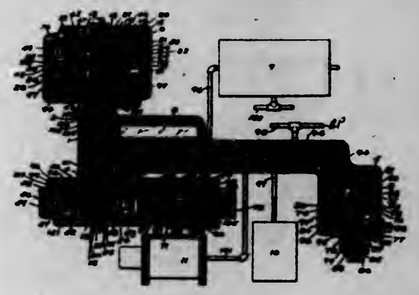
1,901,934. METHOD OF FORMING PARISONS. ALGY J. SMITH, Bloomfield, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Nov. 9, 1929. Serial No. 406,004. 8 Claims. (Cl. 49—80.)



1. The method of gathering and imparting a preliminary shape to a charge of glass which comprises, lowering a suction gathering unit which includes a blank mold, a neck mold, and a plunger in the neck mold, into contact with a pool of molten glass, filling said molds with glass from the pool by the application of suction, thus forming an exterior neck finish on, and a blowing cavity in, the charge of glass by such application of suction, thereafter severing the tail of glass from the charge in said unit, and moving the severed end of the charge of glass upwardly above the severing plane while retaining the plunger in engagement with the glass to preserve the blowing cavity.

1,901,935. ROTARY AMUSEMENT DEVICE. SWAN J. SWANSON, St. Louis, Mo. Filed Oct. 21, 1929. Serial No. 401,034. 4 Claims. (Cl. 272—33.)

1. A device comprising a stationary supporting portion and a rotatable portion, an element fixed to said stationary supporting portion, and means for imparting movement to said rotatable portion, said means including a pair of alternately operable gripping devices, means for guiding said gripping devices in a straight line, said gripping devices being movable with said rotatable portion and being arranged to alternately grip said element, and means associated with said gripping devices for imparting rotary movement to the rotatable portion of the device when the gripping devices are in engagement with said element.

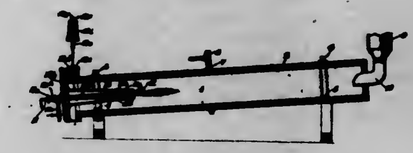


1,901,936. LEVELER. CHARLES W. THARP, Watsonville, Calif. Filed Jan. 25, 1930. Serial No. 423,848. 7 Claims. (Cl. 37—126.)

3. A leveler comprising a frame, a scoop pivotally mounted on said frame; said scoop including a pair of side wings and a blade, means for pivoting said scoop, and means for adjustably positioning said blade relative to said wings whereby the pivotal range of said scoop is altered.

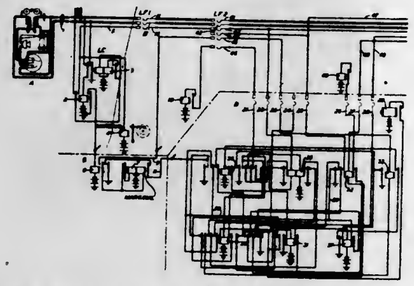
1,901,937. FLUID PRESSURE BRAKE. THOMAS H. THOMAS, Edgewood, Pa.; Mabel M. Thomas, executrix of said Thomas H. Thomas, deceased, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed May 22, 1929. Serial No. 365,027. 8 Claims. (Cl. 303—74.)

1. In a fluid pressure brake, the combination with a brake pipe, brake cylinder, and a main reservoir, of a control reservoir, a valve mechanism subject to the opposing pressures of the brake pipe and said control reservoir for supplying fluid under pressure from the main reservoir to said control reservoir and for maintaining the pressure in said control reservoir constant except in emergency, and



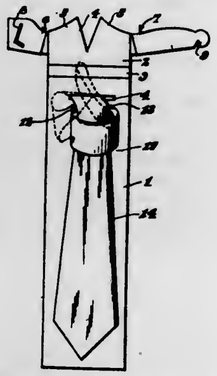
a valve device subject to the opposing pressures of the brake pipe and said control reservoir for controlling the supply of fluid under pressure to the brake cylinder.

1,901,938. METHOD OF AND MEANS FOR TAPPING A CONDUCTOR. WILLIAM C. TITUS, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 6, 1930. Serial No. 418,892. 1 Claim. (Cl. 173—269.)



In a cylindrical inductance coil having a closely spaced winding, a tap connection comprising a short length of thin stiff metallic ribbon wrapped about the wire of the coil and conductively fastened thereto over substantially the entire circumference of the wire, the ends of the ribbon being joined together flatwise to form a fin projecting in a direction perpendicular to the axis of said coil, and a connector having a socket at one end and a tip at the other, said connector being placed with the socket end over the fin and the jaws of the socket portion being flattened to engage the fin and conductively fastened thereto.

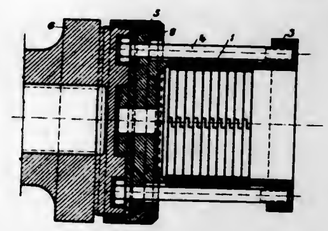
1,901,939. PROCESS OF PRODUCING CHROMATES. JOSEPH J. VETTER, Hackensack, N. J., assignor to Natural Products Refining Co., Jersey City, N. J., a Corporation of Delaware. Filed July 3, 1930. Serial No. 465,683. 4 Claims. (Cl. 23—56.)



4. The process which comprises roasting chrome ore with a basic refractory material and an alkali carbonate, re-roasting the said unleached product and recovering the alkali chromate therefrom by leaching, filtration and evaporation.

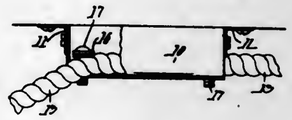
1,901,940. TELEPHONE EXCHANGE SYSTEM. ESMOND P. G. WRIGHT, Croydon, England, assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 12, 1930, Serial No. 495,062, and in Great Britain Dec. 18, 1929. 16 Claims. (Cl. 179—9.)

1. In a telephone system, subscribers' lines, means including an automatic switch for use in establishing a connection between a calling and a called line, means associated with said switch for receiving impulses, a group of trunks connected to terminals in the bank of said switch, means for advancing the brushes of said switch to said group of trunks in response to a train of impulses corresponding to any one of a plurality of different numerical digits, another group of trunks connected to terminals in the bank of said switch, and means for advancing the brushes of said switch to said other group only in response to a train of impulses corresponding to a single numerical digit.



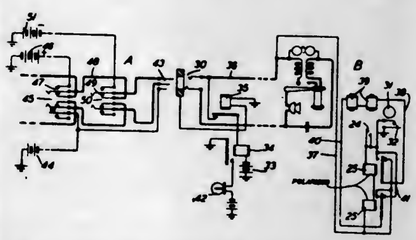
1,901,941. NECKTIE DISPLAY HOLDER. CARL R. YORK, North Tonawanda, N. Y. Filed May 10, 1928. Serial No. 276,694. 4 Claims. (Cl. 206—79.)

2. A mercantile package comprising a card or holder and a necktie, said holder having three slots, one of which is transversely related to and adjacent the ends of the remaining two slots, the necktie having a portion threaded through the first mentioned slot and another portion threaded through the latter two slots and across the first mentioned portion, the slots which receive said second mentioned portion being located adjacent the sides of the first mentioned portion.



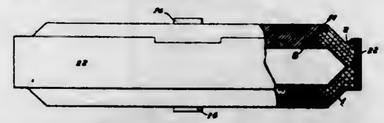
1,901,942. DEVICE FOR TURNING PISTON RINGS. ALEXANDER ABRAMSON, Prague, Czechoslovakia. Filed July 8, 1931, Serial No. 549,430, and in Germany July 17, 1930. 5 Claims. (Cl. 82—40.)

1. Means for assembling piston rings in order to turn their arcuate outer and inner faces, including the combination of a pair of clamping rings adapted to clamp between them the end faces of a series of piston rings intermediate the arcuate outer and inner faces thereof, which pair of clamping rings are adapted to be temporarily secured together with the intermediately clamped piston rings into an assembled unit, and in which pair, one clamping ring is provided exteriorly with means adapting the ring to fit centrally upon a face plate on a lathe and be secured thereto for turning the interior of said series of



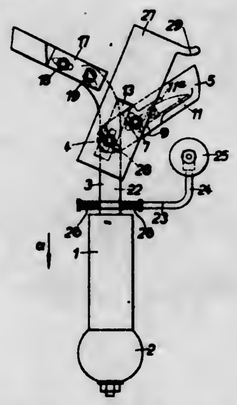
piston rings, the other clamping ring having a clearance opening therein providing for the entrance of a tool and escape of turnings, and means upon said first clamping ring adapting the same when said assembled unit is axially reversed and passed in upon a flanged mandrel interchangeable with said face plate, to be secured to the end of said mandrel and thereby clamp said other clamping ring against the flange upon said mandrel, whereupon said piston rings are adapted to be exteriorly turned.

1,901,943. JUNCTION BOX. JOHN A. ADELL, Orange, Mass. Filed May 9, 1927. Serial No. 189,784. 3 Claims. (Cl. 247—26.)



1. In a sheet metal junction box, the combination with an integral bottom and end walls and a removable L-shaped knock-out extending about half way into both the end wall and the bottom of the box, of a fastening device for the cable inside the box located against the end of the box for gripping the cable against the inner edge of the hole in the bottom of the box from which the knockout is removed.

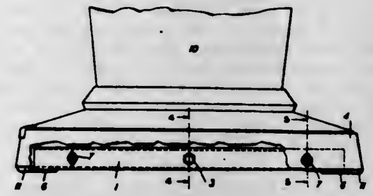
1,901,944. TELEPHONE SYSTEM. LAWRENCE H. ALLEN, Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed May 10, 1932. Serial No. 610,326. 8 Claims. (Cl. 179—6.3.)



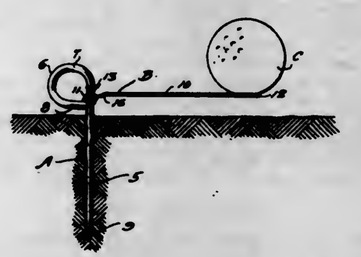
1. In a prepayment telephone system, a coin box, a coin disposal magnet, means for actuating said magnet to refund coins deposited in said coin box and electromagnetic means responsive to an unstandard condition within said coin box for causing said magnet to collect coins deposited in said coin box upon the operation of said means.

1,901,945. CUSHIONING DEVICE. EDWARD S. AVERY, East Hampton, N. Y. Filed July 29, 1931. Serial No. 553,879. 2 Claims. (Cl. 267—63.)

1. A rubber cushioning device for sustaining a load by the resistance of the rubber to deformation, having a center portion of any given thickness which in transverse section remains rectangular under varying loads, a connecting deformable portion which is angularly disposed with respect to the center portion and which under varying loads, is in transverse section always a parallelogram and at maximum deformation approaches a rectangle, an offset outer portion of the same thickness as the center portion and which in transverse section remains rectangular under varying loads, a frame which encases the entire outer surface of the outer portion for resisting lateral deformation, the entire device under maximum deformation being substantially in the same plane and rectangular in any transverse section.



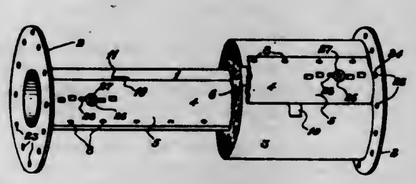
1,901,946. TREE-PLANER FOR CUTTING OR WORKING OUT RESIN-PASSAGES IN TREES. WALTER BARK, Annaburg, Germany. Filed Nov. 22, 1930, Serial No. 497,518, and in Austria Nov. 23, 1929. 6 Claims. (Cl. 47—18.)



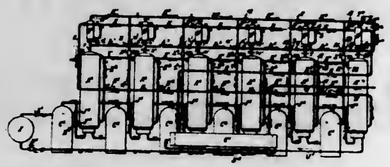
1. Tree-planer for working out and cutting resin-passages in trees, comprising a shaft, a U-shaped plane-iron carried by said shaft, a universally adjustable tongue embraced by the said plane iron and disposed in the cutting direction and in back of the cutting edge of the plane iron, the cutting depth depending on the adjustment of the said tongue.

1,901,947. SUPPORTING DEVICE. EDWIN A. BESCHERER, Brooklyn, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 1, 1931. Serial No. 554,511. 3 Claims. (Cl. 45—139.)

2. A detachable device for supporting an article of furniture, said device comprising in combination, a bracket, at least one securing member for securing the bracket to the article of furniture which is to be supported, a bar having flat plates at its ends suitable for resting upon the surface of a floor, and a pivoting member for pivotally attaching the bar to the bracket.

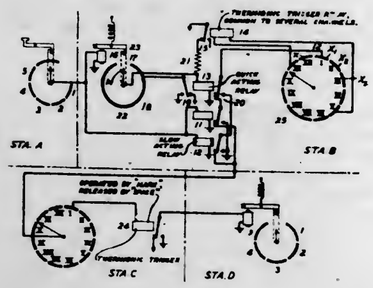


1,901,948. FOLDING GOLF TEE. WILLIAM E. BOCK, West Palm Beach, Fla. Filed July 31, 1931. Serial No. 554,347. 5 Claims. (Cl. 273—33.)



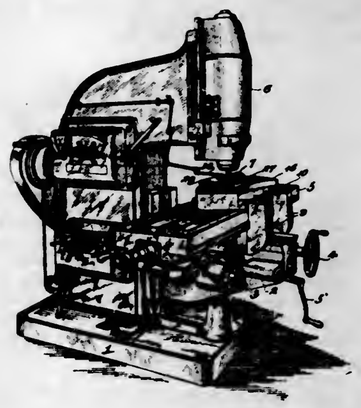
1. A golf ball tee comprising, a peg member formed of wire including a shank and an eye forming bend at the upper end portion thereof, and a supporting arm including a golf ball supporting eye at the free end thereof and a sleeve portion at the other end thereof encircling and slidable along said shank and eye forming bend, whereby the free end of said peg member may engage said eye.

1,901,949. FASTENING MEANS FOR SECURING THE ENDS OF A LENGTH OF MATERIAL TO A REEL. GEORGE E. CLARK, Windsor Locks, Conn., assignor to The George P. Clark Company, Windsor Locks, Conn., a Corporation of Connecticut. Filed Dec. 20, 1930. Serial No. 503,784. 17 Claims. (Cl. 242—74.)



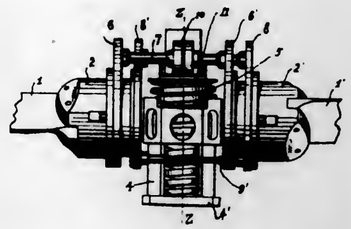
11. A wrapper bar comprising sheet material folded upon itself and having sections cut from its folded edge to leave tongues for attaching the bar to a reel.

1,901,950. APPARATUS FOR TREATING PETROLEUM AND OTHER HYDROCARBONS. CARBON P. DUBBS, Wilmette, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Continuation of application Serial No. 609,876, filed Dec. 30, 1922, since abandoned, which in turn is a division of application Serial No. 176,588, filed June 23, 1917, now Patent No. 1,440,772, which in turn is a division of application Serial No. 133,527, filed Nov. 27, 1916, now Patent No. 1,231,509. This application filed Nov. 1, 1928. Serial No. 316,566. 2 Claims. (Cl. 196—106.)



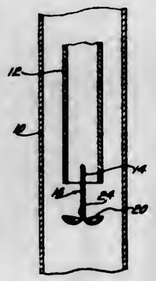
1. An apparatus for cracking oil comprising a plurality of retorts adapted to each receive bulk supplies of oil, means for connecting said retorts in series whereby the oil successively passes through said series of retorts, means for heating the oil to a cracking temperature in said retorts, a dephlegmator for each retort, means for discharging the vapors generated in each retort to its dephlegmator and for returning reflux condensate to the retort from which the vapors were discharged, means for passing the uncondensed vapors from said dephlegmators successively through other retorts in the series, and means for maintaining a superatmospheric pressure on the oil undergoing distillation.

1,901,951. MULTIPLEX TELEGRAPH DISTRIBUTOR. CARLTON R. DUNHAM and ALLEMAN H. ROCHE, Aldwych, London, England, assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 31, 1931, Serial No. 572,244, and in Great Britain Apr. 1, 1931. 17 Claims. (Cl. 178—52.)



1. In a signal transmission system, transmitting devices, a distributor adapted for continuous operation and cooperating in unison with said transmitting devices, a line for receiving signals from said distributor, a plurality of means for transmitting a signal unit or impulse from one of said transmitters to said line at either of two different moments during each revolution of said distributor whereby the sending of the signals from the transmitters through the distributor to the line can be effected irrespective of the position of the distributor in its cycle.

1,901,952. VARIABLE RADIUS ATTACHMENT FOR MILLING, PLANING, GRINDING, OR SCRAPING MACHINES. VICTOR LEE EMERSON, Philadelphia, Pa. Filed July 16, 1931. Serial No. 551,251. 5 Claims. (Cl. 90—13.)

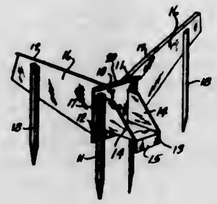


1. The combination with a milling machine comprising a frame and a reciprocatory table mounted thereupon, of a radius milling attachment comprising a work holding member fixedly connected to said table, a wedge hold-down and radius plate engaging said work holding member, and means for fixedly connecting said work hold-down and radius plate to the frame of the milling machine.

1,901,953. PROPELLER WITH AUTOMATIC REGULATION. ACHILLE FERRARIO, Milan, Italy. Filed July 8, 1931, Serial No. 549,421, and in Italy May 27, 1931. 11 Claims. (Cl. 170—162.)

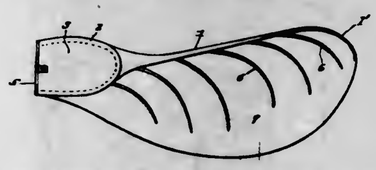
1. A motive, propulsive or tractive propeller, including the combination with means for mounting the same, of a pair of opposite rotatable blades having a common axis of rotation, and means for determining the amount of such rotation and thus the pitch of said blades by the effect of centrifugal force during revolution of said propeller, including a compression spring coaxially mounted with the axis of revolution of the propeller, a dead head associated with each blade and swingable outward about the longitudinal axis thereof thereby tending to directly rotate the blade, and a plate upon said spring beneath said dead heads depressible by the same upon centrifugal swinging outward thereof, whereby to compress said spring and determine the balance between the compression thereof and the centrifugal effect of said dead heads.

1,901,954. LIQUID SPRAY DEVICE. HAL F. FRUTH, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 10, 1930. Serial No. 501,225. 3 Claims. (Cl. 299—121.)



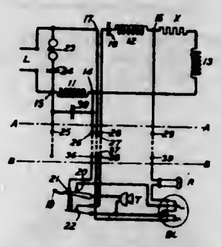
3. A liquid spray device comprising a pipe having a slotted end and a sheet metal baffle having abutting semi-circular portions and integral side strips folded to form supports, the bights of said folds being secured in said slots.

1,901,955. METHOD OF MAKING COMMUTATORS. CHARLES V. GIAIMO, Irvington, N. J., assignor to The Lionel Corporation, New York, N. Y., a Corporation of New York. Filed Feb. 21, 1931. Serial No. 517,417. 6 Claims. (Cl. 29—155.5.)



1. In commutator manufacture, the method which comprises forming a piece of sheet metal into an annular body with radial slots which partially sever it into segments, forming integral prongs at the periphery of each segment and at the inner edge of each segment, bending all the prongs out of the plane of the body so that they project in the same direction, then placing an annular disk of insulating material against the metal body, and folding the prongs against the disk to secure it to the metallic body.

1,901,956. WEIR STRUCTURE. TILMON I. GILBERT, Mount Vernon, Ill. Filed Oct. 21, 1932. Serial No. 638,839. 1 Claim. (Cl. 61—29.)

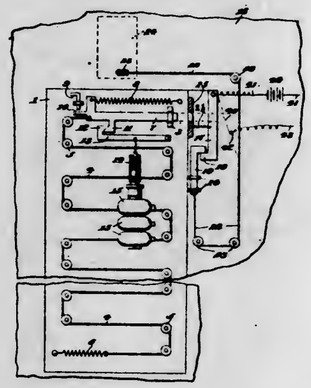


A weir structure for checking soil erosion in drainage canals and the like, comprising a plate having an aperture of restricted size, adapted to be anchored centrally of the canal, said plate having anchoring posts fixedly secured thereto, a channeled spout projecting from one face of the plate, and positioned to receive water flowing through the aperture in the plate, the floor of said spout being spaced above the lower edge of said plate and adapted to lie flush with the bed of the canal, said aperture in said plate being spaced a distance above the floor of said spout, a depending flange formed on the forward margin of the floor of said spout, said flange being adapted to penetrate the bed of the canal; wings secured for pivotal adjustment at opposite ends of said plate, an anchoring post near the outer end of each wing, and means pivotally securing the anchor posts to said wings.

1,901,957. REVOLVING PARACHUTE. KENNET J. GIRDWOOD, Montreal, Quebec, Canada. Filed July 16, 1932. Serial No. 622,954. 2 Claims. (Cl. 244—21.)

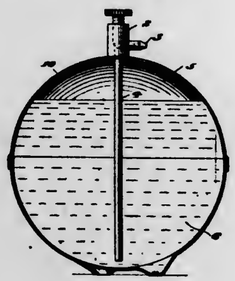
1. A parachute of the class described comprising a body somewhat in the form of a single propeller blade and composed of a stem forming member having an enlarged base part, a blade member having one edge fixed to the stem forming member and formed of a sheet of material, curved ribs fastened at one face of the blade member and each having one end firmly united with the stem forming member, said ribs being exposed and acting to stiffen the member and together with the proper center of gravity of the device gives the device a rotating movement as it descends through the air and a chamber formed in the base of the stem.

1,901,958. SUBSTATION CIRCUIT. JOHN W. GOODERHAM, Larchmont, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 2, 1931. Serial No. 519,406. 6 Claims. (Cl. 179—81.)



1. A signaling circuit including in series four components, the first of said components including a line, the second of said components including a winding of a transformer, the third of said components including a receiving instrument in parallel with a series arrangement of a balancing impedance means and a second winding of said transformer, the fourth of said components including a third winding of said transformer, a transmitting instrument connected in shunt with a series connection of said first and second components, said three windings being terminated on four terminals and having a common magnetic field, a contact common to said transmitting instrument, said receiving instrument and two of said transformer windings, a shunt circuit for said transmitting instrument, an impulse sending device and contacts controlled by said device for opening the circuit of said receiving instrument and closing the shunt circuit whenever said device is moved from normal.

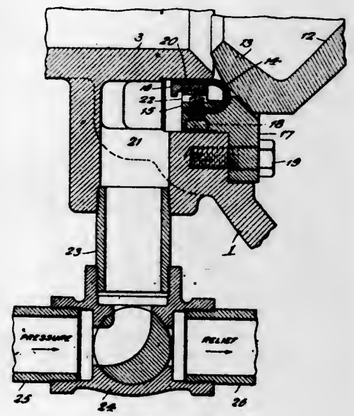
1,901,959. SYSTEM FOR PROTECTING BANKS, STORES, AND THE LIKE, AGAINST ROBBERY, BY GAS AND SMOKE. BYRON C. GOSS, Cleveland, Ohio. Filed May 6, 1931. Serial No. 535,528. 7 Claims. (Cl. 109—6.)



3. A system for gas and smoke protection for vaults and the like as described, comprising a gas and smoke bomb

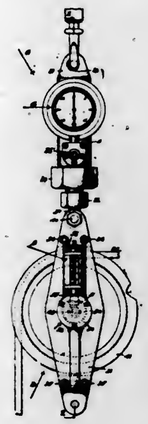
discharge device located inside of the vault, a gas and smoke bomb discharge device located outside of said vault, a first actuating mechanism to operate said inside bomb discharge device, a secondary actuating mechanism adapted to operate said outside bomb discharge device, said sec-

ondary mechanism normally actuated by the operation of said first mechanism, said secondary mechanism also constructed to be manually operated from within the vault and thereby rendered effective to discharge said outside bomb device independently of the operation of said first mechanism and while said first mechanism is restrained.



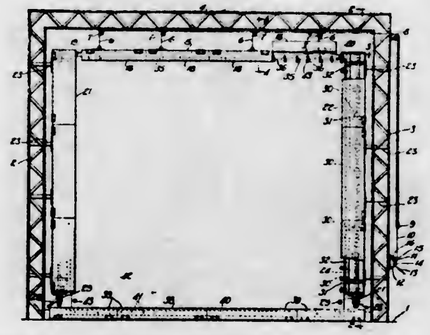
1,901,960. INSECTICIDAL SOLUTION. BYRON C. GOSS, Cleveland, Ohio. Filed Oct. 1, 1931. Serial No. 566,382. 6 Claims. (Cl. 167—17.)

1. An insecticide composition for the protection of woolen goods and the like comprising a volatile solvent containing a soluble fluoride, bile salts, and carbon dioxide dissolved therein to saturation under sufficient pressure to cause penetration of the insecticide into the goods.



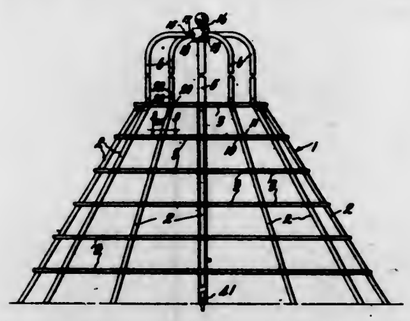
1,901,961. ROTARY VALVE. WILLIAM F. GRANT, Newport News, Va., assignor to Newport News Shipbuilding and Dry Dock Company, a Corporation of Virginia. Filed Jan. 19, 1932. Serial No. 587,459. 5 Claims. (Cl. 251—113.)

1. In a rotary valve having a housing and a tubular valve member rotatable on a transverse axis within said housing, the improvement which comprises a sealing device including a flexible sealing ring of thin sheet material surrounding a passage in said valve, means for holding one margin of said flexible ring in position, and means



for moving the opposite margin of said flexible ring transversely, to cause the central portion of same to contact under pressure with its opposed part.

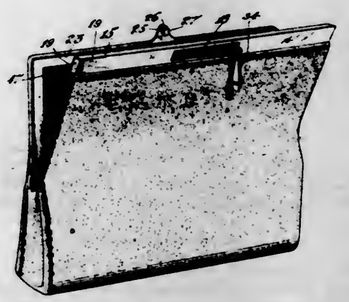
1,901,962. DEVICE FOR INDICATING TENSION AND LENGTH OF LINES IN OIL WELLS. HASKELL M. GREENE, Whittier, Calif. Filed June 14, 1930. Serial No. 461,238. 2 Claims. (Cl. 33—124.)



1. An organization of the character described embodying: a tension indicating gauge; a sheave adapted to support a line; means associated with said sheave for operating said gauge to indicate on said gauge tension in the line, said means including, a piston mounted in a cylinder, and adapted to be supported therein by a noncompressible fluid operably connected with said gauge; separate means operably connected to said sheave for indicating the length of line run over said sheave, said last mentioned means including a footage indicator; and gears operably connecting said indicator to said sheave.

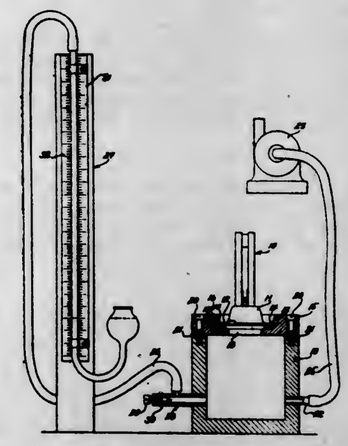
1,901,963. SUPPORT AND STRETCHING MECHANISM FOR MOTION PICTURE SCREENS. JOHN P. HANSEN, Elmhurst, N. Y. Filed Mar. 6, 1931. Serial No. 520,736. 5 Claims. (Cl. 45—24.)

1. A device of the class described comprising vertically extending bars, vertically sliding hooks on said bars for securing a motion picture screen thereto, and means for moving said bars laterally to stretch said screen.



1,901,964. PLAYGROUND DEVICE. WILLIAM E. HASKELL, Springfield, Mass. Filed Jan. 13, 1932. Serial No. 586,311. 5 Claims. (Cl. 272—57.)

1. A playground structure comprising a substantially vertical pole-like member, a frame operably connected to and surrounding said member and so positioned with respect to said member as to afford a plurality of paths to the top of said member, said frame being spaced from said member to afford a rapid unobstructed descent on said member from the top of the frame wholly within the confines of the frame.

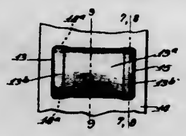


1,901,965. BAG FRAME FASTENER. WILLIAM C. HIMMING, Newark, N. J., assignor to J. E. Mergott Company, Newark, N. J., a Corporation of Delaware. Filed Sept. 11, 1931. Serial No. 562,272. 4 Claims. (Cl. 292—145.)

1. In combination with a pair of U-shaped frame members, a fastening device, comprising a tubular, rectangular casing attached to one of the frame members, said casing having an aperture in one side and a longitudinal slot in the opposite side, a plate attached to the other frame member, a flanged head projecting from the plate and positioned to enter the aperture when the frame members are brought together, a member slidably mounted in the casing, said member having a side wall provided with a slot having a portion of less width than the diameter

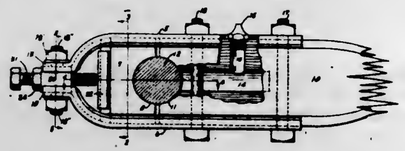
of the head and a portion of greater width, and a means projecting through the slot in the casing and attached to the slidable member to move the latter.

1,901,966. APPARATUS FOR GAUGING MATERIAL. RAGNAR ERIC HOFFMAN, Elmwood Park, and CHRISTIAN PAULSON, Chicago, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 28, 1928. Serial No. 250,135. 6 Claims. (Cl. 73—51.)



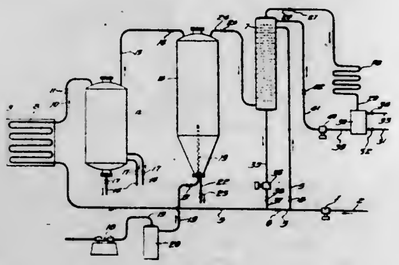
6. In an apparatus for gauging material, a chamber having an opening therein, a rim surrounding the opening having a plane surface thereof adapted to engage a surface under test, means for exhausting air from the chamber at a uniform rate, and means for indicating the pressure of air in the chamber to thereby indicate the fit between the surface under test and the surface of the rim.

1,901,967. ANTIFRICTION BEARING. RAY B. HOOVER, Oak Park, Ill., assignor to Shafer Bearing Corporation, Chicago, Ill., a Corporation of Illinois. Filed Aug. 7, 1931. Serial No. 555,707. 8 Claims. (Cl. 308—218.)



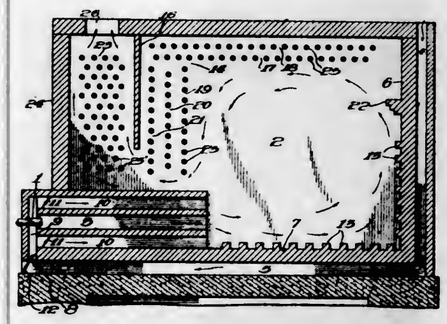
1. An antifriction bearing comprising a plurality of bearing members, bearing rollers cooperating therebetween and having bearing portions with concave surfaces

intermediate their ends and guiding portions at their ends, and an apertured retaining member for said rollers, the apertures in said retaining member receiving said



rollers and being of such shape that the edges thereof contact with said guiding portions of the rollers but not with said bearing portions thereof.

1,901,968. PITMAN FOR AGRICULTURAL IMPLEMENTS. EDWIN F. HUDDLE, Rockford, Ill., assignor to J. I. Case Company, Racine, Wis., a Corporation. Filed Oct. 9, 1931. Serial No. 567,850. 1 Claim. (Cl. 287—93.)



A pitman comprising an arm, a bearing-block adjacent thereto, straps overlapping the outer sides of the arm and block and terminating in converging ends adjacent the block, means for securing the arm and straps together, an internally threaded socket member between said converging ends having shanks thereon passing through the ends, means on the shanks for securing the socket member and converging strap ends together, and a screw follower in the socket for adjusting the bearing-block.

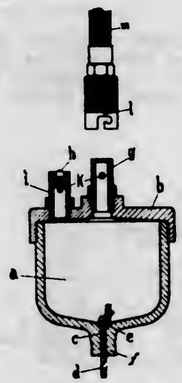
1,901,969. PROCESS FOR HYDROCARBON OIL CONVERSION. LYMAN C. HUFF, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Jan. 3, 1928. Serial No. 244,108. 1 Claim. (Cl. 196—61.)

A process for conversion of hydrocarbon oil, which consists in heating the oil to a cracking temperature under superatmospheric pressure in a heating zone, discharging the heated oil into an enlarged zone of reaction wherein vapors are evolved and heavier constituents are withdrawn as a liquid residue, passing the vapors so freed of heavier constituents to a zone of vapor phase cracking, and supplying heat for the vapor phase cracking by burning a sufficient amount of said vapors within said zone, to maintain a vapor phase cracking temperature.

1,901,970. FLUID HEATING APPARATUS. LYMAN C. HUFF, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Sept. 27, 1930. Serial No. 484,753. 6 Claims. (Cl. 122—356.)

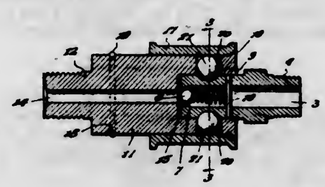
5. In combination, a furnace comprising a combustion chamber, a heating zone communicating with said combustion chamber, means for introducing combustible fuel into said combustion chamber and passing the hot products of combustion into the heating zone along the floor and against the opposite wall thereof, and means for removing the substantially spent products of combustion from the heating zone at a point adjacent the point of entrance of said hot products into said heating zone.

1,901,971. FOUNTAIN PEN. ADRIAN J. IORIO, Randolph, Mass. Filed Sept. 25, 1931. Serial No. 565,080. 4 Claims. (Cl. 120—47.)



1. A fountain pen comprising hollow telescoping members providing an ink reservoir, a pen point mounted in the outer end of one of said members, the outer end of the other member having an ink inlet opening, a valve in said other member adapted to sink in the ink in said reservoir, and a valve seat for said valve adjacent said inlet opening.

1,901,972. WICK OILER. HANS KREIDEL, Wiesbaden, Germany. Filed June 7, 1929, Serial No. 369,161, and in Germany Feb. 20, 1929. 4 Claims. (Cl. 184—105.)



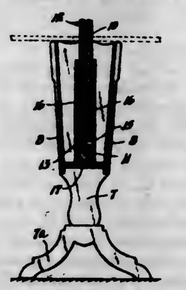
1. A wick oiler comprising a lubricant container, means on said container for making a quick detachable connection with a source of lubricant under pressure, said means being located adjacent the highest point of said container

and forming a duct for free flow in both directions, means for securing said container to a part to be lubricated, said means having a passageway therein, a wick in said passageway for conducting the lubricant from said con-

tainer to the part to be lubricated by capillary attraction, and a check-valve fitting for making a quick detachable connection with a source of lubricant under pressure for filling said container.

1,901,973. LUBRICATOR FITTING. EUGENE J. MACEY, Rosholt, S. Dak. Filed Jan. 6, 1932. Serial No. 585,117. 1 Claim. (Cl. 285—96.)

Apparatus of the type set forth comprising a tubular body having an external annular groove near one end, an inwardly opening check valve fitted in said end, a second tubular body having one end adapted to fit around the grooved and valved end of the first mentioned body and provided at said end with radial openings and an external annular flange, the inner face of which is beveled outwardly, balls disposed in said radial openings and adapted to engage the groove in the first mentioned body to hold the bodies together, a locking sleeve slidably mounted on the second mentioned body to extend over the radial openings therein and retain the balls in engagement with the groove in the first mentioned body and having its inner surface at one end thereof beveled to correspond with the beveled face of the annular flange, the ball locking movement of the sleeve being limited by engagement of said beveled faces, and an abutment on said body limiting the ball releasing movement of the sleeve with the beveled end of the sleeve overhanging the radial openings whereby a limited outward movement of the balls within the openings is permitted and withdrawal of said balls prevented.



1,901,974. SASH LATCH. WALTER C. MACY, South Dartmouth, Mass. Filed Oct. 7, 1932. Serial No. 636,756. 4 Claims. (Cl. 292—340.)

1. A device of the class described including a base plate, a hook member mounted in the base plate and provided with a hook adapted to engage a portion of a cam fastener, and means extending through the base

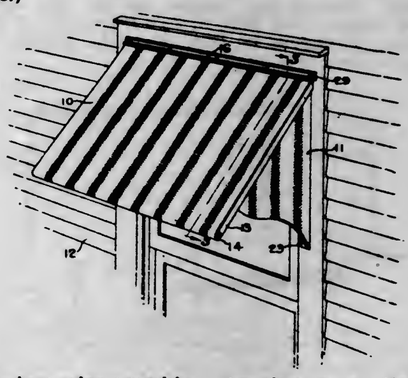


plate locking the hook member in the plate and, said means cooperating with the hook member for locking said plate to the mid rail of the sash.

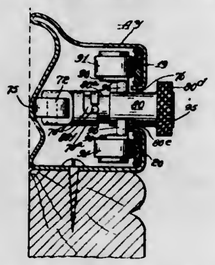
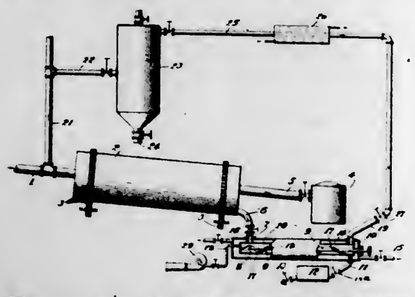
1,901,975. COMBINATION TABLE. CARL A. MAGNUSON and CARL H. UGGLA, Minneapolis, Minn. Filed Feb. 2, 1931. Serial No. 512,915. 3 Claims. (Cl. 45—116.)

1. A combination table comprising an upright frame, said frame having vertical guides in opposite ends thereof, a bar having its ends slidably disposed in said guides, a pair of table leaves hingedly connected at their inner longitudinal edges, said frame including supporting means at the upper portion thereof spaced outwardly from said guides and a connection between one of said table leaves and said bar permissive of oscillatory movement of said leaves on a vertical axis to permit said leaves, when said bar is elevated in said guides and said leaves are unfolded to horizontal position, to be swung through 90 degrees for engagement with said supporting means of said frame.



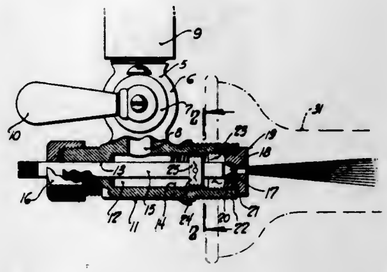
1,901,976. AWNING OF METAL OR LIKE RIGID MATERIAL. JEAN A. MARTIN, Buffalo, N. Y. Filed Jan. 14, 1931. Serial No. 508,736. 3 Claims. (Cl. 189—55.)

1. An awning comprising a top piece, means along the upper edge of the top piece for securing the same to a



building, and a downwardly extending reversed flange along the outer edge of the top piece, a side piece for engagement with the top piece, said side piece being formed with a reversed flange along its upper edge for stationary interlocking engagement with the said flange of the top piece.

1,901,977. ELECTRIC CIRCUIT CONNECTION. MICHAEL W. MCARDLE, Chicago, Ill. Filed Feb. 18, 1928. Serial No. 253,801. 3 Claims. (Cl. 247—3.)



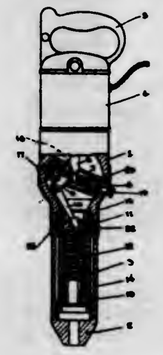
1. A construction for the purpose indicated comprising a longitudinally hollow casing member having at one side a longitudinally extended slot and having two parallel longitudinally extending electrically conductive strips insulatedly mounted within said casing, the casing having means at some point in its length for connecting said conductive strips in circuit with a source of current; a contact carrier having an insulating body adapted to be introduced into the casing and to be guided in the slot for movement longitudinally of the casing; electrical contacts mounted on said carrier in position for bearing on the conductive strips respectively as the carrier is moved along the slot, the means for mounting the contacts respectively on the carrier body consisting of short rockers rotatably mounted in the carrier body positioned and dimensioned for entering through the casing slot, and having each a short transverse projecting inner end terminal also dimensioned for entering through the slot when the rocker is turned to align the terminal with the slot, said transverse terminals comprising the contacts mounted insulatedly in the rockers respectively, said rockers having each a portion exteriorly exposed for manual operation to turn the rocker in the carrier body to project the transverse terminals transversely of the slot and carry the contacts thereof into contact with the conducting strips respectively; whereby said rocker adapts the carrier for entering into the casing through the slot and serves also for locking it in the casing when thus entered.

1,901,978. MANUFACTURE OF POWDERS. ALBERT J. MEIER, Glendale, Mo., assignor to The New Jersey Zinc Company, New York, N. Y., a Corporation of New Jersey. Filed June 14, 1929. Serial No. 370,799. 16 Claims. (Cl. 134—78.)

1. The process of making a pigment which consists in calcining suitable material in a kiln out of contact with air, removing the calcined material out of contact with air, and while still out of contact with air cooling it with a stream of gas substantially non-reactive to the hot pigment which is brought in direct contact with the hot calcined material.

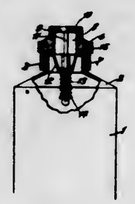
1,901,979. GAS COCK. EUGENE E. MEUSY, Milwaukee, Wis., assignor to Milwaukee Gas Specialty Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Aug. 5, 1932. Serial No. 627,573. 8 Claims. (Cl. 251—43.)

3. In a valve, a valve body, a needle valve movable axially in said valve body, an integral one-piece plug having a bore to snugly receive and firmly hold the needle valve for movement along a fixed axis, said plug also having a discharge orifice outwardly of the bore receiving the needle valve, a valve seat between the orifice and said bore with which the needle valve point cooperates, and means to conduct fluid from the interior of the valve body substantially past the bore receiving the needle valve.



1,901,980. LOOSE LEAF ASSEMBLY. LYMAN MIDDLEDITCH, New York, N. Y., assignor to L. Middleditch Company, New York, N. Y., a Corporation of New York. Filed June 20, 1929. Serial No. 372,248. 6 Claims. (Cl. 40—120.)

1. The combination with a backing member for a loose-leaf assembly, of hollow clamping means extending through the backing member and engaging opposite faces of said backing member, a hollow supporting leg carried by said clamping means below the backing member, and an upstanding post frictionally held within the clamping means and extending above the backing member.



1,901,981. MOTOR-DRIVEN MECHANICAL HAMMER. MATS GÖSTA HARRY OUSBÄCK, Stockholm, Sweden, assignor to Ragnar Erfass, Stockholm, Sweden. Filed Jan. 11, 1932, Serial No. 585,857, and in Sweden Jan. 12, 1931. 5 Claims. (Cl. 125—33.)

1. A motor-driven hammer, comprising a driving shaft, means for rotating said shaft, a cross-head connected with and rotated by said shaft in an oblique plane with respect to said shaft, a reciprocating striking member, means including a link member for connecting said striking member and said cross-head, and means for simultaneously

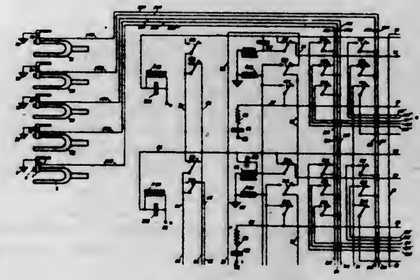
adjusting the position of said cross-head with respect to said shaft, and the position of said tool-holder with respect to said striking member.

1,901,982. CLOSURE FOR RECEPTACLES. JOHN L. PARDUE, St. Louis County, Mo., assignor of one-third to Theodore M. Pardue and one-third to William A. Pardue, St. Louis County, Mo. Filed Sept. 26, 1931. Serial No. 565,241. 7 Claims. (Cl. 221—60.)

1. A collapsible and compressible container having a threaded discharge nozzle at one end, a tubular body screwed on said nozzle and having a valve seat at its outer end, a guide beyond and attached to the inner end of said body and leaving the opening in said tubular body unobstructed thereby, a valve movable to and from position against said valve seat, a stem attached to said valve and extending inwardly through and beyond said tubular body and through said guide, and a spring connected with the inner end of said stem inwardly beyond and cooperating with said guide to hold said valve yieldingly in closed position against said seat and to move said valve to closed position after said valve has been opened.

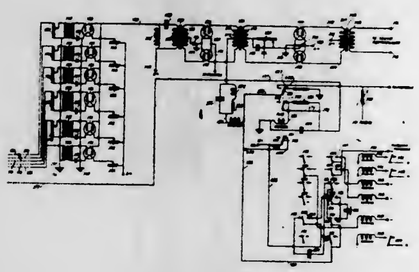
1,901,983. OIL BURNER. CHRISTEN J. PETERSON, Chicago, Ill. Filed Aug. 8, 1928. Serial No. 297,800. 3 Claims. (Cl. 158—77.)

2. A discharge head for an oil burner comprising a rotatable disk having holes therethrough and having circumferentially arranged blades, each of said blades being pitched at an angle to the plane of the disk and having its outer end curved upwardly, and an annular receptacle



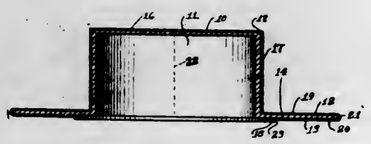
depending from the disk with its outer wall diverging toward the top and coinciding with the outer edges of said holes.

1,901,984. PROCESS OF MAKING HEAT INSULATING BODIES. ERNEST J. PIEPER, DILLON F. SMITH, and CLARENCE C. VOGT, Haddonfield, N. J., assignors to Armstrong Cork Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 10, 1927. Serial No. 225,890. 7 Claims. (Cl. 18—47.5.)



7. The process of making a heat insulating unit, which comprises mixing mineral fibers with a binder in liquid solution in a volatile solvent, shaping the mass, evaporating the solvent with sufficient rapidity to withdraw a substantial portion of the dissolved binder from the interior of the unit to its surface, whereby the unit is formed with a relatively open porous interior and a relatively hard dense surface.

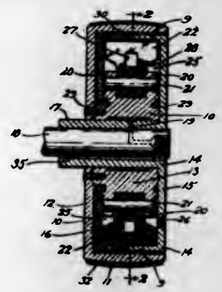
1,901,985. ELECTRICAL MUSIC SYSTEM. RICHARD HOWLAND RANGER, Newark, N. J., assignor to Radio Corporation of America, a Corporation of Delaware. Filed Dec. 30, 1929. Serial No. 417,466. 126 Claims. (Cl. 84—1.)



1. In an electrical music system, a plurality of tone generators, a plurality of sound reproducers of a number less than the number of tone generators, and means for coordinating one of said sound reproducers with tone generators for a single note only at any instant.

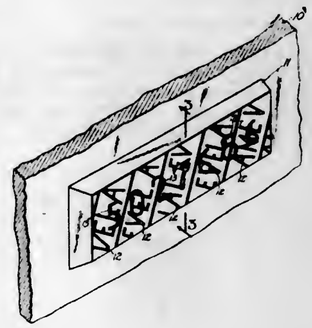
1,901,986. ELECTRICAL MUSIC SYSTEM. RICHARD HOWLAND HANGER, Newark, N. J., assignor to Radio Corporation of America, a Corporation of Delaware. Filed Nov. 28, 1931. Serial No. 577,795. 11 Claims. (Cl. 84—1.)

6. In an electrical music system having a series of alternators for producing electrical frequencies corresponding to the consecutive notes of a musical scale, a plurality of amplifiers for amplifying the various produced frequencies in accordance with a predetermined selection thereof, means for controlling the intensity of each of the frequencies impressed upon said amplifiers in accordance with the tone quality desired, capacity means associated with the amplifying systems for supplying definite voltages thereto during periods when each amplifier is rendered operative and providing for a gradual dissipation of energy from the amplifier during said periods, and a sound reproducer coordinated with each of said amplifying systems for converting the amplified energy into audible energy.



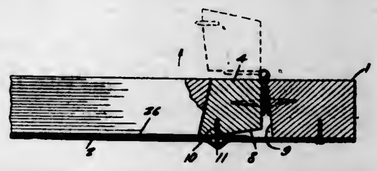
1,901,987. HAT PROTECTOR. THOMAS E. RODERICK, Bronx, N. Y. Filed July 21, 1931, Serial No. 552,111, and in Canada July 26, 1930. 1 Claim. (Cl. 2—187.)

In a waterproof hat protector, an elastic sheet cover tautly and smoothly conformable on the bottom side of the brim of a hat, and corrugations on the inner marginal edge of the sheet cover on the bottom of said brim for simultaneously producing tension to prevent sagging of the cover away from the brim and having edge portions out of contact with the brim for convenience in gripping.



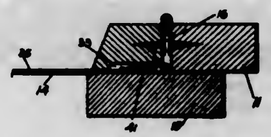
1,901,988. POWER TRANSMISSION. CARL AUGUST RUDQVIST, Stockholm, Sweden, assignor to Pulvis Aktiengesellschaft, Glarus, Switzerland, a Corporation of Switzerland. Continuation of application Serial No. 278,271, filed May 16, 1928, and in Sweden Jan. 9, 1928. This application filed May 14, 1930. Serial No. 452,389. 26 Claims. (Cl. 192—58.)

1. A clutch comprising coaxially mounted relatively rotatable driving and driven members forming a chamber for the reception of finely divided material and means for establishing a driving relation between the driving and driven members comprising elements movable with one of said members and projecting into said chamber,



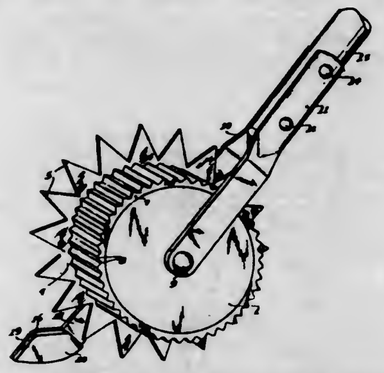
said elements being movable due to pressure thereagainst of the finely divided material to permit the driven member to rotate faster than the driving member.

1,901,989. METHOD OF AND MEANS FOR PROTECTING INSCRIPTIONS. EVERETT J. SCHWANTES, Chicago, Ill. Filed Jan. 18, 1932. Serial No. 587,890. 7 Claims. (Cl. 40—2.2.)



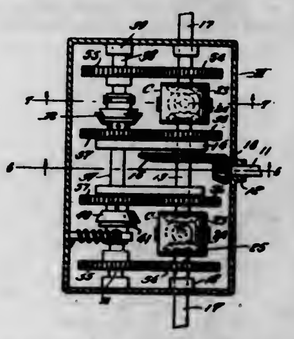
1. The method of protecting inscriptions against effacing, which consists in providing a surface with inscription characters thereon having faces spaced to one side of the plane of said surface and then forming other characters in said surface by means of grooves which cut into said surface and through the faces of said inscription characters.

1,901,990. ADVERTISING FRAME. WENZEL J. SIMANEK, Racine, Wis. Filed Feb. 24, 1931. Serial No. 517,966. 10 Claims. (Cl. 40—156.)



6. A frame for posters or the like having top, side and bottom strips hingedly secured to the inner edges thereof, all of said strips having their inner edges beveled, said side strips having beveled upper ends to engage the beveled inner edge of the top strip when in closed position, impinging elements on all of the strips and the frame having depressions to receive the impinging elements therein, all of said strips having their inner faces beveled from a point adjacent their inner edges to their outer edges, and means for locking the lower strip to the frame.

1,901,991. FRAME. WENZEL J. SIMANEK, Racine, Wis. Filed Oct. 12, 1931. Serial No. 568,475. 14 Claims. (Cl. 40—156.)



1. A frame adapted to receive a poster and the like, comprising a plurality of hinged strips, each of said strips having a plurality of spaced, flexible clips secured thereto, said clips in the closing movement of said strips engaging a poster positioned in said frame and drawing said poster to position smoothly within said frame.

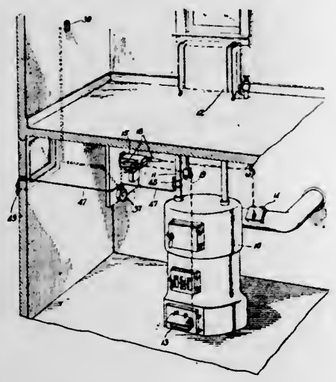
1,901,992. LAWN EDGER AND TRIMMER. D. MONTGOMERY SMITH, Portland, Oreg. Filed Aug. 14, 1931. Serial No. 557,095. 5 Claims. (Cl. 56—256.)

1. In a device of the class described, the combination of a cylindrical drum, formed of a single piece having a side wall disposed upon one side of the cylinder portion, and a flange disposed upon the oppositely disposed side, a toothed blade made of hardened material secured to the flanged side of the drum by counter-sunk screws, a tire band of corrugated rubber secured to the outer surface of the drum, a journal bolt passing through the axis of revolution of the drum and the blade, handle receiving side bars journaled about the bolt, a handle receiving socket disposed upon the outer end of the side bars, and a handle removably disposed therein and secured thereto by fastening bolts, a feeding finger terminating the outer end of one of the side bars, said feeding finger being upset upon its outer end to form a protector for the teeth of the blade and to act as a guide for the grass to be cut, the side bar carrying the feeding finger being spaced apart from the blade for the greater portion of its length and the oppositely disposed side bar being spaced apart from the side wall of the drum by a spacing washer, an offset on the finger carrying side bar adapted to engage the toothed blade at the outer circumference of the untoothed portion of the toothed blade between the handle and the journal bolt, a similar offset engaging the toothed blade on the side diametrally opposite the handle and adapted to coact with the blade and its teeth, a cutting edge disposed upon the portion of the offset adapted to coact with the teeth, both offsets being adapted to maintain the proper alignment of the toothed blade with the cutting edge.

1,901,993. CULTIVATOR TRACTOR. NORMAN S. SMITH, Eastaboga, Ala. Filed July 22, 1930. Serial No. 469,741. 2 Claims. (Cl. 180—17.)

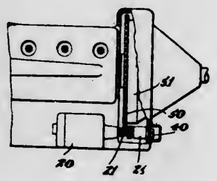
1. In a device of the character described, the combination of a transmission mechanism including a sectional drive shaft and a sectional lay shaft, differential planetary mechanisms connecting the sections of the drive shaft, clutch mechanisms connecting the sections of the lay shaft, a rock shaft, each of the first-named mechanisms including a lever, means operatively connecting said lever with said rock shaft, each of said second-mentioned mechanisms including a control lever, and means operatively connecting said last-mentioned lever with said rock shaft, and gearing located on either side of said differential and clutch mechanisms for connecting the sections of the drive shaft with the corresponding sections of the lay shaft.

1,901,994. COVERED JOINT HINGE. JOSEPH SOSS, Roselle, N. J. Filed May 8, 1931. Serial No. 535,815. 8 Claims. (Cl. 16—162.)



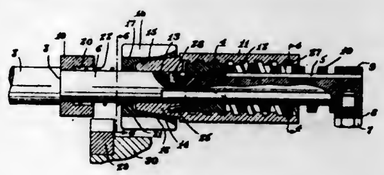
1. A hinge of the class described comprising a stationary butt member including pintle bearings at one end thereof and two movable butt members, each of said movable butt members including curved hood portions arranged in abutting relation with respect to each other when the hinge is assembled, forming means for concealing the joint of the hinge in the several positions of said butt members with respect to each other, means on the stationary butt member permitting the movement of the hood portions of the other butt members with respect thereto and for limiting the movement of the second named butt members, and each of the second named butt members including wall portions disposed at one side of the hood thereof, cooperating with the hood of the companion butt member to form a neat and finished appearance therebetween.

1,901,995. CONTROL FOR HEATING SYSTEMS. DUNCAN J. STEWART, Rockford, Ill., assignor to Howard D. Colman, Rockford, Ill. Filed Dec. 19, 1930. Serial No. 503,364. 7 Claims. (Cl. 236—9.)



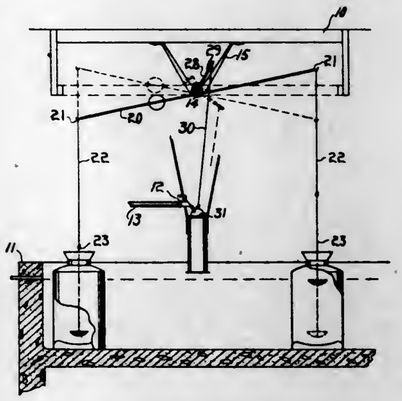
1. In combination with a system for distributing heating fluid, a fuel burner for heating said fluid, electromag-

netic means controlling the operation of said burner, a thermostat responsive to temperature changes within the building to be heated and having switching means, two mercury tubes each having switches at opposite ends respectively closed upon tilting of the tube in opposite directions relative to a horizontal position, a thermosensitive element arranged to tilt said tubes in opposite directions as the temperature of said fluid rises and falls, said tubes being inclined relative to each other so that one of said switches will be opened and closed and a second switch will be closed and opened respectively as the



fluid temperature rises above and falls below a minimum limit, a third switch being opened and closed and the fourth switch being closed and opened respectively as the fluid temperature rises above and falls below a maximum limit, a circuit controlling said electromagnetic means including said switching means and said second and third switches, a circuit including said first switch and controlling said electromagnetic means to initiate burner operation independently of said thermostat, and a circuit controlling said electromagnetic means to interrupt operation of the burner and arranged to be completed by closure of said fourth switch.

1,901,996. STARTING DEVICE FOR INTERNAL COMBUSTION ENGINES. GEORGE A. TAYLOR, Hyde Park, Mass. Filed Jan. 24, 1929. Serial No. 334,656. 12 Claims. (Cl. 74—7.)



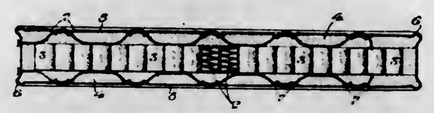
1. A starting device for an internal combustion engine, comprising in combination, means adapted to move axially into and out of engagement with an engine part, an electric motor having means adapted upon energization of the motor to move the first said means axially into engagement with said engine part and transmit rotation thereto, the second said means comprising a slit connection, light resilient means preventing slip when the motor is originally energized, a heavy coil spring adapted to prevent slip during engagement and application of the normal load but designed to permit slip upon backfire of the engine, said heavy resilient means becoming ineffective on the slip connection after the engine starts and before the first said means moves out of engagement with the engine part.

1,901,997. ENGINE STARTING DEVICE. GEORGE A. TAYLOR, Hyde Park, Mass. Filed Sept. 26, 1931. Serial No. 565,237. 24 Claims. (Cl. 78—7.)

1. An engine starting device comprising an armature shaft, a sleeve mounted for rotary and longitudinal movement relative to said shaft, a pinion carried by said sleeve and adapted to be moved into and out of mesh with an engine gear, stop means to limit engine gear engaging movement of said pinion, a friction clutch interposed between the said sleeve and the said pinion, and means cooperating with said stop means to progressively develop a predetermined torque on said pinion.

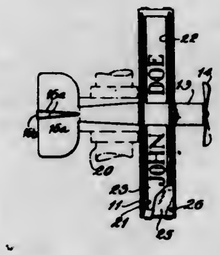
1,901,998. AGITATOR. BENNETT E. THOEN, Orfordville, Wis., assignor, by mesne assignments, of one-half to Orrin B. Ovestrud, Orfordville, Wis. Filed Aug. 7, 1931. Serial No. 555,697. 1 Claim. (Cl. 259—70.)

A fluid actuating device comprising in combination a portable frame adapted to be secured to the ceiling of a building over a trough; a shaft rotatably mounted in said frame and extending longitudinally thereof over said trough; arms extending from said shaft; an agitator fixed to the end of said arms and adapted to extend into fluid containers; an actuating rod extending from one of said arms; a compensating weight on the opposite side of the shaft from said actuating rod; a bucket on the end of said actuating rod and vertically extending guides for said bucket; a valve in the bottom of said bucket, said valve being actuating at the lower-most position of said bucket in said guides to empty accumulated water in said bucket, and means whereby the filling and emptying of said bucket will cause the said shaft to rotate in a clockwise and anti-clockwise direction successively thus causing the agitators to be raised and lowered in the container.



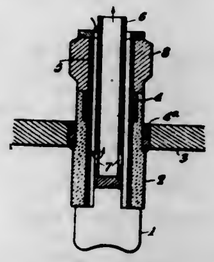
1,901,999. INSULATING MATERIAL AND METHOD OF MAKING THE SAME. CHARLES A. UPSON, Lockport, N. Y., assignor to The Upson Company, Lockport, N. Y., a Corporation of New York. Filed Mar. 28, 1930. Serial No. 439,793. 22 Claims. (Cl. 154—28.)

1. Flexible heat insulating material for walls, comprising a filling of loosely associated fibrous material and a liner on each side of said filling of fibrous material, each of said liners comprising a plurality of layers of cellulosic material held together by a layer of asphaltum chemically treated to reduce the inflammability of said asphaltum.



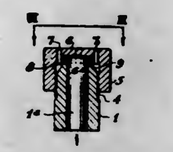
21. The method of making an insulating bat which comprises subjecting jute fibres substantially in the form of a textile fabric to the action of a fireproofing liquid, disintegrating the treated fabric and picking the fibres, forming the picked fibres into a bat filling, and applying a liner to said bat filling.

1,902,000. MATTRESS. WILLIAM VAN SLYCK, Brooklyn, N. Y. Filed Nov. 22, 1930. Serial No. 497,865. 3 Claims. (Cl. 5—356.)



2. The method of making a mattress which consists in providing a series of coiled springs, then completely covering the springs with a layer of filling material, then applying a cover around the filling material, the springs separating the filling material into a pair of layers, then lacing the cover to its juxtaposed layer of filling material by rows of longitudinally extending lacings subsequent to the application of the filling material and cover to the springs, with the ends of the lacing exposed at the edge of the mattress with the exposed portions of the lacing in each row closer together than are the rows of lacings.

1,902,001. OWNERSHIP IDENTIFICATION DEVICE. MAX WASSERBERG, Brooklyn, N. Y. Filed Aug. 27, 1932. Serial No. 630,629. 11 Claims. (Cl. 40—126.)

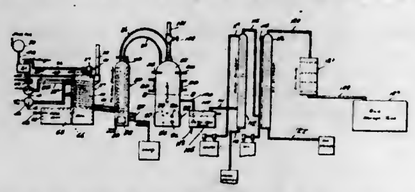


1. An identification device of the class described, of a contour representing a multiple wing aeroplane, said device having a projecting bracket portion by means of which the same may be mounted in connection with a suitable support, means for supporting a characterised strip in connection with one wing of the device to permit the transmission of light through the strip so supported, and another wing of said device having a closed wall arranged in spaced and angular relation with respect to said first wing and including a reflector surface on which the characters of said strip may be seen.

1,902,002. MERCURY VAPOR ANODE. MAX WELLAUER, Oerlikon, near Zurich, Switzerland, assignor to Maschinenfabrik Oerlikon, Oerlikon, Switzerland, a Corporation of Switzerland. Filed Aug. 31, 1931, Serial No. 560,476, and in Switzerland June 27, 1930. 2 Claims. (Cl. 250—27.5.)

1. A vapor anode having therefor a cylindrical insulator, a tube of low thermal conductivity located within said insulator, a tube of high thermal conductivity located within said tube, and leaving an air convecting space between the tubes leading to the exterior atmosphere, and said high conductivity tube having its bore leading to the exterior atmosphere and in its wall a passageway joining the inner spaces of both of said tubes.

1,902,003. DISCHARGE NOZZLE. JOHN F. WERDER, Lakewood, Ohio. Filed Mar. 9, 1931. Serial No. 521,230. 5 Claims. (Cl. 221—4.)

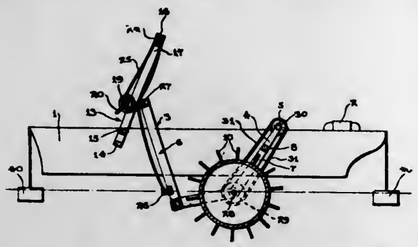


5. A discharge nozzle, comprising rotatably interengaging companion members adapted for permanent operative association with each other and having openings therethrough which are adapted for communication upon partial disengagement of said members so as to permit discharge therethrough, one of said members having a conical seat portion, and the other of said members having an annular edge portion, said portions being adapted for seating and sealing engagement with each other in such manner as to completely cut off communication through the openings of said members, and constituting the only closure means during shipment, storage and usage of the container to which applied, and at least one of said portions consisting of semi-soft material of such degree of hardness as to be only slightly deformed so as to provide sealing seat engagement between said members and permit repeated use of the same in such manner.

1,902,004. PROCESS OF MAKING OIL GAS. RICHARD EUGENE WHITLOCK, Camarillo, Calif., assignor to Whitlock Gas Process Company, Inc., Dover, Del., a Corporation of Delaware. Filed July 2, 1929. Serial No. 375,823. 10 Claims. (Cl. 48—214.)

1. A process of making oil gas comprising injecting oil and water simultaneously in an atomised condition

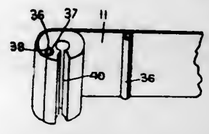
into and downwardly through heated coils having catalytic members within the lower portion of the coils, and thereby generating oil vapors and gases, then removing entrained solid carbon particles by passing the mixture of vapors upwardly and downwardly through a heated separating chamber having baffles for baffling the mix-



ture, then expanding the mixture of oil vapors and gases and fixing the vapors by passing through a heated checker work chamber at a temperature of about 1200° F., then cooling and scrubbing the gas with water by passing through a scrubber and removing sulphur from the oil gas by passing through a gas purified containing iron oxide.

1,902,005. PRESERVATION OF RUBBER. IRA WILLIAMS, Woodstown, N. J., and ARTHUR MORRILL NEAL, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Mar. 12, 1932. Serial No. 598,538. 26 Claims. (Cl. 18—50.)

1. The method of increasing the age-resisting properties of rubber which comprises incorporating in the rubber a compound obtainable by reacting boric acid with an ortho dihydroxy aromatic body and a basic salt-forming substance.



1,902,006. BOAT. CHARLES LEONARD WOODS, Alton, Ill. Filed Apr. 28, 1931. Serial No. 532,330. 3 Claims. (Cl. 115—1.)

1. A boat, comprising a hull, power means positioned in said hull, rotatable drums on either side of said hull, propulsion blades on said drums, pivotal arms supporting said drums, and means for oscillating said pivotal arms to depress and elevate said drums for raising and lowering said boat, consisting of members pivotally mounted to said arms, hoisting frames secured to the hull, drums secured to said hoisting frames, pulleys secured to said hoisting frames, endless flexible members secured at their ends to said pivotally mounted members and trained about their respective pulleys, and drums, means for rotating said drums, and means for securing said drums in a desired position.

1,902,007. PRINTING RIBBON. GEORGE R. WOOD, Toronto, Ontario, Canada, assignor to International Business Machines Corporation, New York, N. Y., a Corporation of New York. Filed Nov. 17, 1927, Serial No. 233,979, and in Canada Sept. 15, 1927. 6 Claims. (Cl. 197—151.)

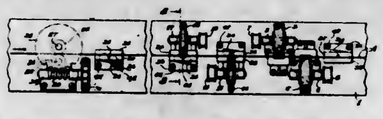
1. An attachment for printing ribbons in time clocks and the like, comprising a printing ribbon, a pair of spaced cylindrical sleeves having slots formed in their walls, a pair of ribbon holders adapted to press the ribbon against the inner walls of the sleeves, one of said sleeves being positioned at the extreme end of the ribbon to form an anchoring means and the other sleeve being spaced

from said end for operating a ribbon reversing gear, a winding roll for the ribbon, a groove in said roll to receive the cylindrical sleeve at the extreme end of the ribbon and a slot in proximity to said groove adapted to receive the other sleeve and allow the ribbon to contact with the surface of the winding roll.

1,902,008. CONDUCTOR CLAMP. ARTHUR O. AUSTIN, near Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Mar. 12, 1929. Serial No. 346,384. 31 Claims. (Cl. 173—251.)

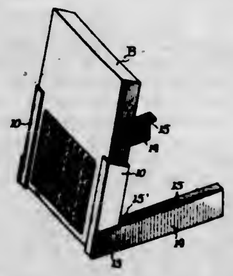
5. In combination a clamp for supporting a conductor, said clamp having a seat extending along said conductor and having graded resiliency for gradually taking up the load on said conductor, and frictional means comprising relatively slidable frictionally engaging surfaces for damping movements of said seat imparted thereto by said conductor.

1,902,009. CONDUCTOR ATTACHMENT. ARTHUR O. AUSTIN, near Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Mar. 29, 1929. Serial No. 351,056. 6 Claims. (Cl. 173—251.)



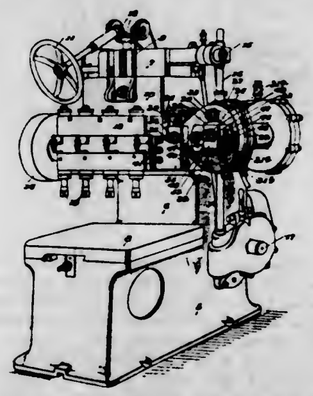
1. The combination with a strand, of a pair of channel shaped spring members nested together with said strand disposed in the channel on the inner one of said members, and means for holding said spring members against transverse movement at one portion thereof to cause said members to be flexed when said strand is vibrated.

1,902,010. STRIP-SUPPORTING MECHANISM. LOUIS W. ANDERSON, Elizabeth, N. J., assignor to Gillette Safety Razor Company, Boston, Mass., a Corporation of Delaware. Filed July 14, 1931. Serial No. 550,710. 7 Claims. (Cl. 51—74.)



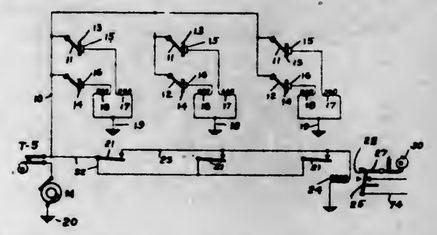
2. A machine of the character described comprising means to propel a perforated continuous strip, and a support for the strip pivotally supported adjacent said strip, said support having spaced projections to enter perforations in the strip, said support having a recess between said projections to receive portions of the strip between

perforations therein, said projections having inclined edges to be engaged by said portions of the strip for rocking the support during travel of the strip, an inclined edge of one



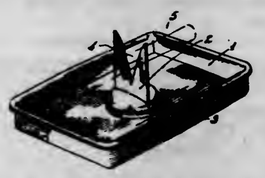
projection extending toward an end of the support and an inclined edge of the other projection extending toward the pivot.

1,902,011. COLLAPSIBLE HOLDER. KENNETH E. BREWER, Chicago, Ill., assignor to Chas. A. Brewer & Sons, Chicago, Ill., a Partnership consisting of Nelson C. Brewer, Kenneth E. Brewer and Everett R. Brewer. Filed Sept. 24, 1932. Serial No. 634,709. 4 Claims. (Cl. 211—160.)



1. A collapsible holder of the character described, comprising a pair of strips adapted to overlie opposite edges of an article to be held, means for attaching said strips to said article, and a pair of legs pivoted at one end thereof to the lower end portions of said strips and adapted to swing between a folded position overlying and substantially parallel with said strips and an extended position wherein they are adapted to rest lengthwise on a table, counter, or other like support; said legs formed with stops cooperating with said strips to maintain the article in substantially upright position.

1,902,012. MACHINE TOOL. ROBERT N. BROWN, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed May 8, 1928. Serial No. 274,863. 14 Claims. (Cl. 90—15.)

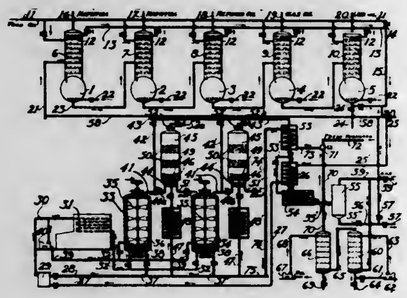


1. In a device of the class described, a rotatable cam member of fixed contour, a slide, a link pivoted to the slide at one end and provided with means at its other end engaging the cam whereby a constant rotation of the cam will intermittently swing the link about its pivot, and means comprising a slotted member carried by said link and a block member coaxial with said cam and housed within said slotted member for converting said intermittent swinging of said link about its pivot into intermittent reciprocation of said link and slide.

1,902,013. CONTROLLING DEVICE FOR RECORD-CONTROLLED MACHINES. JAMES W. BRYCE, Bloomfield, N. J., assignor to The Tabulating Machine Company, Endicott, N. Y., a Corporation of New Jersey. Filed Apr. 16, 1925. Serial No. 23,719. 26 Claims. (Cl. 235—92.)

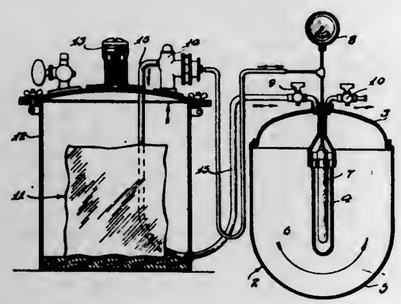
20. In an automatic control system for record controlled machines, a single sensing element for each of a plurality of records, means whereby one or other of the elements detects the presence of a designation on one of the records subsequent to the sensing of corresponding designations on the plurality of records, and a machine control device controlled by said means for controlling the operation of the machine.

1,902,014. ASH TRAY. GUY OUSELEY CAMPBELL, West Grinstead, Horsham, England. Filed Aug. 29, 1931, Serial No. 560,165, and in Great Britain Sept. 10, 1930. 1 Claim. (Cl. 131—51.)



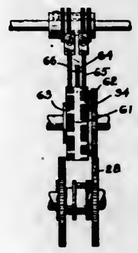
A combined cigarette holder and tray, including a tray proper, having upwardly extended edges, a boss centrally disposed on the bottom of the tray, a vertically disposed flat element supported by and projecting upwardly from the boss, said element extending up beyond the horizontal plane of the upper edge of the tray, said flat element having a V-shaped notch open through the upper end, the maximum width of the notch materially exceeding the diameter of the cigarette, the minimum width of the notch being materially less than the diameter of the cigarette, whereby when the cigarette is arranged in the notch the side walls thereof grip the cigarette at substantially opposing points at the sides of the cigarette, leaving the top and bottom portions of the cigarette wholly free of contact.

1,902,015. METHOD AND APPARATUS FOR HYDROGENATION AND DISTILLATION. EDGAR M. CLARK, Greenwich, Conn., assignor to Standard-I. G. Company. Filed Jan. 26, 1928. Serial No. 249,584. 13 Claims. (Cl. 196—53.)



1. Process for obtaining valuable products from hydrocarbon oil, comprising forcing a mixture of the oil and hydrogen under high pressure through a heating zone, discharging the heated mixture into a reaction zone, maintained at a temperature in excess of about 750° F. and

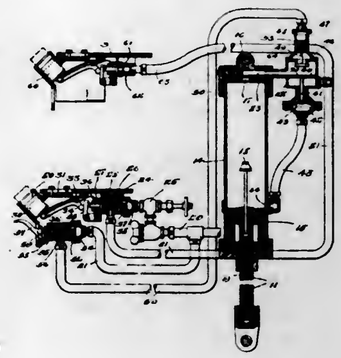
under a pressure above about 100 atmospheres, withdrawing a mixture of gases and vapors substantially free of liquid therefrom, cooling the same under full pressure, separating the condensate from the uncondensed gases, expanding said separated condensate into the first of a series of distillation zones, distilling under substantially atmospheric pressure, removing distillates from the distillation zones, and returning the undistilled residue to the reaction zone.



3. Continuous hydrogenation and distillation apparatus, comprising a heating coil adapted to raise oil under pressure in excess of 50 atmospheres to a temperature at which it reacts with hydrogen, a reactor, means for passing the hot oil into the reactor, means for supplying hydrogen at high pressure and temperature to the reactor for intimate admixture with the oil therein, means for segregating gases and normally liquid products from the reactor, means for expanding said liquid products to low pressure means for distilling lower boiling fractions from said liquid products under substantially atmospheric pressure, and means for continuously returning residual liquid products with hydrogen to the heating coil and thence to the reactor.

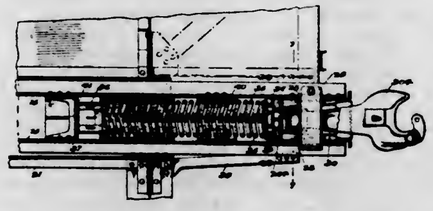
1,902,016. REFRIGERATING APPARATUS. LLOYD G. COPEMAN, Flint, Mich., assignor to Copeman Laboratories Company, Flint, Mich., a Corporation of Michigan. Filed Feb. 12, 1932. Serial No. 592,572. 8 Claims. (Cl. 62—91.5.)

1. A refrigerating system for the application of cold in medicinal and surgical uses, comprising a cold applying unit, a circulating conduit within said unit, a container for receiving a charge of solid CO_2, means for conducting the vaporised CO_2 gases into the circulating conduit of the cold applying unit, and means for controlling the escape of gas from said container to maintain a relatively small amount of pressure in the system.



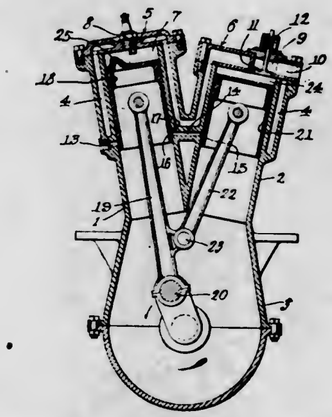
1,902,017. TABULATING MACHINE FOR NONDECIMAL SYSTEMS. GEORGE F. DALY and RALPH E. PAGE, Endicott, N. Y., assignors to The Tabulating Machine Company, Endicott, N. Y., a Corporation of New Jersey. Filed Nov. 30, 1926. Serial No. 151,670. 9 Claims. (Cl. 235—92.)

7. An accounting machine for the entry of a progression of units divisible to represent pence of the English monetary system including control mechanism and adding elements controlled thereby, said adding elements comprising selectively operable counters one of which is adapted to register a number of pence by setting operations of equal increments and having provision for accumulating a number of pence less than nine prior to transfer to the second counter.



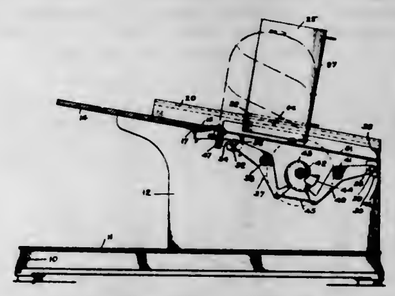
8. An accounting machine, comprising a printing mechanism and means for listing items and the totals of said items, said printing mechanism including a type carrying bar having type for item printing, other type for total printing and another type common to both item and total printing.

1,902,018. ACTUATING MECHANISM FOR PRESSING MACHINES. ERNEST DAVIS, Syracuse, N. Y., assignor to The Prosperity Company Inc., Syracuse, N. Y., a Corporation of New York. Filed Dec. 2, 1926, Serial No. 152,276. Renewed Nov. 22, 1930. 6 Claims. (Cl. 121—38.)



1. An actuating mechanism comprising a cylinder, a piston movable in the cylinder, a supply conduit system for a motive fluid connected to the cylinder and including a feed pipe and a pipe leading to the cylinder and serving as an intake and exhaust pipe, a valve casing connecting the pipes, a spring returned combined intake and exhaust valve in said casing normally arranged with the intake closed and the exhaust open, manual means for operating the combined intake and exhaust valve, a normally open valve in said conduit system, pressure operated means for closing the last mentioned valve when the piston has traveled a predetermined distance on its power stroke, a normally closed exhaust valve in said conduit having means tending to close it, means for opening the normally closed exhaust valve including a pressure chamber having a movable member therein connected to the normally closed exhaust valve, a valve casing connected to the feed pipe and to said pressure chamber, and a normally closed manually operable intake valve in the last mentioned casing having means for normally closing it.

1,902,019. CAR CONSTRUCTION. OTHO C. DURYEA, Waterbury, Conn., assignor to O. C. Duryea Corporation, Wilmington, Del., a Corporation of Delaware. Filed Oct. 29, 1927. Serial No. 229,767. 21 Claims. (Cl. 213—8.)



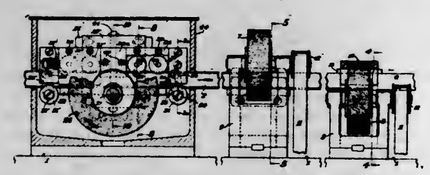
20. In railway draft rigging, sills movably mounted with respect to an associated underframe, resilient means mounted between said sills, follower means for said resilient means, stop means for said follower means mounted between said sills, stop means on the underframe cooperating with said follower means upon movement of the sills with respect to the underframe, a coupler, the stem of which extends between said sills, a key extending through said stem and sills, said sills being formed with elongated slots receiving said key and permitting limited movement thereof longtudinally of the sills, and a block disposed adjacent the rear of said coupler stem for transmitting force to the resilient means upon inward movement of the coupler.

1,902,020. INTERNAL COMBUSTION ENGINE. HERBERT O. EWING, Middleport, Ohio. Filed July 28, 1927. Serial No. 207,915. 1 Claim. (Cl. 60—32.)

In a two-cycle internal combustion engine the combination with a power cylinder and a vacuum cylinder disposed at a relatively small angle to each other, of an intake port opening into the power cylinder, a valved exhaust port in the head of the vacuum cylinder, a relatively short passage connecting the cylinders at a point between their lower ends, a piston in the power cylinder for successively opening the cylinder to the passage and to the intake port during the explosion stroke and successively closing the intake port and the passage during the compression stroke, a piston in the vacuum cylinder, a crank shaft, a pitman connection between the crank shaft and the piston in the power cylinder, and a shorter pitman connection between the pitman of the power piston and the piston in the vacuum cylinder, said pitmen and crank shaft cooperating to actuate the vacuum piston to move from a zero clearance and create a vacuum during the explosion stroke of the power piston and thereafter to open and close the cylinder to the passage, said passage being adapted to be closed by the vacuum piston prior to the compression of gases in the vacuum cylinder and before the closing of the intake port by the piston in the power cylinder.

1,902,021. SLICING MACHINE. EUGENE A. FORD, Scarsdale, N. Y., assignor to Dayton Scale Company, Dayton, Ohio, a Corporation of New Jersey. Filed Dec. 30, 1927. Serial No. 243,496. 18 Claims. (Cl. 146—151.)

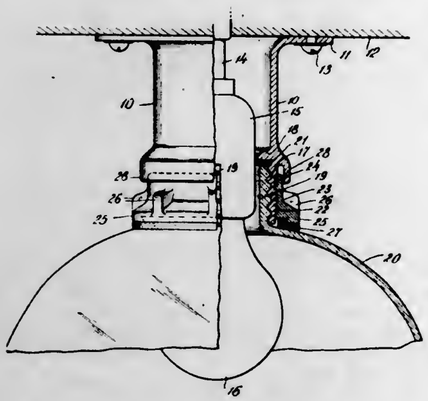
1. A slicing machine comprising an article feeder, a knife element for slicing said article, a driving element connected to the knife element for actuating the same, and means for actuating one of said elements in a direction transverse to a plane which includes the cutting plane of the knife element to effect release of the connection between them.



5. A slicing machine comprising a gage plate, a knife for slicing an article engaging said plate, a frame, a plurality of members pivoted on said frame, a shaft rotatably journalled in said frame, a plurality of cams fixed to said shaft, each cam engaging an end of one of said members, the other end of a member being pivoted to said plate, and means for rotating said shaft to actuate said members for adjusting the distance between said plate and said knife.

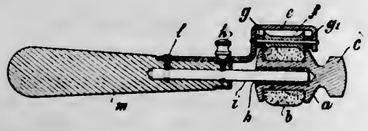
8. A slicing machine comprising an article feeding through a reciprocatably mounted frame provided with a guide slot having a cross-section wider at the rear than at the forward end, the latter end being open, a knife of similar cross-section to that of the slot seated in said slot and having the knife edge projecting through and past the open forward end of the slot for slicing the article fed thereto by the trough, and means for reciprocating the knife to facilitate the cutting action thereof.

1,902,022. METAL SHARPENING MACHINE. HENRY J. GAISMAN, New York, N. Y., assignor, by mesne assignments, to Gillette Safety Razor Company, Boston, Mass., a Corporation of Delaware. Filed Apr. 11, 1929. Serial No. 354,421. 12 Claims. (Cl. 51—80.)



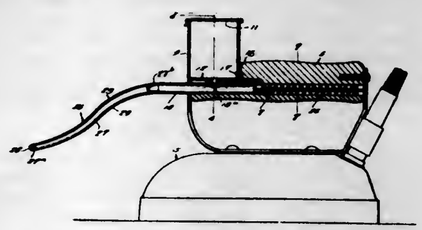
1. A metal sharpening machine comprising means to bevel and sharpen an edge portion of a strip providing facets thereon, means to propel said strip, a sharpening disk spaced from said means, a support opposed to said disk, and a guide block carried by the support adjacent

to said disk and having a guiding groove for the facets of the traveling strip, said groove being narrower than the thickness of the strip with the edge portions of the groove in position to engage said facets of the sharpened



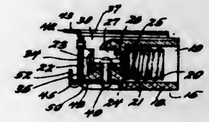
portion of the strip to resist thrusts of the disk against an opposite edge portion of the strip, the groove being of sufficient depth to prevent the block from engaging said sharpened edge of the strip.

1,902,023. SHADE HOLDER FOR LIGHTING FIXTURES. VINCENT J. GALLAGHER, Pelham, N. Y., assignor to Cox, Nostrand and Gunnison, Brooklyn, N. Y., a Corporation of New York. Filed Nov. 19, 1931. Serial No. 576,064. 5 Claims. (Cl. 240—132.)



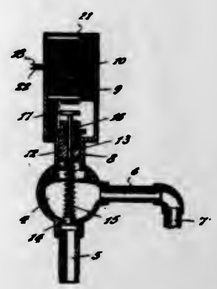
1. A shade holder for lighting fixtures comprising a shell, a shade threaded on said shell, and a collar threaded on said shell and adapted to engage said shade to lock it to said shell, the thread on said collar being of opposite pitch to the thread on said shade.

1,902,024. TYPE CLEANING INSTRUMENT. BESSIE ELLIS GERLACH, NÉE PARKER, and HUGO GERLACH, London, England. Filed July 8, 1929, Serial No. 376,695, and in Great Britain Aug. 3, 1928. 5 Claims. (Cl. 15—97.)



4. A type-cleaning device combining a handle, a rotatable type-cleaning member mounted on the handle and having a plastic material thereon and means mounted on said handle adapted on rotation of the cleaning member to reform the plastic and thereby present fresh surfaces of the plastic for application to the type.

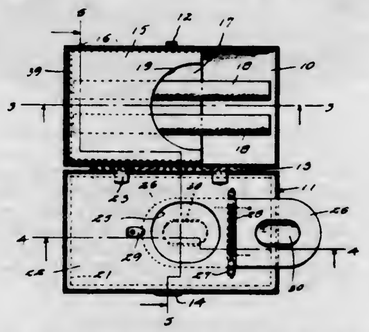
1,902,025. SADIRON. SOLOMON GRAUER, Brooklyn, N. Y. Filed June 30, 1932. Serial No. 620,255. 5 Claims. (Cl. 68—26.)



1. In combination with the handle of a sadiron, a receptacle mounted on said handle and provided in its bottom with an outlet, a tube mounted to reciprocate within a longitudinal bore provided in the handle and having an inlet aperture on its top side normally alined with said outlet but movable out of alinement with said outlet when the tube is shifted, a plunger fixed with respect to said handle and mounted in said bore and normally arranged within the inner end of said tube, spring means normally urging said tube outwardly with respect to said bore, a spray nozzle on the outer end of said tube, and manual means for shifting said tube against the action of said spring means.

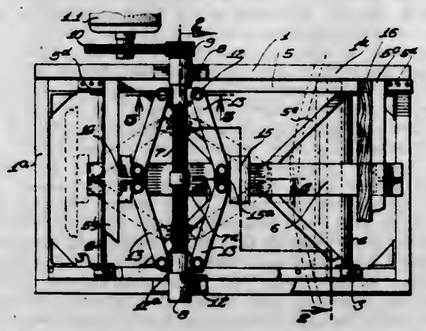
1,902,026. REFLECTOR SOCKET. NELSON WARD HALL, Syracuse, N. Y., assignor to Pass & Seymour, Inc., Syracuse, N. Y., a Corporation of New York. Filed Oct. 7, 1930. Serial No. 487,043. 10 Claims. (Cl. 240—6.)

1. In a lighting unit, in combination, a tubular reflector open on one side, a lamp socket shell of insulating material carried by said reflector and adapted to hold a lamp extending axially of said reflector, a hinge member having one part secured to the bottom of said reflector and one part to the socket whereby the socket may be swung away from the reflector for inserting a lamp, and means to directly engage the insulating material of and clamp the socket in operative position.



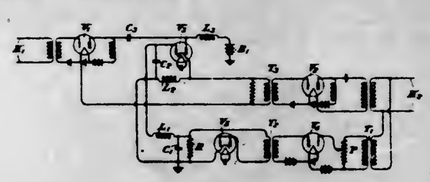
1,902,027. RELIEF VALVE. NORMAN F. HENKEL, Sheboygan, Wis. Filed Nov. 19, 1931. Serial No. 576,189. 2 Claims. (Cl. 137—139.)

1. A device of the class described comprising a substantially spherical casing having an inlet in its bottom and having its upper portion reduced to form an



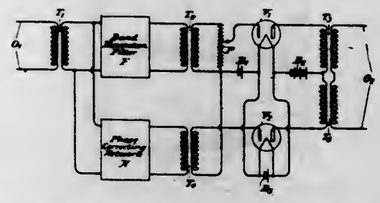
externally threaded neck defining an annular stop shoulder, a bonnet engaging the threads on the neck and bearing against said stop shoulder, the upper end of the bonnet being enlarged to form a housing, an outlet leading from one side of the casing, a valve within the casing seated in the inlet, an adjustable plug mounted in the bonnet, a stem rising from the valve and passing loosely through said plug, an expansion spring coiled about the stem between the plug and valve, an electro-magnet disposed within the housing, and a disk on the upper end of the valve stem and constituting an armature for the magnet.

1,902,028. COMBINATION CIGARETTE HOLDER AND ASH TRAY. RUSHIE F. HEYWOOD, Fulton, Ky. Filed May 7, 1932. Serial No. 609,921. 3 Claims. (Cl. 206—38.)



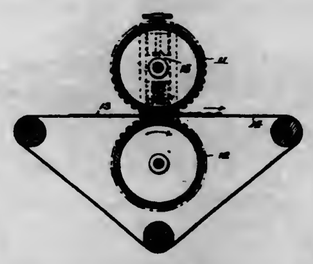
1. An ash tray comprising a member having an open top, a top plate for the member having an ash receiving opening therethrough, means for hinging the plate to said member, a closure for said opening, means for hingedly mounting said closure for swinging movement over said opening, resilient means constantly urging said closure into open position, releasable locking means for holding the closure in closed position, and a transversely curved member carried by the closure and swingable within said opening upon swinging of the closure into closed position.

1,902,029. PIPE STRAIGHTENING APPARATUS. GLEN C. HOLBERT, San Diego, Calif. Filed Dec. 2, 1931. Serial No. 578,534. 6 Claims. (Cl. 153—53.)



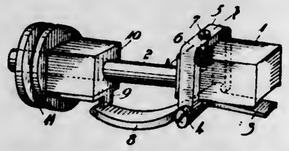
1. In a pipe straightening apparatus, a rectangular fixed frame, a rectangular carriage frame reciprocally mounted in said fixed frame, including end portions protruding above said fixed frame, one of said end portions forming a clamp jaw, a second clamp jaw provided with a groove for receiving work, a screw member extending across said carriage frame and supported from said fixed frame, traveler members associated with said screw member, and links extending from each of said traveler members to said carriage frame and said second jaw.

1,902,030. GAIN CONTROL APPARATUS. WILLIAM H. T. HOLDEN, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 16, 1930. Serial No. 502,824. 4 Claims. (Cl. 178—44.)



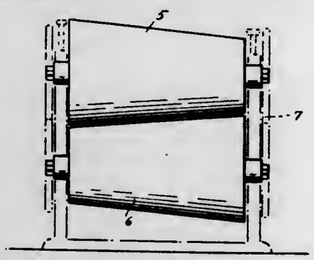
1. In a gain control system, the combination of a circuit transmitting signals, a tube having elements forming a space discharge path and a control electrode, the elements forming the space discharge path being connected directly in series in said circuit, and means responsive to variations in the level of the energy transmitted through said circuit to continuously produce a rectified potential and thereby vary the potential applied to the control electrode of said tube, the control electrode of said tube being affected solely by the rectified potential.

1,902,031. FILTERING APPARATUS. WILLIAM H. T. HOLDEN, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Jan. 6, 1931. Serial No. 506,960. 5 Claims. (Cl. 178—44.)



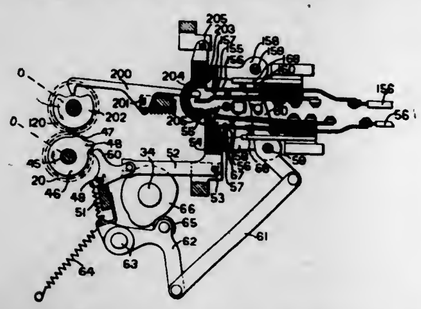
1. Band pass filtering apparatus comprising a band elimination filter, two amplifying circuits coupled, respectively, to the input and output circuits of the filter, both amplifying circuits having equal gains, and a pair of transformers connected to said circuits and coupled so as to be in opposition.

1,902,032. METHOD OF AND APPARATUS FOR MAKING FLEXIBLE VENEER. IRVING HOSKINS, Louisville, Ky., assignor to The Mengel Company, Louisville, Ky., a Corporation of New Jersey. Filed Aug. 8, 1931. Serial No. 554,886. 13 Claims. (Cl. 144—309.)



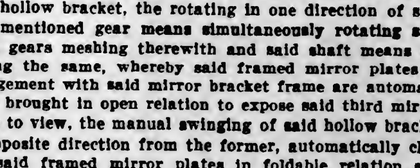
1. Apparatus for producing pliable wood veneer comprising a pair of cooperating toothed rolls between which the veneer is passed; and means for applying a fabric backing to the veneer after it is passed between said rolls.

1,902,033. WINDING DEVICE FOR THE MANUFACTURING OF BOXES, FOR INSTANCE THE OUTER CASINGS OF PUSH BOXES AND SIMILAR ARTICLES. BROR ANDERS EMIL JOHNSON, Alsten, Sweden, assignor to Aktiebolaget Gerh. Arehns Mekaniska Verkstad, Stockholm, Sweden, a Corporation of Sweden. Filed June 16, 1932, Serial No. 617,679, and in Germany Jan. 30, 1931. 2 Claims. (Cl. 93—81.)



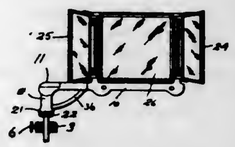
1. In a winding device for the manufacturing of boxes for instance the outer casings of push boxes and similar articles the combination of a mandrel, a jamming member for holding the blank of the box, and a carrier for the said jamming member, which carrier, is slidably and yieldably mounted on the mandrel, transversely of the same.

1,902,034. ROLL FOR USE IN STRIP AND SHEET MILLS. CLARENCE F. KNIGHT, Warren, Ohio, assignor of one-fourth to Melvin R. Hazel, Youngstown, Ohio, and one-fourth to Francis M. Comstock, Warren, Ohio. Filed Feb. 20, 1932. Serial No. 594,297. 3 Claims. (Cl. 29—17.)



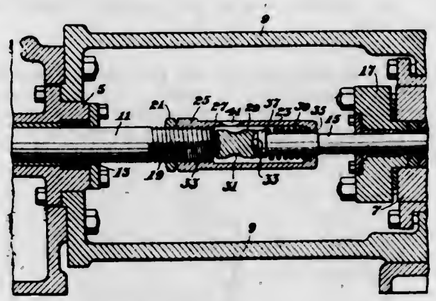
1. A rolling mill comprising plural rotatable rolls, each pair of rolls defining a pass, said rolls having their axes of rotation in the same plane, and each roll tapering in the opposite direction from the other roll with a uniform pitch coextensive with its working surface.

1,902,035. TRANSFER MECHANISM. CLAIR D. LAKE, Binghamton, N. Y., assignor to The Tabulating Machine Company, Endicott, N. Y., a Corporation of New Jersey. Original application filed July 18, 1925, Serial No. 44,452. Divided and this application filed Feb. 29, 1928. Serial No. 257,873. 8 Claims. (Cl. 235—133.)



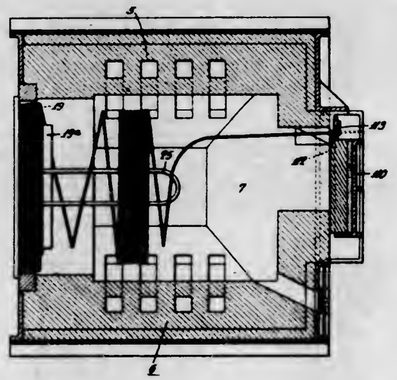
1. An accounting machine adapted for adding promiscuous positive and negative amounts and means for electrically controlling the same, said accounting machine comprising a set of accumulator elements in combination with transfer mechanism therebetween, a positively actuated member, contacts settable by the conjoint action of said accumulator elements and said positively actuated member to control said transfer mechanism for borrowing operations and means for causing a movement of the accumulator elements in a direction reverse to that employed for additive transfers whereby said contacts effect borrowing operations.

1,902,036. SPRING. ERIC G. LINDHE, Hastings upon Hudson, N. Y. Filed Feb. 8, 1932. Serial No. 591,653. 10 Claims. (Cl. 267—2.)



1. A vehicle spring device which comprises a spring leaf element, and a plurality of spaced compression plates supported on said element in a direction substantially at right angles thereto, and resilient material disposed between said compression plates, said plates and said material extending substantially throughout the major portion of the length of said spring leaf element.

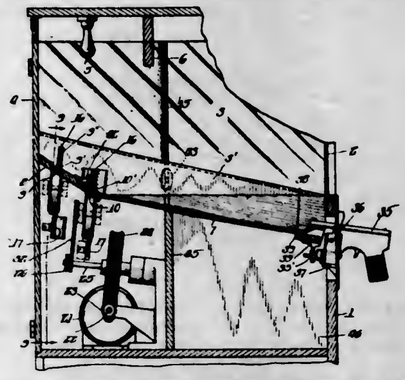
1,902,037. SELF OPENING AND CLOSING THREE-WAY MIRROR. EDMUND J. LOEFFLER, Glendale, Calif. Filed July 20, 1932. Serial No. 623,511. 5 Claims. (Cl. 45—99.)



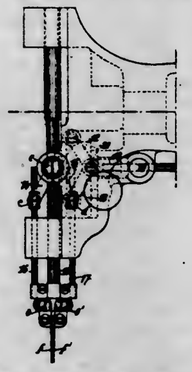
2. In a device of the class described, in combination with a plurality of framed mirror plates comprising separate reflecting surfaces, a movably disposed hollow bracket comprising a support for a mirror bracket frame, gear means mounted in said hollow bracket, two of said plurality of framed mirror plates in engagement with said movably disposed bracket and adapted to be compactly foldable and extensible over the reflecting surface of the third of said plurality of framed mirror plates, said mirror bracket frame comprising a means for securing a third mirror plate, bearing means in engagement with said mirror bracket frame, shaft means engaging said bearings, said shaft means extending within said hollow bracket, bevel gears on said shaft means, said bevel gears meshing with said gear means mounted in said hollow bracket, means within said hollow bracket for rotating said last mentioned gear means upon manually swinging said hollow bracket, the rotating in one direction of said last mentioned gear means simultaneously rotating said bevel gears meshing therewith and said shaft means engaging the same, whereby said framed mirror plates in engagement with said mirror bracket frame are automatically brought in open relation to expose said third mirror plate to view, the manual swinging of said hollow bracket in opposite direction from the former, automatically closing said framed mirror plates in foldable relation and extensible against said third mirror plate so as to hide same from view.

1,902,038. CONNECTER. RAYMOND C. MCALLISTER, Painted Post, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed May 6, 1932. Serial No. 609,753. 6 Claims. (Cl. 287—86.)

4. A connecter comprising a casing adapted to be attached to a driving member and having a bore therethrough, a driven member extending into the bore, convex ends on the driving member and the driven member, an intermediate member having concave sockets in engagement with the convex ends of the driving and driven members, and means to hold the driven member against axial movement with respect to the casing.



1,902,039. METAL HEATING METHOD AND APPARATUS. JOHN JOSEPH MCLAUGHLIN, North Tonawanda, N. Y. Filed May 9, 1932. Serial No. 610,058. 2 Claims. (Cl. 263—3.)

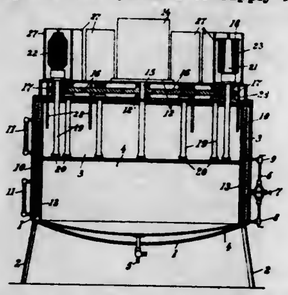


1. In apparatus for heating continuous lengths of rod-like metal for forging and the like, a reverberatory furnace and an uncooled support therein, arranged for sliding the rod-like material along the same in small area contact therewith, the uncooled support being of metal having a softening point higher than the intended temperature of a heating medium in the furnace and approximating the higher forging temperatures for the rod-like metal.

1,902,040. AMUSEMENT MACHINE. JOHN F. MEYER, Chicago, Ill. Filed Mar. 23, 1929. Serial No. 349,355. 12 Claims. (Cl. 273—101.)

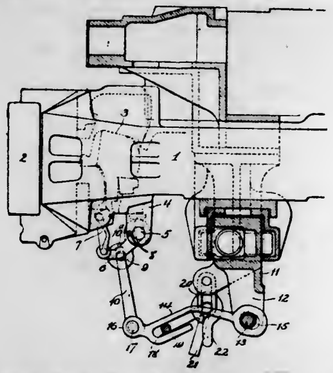
1. The combination of a cabinet having a pistol range therein, a pistol mounted in the cabinet at the front of said range, an inclined support at the rear end of said range and having a groove trackway therein, an endless carrier neatly fitted in and traveling through said trackway and held against movement other than in the direction of its travel, means moving said carrier through said trackway, and targets pivotally mounted on said carrier.

1,902,041. SEWING MACHINE. FELIX MOREL, Fayettas, Par Razac-sur-l'Isle, France, assignor to Anciens Etablissements R. Cornely & Cie (Societe Anonyme), Paris, France. Filed July 20, 1926, Serial No. 123,759, and in France Mar. 23, 1926. 10 Claims. (Cl. 112—81.)



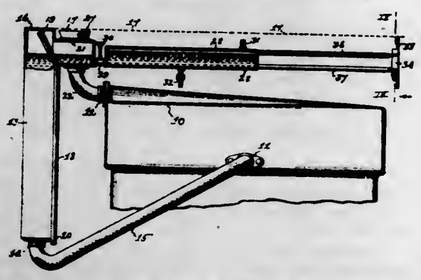
1. In a sewing machine of the type described having a main operating shaft and an operating cam driven thereby, the combination of a pivoted lever reciprocated by said cam, a second pivoted lever parallelly disposed to said first mentioned lever, a link pivotally connecting the free ends of said levers, means for changing one of the pivot points of said link, a pair of needle oscillating rods and a toggle mechanism operatively connected to said second lever slidingly engaging said needle oscillating rods.

1,902,042. MACHINE FOR DYEING, BLEACHING, AND THE LIKE OF LOOSE YARNS OR BOBBINS. JOHANN JAKOB MÜLLER, Basel, Switzerland, assignor to Dr. F. G. Schumacher, Basel, Switzerland, and Hans Keyser, Aarau, Switzerland. Filed July 26, 1929, Serial No. 381,106, and in Switzerland June 12, 1929. 4 Claims. (Cl. 8—19.)



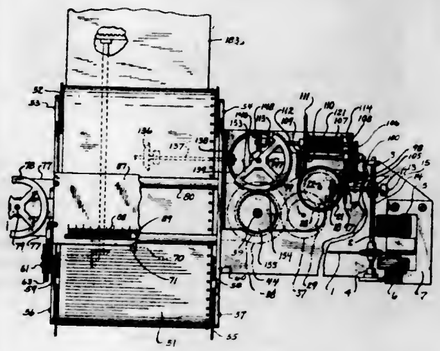
1. A machine for dyeing, bleaching and the like of loose yarns or bobbins, comprising upper and lower vessels, the lower for heating the dyebath and the upper for washing and drying a double cover plate on said upper vessel, rotatable tubes extending from said upper vessel to above said cover plate the projecting portions of said tubes designed to hold bobbins or perforated drums with loose material, driving means for rotating said tubes,

means connecting said lower vessel to said upper vessel, a collecting glass cylinder for each bobbin or drum, said tubes opening into the cylinders to supply liquid to the



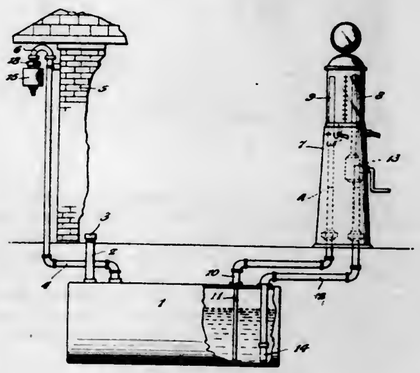
bobbins or drums, and a discharge pipe leading from each glass cylinder to said upper vessel for returning the dye bath or washing liquid to the upper vessel.

1,902,043. CAR COUPLING. GEORGE M. MURPHY, Columbus, Ohio, assignor to The Buckeye Steel Castings Company, Columbus, Ohio. Filed Apr. 5, 1928. Serial No. 267,611. 6 Claims. (Cl. 213—166.)



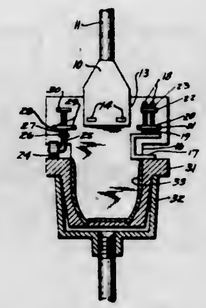
1. The combination with a coupler head, a lock within the head, a rotor provided with a lever arm mounted on the underside of the head, said rotor being pivoted rearwardly of said lock, and connected with the lock to release the same for uncoupling, of a lever mounted below and rearwardly of the rotor, a link between said lever and the lever arm on the rotor, means for swinging the lever upwardly, said lever having an elongated eye fulcrumed so that it may rock laterally on its fulcrum and provided with a slot for engaging the last mentioned means.

1,902,044. AUTOMOBILE RADIATOR. ERNESTO JOSÉ POMMER, Moron, Argentina. Filed Sept. 19, 1932. Serial No. 633,930. 7 Claims. (Cl. 123—174.)



1. The combination with a motor vehicle engine, a radiator with a closed top and a lateral hollow extension below the top of and communicating with said radiator and projecting towards and communication with the cooling jacket of said engine and provided with a filling opening on its upper side below the hood, a reserve tank on the same level with said lateral hollow extension and having communication therewith, and means to cut off said communication between said hollow extension and reserve tank.

1,902,045. MAXIMUM AND TOTAL DEMAND METER. RICCARD PUDELKO, Zug, Switzerland, assignor to Landis & Gyr, A.-G., a Joint Stock Company of Switzerland. Filed Aug. 24, 1927. Serial No. 215,096. 11 Claims. (Cl. 284—5.5.)

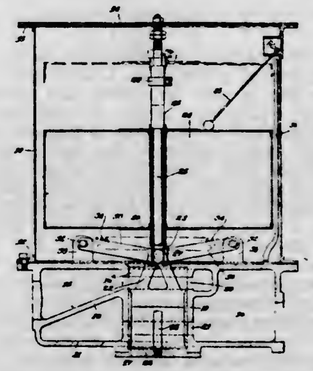


2. An energy metering and recording mechanism including in combination a meter, a recording device positionable proportionately to the energy consumption during a predetermined time interval, a power device, means whereby the power device impels the recording device, connections whereby the meter controls said positioning of the recording device throughout a predetermined time period proportionally to the energy consumed, and means whereby the power device causes the recording device to make a record showing the consumed energy.

1,902,046. DISPENSING APPARATUS. EWELL A. RAINES, Tulsa, Okla. Filed July 2, 1931. Serial No. 548,421. 4 Claims. (Cl. 221—100.)

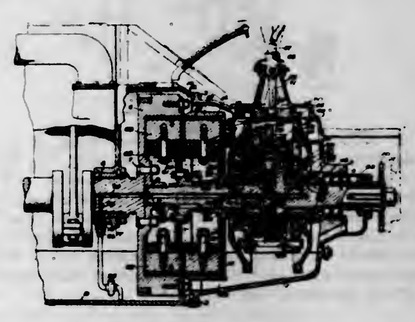
1. In a dispensing apparatus, a dispensing column, a storage tank, suction and return lines extending from the storage tank into the dispensing column and having their lower ends disposed adjacent the bottom of the tank, and a vent tube rising from the storage tank and provided with a pressure-controlled relief valve.

1,902,047. MOLDING TOOL FOR MOLDING MACHINES. HENRY SCHANTZ, New Castle, Pa. Filed July 28, 1932, Serial No. 625,482, and in Germany Oct. 7, 1931. 4 Claims. (Cl. 25—24.)



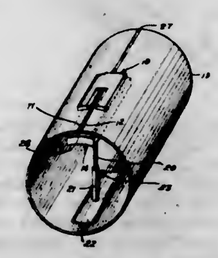
1. In a molding machine the combination of a mold and a shaping tool therein, the mold and tool being relatively rotatable, a trimming blade carried by the tool and spring pressed against the rim of the mold, and means at the opposite side of the tool to balance the spring pressure of the knife.

1,902,048. MATRIX MATERIAL FOR PRODUCTION OF PRINTING PLATES. SHERMAN OSWALD THOMAS, Washington, D. C., assignor to The American Dairy Supply Company, Augusta, Me., a Corporation of Maine. Filed June 18, 1928. Serial No. 286,498. 4 Claims. (Cl. 106—1.6.)



4. As a new article of manufacture, a matrix for receiving impressions and suited for use in casting stereotype plates, comprising a plate or sheet bearing upon one face a closely adhering layer or coating consisting of rubber, finely powdered mineral and carbon black, brought to a tenacious wax-like consistency by mixing with agents which respectively act to facilitate the smooth and even mixing of the solid ingredients and as a solvent for the rubber.

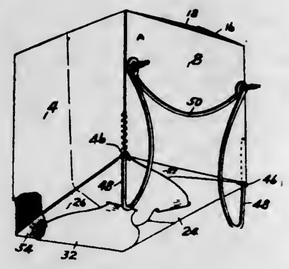
1,902,049. LIQUID METER. ROBERT ARTHUR TRUE, Peterborough, England. Filed May 28, 1932, Serial No. 614,244, and in Great Britain Apr. 21, 1931. 12 Claims. (Cl. 73—28.)



1. A liquid meter of the type set forth comprising a measuring chamber, a float therein adapted to rise and fall with the level of liquid in the chamber, said chamber having inlet and outlet ports, a single sleeve valve controlling said ports and snap action means for actuating the valve to open and close said ports, said valve and snap action means being operatively connected to the float.

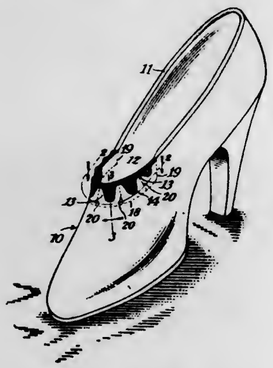
1,902,050. LUBRICATING MEANS FOR AUTOMATIC TRANSMISSION MECHANISM. JESSE G. VINCENT, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Original application filed Sept. 6, 1924, Serial No. 736,829, now Patent No. 1,744,182, dated Jan. 21, 1930. Divided and this application filed Dec. 11, 1929. Serial No. 413,374. 6 Claims. (Cl. 184—6.)

1. A device of the class described comprising, in combination with an engine having a power shaft and a flywheel therefor, a driven shaft provided with an axial oil duct having radial branches, said duct being in communication with the pressure oil system of the engine in the plane of said flywheel, an oil baffle carried by the rear end of said driven shaft and means including centrifugally actuated clutch sectors for transferring power from said flywheel to said driven shaft, said branches leading to the bearings associated with said means.



1,902,051. HEAT RETAINING MEANS FOR AUTOGENOUS WELDING AND METHOD OF WELDING. MATTHEW J. WALL, Jersey City, N. J., assignor to The Linde Air Products Company, a Corporation of Ohio. Filed June 20, 1929. Serial No. 372,501. 11 Claims. (Cl. 113—111.)

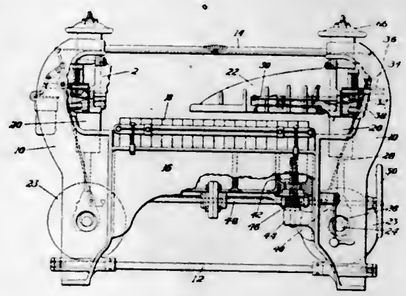
1. Heat retaining means for autogenous welding comprising a hood provided with a recess adapted for partially surrounding a weld during the formation thereof, and a groove adapted for covering the newly formed portion of said weld.



10. Process of welding contiguous metal edges which comprises progressively applying welding heat to said edges while confining the heat so applied to a narrow zone adjacent the welding point; and progressively enclosing the freshly welded portions while applying thereto heat which is conveyed to the enclosed portions from adjacent the welding point.

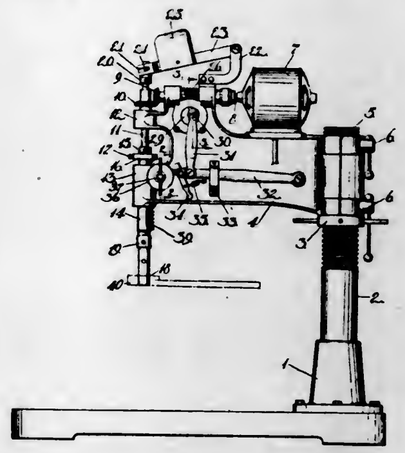
1,902,052. DISPENSER. HOWARD A. WOLF, Philadelphia, Pa., assignor to Wolf Brothers, Philadelphia, Pa., a Copartnership consisting of Benjamin Wolf, Louis Wolf, Albert Wolf, Howard A. Wolf, and Elias Wolf. Filed Dec. 5, 1929. Serial No. 411,723. 4 Claims. (Cl. 206—57.)

1. A container for paper cups consisting of a box formed from a blank of sheet material, said box having a downwardly and forwardly sloping bottom and upright front, back and side walls, a plurality of interengaging flaps joined to the side walls and partially closing the bottom of the box, and a third flap carried by the front wall and defined therefrom by a line of perforations, and extending rearwardly and engaging one of the aforementioned flaps.



1,902,053. SHOE. SAMUEL ZIDE, New York, N. Y. Filed Mar. 5, 1931. Serial No. 520,220. 4 Claims. (Cl. 36—45.)

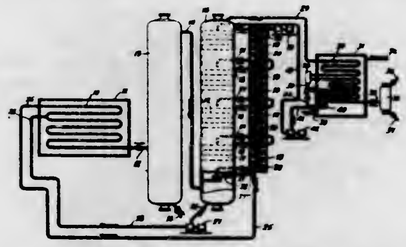
1. A high heel pump having its throat portion provided with free tongues and intervening spaces, a resilient device disposed between the said tongues and the lining of said pump and secured in place by stitching extending along the ends and one side of said resilient device and upwardly along the center of each of said tongues to the ends thereof, for engaging the instep of the wearer yieldingly.



1,902,054. PRESS. MILTON H. BALLARD and DONALD G. MCLEAN, Beverly, Mass., assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 6, 1929. Serial No. 376,463. 9 Claims. (Cl. 164—23.)

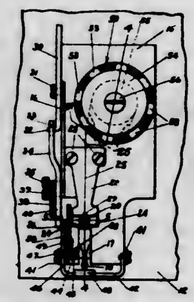
9. A clicking machine comprising a post, a presser member secured to the post, a cutting block, means for producing movements of the member toward and away from the cutting block comprising a sleeve secured to the upper portion of the post and having a spherical seating surface, a connecting rod extending through said sleeve and having a spherical portion bearing upon said seating surface, the connecting rod having a spherical recess formed in the end thereof, a hemispherical member

positioned in the recess, and a cap secured to the end of the post and having a pin extending therethrough for engaging the hemispherical member to secure the post to the connecting rod.



1,902,055. DRILLING MACHINE. ERNST A. BESTE, Kohler, Wis. Filed July 11, 1931. Serial No. 550,239. 6 Claims. (Cl. 125—30.)

2. In a drill wherein an abrasive is the cutting medium, the combination of a standard, a drill frame, a split sleeve connected to said drill frame and concentric to said standard, tightening screws in said split sleeve member whereby said member may be clamped upon said standard and thereby maintain any desired lateral adjustment of the drill frame, a nut screw threaded on said standard and adapted to support and provide vertical adjustment for said split sleeve member and said drill frame, a drill shaft mounted on said drill frame, means for causing the rotation of said drill shaft including a motor mounted on said frame, means actuated by said rotating means for causing reciprocation of said drill shaft simultaneously with the rotation thereof, a weight operatively connected with said drill shaft whereby to create pressure of the drill on the work, a stop collar adjustably mounted on said drill shaft whereby to limit the downward movement of said drill, a drill guide, a concave surface in said drill guide adapted to hold a supply of abrasive in juxtaposition to said drill, and means for positioning said drill guide upon the ware to be drilled.



CARNEGIE LIBRARY OF ATLANTA

1,902,056. TREATING HYDROCARBON OILS. OTTO BEHIMER, Chicago, Ill., assignor to The Texas Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 10, 1928. Serial No. 253,261. 4 Claims. (Cl. 196—140.)

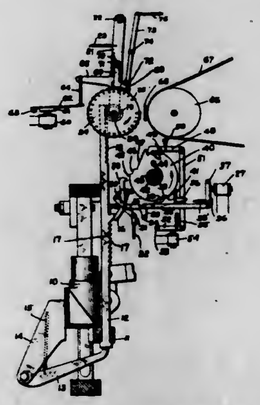
1. Apparatus for treating hydrocarbon oil comprising in combination means for raising hydrocarbon oil to a cracking temperature, means for separating vapors from the resulting cracked products, a fractionating tower for treating said vapors, said tower having in the upper portion thereof a plurality of bubble trays and in the lower portion thereof a plurality of baffle plates, means for introducing said vapors into the lower portion of said tower below the level of said baffle plates, means for removing a desired light distillate from said tower, means for withdrawing a reflux condensate from said tower, cooling said condensate and returning it to a point just above said baffle plates, and means for recycling reflux condensate from the bottom of said tower through said means first mentioned.

1,902,057. WIRE STYLUS AND METHOD AND MEANS OF FEEDING SAME. FRANK L. CAPPS, Milford, Conn., assignor to Columbia Phonograph Company, Inc., Bridgeport, Conn., a Corporation of New York. Filed Mar. 14, 1930. Serial No. 435,824. 16 Claims. (Cl. 274—45.)

3. In a sound reproducing machine, the combination of a pick-up, a stylus formed of fine wire, a stylus bar for supporting said stylus, means for feeding said stylus forwardly, and means preventing operation of said feeding means when the stylus projects a predetermined distance beyond the stylus bar.

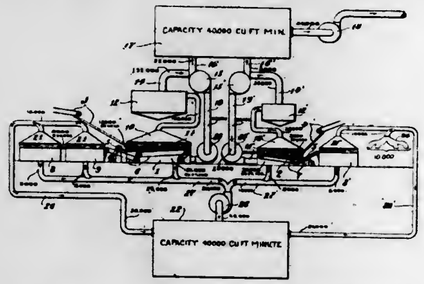
1,902,058. DOUGHNUT MACHINE AND THE LIKE. CHARLES E. CARPENTER, Chicago, Ill. Filed Feb. 13, 1931, Serial No. 515,545. Renewed June 30, 1932. 2 Claims. (Cl. 107—14.)

1. In a device of the class described, the combination with a hopper having a downwardly extending cylindrical throat together with a plunger and a valve reciprocatingly working within said throat, and an upwardly extending sleeve having its lower end connected to the plunger and an upwardly extending rod reaching through said sleeve and having its lower end connected to the valve, of means for vertically reciprocating said sleeve and rod in timed relationship and for adjusting the timing of the movement of said parts, said means comprising a gear journaled for rotation about a horizontal axis, a bracket journaled for swinging adjustment con-



centric with said gear, a gear journaled on said bracket and meshing with the first mentioned gear, both of said gears being of the same size, means for swinging said bracket into adjusted position, means for locking said bracket in said adjusted position, and operative connections between said gears and the sleeve and the rod respectively, substantially as described.

1,902,059. PRODUCTION OF ALLOY SURFACE CASTINGS. JAMES H. CRITCHETT, Douglaston, N. Y., assignor to Electro Metallurgical Company, a Corporation of West Virginia. Filed Mar. 30, 1931. Serial No. 526,551. 4 Claims. (Cl. 22—189.)

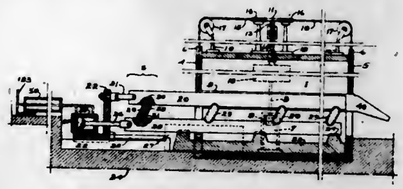


2. A coating for molds adapted to form a chromium-containing alloy surface on a ferrous alloy base metal cast in the mold, which comprises a ferrochromium powder containing carbon, but not more than 2.72% carbon.

1,902,060. PRINTING MECHANISM. PETER DECHÊNE, Berlin, Germany, assignor to The Tabulating Machine Company, Endicott, N. Y., a Corporation of New Jersey. Filed Nov. 27, 1929, Serial No. 410,127, and in Germany Dec. 18, 1928. 19 Claims. (Cl. 101—93.)

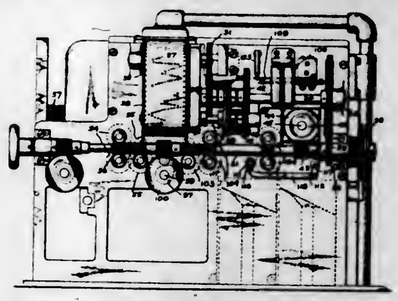
1. A printing mechanism having a type carrier, a plurality of type divided into groups on said carrier and means for selecting the individual type in the groups by repeated operations of a single operating member during a single printing operation of said printing mechanism.

1,902,061. PNEUMATIC CLEANING AIR TREATMENT. MORTON I. DORFAN, Hagerstown, Md., assignor to Pangborn Corporation, Hagerstown, Md., a Corporation of Maryland. Filed Dec. 4, 1929. Serial No. 411,430. 6 Claims. (Cl. 209—502.)



1. The method of treating air in connection with cleaning coal and other materials by air flotation which consists in passing air through the material to be cleaned, the material being fed along a table for this purpose, separating a portion of the dust from the air by passing it through a settling chamber, skimming the entire volume of air from the table and thereby separating it into two volumes, one containing most of the suspended matter and the moisture, the other volume which is the larger one, being relatively pure, returning the pure air to the table where it is again passed through the material, filtering the dust laden volume of air and releasing it to the atmosphere withdrawing from other sources within the cleaning plant a quantity of air corresponding to that released, filtering it by a filtering operation separate from that first mentioned and delivering it to the table to be passed through the material to be cleaned together with the skimmed air.

1,902,062. EXPANSION REAMER. WILLIAM H. EVANS, Chicago, Ill., assignor to Evans Flexible Reamer Corporation, Chicago, Ill., a Corporation of Illinois. Filed Nov. 29, 1929. Serial No. 410,299. 5 Claims. (Cl. 77—75.5.)

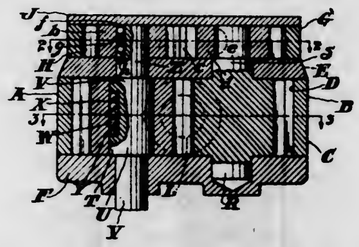


1. A reamer of the character described including a mandrel with a pair of supporting surfaces inclined to the axis of the mandrel in a radial plane and at an angle to the axis in a chordal plane, a pair of segments with spiral cutting teeth, bottom surfaces corresponding to said supporting surfaces, and bevelled ends, retaining collars, one at each end of the segments adapted to fit over the bevelled ends of the segments, a spring bearing against one collar, and an adjusting nut bearing against the other collar, the adjusting nut being so disposed with respect to the segments and their supporting surfaces that tightening thereof expands the segments and moves them bodily sidewise away from the direction of movement of the reamer when cutting.

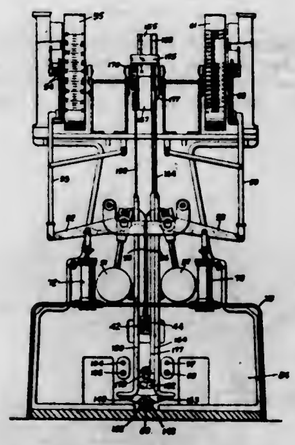
1,902,063. FURNACE OPERATING MECHANISM. JOHN P. FERRIS, Whitefish Bay, Wis., DONALD CLUTE, Detroit, Mich., and ERNST WIEDMANN, Milwaukee, Wis., assignors to The Oilgear Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Oct. 10, 1930. Serial No. 487,698. 20 Claims. (Cl. 263—6.)

1. A conveyor, comprising a reciprocable carriage, an elevator connected to said carriage to be reciprocated therewith, a hydraulic motor for advancing and retracting said carriage, a hydraulic motor for raising and lowering said elevator, means for supplying driving liquid to said motors, and means for gradually increasing and decreasing the rate of delivery of liquid to said motors to thereby gradually accelerate and decelerate the movements of said carriage and said elevator.

1,902,064. PERFORATING MACHINE. EUGENE A. FORD, Scarsdale, N. Y., assignor to The Tabulating Machine Company, Endicott, N. Y., a Corporation of New Jersey. Filed Jan. 25, 1929. Serial No. 334,882. 25 Claims. (Cl. 164—114.)



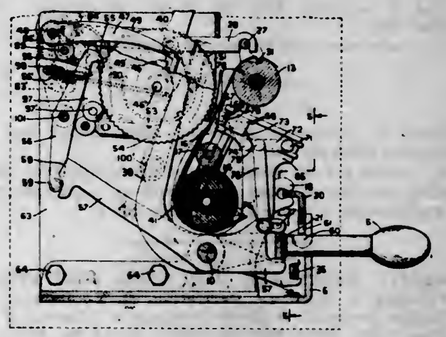
1. A machine for punching record cards in accordance with a perforated pattern record, a punching mechanism having punching pins and coordinated selectors shiftable to engage and hold said pins for a punching operation, pneumatic controlled means for shifting said selectors, said pneumatic controlled means being under the control of said perforated pattern record and means comprising a bar for locking said selectors preliminarily to a punching operation.



1,902,065. PUMP. FRITJOF FRELIN, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Mar. 18, 1931. Serial No. 523,439. 1 Claim. (Cl. 103—126.)

A pump comprising a casing having a pump chamber and a gear chamber, a pair of intermeshing pump gears in the pump chamber, an extension on one pump gear and extending into the gear chamber, a reversible drive shaft in the chambers and extending loosely through one pump gear, a gear train in the gear chamber comprising a gear

mounted loosely upon the drive shaft and another gear keyed to the extension, an idler gear intermeshing with the gears in the gear chamber to transmit the movement of one gear to another, and a pair of automatically acting clutch devices in the drive shaft, one of said clutch devices being adapted to connect the drive shaft to one gear upon rotation of the drive shaft in one direction and the other clutch device being adapted to connect the drive shaft to the other gear upon rotation of the drive shaft in another direction.

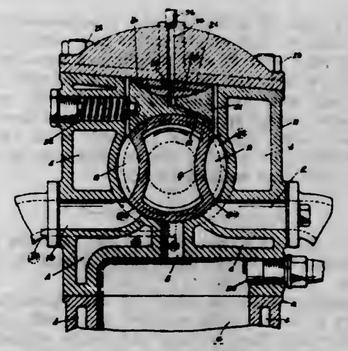


1,902,066. COMPUTING SCALE. FREDERICK L. FULLER, West Orange, N. J., assignor to Dayton Scale Company, Dayton, Ohio, a Corporation of New Jersey. Filed Mar. 5, 1930. Serial No. 433,440. 29 Claims. (Cl. 265—33.)

1. A scale comprising a beam, a load support connected thereto, load offsetting means, connecting devices for connecting said beam and said load offsetting means, rockable means for individually engaging and operating said devices to vary the connection of the beam to the load offsetting means, keys for determining the operation of said rockable means, and means for mechanically actuating said rockable means under control of the keys after operation of the latter, and while the latter are still in operated positions.

1,902,067. TIME RECORDER. FREDERICK L. FULLER, West Orange, N. J., assignor to International Time Recording Company of New York, Endicott, N. Y., a Corporation of New York. Filed Apr. 8, 1929. Serial No. 353,643. 2 Claims. (Cl. 234—43.)

1. In a time recording apparatus, a time controlled printing device, a carrier for a continuous time sheet and shifting means operable only in one direction to shift said time sheet to subsequent printing positions in linear direction, said shifting means comprising a handle actuating a star wheel which cooperates with a pivoted linkage to oscillate the same for shifting the time sheet, and which linkage in turn cooperates with the star wheel to prevent



retrograde movement of said wheel, and means for separately adjusting said time sheet carrier in transverse direction into different printing positions relatively to said printing device.

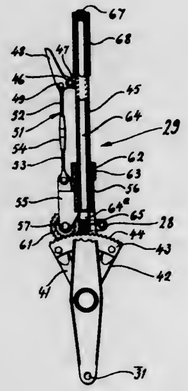
1,902,068. HIGHLY ACTIVE CARBON AND PROCESS OF PREPARING IT. WILHELM THEODOR GEIS, Knapsack near Cologne-on-the-Rhine, Germany, assignor to Aktiengesellschaft für Stickstoffdünger, Cologne-on-the-Rhine, Germany, a Corporation. Filed Nov. 20, 1928, Serial No. 320,749, and in Germany Nov. 26, 1927. 3 Claims. (Cl. 252—3.)

2. The process of preparing highly active carbon which comprises the step of separating the ashes, particularly the flue ashes from lignite (brown coal) into several fractions of different grain sizes by sifting the residues by means of sieves and the further step of purifying in known manner each of the fractions so obtained.

1,902,069. VALVE CONSTRUCTION. HARVEY H. HALLER, Los Angeles, Calif., assignor to The Wehr Motor Company, Los Angeles, Calif., a Corporation of California. Filed July 19, 1930. Serial No. 469,178. 7 Claims. (Cl. 123—190.)

1. In a rotary valve, a compensating device comprising a movable spring-pressed shoe, having concaved upper and lower portions, said lower portion being adapted to engage the periphery of said valve, and a plano-convex backing member having a curved lower portion adapted to engage the upper concaved portion of said shoe, whereby said valve will be held in continual engagement with its seat, irrespective of temperature and wear conditions in said valve and its seat.

1,902,070. ALKOXYALDEHYDE AND PRODUCTION OF SAME. PAUL HALBIG and FELIX KAUFLER, Munich, Germany, assignors to Dr. Alexander Wacker Gesellschaft fur Elektrochemische Industrie, Munich, Germany, a Corporation. Filed June 26, 1930, Serial No. 464,114, and in Germany July 27, 1929. 18 Claims. (Cl. 260—138.)

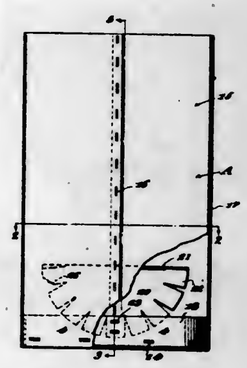


1. A new compound having the formula:

$$R_1 \cdot CH(OR) \cdot CH_2 \cdot CHO$$

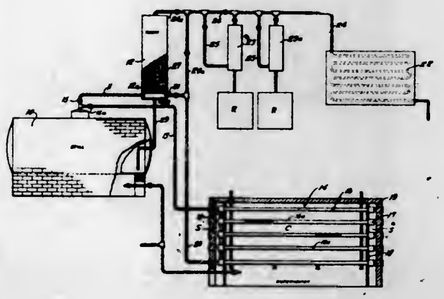
wherein R_1 represents H or an alkyl radical and R represents alkyl radical.

6. Process for the production of alkoxyaldehydes comprising treating an alkoxyacetal with an acid hydrolyst in the presence of water at about 20—25° C.



1,902,071. STABILIZER ADJUSTING MECHANISM. CHARLES E. HATHORN, Hempstead, N. Y., assignor to Curtiss Aeroplane & Motor Company, a Corporation of New York. Filed May 31, 1930. Serial No. 458,035. 7 Claims. (Cl. 244—29.)

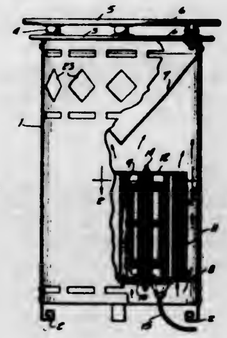
7. In an airplane in combination, a horizontal stabilizer for said airplane, a lever pivoted on said airplane, means connecting said lever to said stabilizer, a fixed gear member positioned adjacent to said lever, a movable gear secured to said lever and adapted to mesh with said fixed gear, a worm wheel secured to the movable gear, and a worm maintained constantly in mesh with the worm wheel regardless of whether the movable gear is in mesh with the fixed gear member or not.



1,902,072. ICE CREAM CONTAINER. HORACE H. HARROD, Morris, Ill. Filed Feb. 6, 1931. Serial No. 514,038. 1 Claim. (Cl. 229—41.)

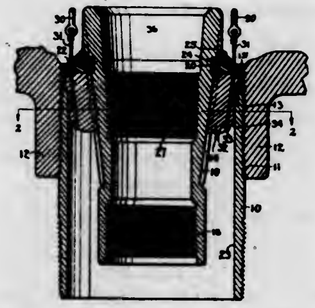
A collapsible food container of the cylindrical type comprising a tubular body provided at opposite diametric points with score lines defining side walls collapsible one upon the other, said side walls being provided with equadistantly spaced longitudinally extending score lines, whereby the said side walls will be rendered flexible, inturned bottom flanges formed on one end of the body, a disc shaped bottom wall foldable on a diametric line arranged within the body, foldable tabs formed on the periphery of the bottom wall, certain of the tabs at opposite diametric points being received at all times between the side walls and the flange, means permanently securing said last mentioned tabs in position, said other tabs being received between the side walls and the flange upon spreading the side walls to an open position, a false bottom of disc shape detachably fitted on the bottom wall, and a

removable cover for the upper end of the container and having means maintaining the cylindrical form of the container.



1,902,073. METHOD OF TREATING RESINS. DANIEL W. HOGE, Los Angeles, Calif., assignor to Carlos W. Newbery, Los Angeles, Calif. Filed Dec. 19, 1928, Serial No. 327,013. Renewed Aug. 26, 1932. 5 Claims. (Cl. 202—5.)

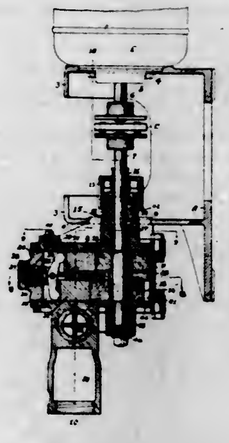
1. A method for distilling crude rosin that includes heating and vaporizing crude rosin in a vaporizing zone, subjecting the vapors to cracking in a cracking zone at a temperature between 700° F. and 1100° F., and fractionating the cracked vapors to produce liquid fractions thereof.



1,902,074. ELECTRIC HOUSE HEATER. EMIL F. HOLINGER, New York, N. Y., assignor to Hudson Electrical Heating Corporation, New York, N. Y., a Corporation of New York. Filed May 27, 1930. Serial No. 456,033. 8 Claims. (Cl. 219—34.)

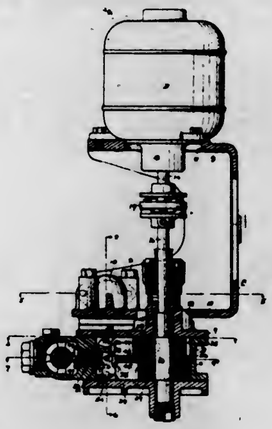
1. An electric heater comprising a resistor unit and a surrounding casing therefor comprising a substantially continuous loop of corrugated sheathing, the corrugations of which are arranged vertically to form air passages open

at the top and bottom combined with baffle plates located at the top and bottom of said sheathing but not extending beyond the inner apices of the corrugations therein.



1,902,075. TUBING HANGER. JAMES H. HOWARD, Houston, Tex., assignor to J. H. McEvoy & Company, Houston, Tex., a Corporation. Filed Apr. 10, 1931. Serial No. 529,025. 9 Claims. (Cl. 166—14.)

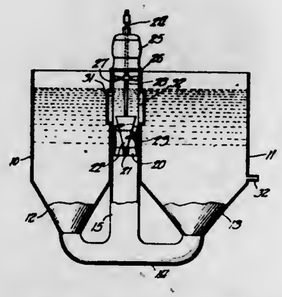
1. In combination with a tubing head assembly a hanger body, slips on said body, a well casing, means to move said slips to extended position to seat on said casing, said means to move said slips to extended position being releasable from said slips by a direct upward pull upon said means.



1,902,076. PUMPING APPARATUS. JOSEPH F. JAWOROWSKI, Cleveland, Ohio, assignor of one-third to Samuel E. Dettelbach and one-third to Sam W. Emerson, Cleveland, Ohio. Filed May 14, 1929. Serial No. 363,027. 2 Claims. (Cl. 102—128.)

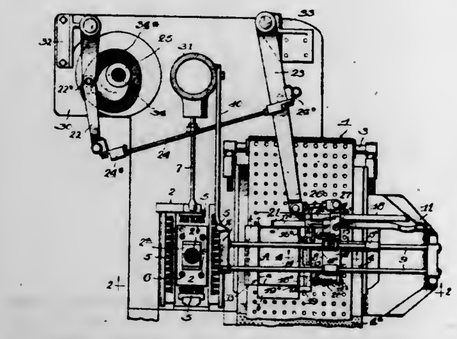
2. In a rotary pump unit as described, a pump body having a round piston chamber and a smaller chamber connected by a slot, and a removable partition for said round piston chamber and slot comprising a flat round plate

having a circular notch within one edge of a flat bar fitting into said slot having a round head confined within said notch.



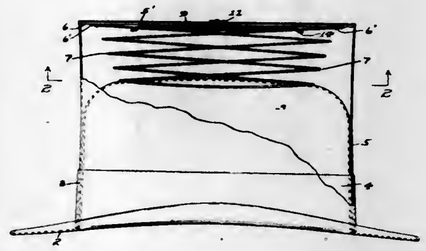
1,902,077. PUMPING APPARATUS. JOSEPH F. JAWOROWSKI, Cleveland, Ohio, assignor of five-eighteenths to Samuel E. Dettelbach, five-eighteenths to Sam Emerson, and two-eighteenths to Edgar Hahn, Cleveland, Ohio. Filed May 1, 1930. Serial No. 448,835. 3 Claims. (Cl. 103—118.)

3. A pump unit comprising an open supporting frame having laterally extending recessed and perforated shelves inverted with respect to each other, a motor mounted at one end of said frame upon one of said shelves having a shaft extending into said frame between said shelves, a rotary pump suspended from the other shelf at the opposite end of said frame and including a cover member



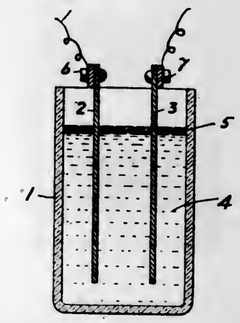
provided with a series of radially arranged re-enforcing ribs having shouldered extensions, passing through said other shelf and seating with their shouldered portions against said other shelf for spacing said cover member from said other shelf and forming a series of drain openings between said other shelf and cover member and centering said pump with respect to said other shelf, said rotary pump having a shaft extending into said frame in axial alignment with the shaft of said motor and a coupling connecting said shafts within said open frame.

1,902,078. MIXING DEVICE OR SEWAGE TREATMENT PLANT. HARRY NEVILLE JENKS, San Jose, Calif. Filed Oct. 21, 1929. Serial No. 401,075. 1 Claim. (Cl. 210—8.)



A sewage treatment device comprising a plurality of tanks of cylindrical form with each succeeding tank being relatively larger than the preceding tank, the lower ends of said tanks being conical in form, a conduit forming the connections between the lower ends of said tanks, and vertically extending conduits connected to said first named conduits, and positioned between the adjacent tanks, said vertically extending conduit communicating with the upper ends of the adjacent tanks, and a pump positioned in said vertical conduit for withdrawing the liquid from the bottom of the adjacent tanks and discharging it substantially tangential in the adjacent tanks for seting up a liquid vortex motion in each of said tanks.

1,902,079. BOX WRAPPING MACHINE. ARTHUR E. JOHNSON, Oak Park, Ill., assignor to Wm. Wrigley Jr. Company, Chicago, Ill., a Corporation of Delaware. Filed Feb. 6, 1931. Serial No. 513,984. 6 Claims. (Cl. 93—54.)



1. In a box wrapping machine, the combination of feeding means upon which the boxes and cover sheets are assembled, sheet applying mechanism adjacent said feeding means including a plunger, a box transfer member movable between said feeding means and the path of said plunger, and means for driving said transfer member comprising a lever arm connected at its free end with said transfer member, another arm parallel with said first lever arm, a connecting rod between said lever arms and driving means for imparting a predetermined oscillatory movement to said last mentioned lever arm.

1,902,080. COMBINATION HAT. HENRY F. JORDAN, Lansdale, Pa. Filed May 2, 1931. Serial No. 534,597. 7 Claims. (Cl. 2—185.)

1. The combination of a hat formed of relative stiff material and tubular body of flexible material substantially elliptical in cross section, closed at one end and fitted over the crown of the hat, stiffening means disposed within the body adjacent its closed end and yielding means carried by and operative to urge said stiffening means axially away from said crown when the body is operatively disposed thereon.

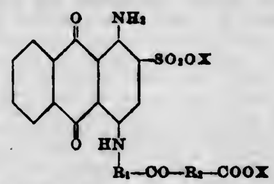
1,902,081. COUNTER-ELECTRO-MOTIVE-FORCE-CELLS. WILLIAM E. KERSHAW, Gwynedd Valley, and JOSEPH LESTER WOODBRIDGE, Philadelphia, Pa. Filed Feb. 15, 1927. Serial No. 168,311. 6 Claims. (Cl. 175—315.)

1. A counter-electromotive force cell adapted for use with direct current having an electrode of metallic nickel devoid of active material and an electrolyte consisting of a solution of the hydroxide of an alkali metal.

1,902,082. TUBE PROTECTOR. PHILIP KILIMNIK, Middle Village, N. Y. Filed Jan. 10, 1930. Serial No. 419,951. 1 Claim. (Cl. 152—18.)

In a motor vehicle tire protector, a fabric member having a circumferential pleat therein to correspond with the center line of the tire and a plurality of pockets secured to said fabric member on opposite sides thereof, the

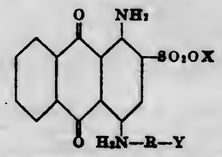
adjacent pockets to said central pleat formed to extend under the said pleat and each pocket overlying an adjacent pocket away from the said central line of the tire to such an extent that strips of material in the pleat and pockets will extend under the strips of material in the preceding pleat and pockets and will extend substantially



to the centers of said strips, and strips of substantially impenetrable material in said pleat and pockets, said protector adapted to be positioned in a motor vehicle tire between the inner tube and inner surface of the casing providing a continuous protecting element for said inner tube

---

1,902,083. CONDENSATION PRODUCTS OF THE ANTHRAQUINONE SERIES. GEORG KRAENZLEIN and ERNST DIEFFENBACH, Frankfort-on-the-Main-Hochst, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Mar. 6, 1931, Serial No. 520,705, and in Germany Mar. 13, 1930. 4 Claims. (Cl. 260—60.)

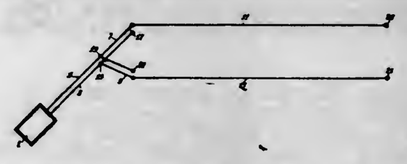


4. As new products, the compounds of the general formula:

wherein the X's stand for hydrogen or alkali metal atoms and R_1 and R_2 represent radicals of the benzene series, the NH-group in the radical R_1 standing in meta-position and the —COOX-group in the radical R_2 in ortho-position to the CO-group, said products forming crystalline powders which dissolve in water to a blue solution and dye wool and silk blue tints of good fastness properties.

1,902,084. ACID DYESTUFFS OF THE ANTHRAQUINONE SERIES. GEORG KRAENZLEIN and ERNST DIEFFENBACH, Frankfort-on-the-Main-Hochst, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Mar. 6, 1931, Serial No. 520,706, and in Germany Apr. 4, 1930. 5 Claims. (Cl. 260—60.)

5. As new products, the compounds of the general formula:



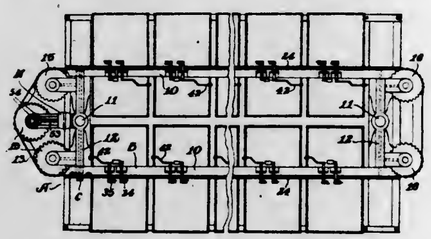
wherein X stands for hydrogen or an alkali metal atom, R for a radical of the benzene series and Y for an esterified carboxylic acid group or for a radical of the benzene series containing an esterified carboxylic acid group, forming crystalline water-soluble powders and dyeing wool clear tints of good to very good fastness to fulling and to sea water.

1,902,085. CIRCUIT CLOSING DEVICE. FRED L. LAM, Binghamton, N. Y., and BURDETT H. PHILLIPS, Montclair, N. J., assignors to The Tabulating Machine Company, Endicott, N. Y., a Corporation of New Jersey. Original application filed June 3, 1925, Serial No. 34,516. Divided and this application filed Nov. 13, 1929. Serial No. 406,826. 2 Claims. (Cl. 200—46.)

1. In a circuit closing device including a support for a perforated card, a plurality of contacts carried by said support for reading perforations in the card, and a conductor bridging all the contacts and adapted to be engaged by any contact extending through a perforation in the card, a carrier for the conductor movable to separate the conductor from the contacts, and a flat plate-like guide extending from said carrier to hold the card flat when the conductor is in effective position and movable with the carrier to permit insertion or removal of a pattern card when the conductor is in ineffective position.

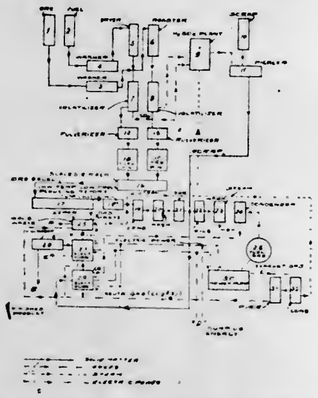
1,902,086. MEANS FOR ENERGIZING ANTENNAE. NILS E. LINDENBLAD, Port Jefferson, N. Y., assignor to Radio Corporation of America, a Corporation of Delaware. Filed May 22, 1929. Serial No. 365,024. 6 Claims. (Cl. 250—33.)

1. In combination, a pair of radiators, a pair of diverging feeders for supplying energy thereto, and leads run from each feeder close to and parallel to the other feeder.



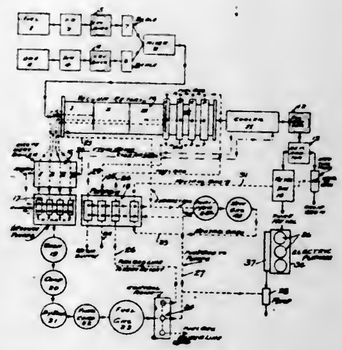
1,902,087. PROCESS OF REPRODUCING SURFACE INLAYS ON PANELS OF COMPOSITE FIBROUS MATERIALS. EMIL C. LOETSCHER, Dubuque, Iowa. Filed Feb. 20, 1930. Serial No. 429,982. 5 Claims. (Cl. 41—35.)

1. The process of producing inlay designs in the surface of a composite material consisting of providing a base of a compressible material, applying a surface covering of



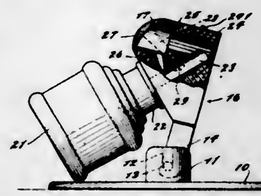
thin fibrous material impregnated with a resinous substance to the surface of the base, laying strips of fibrous material upon the covering material in the outline of the inlay and compressing the material whereby the same is reduced to a uniform density and thickness with the inlay strips flush with the surface thereof.

1,902,088. LAUNDRY SORTING MACHINE. EDWARD C. MAURER, St. Paul, Minn. Filed Aug. 9, 1929. Serial No. 384,626. 9 Claims. (Cl. 209—80.)



1. A package sorting machine comprising. an overhead track, carriages adapted to be operated on said track, means for moving said carriages, tripping lever means arranged in pairs, receptacles beneath said tripping means and track, deflector means in each of said receptacles, a package key adapted to support a package to be carried by each of said carriages, and means for automatically tripping the package off of said carriage and simultaneously operating the deflector of the receptacle to cause packages to be discharged into either end of the receptacles.

1,902,089. PROCESS OF MINERAL REDUCTION AND METAL EXTRACTION. ALFRED MUSSO, East Orange, N. J., assignor of one-half to William P. Deppe, New York, N. Y. Filed July 25, 1927. Serial No. 208,103. 10 Claims. (Cl. 75—14.)

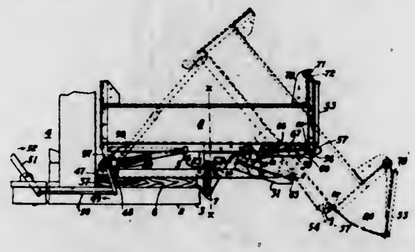


1. A low temperature ore reduction process for producing substantially pure metal, and separating the same in finely divided condition from the gangue before melting, which includes externally heating, in finely divided intermixed condition in a closed retort, a coal and an ore of the group including the oxides, hydroxides, and carbonates of iron, at a temperature approximately between 700° C. as a minimum for coking coals and 950° C. as a maximum for noncoking coals, to avoid fusion, sintering, and agglomeration in the charge, while excluding air from the retort and simultaneously continuously forcibly removing by pump means during the reduction in said retort all gases produced therein, to the degree that substantially no carbon dioxide is obtained, whereby the reduction is caused to be accomplished substantially entirely by the nascent amorphous carbon of the coal, developed in the retort.

1,902,090. PROCESS OF LOW TEMPERATURE REDUCED PRESSURE OR PARTIAL VACUUM REDUCTION OF METALS. ALFRED MUSSO, East Orange, N. J., assignor of one-half to William P. Deppe, New York, N. Y. Filed Dec. 18, 1928. Serial No. 325,713. 8 Claims. (Cl. 75—14.)

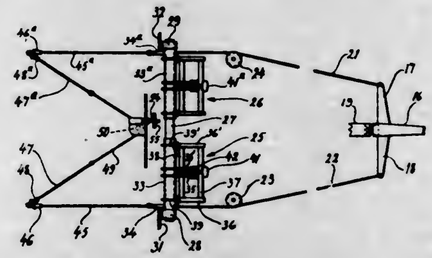
1. A process of reducing with coal an ore of the group including the oxides, hydroxides, and carbonates of iron, to produce a substantially pure iron that can be mechanically separated from a non fused gangue, including externally heating the charge in successive closed chambers, in finely intermixed condition, in the absence of air, according to an increasing temperature gradient whose highest point is not in excess of 950° C., and simultaneously forcibly exhausting throughout the charge the gases generated, at pressures below atmospheric, according to a decreasing pressure gradient in said chambers, to cause the reduction to occur substantially entirely by means of the nascent amorphous carbon of the coal, through carbonization of the latter in the reducing chambers to produce said carbon.

1,902,091. INKSTAND. OSCAR F. NILSSON and JOSEPH BACHRACH, New York, N. Y., assignors to L. E. Waterman Company, New York, N. Y., a Corporation of New York. Filed Aug. 12, 1929. Serial No. 385,233. 10 Claims. (Cl. 120—59.)



1. In combination, a receptacle adapted to contain a comparatively large quantity of fluid, a well adapted to contain a compsratively small quantity of fluid and communicating with the said receptacle, means connecting said receptacle and well, a base, a pivot on the base supporting the connected receptacle and well for movement between two positions, in one of which the receptacle will empty into the well and in the other of which the well will empty into the receptacle, and means to support the receptacle and well in each of said positions.

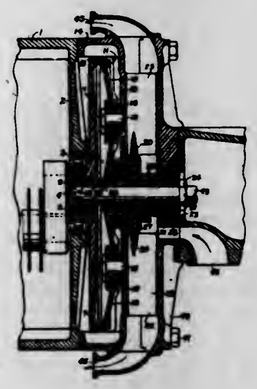
1,902,092. PRODUCTION OF CASTINGS WITH COATINGS COMPOSED OF HIGH-CHROMIUM ALLOYS. STANLEY M. NORWOOD, Flushing, N. Y., assignor to Electro Metallurgical Company, a Corporation of West Virginia. Filed Mar. 10, 1931. Serial No. 521,609. 4 Claims. (Cl. 22—189.)



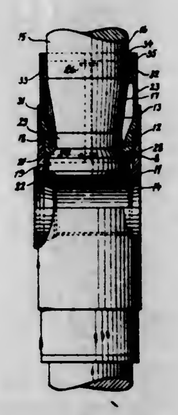
1. A coating for molds adapted to form a chromium-containing alloy surface on a ferrous alloy base metal cast in the mold, which comprises a ferrochromium powder containing about 1% to 6% carbon and about 3% to 7% silicon.

1,902,093. DUMPING BODY. GEORGE E. OGILVIE, Westmoreland, Pa., assignor to Hockensmith Wheel & Mine Car Company, a Corporation of Pennsylvania. Filed Dec. 2, 1929. Serial No. 410,975. 3 Claims. (Cl. 298—12.)

1. In a self unloading vehicle, in combination, a chassis, a body, and swinging link mechanism for supporting said body medially of its ends on the chassis, of a track disposed between said link mechanism and the rear end of said body, and a wheel on said body disposed to roll on said track, said link mechanism causing the body to swing and tilt as the body rolls down the track on said wheel.



1,902,094. RUDDER PEDAL ADJUSTING MECHANISM. GEORGE A. PAGE, Jr., Freeport, N. Y., assignor, by mesne assignments, to Curtiss Aeroplane & Motor Company, Inc., a Corporation of New York. Filed May 12, 1930. Serial No. 451,548. 8 Claims. (Cl. 244—29.)

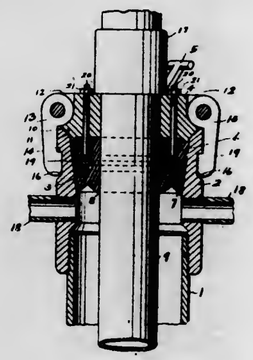


1. In an aerial vehicle, a rudder, a rudder pedal for controlling said rudder, a sleeve bearing upon which said rudder pedal is pivotally mounted, an offset arm also secured to said sleeve bearing, a shaft upon which said sleeve bearing is mounted, connections extending between said offset arm and said rudder, and a screw adjustably secured to said offset arm and also secured to said pedal.

1,902,095. BLOWER AND DRIVING GEAR FOR ENGINES. BEN G. PARSONS, Houston, Tex. Filed Jan. 6, 1930. Serial No. 418,724. 2 Claims. (Cl. 230—116.)

1. A device for feeding fuel vapor to internal combustion engines including a blower fan and driving gear therefor, said driving gear comprising an internal gear driven by the crank shaft of the engine, pinion gears meshing with said internal gear, a hub for said fan meshing with said pinions, said pinions being adapted to rotate within the plane of said internal gear, a pair of flanges keyed to said hub and adapted to frictionally engage said blower fan.

1,902,096. PROPELLER. FRED A. A. PEARSON, Valley Stream, N. Y., assignor to Curtiss Aeroplane & Motor Company, Inc., a Corporation of New York. Filed Jan. 8, 1931. Serial No. 506,392. 12 Claims. (Cl. 170—160.)

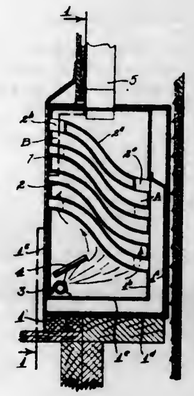


1. In an aeronautical propeller, a hub having a socket, a blade having an inner end adapted to be inserted within said socket, a split sleeve secured to said hub and adapted to bear upon said blade for securing it within said socket and having an outward extension, a cone ring surrounding said blade and inserted within said extension, and means for drawing said cone ring longitudinally of said blade for wedging said blade within said extension.

1,902,097. BLOW-OUT PREVENTER. ARTHUR J. PENICK and KIRBY T. PENICK, Houston, Tex. Filed Dec. 14, 1931. Serial No. 580,846. 8 Claims. (Cl. 285—22.)

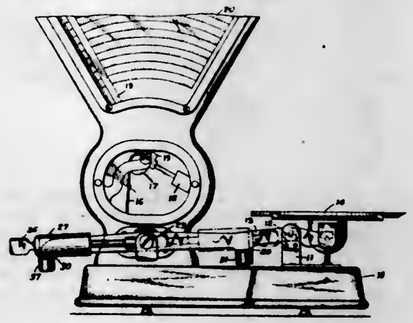
1. In combination a tubular head having a slip bowl, a slip therein formed with a top wear ring and a packer

attached to and depending from said ring and having annular lower end lips spaced apart, one of said lips fitting closely against the bowl and the other lip being adapted



to fit closely about the inner pipe through the bowl and adjustable means for clamping the packing against the wear ring to expand the packing.

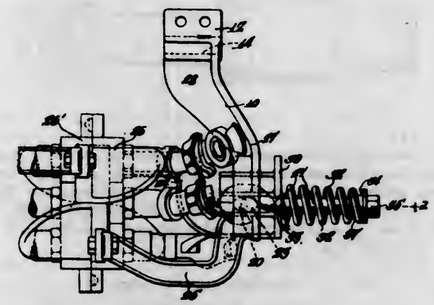
1,902,098. DRILL. WALTER C. REA, New York, N. Y., assignor to Detachable Bit Corporation of America, New York, N. Y., a Corporation of Delaware. Filed June 24, 1930. Serial No. 463,391. 1 Claim. (Cl. 255—64.)



A drill bit including in axial alignment an upper portion constituting a threaded shank, and a body portion, said body portion having a front, a back and sides, the upper portion of the sides forming part of a frusto-conical surface, increasing in diameter from the lower extremity of the threaded shank towards the lower portion and the lower portion of the sides forming part of the surface of a cylinder, the front and back being of similar configuration and each including an upper flat surface converging downwardly and a lower flat surface with the lower flat surfaces at front and back intersecting each other to form aligned apex cutting edges of the bit, and the flat surfaces on both the back and front meeting at an angle and coacting to form thereon aligned cutting edges on the front and back each extending parallel to the apex cutting edges, the front and back being recessed in spaced relation to the side portions to form a web of less thickness than said portions and not intersecting the plane determined by said flat surfaces and said web terminating in spaced relation to the line of the apex cutting edges.

1,902,099. HEATER. WILLIAM E. RENO, Glendale, Calif. Filed Apr. 15, 1930. Serial No. 444,428. 14 Claims. (Cl. 126—90.)

1. In a heater of the class described, a casing having a plurality of separate superimposed air conducting flues extending from the back to the front side of the casing, said flues being flat laterally and curved and directed upwardly from the back to the front side of the casing, and a burner below the lowermost flue, said casing having vertical passages at the lateral ends of the flues for connecting the spaces below alternate flues to the next upper spaces forming a zigzag passage for gases of combustion between and around the ends of the flues.

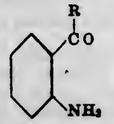


1,902,100. WEIGHING SCALE. ERNEST ALBERT REUSSENZEHN, Dayton, Ohio, assignor to Dayton Scale Company, Dayton, Ohio, a Corporation of New Jersey. Filed Apr. 8, 1931. Serial No. 528,543. 9 Claims. (Cl. 265—60.)

1. In a scale, a load support, a lever operated thereby, automatic counterbalancing means, an upright housing therefor, a projection extending into the housing from one side of the lever for connection to the automatic counterbalancing means, a bracket extending transversely to and from the opposite side of said lever, and a weight

pivotally connected to said bracket and adapted to swing in a generally vertical plane past the housing from one side of the bracket to the other.

1,902,101. BRACKET FOR CONNECTER HEADS. EDWARD ARTHUR ROBINSON, Montreal, Quebec, Canada, assignor to Joseph Robinson, New York, N. Y. Filed May 31, 1930, Serial No. 457,943. Renewed Aug. 10, 1932. 9 Claims. (Cl. 285—58.)

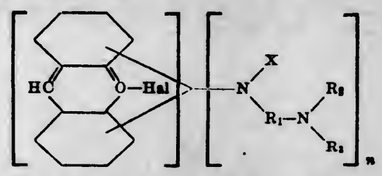


1. A bracket, laterally spaced downward extensions thereon, inwardly directed horizontal pivot projections from the extensions relatively alined and adapted to give pivot support to a train pipe connecter arranged between said extensions of the bracket, a rearwardly extending tie bolt from each extension pivotally connected therewith and spring means rearwardly supported by the rear end of the tie bolts for pressing the connecter resiliently forwardly.

1,902,102. MANUFACTURE OF VISCOSE. OTTO SCHMID, Rottweil-on-the-Neckar, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed Nov. 27, 1929, Serial No. 410,262, and in Germany Dec. 3, 1928. 4 Claims. (Cl. 260—100.)

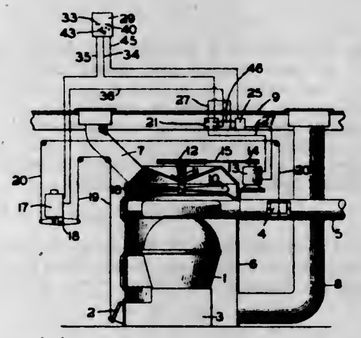
1. A process for manufacturing viscose in a continuous operation which comprises sulfidizing with carbon disulfide a mixture of cellulose with an alkali metal hydroxide solution, said mixture containing at most 25 per cent of cellulose and said alkali metal hydroxide solution having a concentration of at least 12 per cent until a concentrated viscose solution is formed, and diluting said viscose solution with water, all these different operations being carried out at ordinary temperature.

1,902,103. MANUFACTURE OF QUINOLINE DERIVATIVES AND THE PRODUCTS. FRITZ SCHONHOFER, Elberfeld, Germany, assignor to Winthrop Chemical Company, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 12, 1928, Serial No. 325,662, and in Germany Dec. 17, 1927. 11 Claims. (Cl. 260—88.)



1. Process which comprises reacting upon a compound of the general formula:

in which R stands for hydrogen or alkyl and the nucleus of which may be substituted by monovalent substituents of the group consisting of alkyl, alkoxy and halogen, with such a ketone as contains at least one of the groups $-CH_2$ and $-CH_2-$ linked to the carbonyl group, and at least one substituted or unsubstituted amino group linked to an aliphatic chain.

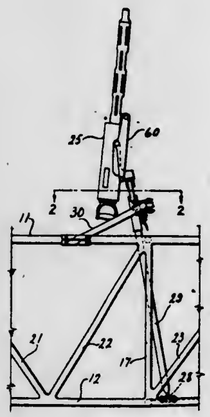


1,902,104. COMPOUNDS OF THE XANTHENE SERIES. WERNER SCHULEMANN, Vohwinkel, near Elberfeld, FRITZ MIETZSCH, Elberfeld, Germany, and AUGUST WINGLER, Westfield, N. J., assignors to Winthrop Chemical Company, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 15, 1929, Serial No. 407,559, and in Germany Sept. 11, 1924. 6 Claims. (Cl. 260—62.)

1. As new products, the xanthene compounds of the probable general formula:

wherein X stands for a substituent of the group consisting of hydrogen, alkyl, aminoalkyl and alkylaminoalkyl, R_1 stands for an alkylene residue which may be substituted by hydroxyl groups, R_2 and R_3 stand for alkyl groups which may be substituted by the amino group, and, "n" stands for one of the numbers one and two, and wherein the nuclei may be further substituted, by substituents of the group consisting of alkyl, alkoxy, phenyl, carboxyphenyl and halogen, said compounds being generally water soluble bronze colored substances, the free bases being generally yellow to red colored, generally sparingly soluble in water, but soluble in organic solvents.

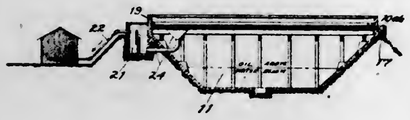
1,902,105. THERMOSTATIC CONTROL. CHARLES M. SELBY, Holland, Mich., assignor to Holland Furnace Company, Holland, Mich., a Corporation of Michigan. Filed Dec. 8, 1930. Serial No. 500,772. 7 Claims. (Cl. 236—11.)



1. In combination, an air conditioning device, means for producing a forced circulation of air therethrough, and temperature responsive means for controlling the actuation of said circulation producing means, said temperature responsive means including mechanism acting to cause actuation of said circulation producing means at temperature within a normal range and to cause inaction thereof at temperatures both above and below the said normal temperature range.

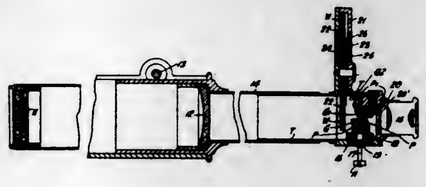
1,902,106. METHOD OF MANUFACTURING PAPER PULP. ALFRED M. THOMSEN, San Francisco, Calif. Filed Dec. 11, 1928. Serial No. 325,898. 2 Claims. (Cl. 92—9.)

1. In the process of manufacturing paper pulp, the method of liberating the fibre by cooking with a liquor containing sodium sulphide as the sole active agent, and separating the fibre from the spent cooking liquor, evaporating said liquor to a syrupy consistency, incinerating



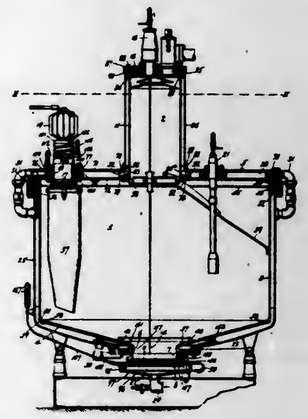
it in a reducing atmosphere, dissolving the ashes in water, separating sodium carbonate formed during incinerating by fractional crystallization, and using the resultant mother liquor for making up fresh cooking liquor.

1,902,107. MACHINE GUN MOUNT FOR AIRCRAFT. CLEM G. TRIMBACH, Hempstead, N. Y., assignor to Curtiss Aeroplane & Motor Company, Inc., a Corporation of New York. Filed Mar. 27, 1930. Serial No. 439,299. 5 Claims. (Cl. 89—40.)



1. In a mount for a machine gun for an airplane, a support for said machine gun, means for guiding said support, and means for attaching the machine gun to the said support comprising an adapter for said machine gun equipped with resiliently spreading jaws, a tubular element spaced from said support and into which the said jaws are adapted to be inserted, and braces securing said tubular member to the said support.

1,902,108. COVER FOR OIL STORAGE TANKS. RALPH S. TWOGOOD, San Francisco, Calif. Filed Apr. 15, 1930. Serial No. 444,426. 3 Claims. (Cl. 220—26.)



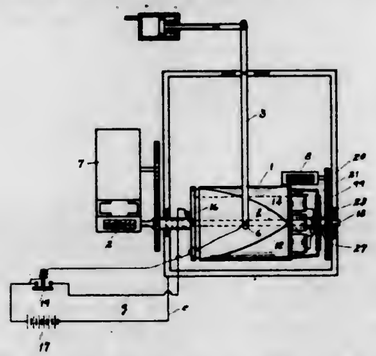
1. A cover for an oil storage reservoir comprising in combination a plurality of pan units connected together to form a unitary water holding structure, means for maintaining a level of water in said units, a passage between said units for the discharge of gas, and a head of water for floating said water containing and gas discharging cover on the surface of the oil in said container.

1,902,109. METHOD OF AND APPARATUS FOR QUANTITATIVE SPECTRUM ANALYSIS. FRANK TWYMAN, London, England, assignor to Adam Hilger, Limited, London, England. Filed Jan. 20, 1930, Serial No. 422,161, and in Great Britain June 11, 1929. 10 Claims. (Cl. 88—14.)

1. The method of quantitative spectrum analysis which comprises bringing spectrum parts side by side, relatively shifting said parts to bring pre-determined lines into juxtaposition and equalizing the intensities of the said lines by a graduated reduction of the intensity of the brighter line.

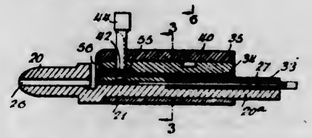
1,902,110. VAPOR DISCHARGE DEVICE. MORITZ UBICH, Baden, Switzerland, assignor to Aktiengesellschaft Brown Boveri & Cie., Baden, Switzerland, a Joint-Stock Company of Switzerland. Filed July 31, 1929, Serial No. 382,451. Renewed Jan. 24, 1933. 14 Claims. (Cl. 250—27.5.)

1. An evacuated space-discharge device comprising a metallic rectifying vessel having a plurality of detachable sections hermetically joined one to the other, seals of liquid at the junctions of said sections, at least one of said sections having a hollow welded joint on its interior wall.



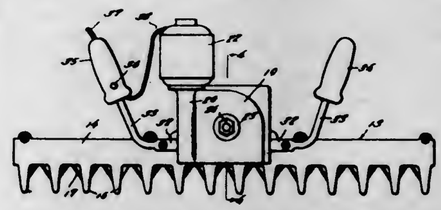
1,902,111. METAL JOINT AND METHOD OF FORMING THE SAME. STANLEY IRVING VAUGHN, Hempstead, N. Y., assignor to Curtiss Aeroplane & Motor Company, Inc., a Corporation of New York. Filed Sept. 27, 1929. Serial No. 395,539. 9 Claims. (Cl. 113—116.)

1. In metallic structure, a pair of plates each having one edge adjacent to an edge of the other and having the adjacent edges bent back substantially parallel with the main body of the plates, a strip comprising a dome portion, a pair of retroverted portions overlying and contacting with the adjacent edges of the plates, flanges extending from the retroverted portions and folded back under the bent back portion of the plates, and an additional fold for each of the flanges positioned between the main body of its associated plate and the bent back portion thereof.



9. The method of joining metallic plates which comprises bending the edges of said plates, forming a connecting strip having a body portion and flanges, placing the bent edges of the plates adjacent to each other, inserting the flanges of the strip between the adjacent bent edges of the plates, folding the end portions of the flanges around the bent edges of the plates so that they lie flat against the edges of the plates, folding the first folds in their entirety back against the plates, and folding the last mentioned folds in their entirety at an angle to the plates to lie within the body portion of the strip.

1,902,112. MEASURING APPARATUS. ARCHER E. YOUNG, Pittsburgh, Pa. Filed Dec. 12, 1931. Serial No. 580,580. 8 Claims. (Cl. 235—61.)

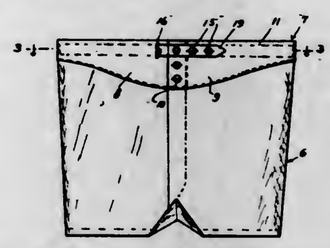


1. In apparatus for aggregating the value of a variable during a prolonged interval of time, a moving member, a tally, means for uniting intermittently the moving member and the tally, electrically operated means controlling such uniting means, such last-named means including a contact-piece movable in response to the value of the variable and in a direction transverse to the direction in which the said member moves, and two contact strips borne by said moving member and with which said contact-piece makes successive contacts as the moving member moves, the two said strips extending divergently one from the other and oppositely divergent with respect to the line of direction of the contact-piece.

1,902,113. BRUSH MAKING MACHINE. ANTON ZAHORANSKY, Todtnau, Germany. Filed Mar. 12, 1931, Serial No. 521,917, and in Germany Mar. 12, 1930. 7 Claims. (Cl. 300—8.)

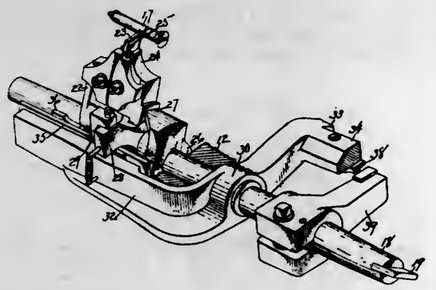
1. A setting device for brush making machines comprising in combination, a frame, means at least partly surrounded by a part of said frame for driving wire loops into a brush body, separate means for cutting off and bending pieces of wire, said cutting and bending means being at least partly surrounded by a different part of said frame, and means for conveying said wire loops to said driving means, said conveying means being guided by said frame.

1,902,114. FOLIAGE TRIMMER. EMMETT M. BRANBLOSSOM, Corydon, Ind. Filed Jan. 19, 1932. Serial No. 587,557. 2 Claims. (Cl. 56—25.)



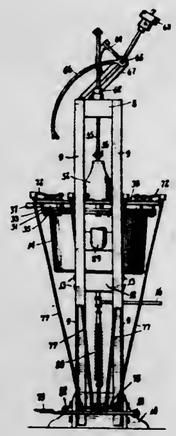
1. A device of the class described comprising an elongated toothed cutter guard, a relatively movable cooperative cutter bar associated with said guard and provided with an actuator intermediate its ends, a casing connected directly to the guard and extending rearwardly therefrom and enclosing said actuator, gearing in said casing for operating the actuator, an electric motor carried by said casing for operating the gearing and supporting handles connected with the casing.

1,902,115. RUBBER COMPOSITION AND METHOD OF PRESERVING RUBBER. ARTHUR W. CAMPBELL, Stow, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Mar. 14, 1932. Serial No. 598,886. 10 Claims. (Cl. 18—50.)



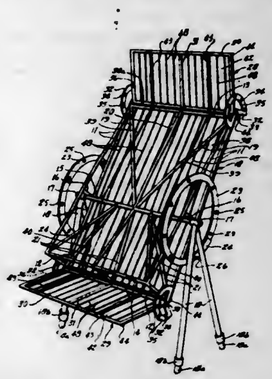
3. The method of preserving rubber which comprises treating rubber with a secondary aromatic amine containing a diarylmethyl group and an arylamino group on different rings of a biaryl nucleus.

1,902,116. WAIST BAND CONSTRUCTION. ROBERT C. CASTLEN, West Palm Beach, Fla., assignor to Palm Beach Garment Company, West Palm Beach, Fla., a Corporation of Florida. Filed May 5, 1932. Serial No. 609,517. 1 Claim. (Cl. 2—237.)



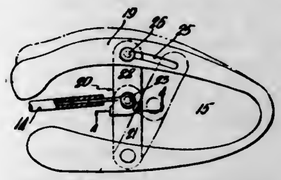
A garment of the class described having a frontal fastener equipped fly, a waistband, said waistband being in the form of a tubular hem, the outer fold of the hem at one end being formed with an outlet slot near said fly, the adjacent end of the hem having its outer fold provided with fasteners, a waistband constricting strap contained in said hem and rigidly secured at one end and having its opposite end left free and extending out through said slot and constructed to engage over the complemental fasteners, said strap being formed intermediate its ends with longitudinal slits, and fastening means passing through the inner and outer folds of the hem and said slits to permit the requisite sliding of the strap for size adjusting purposes.

1,902,117. SCREW MAKING MACHINE. REUBEN S. CROSBY, Hartford, and CHARLES W. SPONSEL, Wethersfield, Conn., assignors to The Asa S. Cook Company, Hartford, Conn., a Corporation of Connecticut. Filed Dec. 19, 1927. Serial No. 241,008. 8 Claims. (Cl. 10—101.)



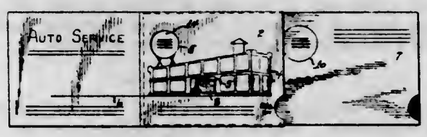
1. A screw making machine including means for holding and rotating a screw blank, a plurality of cutting tools positioned to effect simultaneous cutting action along the same groove in said blank, a tool post support, a cutting tool post fast to said support, a cutting tool post supported on but movable independently of said support, means for rocking said support to engage a tool on one of said posts with the blank, means for engaging the tool on the other post with said blank, means for securing the last named post to said support for movement of said post away from the blank by the rocking movement of the support, and means for imparting relative movement to said support and blank lengthwise of the latter.

1,902,118. MACHINE FOR TREATING HAT BODIES. GEORGE W. CUMING, New York, N. Y., assignor to M. A. Cuming & Co. Inc., a Corporation of New York. Filed Apr. 18, 1930. Serial No. 445,242. 1 Claim. (Cl. 223—31.)



In a machine for treating hat bodies, the combination including means forming a steam chamber having a top wall with an opening therethrough, a hollow perforated hat block supported upon said top wall having its interior communicating with said steam chamber through the mentioned opening, means for admitting steam into said steam chamber and into the interior of said hat block and for exhausting the steam from said steam chamber and hat block, a forming ring arranged above the steam chamber and movable into and out of position encircling the hat block adapted for holding a hat body closely about the exterior surface of the hat block and demarking the crown and brim of the hat body and leaving the brim of the hat body extending radially across the top wall of the steam chest away from said hat block, a plurality of gripping members slidably mounted upon said top wall to slide radially thereof toward and away from the hat block adapted for gripping the brim portion of the hat body and stretching the same radially across the top wall of the steam chest away from the hat block, and operating means for said forming ring and said gripping members.

1,902,119. ORCHARD PROTECTIVE SYSTEM. JOHN DEL REA DE LAND, Pico, Calif. Filed Jan. 16, 1932. Serial No. 587,055. 10 Claims. (Cl. 47—1.)

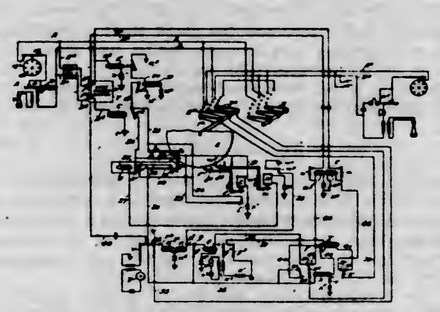


1. An orchard protective wind deflecting structure adapted to be erected at the windward side of an orchard comprising, a baffle wall having a substantially continuous wind deflecting surface extending upwardly above the orchard trees, means pivotally supporting said wall intermediate its upper and lower ends, and a vane attached to said wall and movable relative thereto.

1,902,120. SHOE FORM. WILLIAM J. DE WITT, Auburn, N. Y., assignor to Shoe Form Co., Inc., Auburn, N. Y., a Corporation of New York. Filed July 7, 1931. Serial No. 549,186. 20 Claims. (Cl. 12—128.2.)

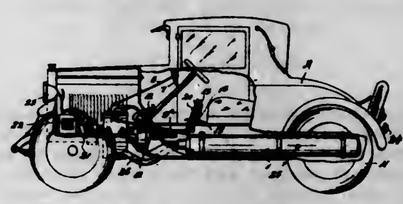
1. A shoe form comprising a toe member and a back part wire, said toe member comprising a hollow body portion, the side walls of which terminate in ball flanges and a cross-brace connecting such flanges, said cross-brace being made in two sections, the inner ends of which are pivotally attached to each other and to the forward end of the back part wire member, and the outer ends of which are pivotally attached to the ball flanges, said sections, when in alignment, forming a toggle and certain of said attachments permitting a relative movement of the attached elements, whereby the expansion or contraction of the toe member is performed in two stages, one stage by the making or breaking of the toggle and the other stage by the relative movement.

1,902,121. ADVERTISING FOLDER. WALTER J. GALLAGHER, New York, N. Y. Filed May 5, 1932. Serial No. 609,359. 1 Claim. (Cl. 46—97.)



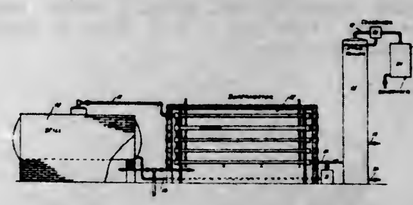
An advertising folder comprising an outer member folded to form front and rear sections, a slidable sheet disposed within the outer member between said sections and adapted to be moved outwardly, a horisontal slot and a slot extending angularly thereof and an opening formed in one of said sections, said last named section having an object printed thereon adjacent said angularly extending slot, an object representation carried by the slidable sheet and projected through said horisontal slot, a series of individual copy briefs or illustrations being printed upon the slidable sheet and in line with said opening, whereby movement of the slidable sheet carries said copy briefs or illustrations successively into view as the object representation is moved along said slot, and whereby said object representation may be projected through the angularly extending slot so as to be obscured by the section in which it is formed.

1,902,122. MACHINE FOR FORMING WATERPROOF TUBING AROUND FIREWORK FUSE MATERIAL. JOSEPH GIOIOSA, Milton, Mass. Filed Aug. 19, 1931. Serial No. 557,974. 13 Claims. (Cl. 154—1.)



1. A machine of the character described having, in combination, means to position a plurality of strips of sheet material face to face, and means to bend said strips longitudinally thereof into tubular form, one within another.

1,902,123. CONTROL CIRCUIT FOR SWITCHES FOR AUTOMATIC TELEPHONE SYSTEMS. CHARLES L. GOODRUM, Athens, Ga., assignor of one-half to Louis G. Pacent, New York, N. Y. Filed Mar. 31, 1932. Serial No. 602,190. 15 Claims. (Cl. 179—16.)

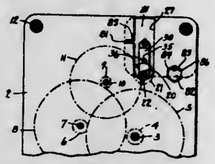


1. In combination with two telephone line conductors, a source of current therefor, an impulse transmitter having a pair of contacts through which said line is normally closed and a normally open contact connected to said source and adapted to maintain current through one conductor while the current through the other conductor is intermittently discontinued, of a main control relay in the first mentioned conductor having a normally open pair of contacts, an associate control relay in the other conductor having a pair of closed contacts, and a switch comprising a motor magnet having a circuit extending through said pairs of contacts.

1,902,124. AIR DRIVEN AUTOMOBILE. JOHN P. HALLORAN, Mayfield Heights, Ohio. Filed Jan. 12, 1932. Serial No. 586,245. 1 Claim. (Cl. 180—66.)

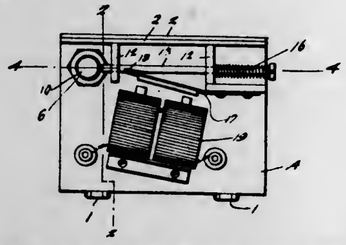
A driving mechanism for vehicles comprising the combination with the chassis of a vehicle, of pressure receptacles disposed in side by side relation beneath the chassis and carried thereby and adapted to contain a compressed gaseous propelling medium, a motor interconnected with the said receptacles and provided with a rotor operable under pressure of jets of the said propelling medium directed obliquely thereagainst, conduits connecting the receptacle and motor and terminating in jet forming orifices, at least one of which is inclined at an angle opposing that of the remaining orifices to permit reverse rotation of the rotor, one of the said conduits being branched to provide an arm for communicating a portion of the propelling medium when desired into the said opposing orifice, control means for each orifice, means for operating the said control means independently of each other and located on the usual instrument board of the vehicle, power transmitting instrumentalities leading from the rotor to the driving wheels of the vehicle for transmitting movement of the rotor to the said driving wheels for propelling the vehicle under influence of jets of the said gaseous propelling medium against the rotor, and a silencing tank for the exhaust from the motor.

1,902,125. MOTOR FUEL. DANIEL W. HOGE, Los Angeles, Calif., assignor to Carlos W. Newbery, Los Angeles, Calif. Continuation of application Serial No. 327,013, filed Dec. 19, 1928. This application filed July 20, 1929. Serial No. 379,810. 7 Claims. (Cl. 44—9.)



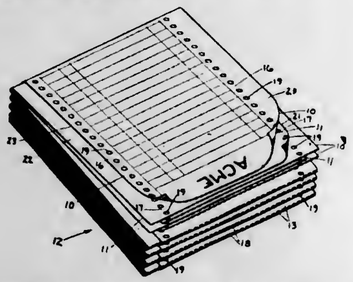
1. A non-detonating motor fuel composed of a mixture of gasoline and a liquid material comprising substantially a mixture of compounds of aromatic nature obtained by vaporizing rosin and cracking the vapors at a temperature between 600° F. and 1200° F., said liquid material having a boiling range within 100° F. to 450° F.

3. As a product, a liquid material comprising a mixture of compounds of aromatic nature obtained by vaporising



rosin at substantially atmospheric pressure, and then in a subsequent operation cracking the vapors, the compounds of the mixture having specific gravities between 0.75 to 0.95, and a boiling range within 100° F. to 450° F.

1,902,126. HOROLOGICAL MECHANISM. PAUL HUNGERBÜHLER, Oberwil, Switzerland, assignor to Landis & Gyr, A.-G., a Joint-Stock Company of Switzerland. Filed Oct. 12, 1927, Serial No. 225,735, and in Switzerland Oct. 26, 1926. 2 Claims. (Cl. 58—7.)

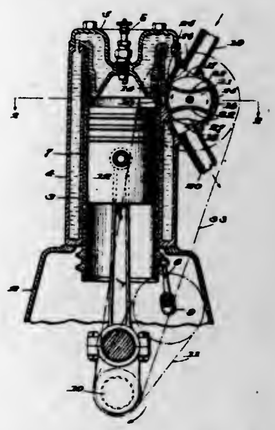


2. A clock movement having regulating mechanism and adapted to be controlled by means of a balance wheel or pendulum and including a gear train, a frame in which said gears are journaled, said frame being provided with an inwardly recessed portion to receive the regulating mechanism, means for fastening the regulating mechanism to the frame, and bearings in said frame oppositely disposed to said recess for rotatably journalling a part of one of the regulating mechanisms which may be employed as a part of the clock mechanism.

1,902,127. GAS GUN. ELWIN H. INGALLS, Aroma Park, Ill. Filed Jan. 19, 1932. Serial No. 587,590. 8 Claims. (Cl. 42—1.)

1. A device of the class described comprising a barrel containing a gas shell, a spring actuated plunger in the barrel for exploding the shell, a spring actuated trigger member for holding the plunger in inoperative position, a latch for holding the trigger member in operative position, magnetic means for moving the latch to releasing position.

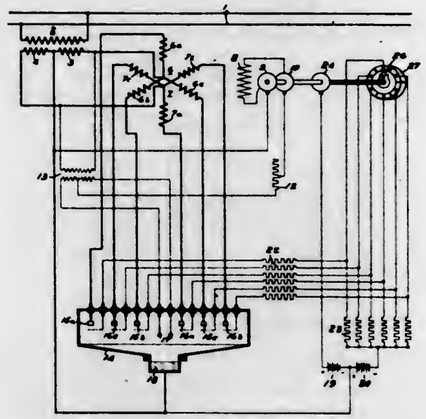
1,902,128. MANIFOLDING. ARTHUR A. JOHNSON, Bridgeport, Conn. Filed Sept. 3, 1931. Serial No. 560,968. 3 Claims. (Cl. 282—12.)



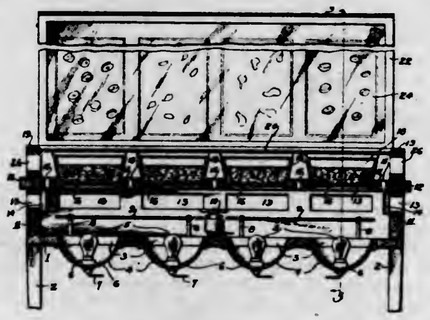
1. A pile of superposed and interleaved record and transfer strips each having at each side margin a feeding band provided with a row of pinwheel-engaging apertures, the feeding bands of the record strips at one side of the pile projecting beyond the adjacent edges of the transfer strips and the feeding bands of the transfer strips at the other side of the pile projecting beyond the adjacent edges of the record strips, the projecting feeding bands forming finger-grips for stripping purposes.

1,902,129. MEANS FOR BREAKING WATER IN OIL EMULSIONS. PHILIP KAPLAN, Brooklyn, N. Y., assignor to The Dehydro Company, Tulsa, Okla., a Corporation of Oklahoma. Filed Jan. 10, 1931. Serial No. 507,995. 3 Claims. (Cl. 252—1.)

1. A medium for treating petroleum emulsions wherein is combined sulphonated rosin oil.



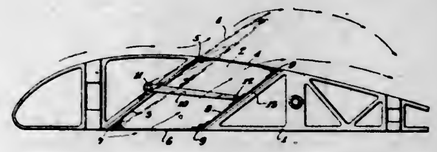
1,902,130. INTERNAL COMBUSTION ENGINE. JAMES KEISTER, Steubenville, Ohio. Filed Nov. 18, 1929. Serial No. 407,989. 11 Claims. (Cl. 123—79.)



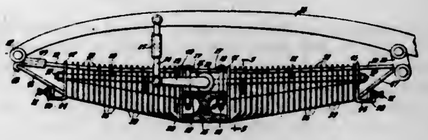
1. An internal combustion engine comprising in combination, a cylinder and a reciprocating piston therein, said cylinder having a port above the upper limit of the piston stroke for the passage therethrough of the explosive charge into and exhaust gases from the cylinder, a charge supply pipe and an exhaust pipe for said engine, a sleeve-valve in said cylinder for covering and uncovering said cylinder port and a distributer valve outside said cylinder for connecting said cylinder port alternately with said charge supply pipe and said exhaust pipe, said valves having such an arrangement and driven movement with respect to each other and the crank shaft of the engine that said cylinder port is uncovered by said sleeve valve and is connected with said charge supply pipe by said distributer valve throughout each suction stroke and into each next succeeding compression stroke of said piston.

1,902,131. DIRECT CURRENT MOTOR COMMUTATING DEVICE. ERWIN KERN, Ennetbaden, Switzerland, assignor to Aktiengesellschaft Brown Boveri & Cie., Baden, Switzerland, a Joint-Stock Company of Switzerland. Filed Feb. 27, 1932, Serial No. 595,536, and in Germany Feb. 23, 1931. 6 Claims. (Cl. 171—228.)

1. In a commutating system for electric motors, a motor having a stator winding and a rotor winding, an alternating current supply line, an electric current rectifier having main anodes, excitation anodes and a cathode, the said stator winding being connected in circuit with the main anodes and with the cathode and with said line to be supplied with current from the latter, the said rotor winding being connected in circuit with the excitation anodes and with the cathode and with said line to be supplied with current from the latter, and means for sequentially causing flow of current through the anodes, the cathode and said windings from said line.



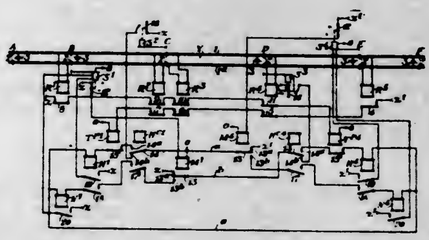
1,902,132. DISPLAY CASE. BENJAMIN A. KLAPPER, Chicago, Ill., assignor to Sprague, Warner & Company, Chicago, Ill., a Corporation. Filed Mar. 11, 1930. Serial No. 434,948. 4 Claims. (Cl. 240—6.)



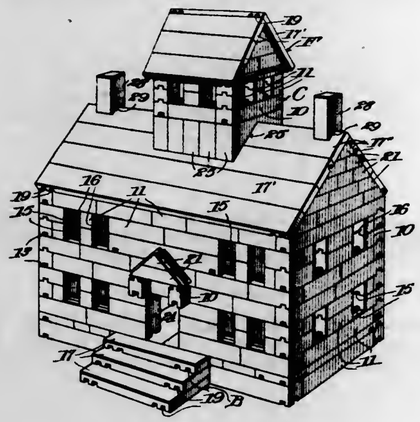
1. In a show case with a transparent top, a shelf partition spaced below the top to form an upper and a lower compartment, said shelf having an opening, a transparent container adapted to seat in the opening and be supported by the shelf, and illuminating means in the lower compartment, means for utilising part of the heat from said illuminating means to prevent condensation on the top, and for venting the bulk of the heated air consisting of air inlets in the bottom of the case, air vents in the side walls of the case below and above the partition shelf, and passages through the shelf partition smaller than said vents to provide a circulation of air into and out of the lower compartment with the diversion of a small part of said heated air into and out of the upper compartment.

1,902,133. AIRCRAFT CONTROL MEANS. THOMAS B. LAVELLE, Hempstead, N. Y. Filed Nov. 24, 1931. Serial No. 576,983. 7 Claims. (Cl. 244—29.)

1. The combination with an airplane of a supporting airfoil having a slot therethrough respectively near each opposite end thereof, and respective closure means for said slots including two plates whose surfaces lie contactingly in opposed relation in the slot closed position of the closure means, said plates being movable away from each other in the slot opening movement.

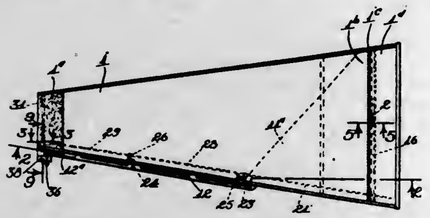


1,902,134. IMPROVED SPRING CONSTRUCTION. ERIC G. LINDHE, Hastings upon Hudson, N. Y. Filed July 26, 1932. Serial No. 624,694. 12 Claims. (Cl. 267—2.)



1. A vehicle spring device which comprises a spring leaf element, a plurality of spaced compression plates supported on said element, resilient material disposed between said compression plates, a frame connected to said spring element, connecting rods associated with said compression plates, a cam mechanism connected between the connecting rods and the frame and adjustable in accordance with the movement of the frame with respect to the spring element.

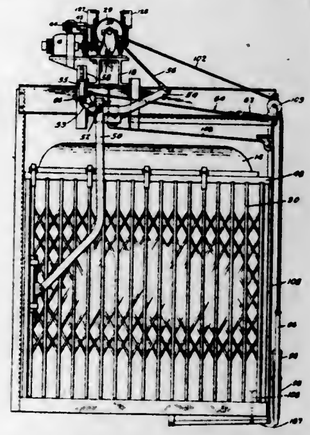
1,902,135. RAILWAY SIGNALING. RONALD A. MCCANN, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Sept. 25, 1931, Serial No. 565,095. Renewed Aug. 24, 1932. 5 Claims. (Cl. 246—3.)



2. In combination, a first and a second signal governing traffic movements from a first and a second direction, respectively over a given stretch of railway track, a first and a second control wire and a common wire, means including said first control wire and said common wire for controlling the caution indication of said first signal and the proceed indication of said second signal, and means including said second control wire and said common wire for controlling the caution indication of said second signal and the proceed indication of said first signal.

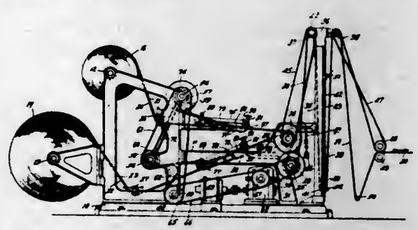
1,902,136. TOY BUILDING BLOCK. FRED H. MILLS, Fort Edward, N. Y. Filed June 18, 1932. Serial No. 618,048. 7 Claims. (Cl. 46—35.)

1. A simulative building block having a plurality of grooves in parallel relation with each other and adjacent at least one marginal edge of the block to selectively receive a tongue of an adjacent block.



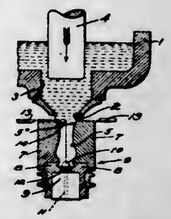
1,902,137. GAME APPARATUS. HARRY T. NAUMAN, Los Angeles, Calif. Filed Oct. 7, 1930. Serial No. 486,880. 8 Claims. (Cl. 273—128.)

1. In a game apparatus, a platform having a plurality of spaced holes at one end thereof, a registering member in association with each of the holes, a trip member in association with each of the holes and operatively connected to the registering member of the respective hole for shifting said registering member into view when a ball enters the hole, and a gate member in association with all of the trip members for retaining the balls thereon and the respective registering member in view, said gate being shiftable for releasing all of the balls for permitting the trip members and registering members to assume their normal inoperative positions.



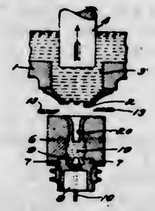
1,902,138. MECHANISM FOR OPERATING ELEVATOR DOORS. CLIFFORD NORTON, South Orange, N. J., assignor, by mesne assignments, to Otis Elevator Company, a Corporation of New Jersey. Filed Aug. 31, 1927. Serial No. 216,588. 28 Claims. (Cl. 187—52.)

1. In an apparatus for operating elevator doors, the combination of an electric motor on the car, a car door, actuating mechanism for the car door directly connected with the said motor to cause said door to be opened, a landing door, actuating mechanism therefor on the car connected to said motor and projectible across the space between the car and landing to open the landing door, an irreversible gear between said actuating mechanisms and the electric motor, means connected with the car door and other means connected with the landing door in which power is stored in the opening operation under the action of the electric motor, said stored power being restrained against closing the doors by the irreversible gear and means



for reversing the direction of rotation of said electric motor to permit the landing door and car door to close through the reversal of the gear by the action of the motor.

1,902,139. METHOD AND APPARATUS FOR SEPARATING ADHESIVELY JOINED SHEETS. FRED BROWN PFEIFFER, Akron, Ohio, assignor to National Rubber Machinery Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 3, 1930. Serial No. 492,918. 18 Claims. (Cl. 242—55.)



3. The method of separating adhesively joined sheets which comprises feeding the sheets forward while holding the leading end of one sheet stationary to strip it from the first sheet, and maintaining both sheets taut as the separation of the sheets progresses.

1,902,140. MANUFACTURE OF HOLLOW GLASSWARE. GEORGE E. ROWE, Wethersfield, Con., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Sept. 30, 1929, Serial No. 396,242. Renewed June 10, 1932. 12 Claims. (Cl. 49—5.)

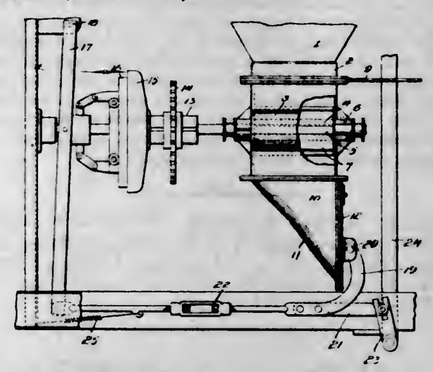
6. The method of loading a parison mold which comprises discharging molten glass downwardly in a column until the lower end of the column contacts with and seals the upper end of the cavity of the parison mold, and then filling the cavity of the mold by forcing glass thereinto from the interior only of the column.

1,902,141. MANUFACTURE OF HOLLOW GLASSWARE. GEORGE E. ROWE, West Hartford, Con., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Sept. 30, 1929. Serial No. 396,243. 18 Claims. (Cl. 49—5.)

11. The method of loading a charge receiver having an elongate glass receiving cavity, comprising the steps of disposing said charge receiver below and in adjacent relation with the lower end of a downwardly opening outlet in the bottom of a container for molten glass, the size of the outlet and of the upper end of the cavity of the charge receiver being such with relation to each other that a column of glass from the outlet will seal the upper end of such cavity on contact with the walls thereof, forcing glass downwardly through the interior of said column into the charge receiver at a rate accelerated beyond that which would be caused by gravity and head pressure, attenuating the glass between the charge receiver and the outlet before the glass in the cavity of the charge receiver has reached the lower end of the latter by moving said charge receiver downwardly with the glass therein and simultaneously applying a retractive impulse to the glass adjacent to the outlet, and severing the attenuated glass before the lower portion of the glass in the charge receiver has completely filled the lower portion of the cavity of said charge receiver, whereby a central cavity will be produced in the upper portion of the glass in the charge receiver when the lower portion of the cavity of said charge receiver has been completely filled with glass, and applying suction to the lower portion of the glass in the cavity of the charge receiver at a time regulable with respect to the time of severance of the attenuated glass to aid in effecting complete filling of the lower end portion of the cavity of the charge receiver and in controlling the size of the central cavity in the upward portion of the glass in the charge receiver.

1,902,142. MANUFACTURE OF HOLLOW GLASSWARE. GEORGE E. ROWE, Wethersfield, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Sept. 3, 1931, Serial No. 560,901. Renewed Jan. 24, 1933. 10 Claims. (Cl. 49—80.)

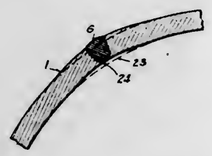
10. In the manufacture of hollow glassware, the method of charging a mold having a glass shaping cavity open at one end, which comprises the steps of presenting at said open end of the mold cavity a separated charge of glass of insufficient mass completely to fill said cavity, applying superatmospheric pressure to the outer end of the glass charge and causing subatmospheric pressure on the inner end of said charge to tend to move said charge longitudinally of the mold cavity, and checking movement of a perpheral portion of the charge at the outer end of said mold cavity to effect charging of the mold cavity with glass having an axial cavity at its outer end.



1,902,143. COMPOSITION FOR TREATING STRINGS. FRANK SALADINO, JOSEPH SALADINO, and SALVATORE SALADINO, Chelsea, Mass., assignors to C. Saladino & Sons, Inc., Chelsea, Mass., a Corporation. Filed Jan. 20, 1931. Serial No. 510,056. 11 Claims. (Cl. 134—23.)

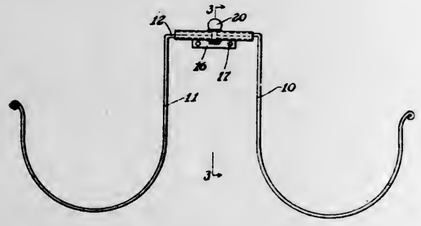
1. The method of preparing a composition for treating strings comprising in major part three pounds of gelatine to one gallon of water cooked until said gelatine and water reach a temperature of approximately 200 degrees Fahrenheit, which comprises adding thereto and stirring in red beef oil distilled, then adding and stirring in glycerine and then adding and stirring in tallow oil, maintaining a contaiinous temperature of approximately 200 degrees Fahrenheit during the preparation of said composition.

1,902,144. PROCESS FOR PRODUCING RED PHOSPHORUS. STAPLETON D. GOOCH, Lake Wales, and FRIEDRICH P. KERSCHBAUM, Winter Haven, Fla., assignors to Coronet Phosphate Company, New York, N. Y., a Corporation of New York. Filed Nov. 29, 1930, Serial No. 499,124, and in Germany Dec. 2, 1929. 5 Claims. (Cl. 23—223.)



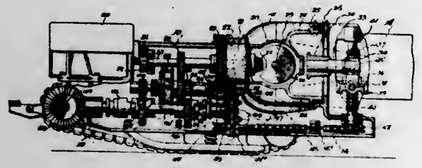
1. A process for the production of red phosphorus from hot gases containing phosphorus substantially entirely in vapor phase comprising adding to the gases from an extraneous source substances capable of transforming yellow phosphorus into the red modification.

1,902,145. APPARATUS DESIGNED FOR HANDLING CEMENT AND LIKE MATERIAL. WILLIAM B. SLEMMER, Malden, Mass., assignor to Warren Brothers Company, Cambridge, Mass., a Corporation of West Virginia. Filed Oct. 21, 1931. Serial No. 570,251. 1 Claim. (Cl. 221—118.)



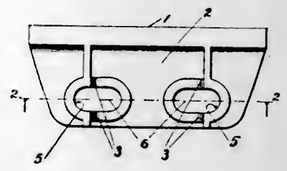
A material handling apparatus comprising a feeder embodying a plurality of radially arranged uniformly spaced wings of which each pair of adjacent wings defines a receiving pocket, a casing enclosing said feeder and in communication at its top with a source of supply, a chute with which said casing is in communication through its bottom, a swinging closure closing the chute on one side, the chute having an inclined bottom wall, a shaft rotatably mounted in said casing and carrying said feeder, a clutch control power actuated member on said shaft, and means for simultaneously opening said closure and engaging said clutch.

1,902,146. METHOD OF ANNEALING VESSELS. RICHARD STRESAU, Wauwatosa, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed Sept. 18, 1930. Serial No. 482,657. 14 Claims. (Cl. 148—13.)



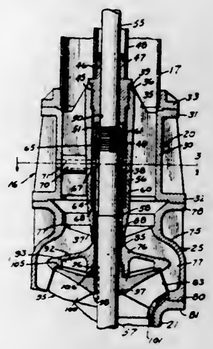
14. The method of supporting the walls of a fabricated pressure vessel during the process of annealing which comprises heating the vessel to an annealing temperature to release stresses in the metal walls, and supplying and maintaining in the vessel a fluid pressure sufficient to support the metal wall when it reaches a temperature at which it cannot support its own weight.

1,902,147. ADJUSTABLE HATRACK. MAXWELL TEITELBAUM, Brooklyn, N. Y. Filed Dec. 31, 1930. Serial No. 505,795. 1 Claim. (Cl. 211—32.)



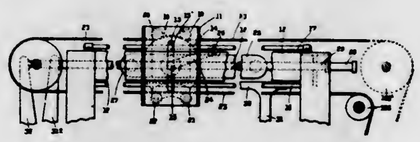
A device of the class described comprising a hollow casing having resilient sides, means for attaching said casing to a wall or the like, resilient hat-holding members, means on said members slidably mounted within said casing for supporting said members against rotation within said casing, comprising an extension on each of said members bent into the form of a substantially rectangular loop having opposite sides of the loop lying in the same horizontal plane, said loop of one of said members lying above said loop of the other member, and means on said casing for depressing the resilient sides thereof against said extensions to lock the latter in fixed position.

1,902,148. MINING MACHINE. FREDERICK W. VODOZ, Wilmette, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 5, 1927, Serial No. 231,213. Renewed Oct. 21, 1931. 12 Claims. (Cl. 262—28.)



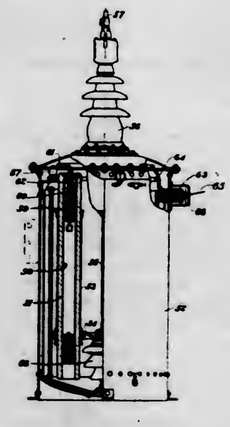
1. In a mining machine, a main frame, a motor, a cutter head mounted for rotation about an axis parallel to the longitudinal axis of said main frame including a cutting element offset from and mounted for pivotal swinging movement in planes substantially parallel with the axis of rotation of said cutter head, coacting power means including screw devices carried on said main frame in advance of said cutter head for swinging said cutting element, and operative connections between said motor and said screw devices including a chain drive for said screw devices extending rearwardly beneath said cutter head, and a drive sprocket therefor on said main frame.

1,902,149. STOKER LINK. HARRY T. WANDLING, Alton, Ill. Filed Feb. 24, 1932. Serial No. 594,919½. 2 Claims. (Cl. 110—40.)



1. A stoker link comprising a web having horizontally elongated eyes provided with lateral webs forming semi-circular bearing surfaces at their outer ends, and cut away above and below the adjacent ends of said eyes from substantially the ends of said semi-circular bearings towards the center of the link substantially as described.

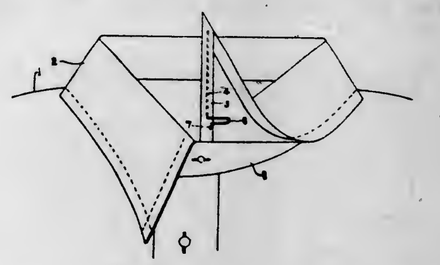
1,902,150. MAIN BEARING CONSTRUCTION FOR TURBINE PUMPS. ARTHUR R. WEIS, Huntington Park, Calif., assignor of one-half to Pacific Pump Works, Huntington Park, Calif., a Corporation of California, and one-fourth to George E. Bigelow, Huntington Park, Calif. Filed Dec. 27, 1927. Serial No. 242,907. 13 Claims. (Cl. 103—102.)



1. In a deep well turbine pump, the combination of: an impeller bowl having an impeller chamber communicating with a longitudinal bore; a shaft extending through said longitudinal bore, there being a primary clearance space between said shaft and the walls of said bore; an impeller on said shaft in said impeller chamber, the rotation of said impeller tending to set up a flow of fluid through said primary clearance space; and means for forming a secondary space in communication with said primary clearance space and through which said flow of fluid must pass before entering said primary clearance space, said secondary space being smaller in cross-section than said primary clearance space so as to filter the fluid entering said primary clearance space.

1,902,151. KNITTING MACHINE. SIDNEY ARTHUR WELCH, ALBERT FAIRHOLME GUYLER, JOHN THOMAS ASHBY, and WILLIAM HENRY BOALER, Spondon, near Derby, England, assignors to Celanese Corporation of America, a Corporation of Delaware. Filed July 21, 1930, Serial No. 469,448, and in Great Britain July 31, 1929. 19 Claims. (Cl. 66—60.)

1. Method of knitting flat fashioned articles, said method comprising effecting knitting traverses at a substantially constant linear speed, automatically making the knitting traverse at each course substantially equal to the length of such course, and completing successive courses with a frequency substantially inversely proportional to the length of the courses.



1,902,152. ELECTROSTATIC CONDENSER. ARTHUR O. AUSTIN, Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed June 25, 1924. Serial No. 722,205. 20 Claims. (Cl. 175—41.)

1. A condenser unit comprising a tubular dielectric member, a covering of conducting material for a portion of the inner surface of said tubular member, a covering of conducting material for a portion of the outer surface of said tubular member, a member of conducting material extending from the end of said inner covering and spaced inwardly from the wall of said tubular member, and a closed cap, of dielectric material covering said extending member.

1,902,153. STIFFENER PIN FOR SOFT COLLARS. FRANK J. BARNES, St. Louis, Mo. Filed Oct. 3, 1932. Serial No. 635,925. 2 Claims. (Cl. 24—87.)

2. A collar stiffener comprising a pin fashioned at one end for insertion into the hem of a collar, and formed at its other end with a point extending in the general direction of said pin for a restraining engagement with the collar, and laterally bent and return-bent adjacent to its pointed end to form upper and lower spaced arms, the upper of said arms terminally carrying said pointed end, in a spaced relation to the extended axis of the pin.
